Tax Reduction

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. WOODRUFF. Mr. Speaker, I have noted with much satisfaction the almost unanimity with which the editorial writers of the country are approving H. R. 4790, introduced in the House by Representative KNUTSON, chairman of the Ways and Means Committee.

Under the circumstances that exist, it seems to me the committee could not report to the House a more satisfactory tax-reduction bill.

The bill very properly gives greatest consideration to those in the lower bracket and, as a matter of fact, removes from the tax rolls entirely 7,400,000 of the present taxpayers in that bracket. I hope, and I believe, that both the House and the Senate will pass the bill by substantially more than a two-thirds vote of the membership and that the bill will become the law, a veto by the President to the contrary notwithstanding.

The following editorials from the Tampa (Fla.) Daily Times and the Tampa (Fla.) Tribune are typical of many others appearing from day to day:

[From the Tampa (Fla.) Daily Times of December 19, 1947]

KNUTSON FIRES FIRST SHOT IN A NEW TAX CUT FIGHT

The public will welcome Representative KNUTSON'S announced intention to make another attempt at income-tax reduction when Congress reconvenes in January.

His latest proposals indicate he is cognizant of the pitfalls that trapped the two previous tax-reduction measures vetoed by President Truman earlier this year. If his prediction that this time his measure is veto-proof comes true, no one will be happier than income taxpayers, large and small.

Income-tax reduction legislation, like most other legislation, regrettably places most emphasis on political expediency, with the public interest taking second place. Likewise, the economic soundness of any particular measure proposed is subordinate to its political effect.

The President's chief objections to the tax reduction plans sent him before were that they failed in his opinion to give adequate consideration to the low-income groups and also he criticized reduction moves as coming at the wrong time, but never pointed out when he thought would be the right time.

The new bill outlined by Mr. KNUTSON quite evidently would give relief to the low-income group. It would equalize the present unfair advantage community-property States have over the remainder of the States. It would free an estimated 7,400,000 low-income and elderly persons from any tax obligation and would give proportionately greater relief to moderate income groups on a percentage basis than it would to the high-bracket taxpayers. In short, it is an acceptable proposal from an economic point of view and one which would not cripple the Federal budget.

Which way the wind will blow on this latest proposal may not develop clearly until discussion on the floor of the House gets underway in January. No doubt plenty of straws will be tossed into the wind while Congress takes its Christmas holiday and public opinion may well be fanned to good heat before that time.

It is conceded in advance that tax cutting will be a major political issue in the coming Presidential campaign. Both parties want the credit for any cuts enacted. For this reason, if for none other, the taxpayers will do well to keep their hopes for income-tax relief in check.

The opening gun has been fired, now let the battle rage, and it is to be hoped that this time the public will come out the victor.

[From the Tampa (Fla.) Morning Tribune of December 20, 1947]

CONTEMPLATED SUICIDE

Mr. KNUTSON, chairman of the House Ways and Means Committee, trying again to be a Santa Claus to the suffering taxpayer, has introduced a new tax-reduction bill, which he proposes to make the first major business before Congress when it reconvenes in January.

This new bill removes the major objection urged to the former one by President Truman when he vetoed it, after its passage by large majorities in both Houses. The veto was narrowly sustained. The President attempted to support his veto by asserting that the bill discriminated in the tax cutting in favor of the big fellows and against the little fellows. That wasn't altogether true, but, at lease, it afforded some pretense for the objection.

The new bill, KNUTSON says, is "veto proof," because it would give the benefit of its reductions mostly and decidedly to the smaller taxpayers, with only nominal reductions to the big taxpayers. While it would give cuts to all the Nation's 54,500,000 payers of income tax, the cuts would range from only 10 percent in the highest brackets to as much as 100 percent in the lower brackets. It would remove entirely from the taxpaying rolls 7,400,000 low income and elderly persons. For example, a man with a wife and two children, and an income of $2,400 a year, who now pays $76 income tax, would pay nothing. The bill gives special exemption to persons over 65. All of the lower bracket taxpayers would benefit on graduated scale, from 32 to 100 percent—77 percent of the total reduction would be on incomes less than $4,000. The appeal of this relief to millions of low-income citizens must be irresistibly attractive. Furthermore, the Knutson bill includes the community-property feature, giving an additional saving to taxpayers in the other 36 States now enjoyed by those of 12 States, under State law.

As to the effect on the Federal Treasury, the total of the reductions, estimated at $5,600,000,000, would be well within the estimated Treasury surplus of $7,000,000,000 for the current fiscal year.

It would be extremely difficult to find a reasonable objection to this tax measure. But what did the President say? At a press conference he spoke out against any immediate tax cut. He gave the impression that he would veto it, as he did its predecessor. If he does, he will be denying needed and just tax relief to 54,000,000 people, most of them of small income, to whom the payment of the present income tax is a serious burden; he will also be refusing to remove the rank discrimination under which the people of 12 States are enjoying community property tax saving, which the people of the other 36 States are not permited to use.

In our candid opinion, if Mr. Truman vetoes this bill or any bill carrying similar relief to the taxpayers, he will make himself both a political suicide and a political murderer—killing himself and his party.

Freedom Train Could Run on a Sound Track

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a well-written, admirable, and impressive editorial on the subject of the Freedom Train recently appearing in the Saturday Evening Post by the distinguished author and commentator, my friend, Richard Attridge, of Clinton, Mass.

His proposal is the product of an alert, active mind and appears to be one ready

solution to what has been the rather vexing problem of trying to arrange a suitable itinerary for the Freedom Train and also accommodate the thousands of people who desire to inspect its contents in various local communities throughout the country.

The editorial follows:

FREEDOM TRAIN COULD RUN ON A SOUND TRACK

(By Richard Attridge)

Why wouldn't it be a good idea to put the Freedom Train on a sound track, and make a documentary movie of it? Wherever the Freedom Train has gone in its travels, it has turned out to be a smasheroo attraction. In fact, the toughest problem for the people planning its itinerary was how to take care of the multitudes who flocked to see the train and its precious cargo.

It hasn't been possible to solve this problem completely. Although thousands of people lined up patiently, in rain or shine, sometimes the lines have been too long, especially for older folks and small children. Physical train dimensions arbitrarily impose limits on the number of people who can view the Freedom Train exhibits in any specified length of time, and also curtail thoroughness of examination by those who manage to get aboard.

A documentary film would bring the Freedom Train to every whistle stop as well as to our larger communities; it would give a break to old and young; it would permit close-up and unhurried study of the great signposts in the history of our heritage of freedom. In brief, it would do almost everything the Freedom Train itself does, more easily for millions more people. The film could, of course, be shown as long as people wanted to see it, could be revived through the years or possibly made available for schools and community groups. If Hollywood should decide to contribute this documentary movie to the Nation, its rentals could be used to support some good cause—perhaps to provide extra little luxuries for the disabled veterans who have already paid extra fares so that the rest of us could ride on the Freedom Train.

Without trespassing on the highly technical field of movie production, it is obvious that Hollywood is equipped to dramatize supplementary historical material that could not be contained in the actual Freedom Train. Of one thing we're certain: Hollywood wouldn't have to glamorize the Freedom Train; it will highball along without any love interest. Hollywood's favorite boy-meets-girl theme might be happily underscored simply by showing an American youngster taking off his hat to the Goddess of Liberty.

Is Washington Becoming Like Berlin and Nazi Propaganda Machine?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am inserting the following article by Louis Bromfield appearing in the Omaha (Nebr.) Sunday World-Herald of December 21, 1947:

A VOICE FROM THE COUNTRY—"NEVER SO MANY BEING BAMBOOZLED BY SO FEW"

(By Louis Bromfield)

I wish it were possible for every thoughtful American citizen to spend a week each year in Washington watching what goes on. He would learn and understand many things which, save in the case of the most objective news reporters, are seldom revealed to him.

Most reporters and columnists living on the spot are so subject to pressures, local prejudices, personalities and ideologies that frequently they cannot see the forest for the trees.

The fundamental trouble is, of course, that our Government has become so big and so bureaucratically involved that issues are no longer determined along the lines of the policies of two political parties. Issues are threshed out by the policies of countless departments, bureaus and lobbies working inside government for their own individual and selfish convictions and interests.

The fact is that in some instances we have come near to attaining a kind of government by direction and bureaucratic propaganda which, resembles the Goebbels technique in totalitarianism.

INSIDE LOBBIES WORST

There have always been outcries against the lobbying of private interests. But the dangers of these lobbies are mild as compared to the lobbying and pressures of bureaucratic interests inside government itself.

The danger is even more devastating when one or more of these groups inside government teams up with outside special interests.

It is not uncommon nowadays to find open editorial reference to the State Department lobby, the Army and Navy lobbies, and so forth. All of these as well as other bureaucratic lobbies are powerful and dangerous, and often as selfish in their aims as any public utility, labor, or farm lobby.

They are particularly powerful and dangerous when they operate inside government and are able to exert pressures, invisible to the people, directly upon the President and upon some Members of Congress.

Perhaps the most flagrant example was the intense bureaucratic lobbying about a year ago against any attempt by members of either political party—Republican or Democrat—to bring about economies in government. Every pressure known to old-fashioned and comparatively harmless lobbying, together with some new and shameless wrinkles, was exerted by Government bureau groups.

Scruples or conscientious public service had little to do with the motives. They were essentially the motives of ambition, power, and self-preservation.

LATEST BALLYHOO

Lately the people of the Nation have been treated to a high-pressure propaganda campaign in behalf of an all-out Marshall plan. Certain elements in the State Department, the Army, and the Navy have exerted every possible concealed and inside pressure upon Congress and upon the President. The latter is not too sure of himself or his information. All too rarely he is given to making judgments of his own.

The propaganda concentrates itself upon three aspects of the international situation:

1. That the collapse of Europe is inevitable unless we pour out our wealth in unlimited quantities.

2. That unless we do so communism will swallow up Europe.

3. That war with Russia is inevitable and may happen at any moment.

Plenty of sound and informed observers do not believe any of these premises. Their voices have been obscured by the skillfully managed propaganda hullabaloo.

The State Department has, as far as possible, taken the attitude that the American people are unable to judge because they do not know many of the facts which that Department and the Army and Navy are keeping hidden. This is, of course, nothing more or less than the old bureaucratic totalitarian technique.

The answer to it is simple enough. The people have every right to this absurdly mysterious information and can thus judge for themselves.

PROFITEERS JOIN IN

Some of the State Department motives are obscure, and some apparent.

One can also discover the trail of many private interests, both industrial and banking, which are all out for the Marshall plan because they stand to benefit greatly by profiting in foreign markets and the benefits of scarcities, exchange, and high prices.

In other words, American taxpayers will pour out money which, after being filtered through Europe, will return in concentration to the pockets of the individuals and special interests involved.

This is one aspect of the European aid program which has by no means been sufficiently explored. But they are in there pitching, supporting every move of the State Department, the Army and the Navy, and in turn being supported by these bureaus.

The self-interest of the Army and Navy cliques is much more transparent.

Like all military groups at any time in any country, they want money and prestige and power. They are unwilling to return to democratic government the powers delivered to them in time of war.

They fight law, tax reduction, and economies because the appropriations which give them power and prestige may be cut.

Of course, the best technique for maintaining both power and big appropriations is to scare the living daylights out of the American people.

Consequently they keep circulating rumors of the mysterious powers and menace of Russia, many of which are unfounded in fact. They keep dangling bogeymen constantly in front of Congress and the people.

BUREAUCRACY'S PATTERN

By design or by accident, these three groups—State Department, Army, and Navy—have become dangerous and powerful lobbies inside the Government, seeking to dominate the Nation itself.

This is an age-old pattern of bureaucracy.

The Washington Government has developed since 1933 steadily increasing evidences of a vicious bureaucracy. It is becoming like the old days of Berlin when in Germany government and its bureaus became one gigantic propaganda machine.

Editors and other citizens with a sense of public spirit should take a little more notice of bureaucratic lobbies and pressures. They are infinitely more dangerous to this Nation than any outside special interest lobbies have ever been. As one suspicious Senator put it the other day, "Never are so many being so bamboozled by so few."

One thing is certain that never in all our history have we had a Government so dominated by military men.

They are everywhere, going in and out of the White House, the State Department, the Capitol, not singly but in troupes, muttering about the horrible mysteries which cannot be told to the American people whom they are paid not to dominate but to serve.

This is the first of two articles dealing with the dangerous bureaucratic lobbies which have grown up unnoticed, inside our Government.

More Education for Everybody

EXTENSION OF REMARKS

OF

HON. ROBERT TRIPP ROSS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following editorial from the Daily Republic, Mitchell, S. Dak., by W. R. Ronald, chairman of the planning committee, board of directors, Dakota Wesleyan University, and owner and editor of the Daily Republic:

MORE EDUCATION FOR EVERYBODY PROPOSED

Interesting and progressive is the report of the President's Commission on Higher Education. What it proposes is a great deal more of so-called higher education, not only for those of college student age, but of adults as well.

Correlatively a book has appeared, written by Mrs. Viola Lurch Cox, of New York, a life-long educator, entitled "Wealth Through Education." Its premise is that all wealth is derived from education, a point that need not be labored. Therefore, it is proposed to finance universal higher education by means of promissory notes given by the students, the Government to use them as the basis of a special issue of currency.

This method of financing some such program as that proposed by the President's Commission is novel. But it would have this tremendous advantage over any other kind of currency, namely, that it would finance an investment in education that, after all, is more of an asset than any material possession.

Dakota Wesleyan University's commitment to an education based on recognition of spiritual law as the only law, in which many educators, one foundation and two national organizations already are interested, would add the inestimable value of moral quality to the higher education proposed for the great mass of the people of this country.

Union college has demonstrated that very few young men and women are incapable of benefiting from a college education. That is supporting evidence for these attempts to realize upon a sacred assurance that all men shall know the truth and that it shall make them free.

Well-Known Publisher Surveys Conditions in Europe and the Near East

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. LUDLOW. Mr. Speaker, while congressional committees were touring Europe and the Near East last summer and fall, Mr. Eugene Pulliam, publisher of the Indianapolis Star, was making a careful survey of the same regions on his own hook, accompanied by Mrs. Pulliam, who paid particular attention to conditions affecting women in the countries they visited. Mr. Pulliam has prepared a summary of his conclusions and I have obtained permission of the House to insert it in the CONGRESSIONAL RECORD on account of the light it sheds on vital problems. Mr. Pulliam's conclusions are the findings of an excellent reporter and a fearless and independent investigator. His summary is as follows:

The blessings and privileges of free America are never so sweet as when you are forced to get along without them. Coming back to the United States after two months in the regimented atmosphere of Europe and the Near East, you are overwhelmed by the sheer joy of being free again. Free to go where you please, free to take a plane or a train without filling in a dozen forms, free to pick up your traveling bags without detailed examination by unfriendly officials, free to go from one city to the next without consent of suspicious police, free to buy food or clothing or what-have-you without governmental coupons or restrictive red tape, free to express your opinions, free to voice your protest, free to say yes and free to say no, free to be a free American once again. It is an amazing experience. You wonder how on earth you ever could have taken freedom for granted like the air you breathe.

The contrast between living conditions in America and almost every country of Europe and all those of the Near East is sharp and stark. The average industrial worker or the average farmer of America lives in Utopia as compared to the lot of the workers and farmers of Europe and the Near East. Industrial workers of America have automobiles, electric lights, radios, refrigerators, a variety of good food and warm clothing. On the continent the workers struggle to remain alive. They know nothing whatever of modern conveniences or simple luxuries. For the most part they live in one- or two-room hovels or in crowded flats.

Not one in 50,000 owns an automobile; very few have radios. There are electric lights in some of the flats, but no electric refrigerators. Their one absorbing interest is to get enough food and clothing to keep alive and warm.

The living conditions of the farm class are even worse, except they do have more food than the city workers. But electric lights, automobiles, and modern farm equipment are practically nonexistent in the farming sections. They live and work and struggle as the peasants of Europe did 200 years ago.

Existence for the middle classes is not much better than that of the industrial workers and farmers. In prewar days the middle classes did enjoy many of the so-called better things of life, but their standard of living at its best was very meager compared to American standards. But all of that is changed now and the middle classes, too, are fighting to stay alive. In the black-market countries prices are soaring and inflation is rampant. In the countries where there is a rigidly controlled economy wages are low and regimentation is a stone around every person's neck.

There is no personal freedom as we know it anywhere in Europe, except in a modified form in the Scandinavian countries. Even free England is no longer free. Under national socialism Englishmen are regimented as never before. They cannot leave the country without the government's consent and even then can take only £20 with them. Elsewhere on the continent everybody is under constant police surveillance. There are restrictions of almost every possible nature, restrictions meekly accepted by the people there, which if attempted here would cause a social revolution.

"If they don't like all these restrictions why don't they rise up and rebel?" a friend asked me yesterday when we were discussing conditions in Europe. It is a natural question and the answer is just as simple: "You don't rebel in the face of machine guns." In generations gone by men could rise up against tyrants and win with clubs and forks. But not any more. Two trained soldiers armed with machine guns can keep a thousand men cowed. In addition, the people of Europe are so tired and exhausted by war they have no heart for rebellion. Complicating their economic troubles is the ever-growing fear of a Soviet war of aggression. Against the Soviets they have no adequate defense. They can only look to America and pray that we will save them.

Socialization, regimentation, class privilege and war have brought Europe to its present unhappy state. By contrast consider conditions in free America. Nowhere on the face of the earth has any country even remotely approached the American standard of living and personal liberty that we enjoy under free enterprise. Nowhere else is there so much production and plenty. This is in fact the workers' republic because almost everybody in America works and works hard in an atmosphere of unrestricted opportunity. That is true of no other country in the world. It explains why so many, many millions of Europeans would give anything they possess just for the chance to come to America to live. They would give everything for what all Americans have for free.

The Constitution

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. ELLIS. Mr. Speaker, I submit to the House for the consideration of its Members a letter written by F. C. Sammons and published in the Huntington (W. Va.) Herald-Advertiser of December 21, 1947.

Mr. Sammons is a successful construction contractor and a student of history and world affairs. You no doubt will find his letter interesting.

The letter follows:

THE CONSTITUTION

EDITOR, THE HERALD-ADVERTISER:

Prominent educators have worked to undermine our Constitution, but I nominate Prof. Charles A. Beard as the pioneer in this field. He was born in Indiana in 1874, he studied at Oxford and received his Ph. D. at Columbia University in 1904. He later wrote textbooks and taught government at Columbia.

In 1913, he wrote The Economic Interpretation of the Constitution—a textbook which devotes much space to enumerate the amounts of money loaned by each of the founding fathers for the financial support of our revolution. The professor insinuates that the patriot fathers may have written the Constitution in order to insure the repayment of their personal loans. He apologizes for raising the dangerous Constitutional question which finally led up to the Supreme Court packing controversy in 1937. Professor Beard had no fine scruples against slandering the motives of our patriot fathers, therefore, it is fair to question his economic motives.

Since reading this book (years ago) we have learned much about the power of the purse, of Marxist Labor International, and the London School of Economics in subsidizing Socialist textbooks and other subversive propaganda.

Please remember that this is a high school or college library textbook—cleverly designed to cast doubt over immature minds regarding the value of our Constitution—a Constitution which was written to protect private enterprise, private property, and a personal money system—and to protect us against all forms of Government ownership, state capitalism, and flat money system. The whole tenor of the book suggests that fascism—or flat money, or what have you—might be a better type of government than the one we inherited.

Since Mussolini, Stalin, and Hitler came to power as a natural result of such doubtful educational theories, which were taught in European schools; why don't we reestablish in our school system the teaching of the main object of our Constitution, and do it before it becomes too late?

F. C. SAMMONS.

Truman's Doctrine Has Failed

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a timely editorial written by Mr. John S. Knight, editor of the Chicago Daily News, under date of Saturday, January 3, 1948. Mr. Knight calls attention to the fact that last March, when the gift to Greece and Turkey was being considered, he predicted that it would end in a dismal failure. He now reaffirms that statement. He further points out that the failure of Mr. Truman's efforts in Greece and Turkey will mean that the Marshall plan is in jeopardy. I include the editorial referred to:

TRUMAN DOCTRINE'S FAILURE BODES ILL FOR MARSHALL PLAN

When the Truman doctrine (remember?) was first proposed last March, I predicted that it would end in a dismal failure.

It seemed quite obvious then, and even more so now, that merely lending Greece and Turkey $400,000,000 would neither "doctor up" the Greek economy nor drive the guerrillas from northern frontiers.

After Congress voted for the Truman loan, I said on August 31 that "the United States is now reduced to a painful choice between pulling out when the loan is exhausted or sticking with the Truman doctrine, regardless of cost and American lives."

My views came in for a great deal of criticism at that time because it is part of the American credo that you can fix anything with money.

EVEN PUNDITS SEE THE LIGHT

Now, even the heavy thinkers of American journalism are beginning to see the Greek situation in its true light. A revealing dispatch by Walter Lippmann brings out these facts:

1. We have given the regular Greek Army 74,000 tons of military equipment and provided all of the food for the entire Greek Army of 100,000 men. Lippmann estimates that the guerrilla forces number not more than 20,000 and says they cannot have received anything like the same amount of help from the Yugoslavs and the Bulgarians.

2. The present Government in Greece, although nominally a freely elected government, quite plainly does not have popular support.

3. Some supporters of the Government have begun to do business underground with the rebels. American food and medical supplies are distributed exclusively by Greek politicians.

4. The same people in the United States Government who said last year that $300,000,000 and 78 military advisers would do the job are now saying that two American divisions can stiffen the Greek Government and seal the border.

In that connection, Mr. Lippmann quite correctly observes that if two divisions are put ashore in Greece, the whole military power of the United States will have to be committed to support them. If two divisions do not suffice, it will be necessary to send as many more divisions as are needed to accomplish the purpose for which the two divisions were sent.

That is precisely what I said last March when Dean Acheson, then Under Secretary of State, told the Senate Foreign Relations Committee that "the present plans do not include sending troops to Greece and Turkey."

Mr. Acheson's diplomatic double talk was quite transparent. State Department officials now concede privately that the present Greek Government can never restore order without the help of American troops.

According to James Reston, of the New York Times, our loan has neither helped the Greeks to carry on alone nor will it permit us to end the investment and pull out of Greece with honor.

HOUR IS LATE FOR DIPLOMACY

Mr. Lippmann calls for diplomacy to extricate the United States from a position where its prestige is so dangerously involved with the fate of the Greek Government. He suggests that the middle powers such as Canada, Brazil, and Sweden be invited to submit proposals for settlement of the Greek problem.

The suggestion is a good one, but tragically late. I protested at the time of the Greek loan that the question could be resolved by further discussions between the nations involved.

President Truman's answer was to ignore the report of the international commission then investigating conditions in the Balkans, and to bypass the United Nations with a flimsy, unrealistic, political formula which came to be known as the Truman doctrine.

At the time, I called it an open invitation to war and subsequent developments have not caused me to alter that view.

The two important issues of 1948 will be the Presidential election and the Marshall plan.

Of the two, the Marshall plan is more momentous. If passed by Congress along the lines of President Truman's recommendations, it will involve any future President in a long-range policy having utterly unpredictable results.

The weaknesses of the Marshall plan are precisely the same as those which handicapped the Truman doctrine.

The money flows from the United States to unstable governments which are unlikely to survive even a portion of the 4-year program.

Assurances from present governments that efforts will be made to stabilize currencies, balance budgets, and stimulate production are flimsy props which may collapse at any time under political pressure.

Unless there is a resolute determination on the part of European peoples to recapture something of the national heritages which once made them strong and virile no amount of American dollars can bring about their salvation.

However, our national pulse beats in sympathy with European distress, and it is a foregone conclusion that Uncle Sam will spring to the rescue.

CONSIDER ITS EFFECT ON UNITED STATES

It is important, therefore, to consider what repercussions the 4-year, $17,000,000,000 Marshall plan will have upon our own domestic economy.

President Truman blithely observes that we have already given approximately $15,000,000,000 to world recovery and that the additional proposed expenditure of less than 3 percent of the expected national income is well within our national resources.

The fallacy of the President's argument is that it is exceedingly dangerous to speculate in futures, and I am not thinking of the grain market.

He is assuming a continuance of our boomtime income of nearly $200,000,000,000 a year. What he fails to mention is how we would meet our commitments under the Marshall plan if the national income declined to $150,000,000,000 a year, still a high mark in comparison with free spending 1929 figures.

Wouldn't it be far more prudent for us to vote a 1-year appropriation and take another look at the world situation at the end of that period?

We might discover that the European recovery program was inflating prices in the United States to such an extent that our own economy was being placed in jeopardy.

We might learn that despite all of our efforts to help Europe the plan was failing because of political inepititude, maladministration, or internal conditions in the Marshall bloc of nations over which we had no control.

In the event of a severe recession in the United States during the 4-year period we might find that we no longer could afford to play the role of Uncle Sugar.

Americans are traditionally the most generous people in the world. But how many of us are willing to make firm pledges to the community fund or the Red Cross for a 4-year period?

Our personal charities are based upon what we feel we can afford to give this year but everyone reserves the right to revise the amount of next year's contribution to fit his bank account.

If this is a prudent course for individuals to adopt, should our Government, of which we are collectively the owners, pursue a less sound policy?

PLEA FOR CHINA ALSO MISLEADS

Let us not be misled, either, by the current clamor for additional help to China. More than $5,000,000,000 has already been poured down the Chinese rat hole in a vain effort to support the corrupt and hopelessly inefficient regime of Generalissimo Chiang Kai-shek.

A neutral survey by Associated Press correspondents in China reveals that her deteriorating military-economic situation is reaching a point where neither American money nor arms will have much bearing on the struggle with the Communists.

Correspondent Joseph Burke reports from North China that "Peiping opinion questions whether there is enough money in the world to pull Chiang Kai-shek's government out of the hole far enough to save it for any length of time."

As we go into 1948, a year fraught with fateful consequences, our heads rather than our emotions should govern the United States foreign policy.

We must develop the moral leadership which will enable us to find the truth and fend off propaganda; to approach every problem without prejudice, expediency or fear; to perceive the difference between right and wrong and be fired with the courage to uphold the right, regardless of personal consequences.

We can then bring some inspiration and hope to a weary and confused world suffering from the ravages of war and an overdose of political patent medicine.

JOHN S. KNIGHT.

The Attack on Inflation

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. ANGELL. Mr. Speaker, in the Portland Oregonian published in my congressional district there appeared on December 30, 1947, an editorial under the above caption which is worthy of careful consideration while we are studying

the problems facing the second session of the Eightieth Congress having to do with inflation and the high cost of living. The editorial follows:

THE ATTACK ON INFLATION

When President Truman submitted his 10-point inflation control plan—which may be the basis of his campaign for election in 1948—Congress had three choices. It could have accepted his program of "selective" controls on prices and wages, and selective rationing; it could have gone whole hog, with rationing and price and wage ceilings in all lines; or it could, and did, devise a program based essentially on the hope of voluntary agreements in business and agriculture.

The public recognizes that Democrats and Republicans, though sincere in their hopes of stopping inflation before it culminates in a national bust, are angling to lay the blame on the opposition if prices continue to go up, and to take credit to themselves if the rise is halted.

In deciding to sign the Republican measure, President Truman termed it "inadequate" and stated flatly: "This bill will not reduce the high cost of living and it will not keep prices from going even higher." Yet he agreed to sign it, and promised that his administration would utilize the authority given "to the fullest extent." Obviously, he considers it better than no legislation.

The President's criticism of the Republican program would have carried more weight had there been more meat and less of political sail-trimming in his own proposals. Some Republicans who believed that Mr. Truman's plan for selective controls could not possibly have succeeded, and would have created great discord and inequities in industry and labor, were tempted to let him have the program and the responsibility. But greater consideration had to be given to the national peril, and to this Nation's assumption of world assistance.

Yet neither Republicans nor Democrats were willing to thrust upon the Nation a system of all-out rationing and price and wage controls unpopular in wartime and unexampled in peacetime. Would the people have accepted such a program as a necessity in a period of high wages, high employment, high prices, and high profits? Congress and the President thought not. Criticism by each of the other's program may not then be taken too seriously.

Obviously, the steps taken by Congress will not be effective unless Mr. Truman's government firmly and vigorously implements them with positive action. Perhaps, as the President predicts, the program still will fail, but if it does the need will be shown positively for emergency powers over the lives of the citizens such as most Americans abhor.

There may have been significance in Mr. Truman's omission, in his recapitulation of the powers he had demanded, of the item of selective wage controls in vital industries. If he intended to give Government encouragement to another round of wage increases, the public will be justified in assuming that he will not make much effort to achieve the price-lowering aims of the GOP program.

By encouraging higher wages, on the one hand, and pointing to a failure of the congressional anti-inflation plan, on the other, the President could put himself into a strong vote-gathering position. Yet there is not yet reason to doubt Mr. Truman's sincerity in pointing to the Nation's danger. A strong nonpartisan administration of the Republican program would prove him a better President than politician.

The fundamental hope of stopping the price climb and getting more production lies, however, with business, agriculture, and labor. The unanswered question is: Are the leaders in the private-enterprise system willing to work together to stabilize the economy and prevent a world-shaking collapse? The President and Congress can only point the way, short of an economic dictatorship distasteful to a great majority of the citizens.

Plug This Rat Hole

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release of Hon. Samuel B. Pettengill, a former Member of the House:

PLUG THIS RAT HOLE

The high cost of living and the high cost of giving are in competition. Whatever we give under the Marshall plan, the colossal waste between giver and givee must be stopped.

Senator STYLES BRIDGES, after a look at Europe, reports "miles" of American goods which have been rotting on wharves for a year or more. He believes much of this is due to the hostility of European merchants and businessmen who don't want American relief goods to compete in their markets. How do we stuff up this rat hole?

Obviously, this is no job for left-wing social welfare workers. Some mighty tough talkers must be put in charge. The greater the need of the destitute for relief the greater the need for hard-boiled handling of international charity. Somebody must crack the whip and get the food into the homes of the hungry. Otherwise, local interests and black-market politicians will gum up the works to prevent the group in charge of distributing the food to the hungry from getting the political credit for our charity.

There must remain one impregnable Gibraltar in the world, if the world is to be saved. Uncle Sam is the only visiting fireman now able or willing to respond to any alarm. If the fireman gets sick, who will take care of him?

It is a new thing in American history to hear huge crowds in Paris and Rome and Cairo shouting: "Down with Americans." Are American troops going to be sent into the Near East when British troops pull out?

We used to say, "Don't set your plow too deep." But that was when America was growing up to the mightiest stature any nation has ever achieved. It was before the waste of public funds was a social virtue, and careful Government bookkeeping had ceased to be honored.

Everyone here was under some pressure to buy war bonds. Patriotism was a pressure—an honorable one. But no one was actually compelled by law to buy a bond. Yet, when our Government makes a loan to a foreign government on its promise to repay, the President and Congress compel every citizen, indirectly, to purchase a share in a foreign government's promise.

The loan to Britain a year and a half ago, of $3,750,000,000, amounted to $27 per capita from American pockets. The total aid already extended to Europe since VE-day, plus the new Marshall plan, will amount to about $250 per capita, or $1,000 for an American family of four.

It is interesting to compare these figures with the taxes that brought on the American Revolution in 1776. At that time England was forcing Americans, per capita, to pay her about $3 a year, mostly in customs duties. The tax on the tea dumped in Boston Harbor was threepence per pound. How would you like to pay taxes of $3 a year, or 25 cents a month, to support our Federal Government today?

This comparison is made from figures in a book published in 1766, when Patrick Henry and other patriots were protesting taxation without representation. The book's title is "Considerations on the Propriety of Imposing Taxes on the British Colonies." Interesting reading 181 years later.

Did the atom bomb, the Frankenstein which we created, repeal the Declaration of Independence? If so, sad news to old Sam Adams in his grave: "If I have a wish dearer than that my ashes may be mingled with Warren (who died at Bunker Hill) it is that these American States may be forever free and independent."

SAMUEL B. PETTENGILL.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast of my colleague from Massachusetts, Hon. CHRISTIAN A. HERTER:

Good evening, ladies and gentlemen, in the next few months the Congress of the United States is going to have to decide whether or not it, on behalf of the American people, will authorize a program of foreign aid. The day after tomorrow the Senate will open up hearings on the question and early next week the House Committee on Foreign Affairs will continue its hearings which it conducted for 1 day at the end of our special session. Congress's action is being watched not alone by the 16 nations of Europe which participated in the Paris Conference to draw up a plan of mutual self-help, but likewise by the Far East, South America, and our neighbors on this continent both to the north and the south. Each of these nations, in varying degree, is hopeful that the United States in making available for reconstruction purposes some of its dollars and its commodities, can put the world, or at least that part of the world which is not within the orbit of the Soviet Government, on the path toward greater productivity, a higher standard of living, and greater political stability. Russia and her satellites alone are opposing any program of aid to any European or Asiatic country with all the power of their influence and their great propaganda machine.

Generally speaking, I think it's fair to say that the majority of the Members of the Congress feel that the United States in its own self-interest should give aid within the limits of its financial and economic capacity. However, there is a wide divergence of opinion; first, as to the amount of aid that can safely be given; second, as to the way in which aid should be administered; and third, the extent to which the United States should look forward to any repayment, whether directly through the products which we need and which foreign nations can supply, or indirectly, through the restoration of the world's strength and freedom. To attempt to discuss all these divergences would be impossible in this brief period, but I do wish to concentrate on the second area, namely,

differences of opinion with respect to administration, because in my opinion the finding of the correct answer to this problem very directly affects the others. Unless the United States can provide the strongest and most efficient administration possible for the carrying out of any program, then dollars spent or commodities given away, are likely to be lost and any hope of repayment either in terms of goods or in terms of a stronger and freer world may well be futile.

At the moment the divergence of opinion as to how any program of aid should be administered can be found most clearly in comparing the draft of a bill which the State Department has submitted for the carrying out of its ideas and the bill which was filed by myself and which carries out the unanimous ideas of an 18-member special committee of the Congress of which I had the honor to be acting chairman. This latter committee was directed by the Congress to make a particular study of this subject and devoted a greater part of the summer and early fall to its work both by visiting the principal countries of Europe affected and by working here in Washington.

The major differences in the two approaches are as follows: The State Department bill, in effect, places the entire administration of the program directly under the Secretary of State both in its domestic administration and in its administration overseas. Although a special agency is created and a special administrator named, nevertheless, the latter is actually under the direction of the Secretary of State in all matters affecting foreign policy, and abroad all of his agents would become in effect a part of our foreign service and could report only through State Department Ambassadors and State Department channels.

My bill would create a special agency organized in corporate form. This agency would have a group of eight directors equally divided between the two political parties, all to be appointed by the President and confirmed by the Senate and one of the directors would be the Chairman of the Board of Directors, and would be the operating head of the authority. The latter would coordinate his work with the policies of the State Department through a foreign aid counsel of which the Secretary of State would be the chairman and which would embrace the principal governmental authorities having a direct interest in the program of foreign aid. He would likewise be required to get the counter-signature of the President on directives which he issued to other Government departments, thereby in effect coordinating his policies completely with those of the President. However, on the technical side he would have considerable autonomy, would be free to select his own personnel both in this country and abroad and would be free, subject to the over-all policies of the President and the Secretary of State, in negotiating special arrangements with each foreign country to which we are extending a helping hand. I am convinced that only through some such special agency as my bill provides can two extremely desirable ends be accomplished. First, the sharing of responsibility by the two major political parties through the creation of a bi-partisan board thereby making a bipartisan foreign policy a reality; second, attracting the ablest brains that we have in this country through giving them sufficient leeway in the carrying out of their administrative duties without having complete direction in all detail by the Department of State. These officials would be free from civil-service regulations and would be acting on a temporary basis. They could be paid such salaries as their services should command. Under my bill the services by contract or otherwise of engineering experts and other technical experts would be possible. Only in some such way could a really competent staff be assembled to administer what in effect would be a highly technical and very difficult operation.

There are other differences in the two bills. The State Department bill would appropriate a given sum of money for the over-all operation and would then leave it to the administrator working under the State Department to determine how much of it should be spent for grants in aid and how much should be loaned to foreign countries. With respect to loans, the administrator would consult with the National Advisory Committee which again consists of administration officials, but does not include the Chairman of the Export-Import Bank and in the making of any loan, the terms and conditions and amounts would be decided by the administrator, and would then be administered by the Export-Import Bank. In my bill it is specifically set out that only food, fuel, and fertilizer can be considered in the grant in aid category; the one exception being that a limited amount can be spent for so-called incentive goods such as tobacco and again a limited amount to take care of urgent requirements such as agricultural or mining machinery for which loans are not immediately available. In my bill the Export-Import Bank capital would be increased and that bank, which in my opinion is one of the most efficiently and ably operated agencies in Washington, would make the final determination as it does today as to the loans which it would make for the financing of raw materials and certain types of light machinery. Both of our bills would presumably leave the financing of capital goods or heavy machinery to the World Bank although in the case of the State Department bill, the Administrator whom they propose could go into this field if he chose to do so.

Again, I am strongly prejudiced in favor of the provisions of my own bill because I feel that we should make full use of an agency which is operating well and which by law can make loans only if such have, and I quote "a reasonable chance of repayment." I do not believe that the United States should make any loans except on such a basis.

The third big difference between our approaches deals with the handling of export controls. The State Department bill would leave export controls where they are now in the Department of Commerce. My bill would transfer them to the new agency. This is an important difference. Any program of foreign aid, whether or not it is limited to certain European countries or whether it includes countries in the Far East, must be directly related to what we in the United States can afford to give or sell not alone to those countries but to all the other countries of the world. It is little realized that during the last year we shipped to the 16 nations of Europe which made up the Paris Peace Conference, only one-third of our total exports. The other two-thirds went to Canada, Mexico, South America, Cuba, India, Australia, etc. Obviously, if an intelligent planning of any program is to be made so as not to weaken our own domestic economy it must be made in relation to the rest of our trade with the rest of the world. The export control is the only control which we have which can effectively channel such goods as we can spare to the right countries. Obviously, that control should rest in the hands of the individual or organizations responsible for our foreign-aid program. In a similar way, the State Department leaves the allocation of foodstuffs in the Department of Agriculture. All allocations in my opinion should be left to the one new agency which would certainly have the best facilities available for determining relative needs. The administrator I propose would have to consult with the Secretary of State and with the President but by and large unless responsibility is fixed efficient administration is impossible. Furthermore, that responsibility ought not to be fixed in the Secretary of State because the State Department has to receive all formal protests from foreign governments and should be free to act as a claimant agency for those foreign governments and also be free from the petty annoyances and difficulties of administrative detail.

There are other differences between the State Department bill and my own, particularly with respect to the use of local currencies taken in payment for goods delivered to foreign governments and with respect to receiving in return certain metals for stock-piling purposes which are either nonexistent or have been exhausted in this country.

I have not touched on the question of the amount necessary to carry out an effective foreign-aid program. That matter is still being carefully studied, but I am very doubtful whether in the first 15 months as large a sum is required as the State Department has indicated. I further feel very strongly that the Congress should not commit itself to any specific sum over a four and a quarter year period. I say this for two reasons, first, because to make a commitment at this time for a very hazardous and unknown future would be foolish on our part and might well lead foreign nations to believe that we have promised just so much help regardless of whether or not they did their own share to help themselves. I firmly believe that we should do what we can to help, but I equally firmly believe that we should review what we are doing at least once every year and that we should continue only so long as real progress is being made and a willingness on the part of recipient nations is being shown to carry out to the best of their ability their own share in the program.

Again let me repeat that I cannot emphasize too strongly the need for a strong organization and one which can attract the ablest brains we have. It is the primary essential in granting help to those who are in trouble.

Thank you for letting me express in this brief way my views on a very controversial matter. Good night.

Meredith Nicholson's Advice to Youths Who Are Unable To Obtain a College Education

---

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. LUDLOW. Mr. Speaker, when Meredith Nicholson, the distinguished author, died, a poor man, at Indianapolis, on December 21, he left a formula which he had used for obtaining a liberal education outside the walls of an educational institution. This formula is a legacy of value to every poor boy and girl in America who cannot find means to obtain a college education. Mr. Nicholson began to earn his own living at the age of 15 as a printer's devil and never went to college. By his own statement he made the city of Indianapolis and its outstanding men his school.

In an autobiographical sketch titled, "Without Benefit of College," Mr. Nicholson detailed his experiences in acquiring an education outside of formal schools:

I shouldn't be writing it at all if it were not for the hope that some boy or girl, denied an opportunity to go to college, or some parent, puzzled and distressed because

a child seems slow or stupid, may find comfort and encouragement in my confession.

He related that he was "undoubtedly below the average child in my ability to learn" and recounted a battle with high school algebra which induced him to end his formal schooling.

My parents were poor, but it was not poverty that drove me from the schoolhouse so much as panic over the algebraic signs—

The Hoosier author wrote.

Upon his withdrawal from high school, he plunged into a different kind of learning—educating himself by talking with outstanding men of all kinds and doing many types of work.

I was making the town itself my school, appointing its most brilliant and stimulating men my teachers and helpers—

He says.

In his sketch he recalls many meetings with Myron W. Reed, then pastor of the First Presbyterian Church; Oscar M. McCulloch, pastor of the Plymouth Congregational Church; with Attorneys John T. Dye and William P. Fishback, for whom he worked for a time, and with many other leaders of the community.

I was probably learning more by observing and listening than from the books I borrowed from the library, which ran the whole range of human knowledge—

He said.

Expressing disdain for the restrictive routine of colleges, Mr. Nicholson said:

I can see now that I would never have been a successful student if I had gone to college; the routine of a fixed curriculum would have crippled my initiative. I gathered such fruit as pleased me from the tree of knowledge and did not worry about the rest.

I have the greatest reverence for exact scholarship, but I was born with what, I believe, is called a journalistic mind and took the shortest cut to any information I wanted.

Who Gets the American Market?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. BYRNES of Wisconsin. Mr. Speaker, a recent editorial appearing in the Green Bay Press-Gazette should give us cause to stop and think. The subject matter is particularly pertinent in view of action taken in the recent trade agreements entered into by the President and in view of the fact that the Trade Agreements Act will expire in June. The big question we must resolve soon is: Who gets the American market?

The editorial follows:

WISCONSIN FOX FARMS

This is not a good time to judge future economic policies because we are still feeling the effects of that great upheaval called war.

But we are naturally interested in the fur-farm problem because we have had many worthy citizens develop the business hereabouts, and they are entitled to our consideration.

The fox-fur industry is laboring hard to keep on its feet. We find that about 65 percent of American imports from Russia last year consisted of furs. These imports didn't do our fur farmers any good although they benefited the Soviets by providing dollar exchange and they also benefited tool makers with whom the Soviets spent their dollars.

It just doesn't seem right. It isn't right. During the past 20 years we were cheering the fellows who dug in their fingernails at a new business venture—that of raising furs instead of depending upon foreign fields or the wilds for them. It takes courage to enter a new venture and use up one's savings or mortgage one's property upon an uncertain future. But it has been ventures of this kind all sewed together that have made America. Our fur farmers burned the midnight oil. They studied markets. They studied animals. They studied food and care. They studied breeds and crossbreeds. They experimented. And they must have balanced in their minds certain perils, for there are always dangers in every business. Yet we doubt that they ever figured their own Government would take their market away from them and give it to someone else.

It is not a matter of the share of this market that goes to the Soviets. It is the deep-seated principle of how much of such market should go to anyone in preference to our own people.

Republican Leaders Review Accomplishments of Eightieth Congress and Assure Country the Republican Majority Will Continue To Keep Their Party's Pledges for Sound, Forward-Looking Legislation

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. AREND S. Mr. Speaker, remarks on the brilliant accomplishments of the Eightieth Congress were made by five distinguished Republican leaders in a radio program on the night of January 5, 1948.

The program was presented by the Republican National Committee over the Mutual Broadcasting System from Station WOL in Washington, D. C.

These leaders of the Republican Party included the Speaker of the House of Representatives, the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, and the Honorable CHARLES A. HALLECK, of Indiana, leader of the majority in the House of Representatives.

Accomplishments in reversing the ruinous trend of New Deal Democrat administrations were detailed in the broadcast, and outlined was the Republican Party's program to maintain the American way of life so that America may continue to be strong and a bulwark for the republican form of government in a troubled world.

Herewith is the full text of the Republican radio program presented over the Mutual Broadcasting System last night:

ANNOUNCER. Republicans are on the air.

On the eve of the second session of the Eightieth Congress, the Mutual network presents from Washington a discussion featuring five leaders of the Republican Party. To be heard are Carroll Reece, chairman of the Republican National Committee; Senators Robert A. Taft, of Ohio, and Eugene D. Millikin, of Colorado; Speaker of the House Joseph W. Martin, Jr., of Massachusetts, and House Majority Leader Charles A. Halleck, of Indiana. And now here is the chairman of the discussion, Mr. Carroll Reece.

Chairman REECE. Good evening. The Republican Party is confronted this year with a great opportunity and with the gravest responsibility ever faced by any political group in history.

This is the appropriate time to appraise the situation, to make plans to take advantage of the opportunity and to discharge the responsibility.

The most important single factor in the determination of Republican success or failure this year will be the record of the Republican Congress.

That Congress made a brilliant record during its first session, despite opposition of Mr. Truman and his executive departments.

It kept every promise its Members had made to the people during the campaign with the sole exception of a reduction in withholding and other income taxes.

It was prevented from keeping that promise of tax relief only by an unprecedented misuse of the Presidential veto power.

During the special session just ended—and despite handicaps imposed when the Truman administration injected domestic politics into the European relief emergency—the Republican Congress made a record equally satisfactory to the American people.

During the second session, which begins tomorrow, the Republican leadership will make additional progress toward maintaining our representative Republic and preserving our American way of life.

Tonight it is my privilege to present four distinguished Republican congressional leaders who will discuss with you some of the high lights of the legislative task confronting the Congress.

Representative CHARLES A. HALLECK, of Indiana, the majority leader of the House of Representatives, is first on our panel. Mr. HALLECK, would you like to tell the audience what, in your opinion, the people had in mind when they voted a year ago last November to give the Republicans control of the Congress?

Representative HALLECK. Yes, Mr. Reece, I would like to do that, but I don't think I need to go into detail to refresh the memory of the American people regarding the chaotic, insufferable conditions that prevailed in this country when the people by their votes in November 1946 said they had had enough.

Our country was on the brink of disaster. The years of New Deal Democrat misrule; their rubber-stamp Congresses, huge blank-check appropriations; pollution of every phase of our national economy by all sorts of alien philosophies—all of these and more, had conspired to strangle industry, farming, and mining.

The American people's memory is vivid on those hectic postwar days when the Truman administration was fumbling and bungling and steering the ship of state toward rocks of destruction.

The war had ended but controls, directives, Executive orders, rules and regulations were still going strong and hamstringing the country.

It was plain to almost everybody that bad government was stifling the production of the peacetime goods so urgently needed.

That's why the American people voted for good government—Republican government—and they are not going back to bad government. They are not going back to OPA.

We all remember the meat situation that existed in 1946. Housewives could buy a little meat, but to get it they had to stand in line for hours, or be lawbreakers and go into the black market and pay outrageously high prices. And there were shortages in

nearly every other line—washing machines, clothes, refrigerators, shoes, radios. In short, about all we got was old bull meat and short shirt tails.

Sure, some prices are too high today, chiefly because of the tremendous drain of foreign exports on our limited domestic resources. But the solid fact is that many things that were not obtainable before the people elected the Republican Congress are now on the market shelves.

That is because the Republican Congress got production under full speed ahead. But for that prices would be much higher and we could not begin to meet our necessities, either at home or abroad.

The truth is the Truman administration has no round solution for any of our national problems.

All it wants is power and more power to regiment the people. That is the road to collapse and ruin.

The administration asks for these police-state powers on its record. But the way the administration has abused these powers in the past is the best warning sign for the future.

The American people remember that a few days after they had repudiated the Truman administration in the 1946 elections the President publicly issued a statement acknowledging the people's verdict and pledged cooperation with the Republican Congress.

He has not kept that pledge.

Instead he has called the signals for opposition to every major measure proposed by the Republican majority in the Congress.

He has opposed reduction in Government expenditures. Twice we passed bills to give the people relief from the heavy wartime tax burden only to meet Presidential vetoes. We Republicans have a majority in the Congress, but we do not have the two-thirds required to override all the President's vetoes. Incidentally, with a Republican President, we won't need two-thirds.

Again I ask you to cast your thoughts back to those chaotic days of 1945 and 1946. Labor-management disputes raged all over the country. The year 1946 was the blackest year for work stoppages and loss of production in the entire history of our country. Not once but many times widespread strikes paralyzed large segments of industry.

The people demanding action, we passed the fair and just Taft-Hartley Act.

It is not, and never was, intended to be a punitive law.

Workers now know from experience under its terms that it is a good law and their bill of rights. They know it completely protects their rights—the right to organize, the right of full control over their unions, fair and honorable collective bargaining, and the right to strike. Under it contracts are being made, and, what should be of interest to workingmen everywhere, those contracts are good ones.

The country knows it is a good law because it makes the public interest paramount.

President Truman vetoed the bill. The House of Representatives overrode the President's veto, 331 to 83, only one vote short of 4 to 1. The Senate vote was 68 to 25, or six more than a two-thirds of the 93 Senators who voted. More Democrats in the Congress voted for the bill than against it.

Fellow Americans, I have given you some of the reasons why the people have determined there will be no fifth term for the New Deal. America is going forward!

And now, Chairman Reece, will you take over?

Chairman REECE. Thank you, Mr. HALLECK. Now we go from the House to the Senate. Next is Senator ROBERT A. TAFT, of Ohio, Chairman of the Republican Policy Committee of the Senate. Senator TAFT, suppose you give us a few facts about why we have high prices and what has been done and what could be done to keep them from going higher if the Administration was really interested in that idea.

Senator TAFT. I shall be glad to do that, Mr. Chairman.

The people today are restless and uneasy. In spite of full employment and high wages, they have no sense of safety or security. Abroad, the policies of Yalta have brought us to a condition where no one is confident of peace. At home prices are so high as to shock every housewife and impose hardship on millions of families of the white collar and fixed income groups, the aged and the pensioners. Everyone feels the present artificial conditions will end in a depression if it is not promptly corrected.

Why are prices rising? The New Dealers have been in power for the last 15 years. They have always tried to bring on inflation. They devaluated the dollar! They encouraged Government spending and huge deficits, both before and during the war. They tripled bank deposits and quadrupled the cash money in circulation.

They adopted the extraordinary theory that you could increase the whole wage level by 20 percent without increasing prices, a theory disproved almost before the new wage pattern for factory workers became effective.

They have been promising the farmer higher prices, the consumer lower prices and the workmen higher wages all at the same time. They don't know anything but inflation. How can they be expected to stop it?

Prices go up when there is more money to buy things than there are things to buy. We are producing more today than ever before, but the Government has created still more paper dollars. In spite of these policies, prices were almost stable when Congress was in session in 1947. But more New Deal policies have started them up again.

First, the Government itself is spending four times what it spent before the war and the Government doesn't produce any goods on the selling side.

Second, we have supplied foreign nations with dollars in huge sums to come here and buy our goods. Our exports of goods and services in 1947 amounted to $18,000,000,000, against only $8,000,000,000 of imports. Ten billion dollars came in here to compete with our citizens for goods and services produced here, without adding one bushel of wheat to our production. And most of these dollars were supplied by our taxpayers on credit or as a gift. Of course, the price of wheat rose on the open market to $3. Wheat went up even faster because of reckless Government buying methods. Of course, the members of the Government who bought wheat futures knew the price was going up.

Third, the administration let bank loans increase in a year by $5,000,000,000, creating that many more dollars. It failed to use the powers it has always had to restrict bank credit.

Now the administration demands a return to OPA, to WPB, to the War Labor Board. The President hysterically demands unlimited power to ration the housewife, fix prices, fix wages, and direct every detail of business—the very powers which he denounced 2 weeks earlier as police-state methods. He tries to blame the Republicans because controls were removed. Why, he removed controls himself, 8 months before his price-control powers expired.

In any event, police-state methods won't work in the United States in peacetime as we saw under OPA. They can't be enforced. Black markets spring up overnight. If controls could be enforced, they would stifle production as they have in Europe and did here. And more production is the ultimate solution. Freedom and free competition have made America the greatest producer in the world, and have made it possible for us to help Europe.

Let the administration get at the causes. Increase production and, in the meantime, cut down the demand by less spending for a while.

The New Deal method has always been to set up a bureau, issue orders and regulations, and call out the police to enforce them. They do not know any other method. Let the President try some American methods to cure high prices. Let the Government stop spending itself, and then it can get the cooperation of the people to save more and spend less. Let him tell his bureaus to stop spending $40,000,000,000 a year. Last year he fought every Republican effort to save. Let him cut down on exports, he has had the power right along and has refused to use it.

As long as we have lavish Marshall plans, we will have Marshall-plan prices.

Let the administration make it clear that banks must curtail lending. Most bankers will tell you prices can be turned down over night if the orthodox methods are used which the administration has had full power to use. The power is so great it has to be carefully handled not to bring prices down too rapidly.

The Republican Congress has consistently given the President all the powers needed to stop inflation by American methods. We have given him everything except the OPA and wage fixing and allocation, police state methods. All the important powers he has had ever since the war. But he has not used them. So, even if you get more paper dollars in your pay envelope, the administration policies have reduced the value of your dollars.

Is the President afraid to use American methods? Or is it possible he doesn't really want lower prices? Whenever any food price starts going down, or even threatens to go down, as in the case of sugar, some Government department steps in and starts buying to keep up the price. Does the President think that Democratic chances are better if he keeps the boom going, even at the cost of a serious depression and hardship to millions of consumers?

And now, Chairman Reece, will you take over?

Chairman REECE. Yes, Senator TAFT. And now back to the House again. Next on the panel is the Speaker of the House, JOSEPH W. MARTIN, JR., of Massachusetts.

The Republican Party keeps its promises. During the last campaign it made promises to reduce Government expenditures and wartime taxes. To tell you how the party lived up to those promises, I now call upon the Speaker.

Speaker MARTIN. All right, Mr. Chairman, I'll talk about Federal Government expenditures and taxes.

"Spendthrift" is a term that applies definitely to New Deal Democrat administrations, past and present. Spend and spend and tax and tax has been their guiding philosophy in utter disregard of the road they were traveling—the road to ruin, bankruptcy, and the police state.

For any whim of these New Dealers, any experiment in collectivism they could think of, they spent and spent and they taxed and taxed.

They tell us that if the Government takes the people's money and spends it the result is not inflationary, but if the people use their money as they decide the result is inflationary. That is nonsense.

The American people know that the cost of government has gone up all out of reason. They want those costs cut and we shall do so. The Republican Congress during its first session made a start in eliminating unnecessary expenditures and in relieving the Federal pay roll of persons not needed.

We lopped off several billion dollars from President Truman's padded budget. The number of persons on the Federal pay roll has been reduced by approximately 1,000,000 persons since the beginning of the Republican drive for the elimination of useless bureaucrats.

These accomplishments for the most part were made despite vigorous opposition of President Truman and his followers on Capitol Hill. The administration fought econ-

omy every step of the way, and they turned loose their propaganda machine to misrepresent the facts. All across the country one could hear the wails of busybody bureaucrats, when they were deprived of some of their sugarplums.

The American people are deeply concerned over the high cost of government.

Federal, State, and local governments now cost about $50,000,000,000 a year. That is one-fourth of our entire national income of roughly $200,000,000,000. Think of it. The Nation's food bill was less than $40,000,000,000 in 1946. It costs our people more to be governed or misgoverned than their food costs them. It is estimated that the cost of food has increased about 92 percent since 1939, while the cost of the Federal Government has gone up 331 percent, and we are in our third year after the war.

Yes, we are going right ahead with our reduction of unnecessary governmental expenditures during the session of the Congress beginning tomorrow. Of course, we will not be able to finish the job on it as well as on other matters until the people next November elect a Republican President who will cooperate with a Republican Congress.

Now on taxes: We shall pass a tax-reduction bill during the forthcoming session. I am hopeful we can pass it in the House this month. Continuation of wartime taxes in peacetime is intolerable and indefensible.

The American people know that the Republican Party is the party of economy in Government expenditures and in tax reduction. Twice during the first session of the Eightieth Congress we passed tax-reducing bills only to meet indefensible vetoes by the President. I say indefensible, because the Constitution definitely lodges in the Congress the power to say what the tax policy shall be.

Our Federal Treasury today would be operating in the red if the Republican Congress had approved all of the spend-and-spend proposals of the Truman administration.

Largely due to the freedom of competitive enterprise that the advent of a Republican Congress generated throughout the land—and the constructive record of this Congress—Federal revenue now exceeds outgo for the first time in 17 years.

We got the Government out of the red, and we are getting the Reds out of the Government.

We shall continue to see that adequate funds are provided for effective national defense and for the needs of our war veterans.

We shall do whatever is necessary to maintain the upsurge in home building that began when the Congress took charge of the housing shortage from ignorant New Deal planners.

We appropriated the largest amount in history for flood control. The Republican Party originated the vast reclamation program that today is meeting the needs of our Western States, and the present Republican Congress is expanding and developing that program in a sensible businesslike way.

All of these expenditures are necessary. They will be made and with continuation of the economy record of the present Congress there will be ample margin of Treasury surplus to give the people the tax relief which they demand and which they are entitled to have.

Lower taxes mean more take-home pay. Lower taxes mean more money to invest in business enterprises for production of goods and to provide jobs.

Lower taxes will help cut the cost of living. Taxes enter into the cost of everything we buy, from an automobile to a haircut. Every time you housewives go to the store and spend $10, $2.50 of it goes for taxes.

Lower taxes mean more money to save and for our aged citizens, lower taxes might mean they can obtain the necessities of life. We must cut the cost of government and cut taxes to help keep America strong.

The American people want to do all they can to help friendly foreign countries recover from the war and to stop communism, but our people want the Congress to be prudent about it and not bankrupt America. Only a strong America can be an inspiration and bulwark for the republican form of government. Now, Mr. Chairman, will you carry the ball from here?

Chairman REECE. Thank you, Speaker MARTIN.

Much of the legislation which will be needed to end the chaos bequeathed to this Nation by the dying New Deal will be considered by the powerful Senate Committee on Finance. Its chairman, who is here tonight, is Senator EUGENE D. MILLIKIN, of Colorado, and he is also chairman of the Senate Republican conference, which includes all majority Members of the Senate. Senator, we would like to have your views on the Marshall plan.

Senator MILLIKIN. All right, Mr. Reece.

In 1944 the voters were assured and a majority of them believed that another 4 years of New Deal executive leadership was necessary if we were to win the kind of peace that would justify the appalling human and material costs of the war then in progress.

And so we were promised and a majority of the voters, including our voting servicemen believed, that there would be no territorial aggrandizement by the victorious powers; that liberated governments were to be rooted in the approval of their citizens as determined by secret and uncoerced ballots in free and unrigged elections; that the human race was to walk upright and unafraid in the sun of freedom.

Later on, these and other inspiring principles were formally expressed and pledged by us in the Atlantic Charter and in the Charter of the United Nations Organization.

What happened? At Tehran, Yalta, and Potsdam, the leaders of the executive department of our Government turned their backs on their pledged adherence to the peacemaking principles which I have mentioned and which had comforted and inspired our wartime sacrifices, and joined in deals for their violation. Many of these deals were secret and there is no sound assurance that we have heard the last of them.

It seems that the opposition leaders were operating under a variation of the childhood theory that you can catch a bird by putting salt on its tail. They apparently thought you can tame a bear by feeding him all of the honey he can eat. But there isn't that much honey.

Those deals which were made without the approval of the Congress and without the cooperation and with the abhorrence of the Republican Party, brought down the "iron curtain" with the tragic consequences which confront us today.

It will serve us well to remember these things for it will not be long until we are again told that only the present occupant of the White House has the infallible master touch to insure the victory and keep us out of further war.

Well, what is the Republican position?

We do not say to our opponents—you have made the mess, go and clean it up. Not at all.

Our country has to be protected from the perils which surround it and peace with honor has yet to be salvaged. These facts set our duty.

We have cooperated patriotically on a bipartisan basis and shall continue to cooperate on that basis with every sound measure proposed by the opposition to further those purposes.

I respectfully affirm that the Republican leadership of Senator ARTHUR H. VANDENBERG inspired the reversal of the appeasement policies of Tehran, Yalta, and Potsdam.

The Republican Party wants our foreign policy to move in partisan unity throughout the world.

The sincerity of our purpose has been attested by the conduct of Republicans who represent this Nation in the United Nations Organization. It is attested by the most effective support and leadership which Republicans have given to all our accomplishments in furthering peace and friendly relations throughout the Western Hemisphere.

This should evidence that we shall not allow our disillusionments and frustrations either to move us into isolationism or into measureless, and self-destructive world-wide commitments. We are not insensitive to the troubles of other nations, but this does not require that we shall rush to diaper every squalling problem all over the face of the earth, or shoulder burdens which belong rightfully to others and which they are able to bear.

We shall follow policies of sanity and common sense and these, by their nature, exclude adherence to morbid extremes.

We shall confront the dangers of the hour with courage and self-respect.

We accept the rightful responsibilities of a great Nation. We are not unmindful of the fact that the performance of these responsibilities must necessarily be limited to our means.

We recognize that our broader best interests are served by an economically sound, free, and peaceful world.

It is my personal opinion that this session of Congress will pass foreign-aid legislation.

I believe it is realized that the operation of a foreign-aid program will add to our shortages at home and that this will keep us from buying many things we would like to have, and will exert pressures against the lowering of high prices.

Nevertheless, out of a spirit of helpfulness, unparalleled in world history, I believe that a majority of our people want the Congress to enact foreign-aid legislation.

A decent regard for what is in the hearts of the American people requires that the aid shall not imperil our own economy and shall be of a nature that will help our friends abroad to help themselves.

Decent regard for these duties of high trust will require, among other things, that the Congress shall come up with a plan stripped clean of hysteria, waste, extravagance, overswollen aims, and scatteration. A plan sharply focused on the accomplishment of vital objectives, a plan limited in time so as to assure performance of whatever our promise may be, a plan that will avoid raising false and extravagant hopes, a plan so constructed that the performance can be watched and our aid can be abandoned if the intended purposes are not accomplished.

Now, Chairman Reece, will you take over at this point?

Chairman REECE. Thank you, Senator MILLIKIN. May I say in closing that I am confident the United States is on the road to recovery. We cannot hope for a complete cure overnight.

This Nation has been on the greatest spending spree in history—one which has lasted more than 15 years. The inevitable headache must be endured. But the cure for the headache is not more of the stimulant which produced it.

A year ago the people called in a new physician and under the ministrations of the new doctor substantial progress has been made toward recovery. The American people are not going to adopt a policy of reaction which would take them back to the conditions so vividly described earlier on this program.

The American people are going forward—forward with the Republican Party, the party of progress and liberalism. The Nation's only hope—and it may turn out to be the only hope of the world as well—is the Republican Party, which stands unequivocally for the American governmental and economic system.

The Republican Party had a noble origin. It came into being to prevent slavery and to

promote freedom for the individual. The onslaught on individual liberty by the alien-minded radicals—the Typhoid Marys of communism—who have insinuated themselves into positions of influence in and out of the Government, signifies the importance of maintaining freedom in America at this time.

The Republican Party from its beginning, has been consistent in principle, loyal to its beliefs and faithful to its commitments. Its long record is an assurance of its sincerity and fidelity. The character of the Republican Party gives assurances of good government.

ANNOUNCER. Tomorrow the second session of the Eightieth Congress will convene on Capitol Hill. This evening you have heard a discussion by Republican leaders of what legislative developments may be expected in the months ahead. Heard on the program were Carroll Reece, chairman of the Republican National Committee, Senators Robert A. Taft, of Ohio, and Eugene D. Millikin, of Colorado, Speaker of the House Joseph W. Martin, Jr., of Massachusetts, and House Majority Leader Charles A. Halleck, of Indiana. The preceding half hour was made available by the Mutual network to the Republican Party in the public interest. The program originated in our Washington studios. This is the Mutual Broadcasting System.

Federal Grants-in-Aid

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. BYRNES of Wisconsin. Mr. Speaker, we will soon begin consideration of the Federal budget for the fiscal year 1949. We will be looking for ways and means to reduce this budget to an absolute minimum.

One place where great savings can be made is in the field of grants-in-aid. In this connection, I call attention to the following editorial which appeared in the Green Bay Press-Gazette on December 19, 1947:

WANT $2,000,000?

Three years ago the United States Congress increased Federal aid appropriations for highways. One section of the Federal aid law set up the first specific Federal subsidy program for urban streets which are part of the Federal highway system.

Municipal representatives from all over the country, including Wisconsin, represented such a program as seriously needed. Congressmen listened, and gave them the money. The Wisconsin apportionment amounted to more than $8,000,000 divided through 3 years.

But today, with the delayed expiration date nearing for the expenditure of the first year's apportionment, the State highway commission is worried about what to do with the money that has been credited to this State.

Only about $700,000 of nearly $3,000,000 has thus far been claimed by Wisconsin cities, some 50 of which are eligible for the subsidies, our Madison bureau informs us in an interesting dispatch. The cities are apparently indifferent about the disposition of the remainder of the money. Most of them have filed no plans, made no claims.

Here may be a prime example of the confusing lengths to which the grants-in-aids system has been carried by the national Government in recent years.

The Congress has taxed the American people to supply millions of dollars of highway funds which local authorities, by their inertia and indifference, have indicated will not be used. In spite of repeated admonitions from the State highway commission—which evidently is a little embarrassed by this turn of affairs—the money is going begging.

There are other Federal aid programs with which the State and local governments of Wisconsin can easily dispense. We are not so poverty-stricken that we cannot raise the funds needed for the public services which we actually can use and want. The ignored Federal aids may awaken the people to the wild lengths to which our free-spending Washington Government has gone in recent years to willfully dissipate the resources of the people.

Civil Rights

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Foote, from the Bay City (Mich.) Times:

CIVIL RIGHTS

(By Mark Foote)

WASHINGTON.—The President's committee on civil rights has made an exhaustive report, eloquent and at times persuasive. It would set up a Federal bureaucracy to enforce a greatly expanded list of civil rights, including a Federal antilynching law, anti-poll-tax law, and fair-employment law.

It goes far beyond President Truman's Executive order which proposes a study of better ways and means of "preserving of civil rights guaranteed by the Constitution." It also recommends passage of State laws.

There is much to commend in the report. It enunciates a lofty principle of human conduct, a great ideal of morality if not of law. Some of the results of segregation on account of race, color, creed are a shock to the conscience of all good citizens.

It errs in placing more reliance on compulsion by law than the character, vision, and high principle of the people. It errs also in seeking to extend Federal authority into the jurisdiction of the States.

The Constitution-makers were setting up a limited form of political government. They confined themselves to guaranteeing security of person, citizenship, and freedom of expression. They knew that a government which deals with social questions inevitably gets into the realm of sumptuary legislation.

And as the Constitution-makers realized, 140 years before the prohibition amendment, sumptuary legislation does not work in a free society. No legislation works in a free society unless it has the backing of a large majority of the people.

The report lacks balance because it fails to take into account the great progress made in the past. Only six States now have poll-tax laws. The Negro race in this country has only been out of involuntary servitude since 1863. In the period since it has made more progress than any race in the history of civilization.

Some of the promise for the future is contained in the past. Progress in wiping out injustice and inequality is always slow, but it usually goes along with the burial of old antagonisms. The danger of compulsion by law is not only its ineffectiveness, but in the creation of new antagonisms. The committee puts little emphasis on education and evolution as a solvent.

The committee turned the spotlight on the National Capital as the plague spot of discrimination. It holds that Washington should set the example for the country. In this it ignores the practicalities of the situation—a Congress in which southern Democrats bitterly opposed to breaking down segregation—hold a veto through use of the filibuster in the Senate.

The report stated: "The Capital Transit Co. (Washington street railway system) advertised for workers hundreds of miles away and even recruited Government employees on a part-time basis. In spite of this, the company would not employ Negroes as operators."

This is in error. The company was always willing to employ Negroes. But the union of company employees vetoed it. The company knew if it hired even one Negro operator, the National Capital would have a transit strike on its hands in wartime.

Herewith is presented a viewpoint opposed to that of the President's committee of Donald Richberg, who switched from labor lawyer to bitter critic of monopoly and coercive features of labor law as developed by the New Deal. Richberg filed a brief with the Senate Committee on Labor and Public Welfare opposing a bill to prohibit discrimination in employment because of race, religion, color, national origin, or ancestry. He said:

"The essential liberty to choose one's associates because of personal liking and confidence, or individual judgment, whether rational or irrational in the opinion of others, is one of the most essential freedoms guaranteed by the Constitution. Denial of that freedom is not admirable but detestable.

"All unreasonable prejudice may be assumed to be evil. But bad thinking cannot be legislated out of the human mind. And how can a Government official be endowed with the celestial wisdom necessary to determine whether that which is called prejudice and intolerance is really evil, or is righteous dislike or hatred?"

Is it wrong or right for a deeply religious person to prefer not to associate with those who would like to destroy his religion? Is it wrong or right for a free individualist to object to enforced association with a fanatic Communist, who works to enslave him?

Richberg says if the FEPC law were passed, the management of a religious publication (for profit) would be forbidden to discriminate against atheists or hostile religionists, who might be qualified but certainly not cooperative employees.

If an employer is to be regarded as a mere instrument of state policy who can be required to employ anyone whom a Government bureaucrat finds to be qualified for a particular job, why should not all employment be made through a Government agency?

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me

over Station WNBF on December 27, 1947:

Dear friends of the Triple Cities and my congressional district, in response to a number of telegrams received from home, informing me of a critical fuel oil shortage in the Triple Cities, I immediately appealed to the authorities in Washington.

The Department of the Interior, which is handling this problem, is not very optimistic over our northeastern supply of fuel oil for the balance of the winter. The director told me that we can expect at least a 20-percent shortage in view of increased demands for this vital utility.

Personally, I feel both Government and industry should take care of fuel-oil users who have homes and families to keep warm before they allocate their supplies to any other applicants.

As you know, Congress passed the anti-inflation bill just before we recessed, along with a moral persuasion proviso. This calls upon industry to cooperate with Government to make voluntary agreements concerning prices and allocations of materials.

I am advised that fuel oil will figure importantly in this whole allocation picture. To my mind the powers that be had better think clearly and precisely through the dilemma in order to keep the people who need fuel oil well supplied.

There will be meetings held soon here in Washington, consisting of men from all petroleum concerns to work out with the Interior Department details of this new legislation which is now on the books.

Compulsory methods in connection with the program of distributing our material resources will not work out. You cannot make some individuals do entirely as they should, even for the public welfare.

Programs like this ought to be voluntary. The will to cooperate must be there, else there will be no cooperation. But to make it a success everybody must cooperate.

The solution then is to convince these people that their chance to save our form of government is now. If they get their heads together and carry out a plan whereby all the United States can be supplied sufficiently with the necessary things for living, all will be well.

If they fail to rise to the occasion, then our citizens will begin to go without. The agitators will come out of their holes and begin to stir up resentment against a society which is rich and powerful, yet cannot supply the needs of the people.

Where there is want, where there is suffering, as there will be if petroleum and other fuel are short, there will be grumbling and dissatisfaction. Those in business certainly will realize this and do everything in their power to see even the reduced supplies of fuel oil distributed fairly around the country. No family must be cold this winter.

Some challenged me when I said compulsory measures will not work. They say industry will never be patriotic enough to volunteer.

I maintain the whole business is past the stage of compulsion. It is either volunteer or lose our form of government. There can be no room for selfishness if we are to save America.

Behind the iron curtain compulsory methods have snuffed out all distribution of fuel of any kind. The majority huddle together in their below-zero dwellings and pray for liberation. Brute forces keep them from getting a look at any fuel, to say nothing of burning it in their homes.

It is the same story over there with food, clothing, and other commodities the people must have.

So I say it has reached a point beyond the stage of compelling private enterprise to do anything. They are aware of the seriousness of our plight. They know only too well that if our people become desperate as the result of want and privation, anything can happen.

As I have said so many times, the best way to lick communism is to make the American system work.

It cannot work if profiteers are tossing monkey wrenches into production. It cannot work if exploiters are jockeying prices far above the reach of the average buyer. It cannot work if those who control the high finances of this Nation throw overboard the legal ballasts that hold down our economic balloon and send it skyrocketing into the stratosphere of inflation.

Saving our American system will take more than idle wishing for the moon. Our leaders will have to see that the standard of living, not the cost of living, goes up. They will have to bring about a state of permanent, full employment. They will have to guarantee a greater production of life's necessities than ever before.

Such conditions will do more to keep foreign "isms" away from our shores than all the armies, all the airplanes, all the atomic bombs we can bring to bear against the enemy.

So you see the fuel-oil shortage is an important part of the whole problem. The remedy of this important part is the same right down the line. Let industry and Government realize that equitable distribution of what is available must be the paramount goal. Their patriotism and willingness to preserve America will be the cornerstone upon which the moral persuasion question, the voluntary compliance with regulations made for the good of us all, will be laid.

The American Way

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harvey S. Firestone, president of the Firestone Tire & Rubber Co.:

THE AMERICAN WAY

As we enter into the new year of 1948, one fact becomes crystal clear. Divine providence certainly smiled kindly on us when we became Americans. Mathematically, our chances of being born in the United States were only 1 in 16. And all of us know that today, except in a few rare cases, the plight of the other fifteen-sixteenths is downright tragic.

Hunger, poverty, and desperation stalk the earth. From all points of the compass, pleading eyes are turned to the United States in prayerful hope that out of our compassion and our generosity will come relief for those in dire need.

Certainly we cannot ignore these appeals to our humanitarian instincts. Therefore, through the principles of the Marshall plan, we are considering ways to make up the deficit between what these people can produce themselves and their actual needs for the next few years. There can be no doubt that we have a definite responsibility to do everything within our power to help alleviate starvation wherever it occurs. But there are those among us who feel that some of the nations that are asking for help will come back again and again for more and more unless we insist that they rebuild on the sound foundation that to produce is to progress. Our contribution to world recovery should be essentially in the form of equipment and know-how and not in dollars and cents alone.

Some of the countries now asking for help were great powers long before the United States became an independent nation, yet in the relatively short span of 171 years we have overcome their head start of centuries and have become the most prosperous, the most powerful, and the most successful nation on earth.

How did this happen? How was it possible for a poor, struggling former colony, made up of people of many nationalities, of many races, and of many creeds, to surpass in so short a time the long-established power and prestige of older nations?

OUR AMERICAN HERITAGE

The answer is fourfold: First, Mother Nature endowed us with tremendous resources; second, we had no powerful neighbors to threaten our security; third, we adopted at the start and developed down through the years a better system of government; and, fourth, we created an economic system which brought to us a better way of life.

We established a republican form of government, and we laid down the rules for its operation in a living document called the Constitution. We laid the cornerstone of a new economic system, based upon competitive free enterprise. The rules for its operation were recorded in the first 10 amendments to the Constitution, which we call the Bill of Rights. In effect, we made it possible for every person to go as far as his will and his skill permit, provided that he does not deprive his fellow men of this same right.

Yes; this is the land of opportunity, where such qualities of character as diligence, foresight, and ability are much more vital to success than noble birth, tradition, and force. Over here America has sought to better the lot of all her people by fostering individual initiative through a system designed to produce a higher standard of living.

And so, it is no wonder that despairing people in other lands cast longing eyes at us and wish with all their hearts that they, too, had the material possessions, the political liberties, and the sociological advantages which we Americans enjoy. But, apparently, it does not occur to some of them that the blueprints and formulas for their own salvation and prosperity are all clearly recorded in the pages of American history. Instead of adopting eagerly a system which has been proved successful, some of them waste their time and our money in futile experiments with doctrines which have failed miserably in the past and which, at best, promise only in the far-distant future a standard of living which we Americans already enjoy.

DOCTRINES OF DESPAIR

Today, Americans look at conditions in many other countries, where starvation, poverty, and tyranny rule supreme, and they see nothing to be gained and much to be lost by changing to any other social doctrine. There are countries which call themselves democracies where a citizen may not own land or select his own job. He may not be tried by a jury of his peers. He may not stay away from work without good and sufficient reasons. He may not employ anyone to work for him. He does not have freedom of speech, freedom of assembly, or freedom of religion and his press and radio are censored by his government.

The weekly wage of this same man will purchase 11 pounds of meat or 40 quarts of milk. An American worker, with his weekly income can buy 94 pounds of meat or 263 quarts of milk. Over there, it takes 104 hours of work to buy a pair of shoes. Over here, it takes only 7 hours. Over there, it takes 250 hours of work to buy a wool dress. Over here, it takes only 13 hours. Over here, one miner produces as much coal as four miners over there. With about the same

number of acres under cultivation, the average American farmer turns out four and a half times as much as a farmer over there. Certainly these contrasts speak for themselves.

The complaints against the American system of competitive free enterprise frequently come from those who want to gain fame and fortune by sponsoring some new cause. They come from failures who do not have what it takes to succeed under our system and therefore want to change the system. They come from paid propagandists whose employers resent the fact that we have a successful system and want to wreck it so they can say "I told you so." And they come from visionaries who either ignore or hope to change the laws of human nature.

I do not mean to imply that we should be completely satisfied with things as they are. I sincerely hope that we never shall stop seeking improvements, for progress ends where smug satisfaction begins. None of us should delude himself that our way of life is perfect. But, fortunately, only a few starry-eyed fanatics and professional rabble-rousers want to destroy the edifice we have built and start all over again. Instead, most of us wisely advocate refinement, renovation, and repair of the present structure.

WHO PROFITS FROM AMERICAN BUSINESS?

Many of the objections to our present system are based on fallacies. Let us examine a few of them. For half a century, soap-box orators, wily subversives, and well-meaning but misled reformers have spread the completely erroneous idea that workers get the smallest share of the income which manufacturing produces and that the owners receive fabulous amounts. Actually, out of every dollar of sales made by a manufacturer, 47 cents go for materials and supplies, of which 35 to 45 cents go to the workers who produce those materials. Nine cents go for taxes of which 4 cents are paid to Government employees. Six cents go for depreciation, maintenance, repairs, and interest; 2 cents for advertising, and 1 cent for research. That leaves 35 cents from the sales dollar of which the employees get 29 cents. The remaining 6 cents are profit of which 3 cents are set aside for tomorrow's jobs by reserves to buy new machines and to expand plants. The remaining 3 cents are paid to stockholders, who are the owners of the machines, the tools, and the factory buildings.

All told, approximately 85 cents out of every dollar of sales by manufacturers go for salaries and wages.

Stymied in that argument, the critics then turn their guns on the 3 cents that go to the owners. They give the impression that American business is owned by a mere handful of individuals. Here again they must face the facts. Actually, some 14,000,000 people own shares in American industry: Workmen, teachers, grocers, bus drivers, and many others who have saved and invested their money. These securities are much like promissory notes; receipts, if you will, for the money which the firms borrowed from these individuals and on which they attempt to pay interest in the form of dividends.

In addition to these direct owners of American business, there are 54,000,000 who have life-insurance policies and 50,000,000 who have savings accounts. All of these people are vitally interested in the successful operations and profits of American business, because the insurance companies and banks in which they have deposited their money have, in turn, reinvested most of these funds in the securities of American business.

Thus, it is apparent that the vast majority of our population receive direct or indirect benefits from American business.

LOOKING TO THE FUTURE

The young men and women of today have before them opportunities greater than have existed since the beginning of time. Strangely enough, the word "opportunity" has no equivalent in some languages. To people who live under totalitarianism, however, this omission is not serious. They have little need for such a word. But it is a priceless word in the vocabutary of an American, and it will become increasingly meaningful as time goes on.

Looking back along the road that Americans have traveled in the past, it may seem that so much has been accomplished that there may be a shortage of opportunities in the future. But when we glance along the road ahead, we realize that there are many more opportunities before us than there were in the years gone by.

Think of the many new inventions and discoveries of the last few years on which whole new industries are being built. Radar, atomic energy, electronics, synthetic chemistry, antibiotics, plastics, and hundreds of other new and revolutionary developments are still in their infancy. The United Nations and the problems which that organization faces may well create wholly new and different fields of endeavor in finance, in sociology, and in law.

A century ago, thousands of families left their homes east of the Alleghenies and braved the unknown wilderness in search of fortune. They knew before they started that thirst, hunger, exposure, and savage enemies were obstacles which they would have to overcome before they could span the continent and reach their goals. Did these hardships stop them? Not for a minute. They knew that anything worth while can be gained only by taking risks, by hard work, and by determination. Most Americans still believe in that creed. America is not getting soft. Like the hardy pioneers who defied the hazards of the trail, Americans know that you have to give in order to get.

Under our system of competitive free enterprise, to all who are willing to work, to think, and to dare, the American way brings rich rewards.

HARVEY S. FIRESTONE, Jr.,
President, the Firestone Tire & Rubber Co.

Capital Punishment

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas Hardie, from the Washington Post of December 21, 1947:

WAR WAS A DAMPER—ONCE ARDENT CRUSADE AGAINST CHAIR SHOWS NO SIGNS OF REVIVAL

(By Thomas Hardie)

The once stormy issue of capital punishment is dying a natural death in America.

As late as 1780 the common law recognized more than 200 capital crimes. A man could be executed for felling a tree, robbing a rabbit warren, stealing a half dollar, or association with gypsies.

Public sentiment gradually whittled this list down until today capital punishment is invoked only for murder, rape, and treason in most States, and, although legal in 42 States, it is mandatory for a first-degree murder conviction in only 5.

However, while there were many fiery movements arguing for complete abolition of the death penalty before the war, there is nothing but ghostly silence today.

The American League to Abolish Capital Punishment, Inc., for example, seems moribund. Only a few gasps have been heard in several years, and these were localized in California.

A lone voice in the House, that of WALTER B. HUBER (Democrat, Ohio), has spoken out since the war for abolition of the death penalty. In August 1946 he proposed a resolution to amend the Constitution, and he said last week he intends to make a similar move next session. But he was pessimistic as to its success.

PEACETIME SUSPENSION

Other countries have been more active in this field. On May 26 the Presidium of the Supreme Soviet of the U. S. S. R. abolished the death penalty in peacetime and decreed that crimes formerly punishable by death would bring "confinement in corrective labor camps for 25 years."

This move was prompted, the Presidium said, "by the exceptional devotion of the entire population" and because "peace can be considered as secured for a long time."

England has witnessed a growing postwar sentiment against capital punishment. London's Law Journal attributes it to a "natural revulsion" after 6 years of killing.

British Socialists in Parliament have revived a 20-year-old proposal by humanitarians to suspend the death penalty for a 5-year trial period. Many think it has a good chance of adoption.

Even George Bernard Shaw, who advocates "state-contrived euthanasia for all idiots and intolerable nuisances," has excoriated the present British method of execution by hanging.

TREND REVERSED

Although there was a latter nineteenth century trend in the United States to abolish capital punishment, Washington State restored it in 1919 and Oregon a year later. In 1931 there was a restoration movement even in Michigan, the State which had been the first to abolish it.

At present, only in Maine, Michigan, Minnesota, North Dakota, Rhode Island, and Wisconsin is life imprisonment the maximum penalty.

The few surviving abolitionists are consoled by modern and supposedly more humane methods of execution, such as electrocution and lethal gas. The District of Columbia uses the electric chair but there has been some agitation for substitution of the gas chamber.

The late Lewis E. Lawes, warden of Sing Sing and crusader for abolition, argued that to a great extent the old eye for an eye doctrine was a product of the sadism inherent in almost everyone. That is why, he said, that as many as 50,000 spectators have attended public hangings in this country.

President Franklin D. Roosevelt opposed capital punishment in principle but believed the question was one for criminal experts to decide.

HEMISPHERE PROPOSAL

Before the war, there was a short-lived movement among the Americas to abolish the penalty. A meeting of Latin-American criminologists at Santiago, Chile, in 1941, urged the step for the entire western hemisphere. But the war finished that.

The declaration of human rights recently presented by Mrs. Roosevelt to the United Nations Human Rights Commission at Geneva, does not mention capital punishment. Drawn up by a committee of State, Labor, Justice, and Interior Department officials, it is intended for adoption by the General Assembly next September. It is described as a statement of the aspiration of the peoples of the world.

As to its silence on the abolition of capital punishment, a high-ranking official explained last week: "The world is not ready for it yet."

Italy Faces 1948

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sumner Welles from the Washington Post of January 6, 1948:

ITALY FACES 1948
(By Sumner Welles)
COMMUNIST THREAT IN BACKGROUND

Internal developments in Italy justify continued optimism.

A republican constitution has finally been adopted. The government has been greatly strengthened by the inclusion of the right-wing Socialists and the Republicans. The democratic coalition which Prime Minister de Gasperi now heads has an absolute majority in the National Assembly. The cabinet is politically far stronger than the Schuman cabinet in France, since it need not depend for support upon the extreme right. It has public opinion behind it. There is no doubt that the democratic parties could secure an overwhelming victory in fair national elections.

It was because of the government's popular strength that the revolutionary strikes called by the Communist Party failed so abjectly. The government acted with vigor and dispatch. The police and the army, which had not previously been tested, obeyed enthusiastically their instructions to maintain order. And most of the Italian workers, members though they are of Communist-dominated trade unions, were so desperately tired of Communist agitation and so anxious to work, that they refused to strike.

The chief cause for public confidence is that the de Gasperi cabinet is getting things done. Minister Einaudi's financial and economic program is succeeding. Inflation is being controlled. The prices of basic necessities have actually gone down. The devaluation of the lira has stimulated Italy's export trade. Employment is slowly increasing.

Italy is receiving about 75,000 tons of coal a month from the United States, 200,000 from the Ruhr and some 60,000 from Poland. Industry can consequently operate at a satisfactory level. American stopgap relief will prevent acute distress until the end of March. If Italy can obtain the 400,000 tons of wheat from Argentina due under the recent credit, there need be no food crisis before next June.

Yet with all of this encouraging progress the situation of Italy is becoming increasingly precarious.

The creation of a Moscow-dominated Balkan federation is under way. The establishment of the Communist Greek guerilla government is the long-expected sign that the Soviet Union will stop at nothing short of actual hostilities in order to dominate the Mediterranean. If Greece is brought under Russian control Italy would inevitably become the next scene in the struggle.

There have as yet been only minor clashes along the new frontier between Italy and Yugoslavia. But Yugoslav provocation in the Adriatic have now commenced. The Yugoslavs lately seized 25 Italian fishing boats within sight of the Italian coast on the pretext that they had invaded Yugoslav waters. Feeling is beginning to run high. The unsettled status of Trieste invites a major incident.

The next crisis will probably come during the Italian national elections. The tactics of the Communists are already foreshadowed. The Communist Party, which, notwithstanding Togliatti's self-incriminating denials, is largely financed from Soviet-controlled sources outside Italy, and which has by far the largest campaign chest of any Italian party, will use its funds lavishly to cut down the showing of the democratic parties.

On election day the Communists will provoke local riots in order to prevent their opponents, and particularly the Italian women, from going to the polls. If the Communist leaders see that there is a democratic sweep which neither corruption, fraud, nor subversive activities can arrest, they will immediately claim that communism has been cheated. That will be the moment for revolution, provided Moscow believes the time to be then ripe for violence.

Yet the tide against communism is today so strong that, unless the Soviet Government is prepared to support an armed rebellion by force, a coup d'état would undoubtedly fail. Even were the Communist leaders to follow the example now set on Greece's borders, and establish a rebel government in some frontier city like Gorizia, such a government could not maintain itself save with Russian or Yugoslav military assistance.

The Italian people, in their great majority, will resist any attempt to impose a Communist dictatorship upon them.

Because of the help given them by the United States, the Italians are able to stage a magnificent comeback. If they were freed from the growing threat of Soviet intervention they could recover more rapidly than any other major nation of western Europe.

Winston Churchill has rendered democracy no greater service than his salutary warning last year that the Soviet rulers respect only force. In a world in which force is rampant, Soviet power can only be restrained by the Kremlin's knowledge that there exists a superior power, prepared and able to restrain it.

Where so many of our own political leaders are making their fundamental mistake is in their comforting, but wholly unrealistic assumption that loans and relief alone can keep Europe free.

It is true that the only hope for European economic reconstruction lies in that form of cooperative undertaking which the European recovery program can bring into being. But of what value to the American people would such a start toward recovery prove to be if the Soviet Union is able, like Hitler, to crush democracy in one western European country after the other?

If Europe is to be saved, the European recovery program is indispensable. But what is equally urgent is that the Congress of the United States—whose voice is the only American voice that the Kremlin will heed in this Presidential election year—declare that American force will, if necessary, be made available to enforce the provisions of the United Nations Charter, and to guarantee the independence of those European democracies like Italy, whose freedom has today become essential to American security.

Citizens and Politicians

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. BRADLEY. Mr. Speaker, it is a healthy sign for the Nation when our editors begin to appreciate that there are such things as "intelligent and public-spirited politicians."

I know that I have never been associated with a finer lot of gentlemen than it has been my pleasure to encounter on both sides of the aisle in this House of Representatives of the Eightieth Congress, and so it was distressing indeed to see that the recent Gallup poll indicated so few Americans are desirious of having their sons follow political careers.

I think that editorials such as the one which follows from the Hynes-Clearwater Journal of Paramount, Calif., are most beneficial in bringing the people of the Nation to a fuller realization of the encouragement needed for young men who wish to make politics their life's work:

CITIZENS AND POLITICIANS

A recent Gallup poll indicated that few American parents want their sons to go into politics, expressing the belief that "a political career leads to graft and crookedness."

This is a dangerous sign for a democracy which depends for its efficient operation upon the willingness of men to offer their services to a governmental capacity for the benefit of society as a whole.

It should be perfectly obvious that parents with such a complex are attempting to blame the politicians for some of the shortcomings of the citizens of this country. Neither the Government nor the people who serve as governmental officials can be more than the people expect and support. Moreover, a democratic government, in its attempt to reconcile antagonistic interests, can only function through intelligent and public-spirited politicians.

The Cost of Food and the Cost of Government

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. SNYDER. Mr. Speaker, I was startled a few days ago when I saw an article in the United States News on the cost of food and cost of government. The food bill for the Nation, high as it is, is not as high as the bill being paid for government in the United States. Food still costs less per person than taxes to run the Government.

In 1947, food cost the American people $47,520,000,000. Government—Federal, State, and local—cost an estimated $54,300,000,000. The food bill was $330 per person; taxes per capita were $371 in the year 1947. The bill for government on a per capita basis was $41 more per individual than the food bill.

Checking back, we find that in 1929 the per capita cost of food was $161. Government that same year cost $85 per person. Food in that year was only about half as expensive as in 1947. Government then was only about one-quarter as expensive as now. In 18 years the per capita cost of Government has gone up about 4 times; food cost has about doubled.

Today we hear a great deal from the administration about high prices and the high cost of living. Prices are high and every effort possible must be made to bring relief without imposing on the American people a "police state." The exportation of food, steel, and other items in short supply is a material factor in the high cost of living.

The cost of Government receives very little, if any, consideration from the present administration. We still have over two million Federal employees, duplicating and overlapping functions of Government—the cost of which amounts to $371 per person.

The Congress again will make a vigorous and determined effort to cut down the budgets of the various Government agencies and again, no doubt, will be opposed by every Government bureau. Again a determined effort will be made to reduce taxes and increase the take-home pay of millions of workers. I believe all thoughtful people will agree that the per capita cost of Government should not exceed the per capita cost of food in the United States.

Who Will Carry the ERP?

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. BLAND. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD an editorial appearing on December 16, 1947, in the New York Journal of Commerce, of which Stanley Ferguson, a consistent friend of the American merchant marine, is the author.

Representatives of the industry inform me that the shipping industry withheld efforts to amend the interim relief bill to sustain American cargo ratios in order that the legislation designed to take care of a desperate situation might go through both Houses quickly, but that when the main Marshall plan comes before Congress, it will be of vital importance that at least 50 percent of the supplies will be carried in American ships for the life of the plan which will run until 1951.

The article follows:

WHO WILL CARRY THE ERP?

(By Stanley Ferguson)

If there is anything in common between European and American views as to what ships shall carry exports shipped abroad under the European recovery program, it is the earnest and persuasive quality of the arguments on both sides.

The European argument, as set forth by Percy Rogers, a variety of influential maritime publications abroad and by our own State Department, is that since the dollar shortage in Europe is the crux of the whole crisis now enveloping the western part of that continent, things are only made worse when Europe is forced to make dollar shipping outlays from its meager supply of this hard currency.

The 16 nations at Paris—or at least the 10 of them most concerned with shipping—argued with some effect that shipping is one service they are able to provide, up to a point; it is one field in which they are able to earn their way. Therefore why waste their dollars by paying them out to Americans for a service they do not actually require when the dollars are so urgently needed by them for other purposes—the purchase of steel, foodstuffs, machinery, and the like? If the United States means business when it urges the European states to help themselves in every way possible before turning to us to meet the deficit, shall it turn around and deny these same countries the right to help themselves in one valid way they are able to do so—by carrying as much of their imports as possible?

The American position is hardly less solid. The United States today has the ships to do the job. It also has a merchant marine which it believes, as a matter of policy, should be maintained in a strong position, not only to support our important maritime industry, but to develop the Nation's commerce and for the very important factor of national defense.

Shipping lines in this country will concede freely that the European recovery program will, if adopted, mean more cargoes for them than they could otherwise expect. Failure of such a plan to materialize would probably cut our exports by 25 percent next year. But the difference to shipping is not as great as commonly supposed for reasons set forth here on previous occasions. Some traffic would continue to move in any case. Moreover, ERP will doubtless punish some American line in the non-European trades by making it progressively more difficult for Latin America, Africa, and Asia to buy scarce materials here.

The American section of the industry, which has been carrying half or more of our foreign trade, is not taking a narrowly nationalistic position when it insists that the mere fact that it flies the flag of the country which is being asked to put up $19,000,000,000 or so for ERP is not an adequate reason for excluding it from the export movement. Shipping lines here have demonstrated that actual dollar savings would be very small, all things considered, even if foreign ships did carry the whole program. And there is the additional consideration that the Government of the United States has to consider the welfare of its own merchant marine. No other government is going to.

A MODERATE COURSE IS THE RIGHT ONE

If one takes either the American or European arguments by themselves, it is quite possible to understand an extreme view on either side. The dollar squeeze tells the Europeans they should carry all they can possibly get and scrape ships together to move, even if it means denuding other trades of tonnage. Americans may feel that since they are putting up the money, their merchant marine comes first and should decidedly get the business.

In view of the tendency toward extremes on both sides, the American shipping industry, as represented by the National Federation of American Shipping, is to be commended for adopting what is on all counts a moderate and common-sense course.

Operators here might well have asked that Congress implement Public Resolution 17—which directs that American shipping shall carry goods purchased here by foreign interests with the proceeds of United States Government loans or credits. They might well have, but they have not. Instead, they are asking merely that Congress direct that American ships shall carry the same proportion of export cargoes under ERP that they have carried during the past 6 months under the various European relief programs. This would amount to somewhere between 50 and 60 percent.

This request simply means that the present ratio of American to foreign tonnage in the United States-European trades should be left undisturbed by adoption of ERP. It means that neither American nor European shipowners will get all of the business they might like to have, but neither group will find itself arbitrarily frozen out.

All in all, this seems to be about the least that Congress could do to offer needed protection to American shipping without throwing too heavy an additional burden upon Europe. It is a restatement of the old doctrine of live and let live, which is still about the best that has been devised in the world of shipping and foreign trade.

THE CAPTAIN ON THE DECK

The time was not so long ago, and the scene was the deck of an American passenger ship just prior to its departure from New York. There were two chief characters, the master and a minor union official. What action there was was brisk but over quickly. During the argument the union official swung and then turned and left the ship as the captain hit the deck.

That was all there was to it. No officials were called. No inquiry was begun. There was no publicity. The captain, seemingly humiliated, indicated he preferred to "forget" the incident. Possibly, by now, he has, but there were others present who have not.

American Legionnaires at Cleveland last week who heard the Coast Guard's Commodore H. C. Shepheard describe conditions affecting discipline and personnel in the American merchant marine today may well have been shocked—as they appear to have been—but among those who have been circulating in maritime circles continuously enough to taste these matters first hand there was nothing whatever that the commodore said that was new—except, perhaps, his statistical compilation of shipboard offenses which have gone unpunished. There have been about 500 since June.

All may not agree with Commodore Shepheard that discipline in the American merchant marine is now at its lowest ebb. All may not agree with him that it is the product of "foreign ideologies." That would be difficult to prove and probably confuses the issues, although there is no doubt that the Communists are doing and will continue to do everything in their power to disrupt conditions in the merchant marine. But discipline certainly is low, and corrective measures are urgently needed.

One should not have to argue that there should be at sea, as well as ashore, not only authority, but the power to enforce it. Such authority did exist, within limits, until the recent overhaul of our shipping legislation when Congress ill-advisedly decided to deprive the Coast Guard of disciplinary powers formerly vested in the Bureau of Marine Inspection. While doubtless spurred by the best of intentions, this was a most unfortunate move, as the steady deterioration of shipboard labor conditions has so convincingly demonstrated.

There is now before the House legislation which would correct this situation by vesting with the Bureau of Marine Inspection the corrective powers which is now lacks. This amendment has already been passed by the Senate. Prompt action by the House will aid greatly in restoring a semblance of order and discipline out of a situation which neither the Nation nor the shipping industry can afford to tolerate any longer.

Forcing Socialized Medicine on America by the Use of Federal Employees and Government Money

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the National Physicians Committee's national conference of the professions, Sheraton Hotel, Chicago, Ill., September 29, 1947:

Mr. Chairman and gentlemen, I am particularly happy to be with you this evening, because I am acquainted with the great fight this organization has waged in behalf of free medicine, as distinguished from that type of socialized medicine which we now find in every country in which dictatorship prevails.

The brand of dictatorship makes no difference—communism, fascism, nazism, socialism—all are alike, in that they enforce a system of state medicine, or political medicine, as I prefer to call it.

Whatever the name of the dictatorship, or whatever the pattern of the particular brand of collectivism in a given country, the system of socialized medicine is always pretty much the same. It is based on compulsion and is generally administered by a nationwide system of ward and precinct politics.

But socialized medicine is not for free America, and I am happy to congratulate you gentlemen on the great fight you have made during the last 10 years to head off this unwholesome campaign in Washington.

If the medical profession and all our hospitals can be taken over by the Federal Government and forged into a new and gigantic health bureaucracy, then it would only be a question of time until Washington likewise moved into the field of education, religion, the press, the radio.

Freedom soon would be in total eclipse.

That must not come to pass in mighty America, the last great citadel of freedom and liberty on the face of the globe today.

HEARTENED BY PHYSICIAN SUPPORT

Ours is a great responsibility to hold aloft the bright torch of freedom and honest representative government. And it has been most encouraging to know that we have the great body of the American medical profession standing behind us in this effort in Congress, as this meeting tonight so clearly indicates is the case.

Approximately 5 months have passed since our special subcommittee was established to investigate publicity and propaganda in the executive agencies. We are a subcommittee, as you know, of the standing legislative Committee on Expenditures in the Executive Departments.

Our special interest has been the techniques of Government propaganda by which our Federal bureaucrats perpetuate themselves in office, generate pressures on Congress for more and bigger appropriations, and sponsor socialistic enterprises in the name of national emergency or an artificially stimulated public demand.

More than 6 solid weeks of our investigation has been devoted exclusively to the so-called health work shops set up throughout the country under the aegis of the United States Public Health Service, the Social Security Board, the Children's Bureau and several other agencies having an oar in the administration of health and welfare programs.

The amazing ramifications of the Federal propaganda in behalf of socialized medicine have astonished me. How much of our total appropriations for health and welfare are being diverted to this sort of high-pressure propaganda, we do not yet know. But we do know that the amount is considerable. And before our inquiries are concluded, we shall hope to present for public consideration an itemized account, of the total diversion of Federal funds for this propaganda campaign. In that accounting we shall include a considerable item for foreign travel to New Zealand, England, South America, and Japan. For we now know that our health bureaucrats are interested in socialized medicine not only in the United States but in every other land in which they can find an opening.

Before enlarging on the details of the health work shops inquiry, I should like to give you an over-all picture of the Federal publicity operations, as we have measured them to date.

SEVENTY-FIVE MILLION

We began with a special report from the Budget Bureau which showed that the various Federal agencies spent $74,829,467 for publicity and propaganda work of every kind and description.

An earlier study, covering the fiscal year 1941, showed total publicity expenditures of the Federal establishment at only $28,000,000.

Now, everybody in Washington recognizes that certain information services are an essential part of any institutional operation. But Congress insists that there is a clear line of distinction between legitimate information services and those additional operations which tend to build up public opinion in favor of more projects, broader programs, or Federal invasion of new spheres of public service. It is primarily the latter operations which our subcommittee seeks to itemize as to cost and scope. It is my contention that, at least, the people are entitled to know how much they are spending to educate themselves to more spending.

HUGE PUBLIC RELATIONS STAFF

In the Department of Agriculture, committee investigators found 525 persons engaged in public relations work. Salaries ranged from $10,000 down to $1,888 a year. But only 204 members of this robust information staff were in Washington. The rest were found in Department of Agriculture branch offices in Boston, San Francisco, Milwaukee, Raleigh, Dallas, Denver, Albuquerque, Philadelphia, Ogden, Chicago, Atlanta; Juneau, Alaska; San Juan, P. R., and eight lesser cities throughout the States and Territories.

Total budget estimates for Agriculture's Office of Information for the fiscal year beginning July 1, 1947, were $2,307,000, an increase of $335,350 over the previous year. But this does not include printing or mailing expenses.

Every known media of intelligence is utilized by Agriculture. The Office of Information prepared 1,998 press releases in the 9 months ended April 1—an average of 11 every working day. During the same months the office prepared 837 radio scrips, including several network programs. The radio time contributed for these programs normally has a commercial value of more than $500,000 a year. The same 9 months saw 17 new motion-picture films released through the Department's film stations.

For the 1947 fiscal year, Agriculture's combined printing bill—all bureaus, divisions, and offices—will be $2,260,784, exclusive of mimeographing processed within the Department.

SPENDERS FOR PUBLICITY

These activities begin to explain why the Government Printing Office, which occupies 33 acres of floor space in Washington and employs 7,900 full-time workers, still can't keep up with Government printing demands.

Some of the principal spenders for publicity in fiscal 1946 were:

Department of State	$30,377,000
Treasury	11,104,800
Department of Agriculture	9,295,700
Office for Emergency Management	8,154,021
War Department	5,715,690
Office of War Information	3,772,095
Office of Price Administration	2,572,000
Office of Petroleum Administration	2,572,000
Federal Security Agency	2,043,983
Department of Commerce	2,003,212
Department of Labor	1,440,641
Navy Department	704,000
Veterans' Administration	660.571
Tennessee Valley Authority	245,000
Post Office Department	11,960

My distinguished colleague, Representative RICHARD B. WIGGLESWORTH, of Massachusetts, long has been a crusader on the Appropriations Committee against excessive public relations expenditures within the Federal establishment. He expressed astonishment at the 1946 tabulations I have just quoted.

"In my opinion," he said, "the enormous governmental propaganda set-up is not only a gross waste of the people's money, but, over and beyond that, makes for the destruction of the proper exercise of the legislative functions of the Government."

With that, of course, we are all in full agreement.

SOCIAL SECURITY SPENDING

You will note that the Social Security Board has been spending about $2,000,000 a year in public relations activities—regardless of whether we call it publicity or propaganda. We do not yet know the full scope of this work. But we do know that they have been setting up these so-called health work shops; that they were launched on a Nationwide scale; that they are financed entirely by Federal funds diverted from the regular appropriations; and that it was never at any time the intention of Congress or its appropriations committees to authorize the expenditure of public funds for such activities.

To our committee it seemed reasonable to ask why these agencies should be permitted to spend public money to generate an entirely artificial public demand for a system of socialized medicine in the United States, when all our experience through public-opinion polls, and all our contacts with the medical profession, indicate beyond question that the American people and the American medical profession insist upon maintenance of our traditional system of free medicine, under which we have attained the highest standards of service and scientific skill and proficiency ever recorded in the history of the world.

It seems to our committee to be a proper function of the Congress to determine whether the diversion of public funds from legitimate purposes to purely propaganda purposes for socialized medicine, does not, in fact, constitute a criminal violation of the law.

And on this point, I may say that the Federal Bureau of Investigation is giving that question some serious study at the moment. As you know, we advised the Attorney General, Mr. Clark, what we discovered about the health work shops, and we have since been informed that some of the vouchers are in the hands of the FBI for investigation.

WORLD-WIDE PROPAGANDA

All this federally financed activity for socialized medicine heads up in the Bureau of Research and Statistics in the Social Security Board.

Our committee investigators have found in that bureau a veritable nerve center of socialized-medicine propaganda for the entire world.

Mr. Isadore S. Falk is the Director of Research and Statistics in the Social Security Board. He has been in the Government service for some 12 years. He has always been noted for his militant and aggressive advocacy of socialized medicine.

Our committee, of course, does not challenge the right of any citizen to hold whatever views he may wish on any subject of political or economic policy.

But we are interested that funds appropriated by Congress for public administration shall not be diverted to a world-wide system of propaganda calculated to advance socialized medicine the world around.

Such operations, until specifically approved by the Congress, are positively illegal. And our committee will not rest until they are uprooted and stamped out of the Federal picture.

ILLEGAL USE OF FUNDS

Any group of citizens has a right to agitate for socialized medicine, if it puts up its own money and pays its own bills. But I, for one, do not intend to see this gigantic propaganda machine for socialized medicine financed entirely by funds secretly diverted from moneys appropriated by Congress for the legitimate functions of government.

In our hearings to date we have examined officers of the United States Public Health Service, the Children's Bureau (which is another section of the Federal Security Administration), the Social Security Board, and the Farmers Home Administration, a section of the Department of Agriculture. As a part of this investigation, we also have called upon the General Accounting Office for certain travel vouchers in connection with the Health Work Shops.

On page 8 of the interim report, which most of you have before you, there appears a tabulation of the various Federal officers who have taken part in this propaganda effort. In each case, the agency or governmental unit paying the salary and travel expenses is indicated.

We found that the first meeting on the Health Work Shops was held in Washington on November 2, 1945. It was attended by only 12 persons—10 of whom were full-time employees of the Public Health Service, the Social Security Board, and the Department of Agriculture.

WORK SHOP BORN

This is where the Health Work Shops were born. The chairman of that meeting was Dr. George Perrott, of the United States Public Health Service.

The detailed operations of the Health Work Shops are set forth in House Report No. 786 of the Eightieth Congress, as published by our subcommittee on July 2, 1947.

Suffice it to say here, that the project was financed almost entirely by Federal funds, through the contributions of the participating Government agencies—through the assignment of the so-called forum experts from the Government bureaus, through the payment of travel expenses, and the providing of literature and mimeographed material for the meetings.

The real purpose of these meetings was to generate pressure upon Congress for passage of the Wagner-Murray-Dingell bill.

HILLEBOE'S STATEMENT

At one point in our hearing, our committee counsel, Mr. Frank T. Bow, asked the witness, Dr. Herman Hilleboe, of the Public Health Service, if the literature presented by the Government agencies presented all sides of the medical discussion, or merely the side supporting socialized medicine, as embodied in the Wagner-Murray-Dingell bill. To this question, Dr. Hilleboe answered:

"We would naturally give emphasis to that, because that is why we are in government. Otherwise we should get out of government."

Here, indeed, is a strange concept of Federal service in public health—the concept that any physician who is not a vigorous advocate of socialized medicine should remove himself from the Government service.

And that conception of the public service appears the more distorted when we realize that at no time has Congress approved any declaration of policy favoring the expansion and development of socialized medicine at Federal expense; nor has Congress authorized the expenditure of public funds for any sort of propaganda work calculated to generate public opinion in behalf of socialized medicine as a national policy. Yet here is a responsible official of the Public Health Service testifying before our investigating committee to the effect that the presentation of material supporting socialized medicine is a clear and direct moral obligation of the Public Health staff.

Gentlemen, I am here to say that such a distorted conception of the public service in Washington must be uprooted by Congress.

BECKER ON STAND

On another occasion, we had as a witness before the committee Mr. Harry J. Becker, health consultant in the Children's Bureau. When asked if his public speeches throughout the country presented both sides of the discussion touching compulsory national health insurance this witness answered: "I don't know what you mean by both sides."

Those two bits of testimony, to my mind, offer a pretty complete picture of the present set-up in Washington as it relates to Government propaganda supporting socialized medicine. From the Public Health Service came the suggestion that doctors who do not believe in the Wagner-Murray-Dingell bills simply have no place in government; and from the Children's Bureau came the response that the witness was either unaware of the opposing viewpoint, or had so firmly closed his mind against opposition argument that they could merit no time or attention in his public speeches.

From these incidents it seems reasonable to conclude that some of our bureaus in Washington regard themselves as the protectors and defenders of the whole concept of compulsory national health insurance and socialized medicine.

But, again, I want to repeat—that is not what Congress appropriated the money for.

MISSION TO TOKYO

Plowing deep into these matters, our investigators soon came upon the much discussed health mission to Tokyo. You have seen reports on this in the newspapers. It, too, is revealing for the light it throws on the operations of the Washington inner circle which is forever pulling the wires for socialized medicine..

In our examination of the Bureau of Research and Statistics in the Social Security Board we discovered that practically every argument, every pamphlet, every radio broadcast, and every statistical table advocating socialized medicine originated primarily in the Social Security Board. Here is the world-wide nerve center of the movement for socialized medicine.

Our committee found, and has so reported to Congress, that pamphlets prepared as to basic material in the Social Security Board were distributed to the general public by the CIO and A. F. of L., the Farmers' Union, the Physicians' Forum, and the Committee for the Nation's Health.

All these pamphlets vigorously supported socialized medicine as embodied in the Wagner-Murray-Dingell bill.

In several of the pamphlets, no matter by whom distributed, the language and the figures were the same.

"CENTRAL GENERATING PLANT"

The Social Security Board is the central generating plant, so to speak. And the material is then distributed for popular consumption by whatever organization will lend its official imprint to arguments and briefs of Messrs. Isadore Falk and Wilbur Cohen.

That's the fundamental set-up discovered by our committee, and that's the beginning of the health mission to Tokyo.

Just about a year ago a Federal civilian employee in Washington (one Stanchfield) was detached temporarily from his job to go to Tokyo to make a preliminary survey of social security and health needs. Upon his return to Washington early this year Mr. Stanchfield proposed a general health mission to Tokyo. His proposal was presented directly to Mr. Arthur J. Altmeyer, Commissioner of Social Security.

Next, on March 5, 1947, Mr. Altmeyer proposed the mission in a formal communication to the War Department. In that letter Mr. Altmeyer designated the particular individuals who should make up the mission, and then went further to suggest that William H. Wandel, Chief of the Program Division, Bureau of Unemployment Security, be appointed chief of the Social Insurance Division of the Public Health and Welfare Section of the Supreme Command for the Allied Powers in Tokyo. It is perfectly apparent from the letters we have taken from the War Department files that the personnel of this mission and the planning of its program originated in and was dictated from the Social Security Board in Washington.

Up to this point there had been no hint that the proposed health mission had been requested or urged either by General MacArthur or any responsible Japanese source. The suggestion came first from Mr. Stanchfield, who had been sent to Tokyo from Washington for that particular purpose.

LETTER TO ISADORE FALK

Next, we found a letter, under date of June 14, 1947, from Mr. Wandel in Tokyo reporting directly to Mr. Falk in Washington on the progress of the work in Tokyo. In one revealing passage of this letter, Mr. Wandel said:

"We think that our need is for someone who is primarily not so much an economic analyst as one versed in health insurance. Health insurance is the major field of social security in Japan. * * * Permanent revision requires amalgamating national health insurance with health insurance on a compulsory basis."

When the Tokyo health mission finally was named it comprised two men from the Public Health Service, one from Mr. Falk's bureau, and one from the Federal Housing Authority. This mission departed for Japan on August 28, this year, with the understanding that Mr. Altmeyer and possibly Mr. Falk would follow when the work had been sufficiently organized in Tokyo.

BUREAUCRATIC INTRIGUE

Because this instance offers a shocking demonstration of bureaucratic intrigue in violation of the purposes and intent of Congress, I have brought the matter to the attention of the House Appropriations Committee, with the suggestion that when the next budget comes up from the Social Security Board and the Public Health Service all those engaged in spreading socialized medicine around the world be stricken from the public pay roll—unless, of course, Congress shall determine to support such world propaganda with funds specifically allocated for that purpose.

In my letter to Chairman TABER, of the Appropriations Committee, I made eight specific charges against the Tokyo health mission. I wish to summarize them here, because they are the nub of our case against the Social Security Board and the United States Public Health Service in relation to all this propaganda supporting socialized medicine.

CHARGES AGAINST TOKYO MISSION

My charges against the Tokyo health mission are as follows:

1. That the health mission to Japan is composed entirely and exclusively of men long identified in the public record as advocates and proponents of socialized medicine not only in the United States but throughout the world.

2. That the real purpose of this mission is to lay the groundwork for a system of socialized medicine in Japan.

3. That the scheme for such a mission originated in the Division of Research and Statistics in the Social Security Board in Washington, and nowhere else.

4. That the nominal request for the mission was engineered through the General Headquarters of the Supreme Commander in Tokyo by Federal employees sent from Washington for that particular purpose.

5. That Gen. Douglas MacArthur does not favor—and does not approve—any plan to establish compulsory socialized medicine in Japan.

6. That the dispatch of this mission to Tokyo for the purpose indicated in Mr. Wandel's letter to Mr. Falk under date of June 14, 1947, is a gross misuse of public funds.

7. That the real purpose of the mission is not to assist Japan in working out her basic problems in health and welfare, but to force upon that country a compulsory system of socialized medicine.

8. That although the questions here involved are of a health and medical nature, the Surgeon General of the United States Army was not consulted in reference to the problems involved.

TAXPAYER FOOTS THE BILL

I deem it inappropriate for Federal employees, at the expense of the American taxpayer, to travel throughout the world preparing or assisting in the preparation of legislation to be adopted by foreign countries when similar legislation, long pending, has not been approved by the Congress of the United States.

It is hardly necessary for me to tell you that we shall watch developments in this case with lively interest. General MacArthur certainly does not intend to lend himself to any such intrigue by our Washington health bureaucracy.

And I am equally certain that my distinguished colleague and good friend, JOHN TABER, chairman of the House Appropriations Committee, does not intend to see Federal funds misapplied in this fashion. We shall hear more of this mission to Tokyo as our investigation goes forward.

INTERNATIONAL COMMUNISM

One other point about these operations in the Social Security Board merits brief attention at this juncture, although our inquiry in this direction has not been concluded. The fact is that this entire movement for world-wide socialized medicine is tinged and infiltrated with international communism.

World communism has adopted compulsory health insurance as one of its major tenets; and our committee investigators have found the agitation for socialized medicine in the United States closely linked with Communist and fellow-traveler publications and meetings.

JACOB FISHER'S RECORD

Under date of May 14, 1947, Mr. Isadore Falk, Director of the Bureau of Research and Statistics, sent a memorandum to the Acting Commissioner for Social Security, urging that one Jacob Fisher, a member of Mr. Falk's staff, be sent to New Zealand at Government expense, to study compulsory health-insurance programs and activities in that nation.

We find that this same Jacob Fisher has been documented by the House Committee on Un-American Activities for almost uninterrupted association since 1939, with various Communist-front and fellow-traveler organizations in the United States. At various times, according to his record, Jacob Fisher has been identified with seven different groups or organizations avowedly sponsoring the Moscow party line in the United States. He has published at least one report on health insurance in New Zealand, in the Social Security Bulletin—a report which has been criticized by some reputable medical authorities as extremely biased.

In a later interim report on propaganda activities within the Social Security Board, we shall present to the Congress the detailed record of Jacob Fisher's activities, as certified to us by the Committee on Un-American Activities, together with additional material bearing upon organized Communist agitation for socialized medicine, through such agencies as the Southern Conference for Human Welfare.

THE MOSCOW PARTY LINE

Suffice it at this time to report our firm conclusion, on the basis of the evidence at hand, that American communism holds this program as a cardinal point in its objectives; and that, in some instances, known Communists and fellow-travelers within the Federal agencies are at work diligently with Federal funds in furtherance of the Moscow party line in this regard.

I must emphasize that I have not given you a complete and comprehensive report on our committee's work. But within the limits of the time allotted, I have summarized the main points of our inquiry as it touches this vital problem of Government propaganda in support of compulsory health insurance.

From the letters which have come to us in Washington, I know that the medical profession is well aware of what's going on in the Public Health Service and the Social Security Board. And the medical profession welcomes and supports our investigation.

ILLEGAL ACTIVITIES

We know, too, that much of the activity we have cited is positively illegal under section 201, title 18 of the United States Code.

That section offers a blanket prohibition against the use of any part of any Federal appropriation for the purpose of influencing legislation before Congress. That's the legal point which is now under vigorous investigation by the FBI.

But the issue is even broader than the question of socialized medicine. It is also challenging in that it reveals for public examination the manner in which all Government lobbyists operate on the Government pay roll, how they are always at work to expand their fields of interest, to perpetuate themselves in office, and to impose their ideas and systems upon the American people by organized propaganda paid for entirely by the diversion of public funds from their true purposes to the shielded purposes of the top bureaucrats and planners.

THE BASIC ISSUE

This is the fundamental issue from the legislative standpoint—the question whether the Congress of the United States has lost its power to establish and maintain the sort of government the people want; or whether the bureaucrats are supreme and can give the sort of government they want, regardless of Congress, regardless of elections, regardless of public opinion.

That's a question that goes to the very roots of popular government. If the bureaucrats are above Congress, and may defy Congress in the way they spend their appropriations, then representative government has become a fiction.

PLANNERS DEFIANT

I am certain that the United States has not yet reached the point where it must be submissive to the dictates of a rampant bureauracy in Washington.

But my work with the propaganda subcommittee during the last 6 months has convinced me that there are danger signals in the air.

The spirit of defiance encountered by our committee investigators within the Social Security Board and the Public Health Service is a most unwholesome sign.

The circular letter sent out by the Surgeon General, Dr. Parran, in 1945, wherein he directed that all public statements should be in line with the President's national health message, regardless of the individual views of the officer himself—that is a very dangerous sign in a nation devoted to representative government.

We must not fall into the attitude that all our opinions are made in Washington and handed down to us full-fashioned. That is the way of dictatorship.

HERITAGE OF FREEDOM

Public opinion must be maintained in its free and virile state—in full harmony with the great American tradition of liberty.

If we do that by stamping out government propaganda at its roots, then we shall have rendered a great service, not only to medicine, but to the whole cause of liberty and freedom the world around.

We all know that freedom is not free.

We all know that bureaucratic power feeds upon itself—and upon the rights and privliges and liberties of the people.

If we are to support and defend liberty and constitutional government in America, we must begin by keeping clean and undefiled the wellsprings of public information from Washington.

Government propaganda poisons the wells of public information.

Government propaganda is illegal.

Government propaganda is a method of dictators.

Our purpose will be to uproot and destroy Government propaganda wherever we may find it.

The Panama Canal: Operations or Engineering?

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. BLAND. Mr. Speaker, the problem of the Panama Canal, the width of the project, other improvements needed and its defenses are peculiarly live subjects at this time. There appeared in the United States Naval Institute Proceedings of December 1947, a very comprehensive article by Commander Arthur Stanley Riggs, United States Naval Reserve, retired, entitled "The Panama Canal: Operations or Engineering?"

It is said that the statements of fact and the views expressed in the article are exclusively those of the author, and must not be taken to reflect the opinions of the Department of the Army, the Department of the Navy, or of the Panama Canal.

Attached to the article appears a memorandum which says:

Commander Riggs' first naval service was with the fleet in 1898 as an enlisted man. Anticipating a possible war, he joined the Naval Reserve in 1935, was called to active duty in 1941, and detailed to the office of Censorship. Here he was assigned the task of planning and then supervising the reference libraries of all cable censorship stations throughout the world, with additional duty as information officer. He has long been especially interested in the Panama Canal.

The article is informative and I ask unanimous consent to extend my remarks in the Appendix of the RECORD and to include in my extension of remarks the article referred to. I make the request notwithstanding that I am advised it makes three and one-third pages of the CONGRESSIONAL RECORD at a cost of $260.34.

THE PANAMA CANAL: OPERATIONS OR ENGINEERING?

(By Commander Arthur Stanley Riggs, United States Naval Reserve, retired)

The success of any military plan depends upon the relation of its practicality to its purpose. No sane commander would send battleships to hunt submarine packs.

The Panama Canal is first of all for military purposes, then for international marine commerce. Its purpose is to pass traffic of all types from one ocean to the other quickly—and safely. Necessarily that makes the solution of most of the problems it presents, operational solutions. The men most competent to handle such matters are obviously the men who operate the ships traversing the Canal, whether they are naval craft or of the merchant marine of this or any other nation. But the history of this tremendous ditch, from the days of the ill-starred Comte Ferdinand de Lesseps to the present decade, shows that navigators, masters, and pilots had little if anything to say about the original design. The Canal was conceived of as an engineering problem from first to last, its design was elaborated by engineers, other enginers and construction men executed it, and as a consequence it does not fulfill its purpose as well as it could have done had operation been the basic principle of its planning. As a task force, a weapon, and a public utility it has such serious defects that at best its functioning is slow and dangercus.

At last we have begun to be aware of this. What shall we do about it, if anything? If we do undertake the problem, how long a time will its solution require, what will the ultimate cost be, and who will do the planning? Shall we again put our trust in the engineers, who neither know nor care anything about ship handling; or shall we turn for counsel and guidance to the men directly concerned, the men who risk valuable lives, property, and their professional reputations every time a ship goes through from sea to sea? The answer should be rather evident, but as yet so much of the thinking about the Canal has been either tainted by influence (of which this writer knows nothing) or by muddy reasoning, or by both, that it is not amiss to apply a little logic in the endeavor first of all to find out exactly what it is we wish to remedy, and after that the most promising means of effecting the desired result. Moreover, in considering the problem of the Panama Canal we must remember that it is unique in both magnitude and problems. For that reason experience in developing and operating other waterways is largely useless because they are all secondary in importance and so not comparable. The Panama Canal is the only truly interoceanic canal in the world.

INTRODUCTION TO THE PROBLEM

Right at the beginning we may disregard completely all the more or less violent propaganda of various types which for more than a year past has circulated in the press of both halves of this hemisphere and in more than one language. Our concern is with fundamentals only. One of these, and by no means the least important, is the question whether or not what we do today is to be final or of only temporary value. Whether we see the Canal from the naval-military or the business standpoint is not especially significant in the beginning. We must see it with eyes wide open and clear for the future. The great banker, Morgan, once said that "the man who sells America short is a fool." Unless we are utterly crushed by a world cataclysm, which no one today really anticipates, we cannot fail to recognize the normal growth in population, expanding foreign relations, and commercial interests of the United States as one of the main blocks for building our foundation. Other great powers will grow and progress side by side with us, and the demands upon the capacity of any canal will steadily increase. No one today can plot the curve of that growth accurately. It seems more than likely, therefore, that the sensible thing—after we know completely what is wrong and in general what we wish to do about it—is not to try now to make the Canal the final word. Common sense tells us that nothing is final, nothing so adequate in a restless age of achievement that it cannot be improved. The obvious answer to this first question, therefore, seems clearly to be a canal capable of accommodating the increased traffic, both as to numbers and as to the dimensions of individual vessels, in the foreseeable future. Before the saturation point is reached world conditions may have so changed that the national interests will be better served by an entirely different outlook.

A second point that has been repeatedly and senselessly raised during the past 2 or 3 years is vulnerability. So far as that is concerned, no canal conceivable by human intelligence could be constructed that would not be vulnerable. The present Canal could be completely wrecked without ever touching it; the breaching of its protecting dams would put it out of action for an indeterminate period. A single burst in a cut might easily start a chain of geological reactions in the distinctly unstable rock formations on either hand whose end no man can foresee. The only protection of any canal across the Isthmus is adequate air cover able to dispose of attacking elements long before they can reach it. For that reason the ultimate design is something that must be considered wholly apart from defense. To attempt to solve this duplex problem at a single stroke is to try to fire a .45 slug from a 10-gauge shotgun and expect accuracy of fire.

Any detailed study of the problems to navigation imposed by the Canal reveals immediately only the obvious reasons for the hazards of its transit. Beyond the manifest there lies a natural cause of anxiety so profound it cannot be rightly calculated by any engineering methods. This is the soft stratification of part of the subsoil rock whose shifting was the cause of the slides that continually gave trouble by rolling down into the present Canal and having to be laboriously dredged out. Any disturbance of the slightly hardened surface material which exposes new areas of the softer rock beneath disturbs the equilibrium, and almost anything in the nature of a slide or a bottom bulge can easily occur. Geologists who have made careful, detailed studies and examined core-borings of the rock at the slides of the Canal agree almost unanimously that the nature of the terrain is so doubtful that any large-scale operations tending to widen or deepen the channel, or both, would have unpredictable results but might easily result in such further slides as to close the Canal to navigation, for how long a time no one could say. The mere dredging up of the slides might in itself have a tendency to provoke additional displacements of material.

REASONS FOR DISABILITIES

Beyond the geophysical conditions are the even more unpredictable results of temporary meteorological unbalances. No weather chart or calculations on earth could have predicted with certainty when and to what extent the Mississippi River system would rise as a result of exceptional rainfall, burst through restraining levees over a tangled series of courses for a thousand miles, inundate millions of acres, destroy hundreds of millions of dollars' worth of property, and drive the inhabitants of entire large as well as small towns from their homes as occurred in 1947. Similarly, any sudden increment of the normally heavy rainfall in the Panama sector—or its antipode, an unforeseen heavy drought—can operate to the serious disadvantage of the Canal, and cannot be omitted from any calculations for the future. This matter of water, and the further factor of the heavy fogs in Gaillard Cut at night, have a direct and very important bearing on two of the three proposed plans for improvment of the Canal, as will appear.

For the present, with the natural and the not easily recognized factors out of the way, accidents which have made the Panama Canal the most hazardous short waterway in the world, and the reasons for them, complete the picture of what is wrong, and automatically suggest the remedies. To understand the accident record it is necessary to go back and review the history of the design of the Canal from the days of Ferdinand de Lesseps and the first calculations of the French engineers who planned, partially constructed, and so thoroughly estimated the possibilities that when we took over on the collapse of the French company we made full use of the glorious failure.

When De Lesseps arrived at Colón on December 30, 1879, he began work immediately and was reported by the Panamá Star and Herald on January 1, 1880, as saying he recognized only two great difficulties to be overcome. These were the slashing through the summit of the Continental Divide at Culebra and the equally formidable nature of the Chagres River. He had not realized, as did the late John F. Stevens, that the Isthmus was then (and still remains) "one of the most forbidding spots on earth" for construction work of any sort, and with even more obstacles than appear to the unaided eye. The Panama Railroad having been already built, De Lesseps projected the Canal to follow its general route at sea level with a trench 72 feet wide at bottom and 27 feet 6 inches deep. The initial plans included a mighty dam at Gamboa to hold back the waters of the Chagres, which otherwise would have cascaded disastrously into the Canal, and on the Atlantic slope north of the Divide two outlet channels to carry flood waters to the ocean, one to the eastward of the main waterway, the other to the west. South of the Divide two other flood channels were scheduled, one on the east side of the main Canal, one on the west. This made a total of five, the main artery for navigational purposes and four diversionals for surplus water. To compensate for the different ocean levels a tidal lock at the Pacific end was considered sufficient, and a long mole or breakwater at Colón to provide shelter for shipping from the frequent heavy northers. The total excavation was roughly figured at 75,000,000 cubic meters, the total cost at $168,600,000.

Long before the French collapse the engineers knew a sea-level plan was unfeasible because of slides too formidable for their limited equipment to handle, and because of the enormous amount of excavation required on even the scale then governing operations. So difficult and slow was the work at Culebra

that it would have required practically a century to complete the Canal. The slides and the Culebra obstacles were the final cause of the abandonment of the sea-level plan in favor of a lock canal on high level. The change, however, came too late to save the financially exhausted French, though their excavations had extended throughout the entire length of the canal, even including Culebra cut. By May 15, 1889, all work on the Isthmus had been suspended, the great French effort had failed, and misfortune after misfortune followed in rapid succession until the United States undertook the project and assumed formal responsibility on May 4, 1904, a date celebrated annually in the Canal Zone since then as Acquisition Day.

Entirely aside from the financial maneuvering and political influences working against success, France failed not only because of the sickness and corruption which were so freely discussed while the Canal was building, but because all efforts were bent toward a sea-level canal without adequate vision of the terrific size of the undertaking, and the failure of the heads of the project to adopt the logical plan for the high-level lock canal advocated by Adolphe Godin de Lépinay, the only French engineer who knew the region, the geological and hydrostatic conditions, had supervised construction work there, and could see the solution from the navigational viewpoint. Curiously enough, though we eventually built the Canal largely along the lines Godin de Lépinay laid down, we omitted one vital feature of them. It is the adoption of that feature, dating back to 1879, with the essential changes it imposes at the Pacific end of the Canal, that offers a solution of the problem attended by less cost, fewer difficulties, and requiring less time for its completion than any of the other plans thus far suggested.

THE UNITED STATES ASSUMES CONTROL

As soon as we assumed control, new surveys and tests were made, careful estimates figured of the amount of excavation to be done and the best means of disposing of the mountains of excavated material, and plans developed for machinery, tools, labor, supplies, and all the rest of the necessities for making the task not only a success from an engineering standpoint, but the Canal larger and of far greater capacity than anything the French originators had considered. At this point the matter of sickness had to be reestimated, and the vision of Gorgas, with the heroism of the volunteers whose submission to yellow fever and malaria provided our biologists and physicians with the information necessary to mitigate these twin scourges, immediately comes to mind. In other words, the world had progressed mightily, and the new undertaking was carried forward in that spirit of advancement, plus the practically unlimited financial backing the United States alone could give.

From the standpoints of engineering and sanitation, success was certain from the beginning. But unfortunately the conception was still entirely one of engineering. In all the calculations no one thought of consulting the men who must take their ships through the Canal once it became a fact. The technical details of design and construction, and their relation to the traffic, are all a matter of public record in print, so they have no place here. But the flaw in the plan was a serious double one; it took no account of the human factor (not all masters or pilots being equally skilled and instant in their responses to emergency), and no sufficiently generous allowance was made for the behavior of the Canal itself under differing conditions of width, depth, sideslope angle, wind force, currents, surges, and the actions of vessels moving upon its surface but materially affected by many more than surface conditions.

THE OPERATIONAL PROBLEMS AND HAZARDS

Briefly, the operational problems the Canal presents may be summarized as the traffic bottleneck at the Pedro Miguel locks; the double lockage of vessels at the Pacific end, with consequent accidents, loss of transit time for ships involved directly, and hindrance of capacity operation otherwise; delay to traffic caused by nocturnal fogs in Gaillard Cut; heavy surges in the Cut caused by operation of the Pedro Miguel locks; distinctly limited operating range of the 82-87-foot level of Gatun Lake; the navigational risks imposed by the restricted channels, especially in the Cut; and the narrow dimensions of the present locks.

In addition to this formidable indictment, there is the further matter of the difference in maneuverability between different types of vessels, with especial emphasis on the single screw, amidships rudder and the multiple screw, double rudder type on the one hand, and the unwieldy tanker and ore-carrier type on the other. Any examination of the accident record discloses the fact that mishaps fall into two main classes, lock and channel. Those most feared are the ones occurring in Gaillard Cut, where the jagged rock sides have brought grief to many a stout ship so unfortunate as to strike the bank. Damage to vessels in the locks, while not usually so serious as the groundings and sinkings in Gaillard Cut, is nevertheless very expensive and holds up traffic wastefully while blocking the passage.

THE CARDEROCK MODEL BASIN SCALE TESTS

When the French projected the Canal, and a quarter of a century later when we undertook the job of completing it, neither they nor we had the apparatus adequate to such a colossal task. Neither did we have any institutional means of experimentation to scale such as exist today. But, as has invariably transpired when necessity pressed us hard enough, we mixed our labor with intelligence. The practical results, though slow at first in manifesting themselves, eventually gave ample proof that we could accomplish our purpose. That effort did not cease when the Canal was opened, for awakened intelligence struck out boldly into many fields, one of which is right now contributing its revolutionary findings to our knowledge of the peculiarities and hidden forces of great waterways.

With characteristic thoroughness and determination to secure and evaluate every scrap of evidence of whatever nature bearing on the subject, the United States Navy has been unostentatiously holding an elaborate and searching series of tests accurately scaled for the purpose of producing scientific data covering all the problems of restricted channel design, which are steadily continuing. These tests are being held not on the Isthmus but at the David Taylor Model Basin at Carderock, Md. In that great test laboratory the naval architects and engineers conducting the experiments produce conditions minutely scaled to the dimensions and conditions obtaining in the Canal, and by means of delicate recording instruments are achieving results of astonishing detail and accuracy which give mathematical proof and the fullest confirmation of conclusions reached by practical operating experience.

Before a single experiment was conducted, the engineers who were to make the tests were flown down to the Canal for several weeks of first-hand observation of the topography, the plan of the Canal, and the problems of ships in transit. The accident records and their causes came under the closest scrutiny. Always the visitors had the cooperation of the pilots and engineers attached to the canal to clarify their personal observations. Eventually they returned to Carderock knowing precisely by experience what the problems were that they had to solve and how best to go at the task to secure results.

As detailed, highly technical memoranda of progress are available for those qualified by knowledge and by official authority to use them, no attempt is made here to give more than general principles governing the experiments, and brief mention of one or two of the results of outstanding interest to navigators. In the model basin the channel was so arranged as to afford bases for traffic studies in both still and moving waters, in varying depths and widths, both straightaway and with channel bends. Three ship models were used in many of the experiments—one of a large naval vessel, one of a Liberty-type ship, and the third of a huge twin-screw, single rudder oiler. The Navy model, with four screws revolving outwardly, though its general steering qualities were rated as excellent, was hard to handle because of its size. The tanker was a natural selection because so many canal accidents have involved craft of this type and made the canal pilots feel they are exceedingly difficult to maneuver in restricted waters. Summed up, repeated tests under all conditions established the principle beyond controversy that the angle of rudder required to hold the vessel parallel with the axial line of the canal while under way ahead may be accepted in general as the index of controllability. This, of course, varies markedly with the depth and width of the channel, the distance of the vessel from the center line, and her speed.

At every test the Panama Canal pilots, who assisted, said the models behaved very well and that where differences were to be noticed the model was on the whole more difficult to control than a full-scale vessel. The pilots, incidentally, have taken part in the experiments by rotation, so that the full navigating skill and experience that keeps traffic flowing through the canal is being utilized to reinforce the ability of the technicians at Carderock. At the time this is written the tests are continuing steadily to exhaust the subject if possible. In summary, when they are completed and the data they provide are collated and analyzed, they will make available not only the information requisite to make traffic through the Isthmus safer, faster, and easier, but they will quite possibly affect waterway modification and construction all over the world.

LOCK ARRANGEMENT

When the Canal was designed the reason given for placing the single-step lock at Pedro Miguel and the double-shift lower locks at Miraflores a mile away was that the engineers believed suitable foundations could not be had in a single location along the surveyed Pacific end of the Canal route for all three. As each lock is 1,000 feet long inside the chamber, placing three such structures in continuous series would have meant substantial foundations for a good three-quarters of a mile. So the Pedro Miguel one-step lock was placed squarely across the southern end of the Gaillard Cut. This was an error of the first magnitude, since it directly caused operational dangers the designers had not even imagined. They had not realized they were literally creating a choke-bore. Every time 103,000 tons of water are drawn into the Pedro Miguel Lock to fill a chamber measuring 1,000 feet in length by 110 in width and 30 in depth the draft causes a seiche or surge like a tidal wave in Gaillard Cut. The amplitude of this surge at its maximum is approximately 3 feet, its speed almost 25 miles an hour. Hours elapse before this oscillation is dissipated, provided no other ships lock through. If there are other lockages each one creates a new surge, resulting in continuous disturbance of the most dangerous water in the Canal, that of the Cut. Not only does the surge create

powerful local shifts of the water, but it actually decreases the depth of the Canal channel and makes steering and control more difficult. As a result, more than one stout ship has suddenly yawed into one bank or the other and sunk. On February 17, 1942, the 36,000-ton ore carrier *Steelore* sank near La Pita in the Gaillard Cut after sheering into the west bank and breaching several forward plates as a result of these currents caused by the surge. But her sinking is only half the story. After she was securely moored by wire nawsers to the bank and had come to rest on the bottom she suddenly rose, moved forward several feet, snapping the hawsers, and again took the bottom. To lift 36,000 tons and shift it about in that fashion testifies to the irresistible force of the surges and the danger they are to navigation every time the Pedro Miguel Lock is used.

About a mile southeast of Pedro Miguel, the two-lift Miraflores Locks take traffic first when north-bound, last when south-bound. Between the two Pacific locks Miraflores Lake is little more than a huge marsh with a channel across it. The standard speed for vessels in transit is six knots, which for large units gives little more than steerage way under normal conditions. But on approaching Pedro Miguel, craft of any size necessarily have to exercise the greatest caution. As a writer in a popular magazine put it, getting a really large craft into the lock without accident is much like ramming a bass-drum into a telephone booth while on the run. There is opportunity for a mistake. Either she goes in smoothly, or she doesn't go in at all. Naturally this slow approach and extra caution slows traffic down perceptibly. The figures for complete locking at each end of the Canal show that the passage of both sets at the Pacific end takes an hour longer on the average than at the Atlantic. For very large craft, such as those of our aircraft-carriers which can go through, still more time is required, and the maneuvering has to be delicate in the extreme because of projecting sponsons and superstructures. Direct passage from one lock chamber to another, as at Gatun, is relatively safe and simple because the ship is kept continuously under the control of the towing locomotives.

Besides the spacing on the Pacific side, the size of all the locks as compared with the beam of vessels entering them reveals strikingly how far the demands of ocean commerce and the national defense have sent us since the completion of the Canal. With a maximum width inside the chamber walls of 110 feet, none of the present locks can take in our largest carriers or battleships. Such giant passenger liners as the two great Cunarders are automatically barred. An *Essex* class carrier fits the locks almost like a cork in a bottle, with nine inches to spare on either hand. The bigger and beamier *Midway* carriers have to round the Horn to go from sea to sea. With such progress in the past 30 years, is it safe today to attempt to say what we shall need 30 years hence? Is any man today wise enough to determine the ratio of ship dimensions to Canal facilities beyond the nearer future?

GAILLARD CUT DANGERS

Assuming a vessel to have entered, northbound, from the Pacific, and to have progressed safely from the entrance as far as Pedro Miguel Lock, if the weather is clear she proceeds and enters the Gaillard Cut, the most hazardous stretch in the entire Canal. For approximately 7 miles the Continental Divide, a range of hills rising to some 600 feet, is slashed through by a winding channel 300 feet wide at the prism line, with slopes only a tenth off the vertical. In this narrow gorge, its waters troubled by the surges from the lock, vessels have to be handled with infinite skill and care. None is safe anywhere but in the middle of the channel. Let a ship deviate from the center line, and the laws of hydrodynamics come into play at once. The vessel's displacement of water by her forward motion creates pressure greater between herself and the near bank than vice versa, and results in bank suction which has a strong tendency to draw her stern in toward the rocky side of the nearer bank, with a corresponding outward sheer of her bow toward the farther one. Given a strong surge at the same moment the bank suction takes effect, the ship may become uncontrollable, especially if she is of deep draft and heavily loaded. We have already seen in the sinking of the *Steelore* what happens in such a case. And that is not the only instance by a good deal.

Besides the dangers of the Gaillard Cut in itself, there is the further serious impediment of impenetrable fog at night during about 110 days a year. In other words, almost 1 night out of every 3 is foggy, and thus completely stops all transit for a period whose extremes range from 1 to 11 hours. During the rainy season, when fogs are naturally most frequent, they are often so dense that the Canal banks cannot be seen from the deck of a vessel in transit. In such circumstances it is obvious that movement in the area smothered by this impenetrable blanket is utterly impossible. The astonishing feature of the fog is that it generally affects only the Cut. Since the locks at both ends of the Canal are free from this smother, it is clear that the Cut is the cork in the bottle. Vessels can come in from the Pacific and proceed as far as Pedro Miguel, where they must stop until the fog is dissipated. Pacific-bound traffic, since it cannot traverse the fog-filled Cut must wait at Gatun Lake anchorage. Right there is the keystone of the Canal problem.

Berthing capacity for vessels along the Pedro Miguel Lock walls is so limited that only a very few vessels can wait there. Others desiring to make the transit must wait at Balboa, some distance away. Exactly the opposite is true of the Caribbean end of the Canal. These vessels entering or leaving may anchor at the pilot's discretion on both sides of the locks without the assistance of tugs or any special supervision either in Limón Bay outside, or in Gatun Lake, inside the Gatun Locks. The misunderstanding by the designing engineers of the operational problems caused this unsymmetrical arrangement with consequent added dangers to shipping and the risk of blocking the Canal through accident at any time. The experience of 30 years in operating the Canal proves the wisdom of the French canal engineer, Godin de Lépinay, who in 1879 foresaw exactly this condition and struggled to secure terminal anchorage facilities at the Pacific end so as to balance traffic and thus permit use of the locks at their full working capacity.

With adequate water supply, the ability of the locks to pass ships through is the index of the Canal's capacity. The figures given by the Canal authorities show that, including closure of one side of the Pedro Miguel Lock for the biennial overhaul, the "lockage interval for single culvert operations is 53½ minutes, or a daily capacity of 27 lockages in each 24 hours. This figure has been accepted as the minimum capacity of the Panama Canal." These figures, however, are not entirely conclusive, for they ignore the fogs in Gaillard Cut, which may settle down after 9 p. m., and lift under normal conditions before 8:30 a. m. next day. They also did not take into account the necessary traffic restrictions governing the use of the Cut by explosives ships, oilers, ore-carriers, large naval craft, and unwieldy or extra large passenger vessels. For them the Cut must be clear of traffic so as to avoid the risk of possible collision. It follows naturally that with such vessels in transit, approaching traffic must be held, and the delay pulls down the general average. In other words, with so many and such diverse factors entering the equation, any capacity figure must be regarded as approximate, and subject to wide variation in special circumstances.

PLANS FOR IMPROVEMENT

With the principal defects in the Canal briefly indicated, the three main propositions for improvement may be considered. The first of these is the so-called Third Locks project, undertaken in 1939 to increase the Canal's capacity, to permit the transit of the largest naval craft, to achieve a greater theoretical security from bombing, and eventually to make conversion from the high-level, lock-type canal to a sea-level design easier and more expeditious. It may be asked, however, why, if the Third Locks solved the traffic problem, there should be any necessity for conversion of the entire Canal to sea level. No adequate reasons for that conversion have ever been presented. Moreover, no study was made of what the effects of conversion would be.

Only 2½ years of uneasy peace and increasing fear intervened between the authorization of the plan in August of 1939 and the entry of the United States into the war in December of 1941. Excavation was pushed as rapidly as possible for a new set of large locks at some distance from the present Gatun locks, and bypasses connected with the main channels. The first bypass was planned to leave the existing channel near Cucaracha at an angle of 28°59'. Between it and the proposed lock at Pedro Miguel a bend of 46°17' was planned. A ship that succeeded in negotiating these two hazards would then pass through the new and larger Pedro Miguel locks, enter Miraflores Lake, and make a turn there of 37°30' to enter the new Miraflores locks. Shipping men who have studied the question are emphatically opposed to any such plan as adding to the present hazards for all types of vessels by creating new focal points for serious accidents and generally increasing instead of solving operational problems. Fortunately for the welfare of both shipping and the Canal, the war emergencies forced the suspension of the plan in 1942, before it was too late.

The second, and most widely hailed and controversial plan calls for a sea-level canal, thus reverting to the original idea of Comte de Lesseps. It is hardly necessary to go into detail regarding such a fantastically impossible suggestion along the lines proposed by its advocates, none of whom ever handled a ship in any waters. The plan thus far published calls for a titanic excavation job, some of it so demanding as to require special dredges never before designed, to work to a depth of 135 feet beneath the water's surface. With a bottom width of a mere 500 feet, and banks sloping 1 on 1 to give a surface width of about 80 feet, nobody connected with the plan seems to have thought of what would happen to even a very moderate-sized vessel obliged to anchor suddenly in emergency. The chance that she would be squarely on the axial line of the Canal may be granted as a possibility. But even then, with only 45 feet of water under her, and the banks only 400 feet away on either hand, with no tidal lock, a current flowing at all times, and her normal swing to be considered, any such ship would inevitably ground and be damaged, perhaps sinking, and besides blocking at least half the available waterway, creating dangerous eddies.

Besides this perfectly obvious operational hazard, the sea-level plan calls for control of the Chagres River and its floodwaters by the construction of approximately 30 miles of tremendous dams and, to compensate for the difference in tidal levels of the Atlantic and Pacific Oceans, a tidal lock at Miraflores. The flaws in the plan are so numerous and glaring that only a few of the major ones need be indicated for their effects on operating. Such a waterway would, if it followed the same general route and had in the main the same form as the present Canal, increase the danger zone from the length of the present Gaillard Cut of 7.69 miles to approxi-

mately 31 miles, probably extend the fog area considerably, and not only add to the number of curves or bends, but make the aggregate of curvature in the danger zone considerably higher. It appears, accordingly, that the sole benefit to be gained by adoption of the sea-level plan is that of doing away with the present type locks and the consequent diminution of lock-type accidents. The cost of conversion has been estimated at as much as $20,000,000,000, the time required at from 12 to 20 years. Because of the geological formations it is impossible to state definitely whether the excavations would at any time result in closing the present Canal to traffic for indeterminate periods.

It is anticipated on the basis of present conditions and their bearing on the future, that the Canal will have reached its ultimate capacity by about 1970, less than a quarter of a century hence. Whatever plan is adopted for the improvement of conditions must, therefore, be such that it can be in successful operation at or before that time. Furthermore, the cost must not be so exorbitant that ship tolls will have to be heavily increased to amortize the expense incurred. That is a much more important item that appears at first. The ship operators, of course, pay the tolls in each instance, but any accounting shows immediately that the cost is inevitably passed on to the public in various forms. Passengers would have to pay more for their tickets, shippers higher rates per ton for the goods carried, and, of course, the retail customer more for each item on a proportionate basis. So when it comes to discussing calmly the theory that money is no longer a factor in public service, and that only human energy counts, the fact is inescapable that every one of us in some form or other will help to pay for whatever is done, whether we realize it or not. Besides the main debt for the job there is also the matter of terrific amounts to be paid for annual interest.

THE TERMINAL LAKE PLAN

A plan, therefore, which is at once practical and relatively inexpensive, and whose execution would interfere with the daily operation of the Canal less than any other, is not to be considered lightly. The Terminal Lake Plan, which has aroused such opposition from sea-level advocates, is thus far apparently at once the most practical, the most historically based, operationally sound, economical, and capable of being most expeditously constructed. Briefly, it utilizes the present Canal but takes out the Pedro Miguel locks bodily, concentrating all the Pacific locks near Miraflores in a single set, and creates an ample anchorage basin by extending the area of Miraflores Lake. This automatically solves most of the operating problems, increases the safety of the Canal, adds notably to its capacity, and as far as human skill and foresight can go at present, makes an end of the question. By recognizing its own limitations—as the other plans do not—and working not to provide for an ever expanding future but for what can be legitimately estimated as within the probabilities, it provides at a reasonable cost which will not add too greatly to Canal tolls, the capacity for both ordinary and exceptional traffic. By exceptional is meant the occasional transit of some huge liner or other super-size vessel. A noted naval authority recently said to me that in his judgment there will not be much difference in size between the ships of today and those of tomorrow. "The average vessel will be a smart ship of say up to 30,000 tons maximum and good speed. But we must not overlook the possibility of the big freaks that are practically sure to come along jammed with passengers looking for sensation."

Whatever the value of this guess, any survey of the land contours in the Miraflores area shows that by throwing a dam across the present Miraflores locks the lake can be extended well into the impounding hills, thus increasing the summit level water supply and giving a total navigable area of 1.03 square miles. This affords space for nine 300-yard berths and thirty 200-yard berths. The operational advantage of this is evident at a single glance. It enables full use of the Pacific locks without regard to nocturnal fogs, puts an end to surges in Gaillard Cut, removes the dangerous bottleneck at its southern end where the Pedro Miguel locks now stand, provides ample anchorage facilities between Gaillard Cut and the Pacific locks, and thus greatly speeds up the operation of the Canal as a whole, does away with the double handling of vessels in transit at the Pacific end by elimination of the one-step Pedro Miguel locks, lessens lock-operating costs, and enables a much better handling of traffic in transit during slides. It has other marine advantages also, but these are enough to show the utility of the plan as a whole.

The United States Navy's foremost expert on the Canal, after years of study and with more than 3 years of close observation and responsibility as captain of the port at Balboa during the war, feels that besides its manifest advantages, the terminal-lake plan can easily develop into the plan for the ultimate passage across the Isthmus, whatever the future may determine that to be. There are engineering difficulties to be met and problems to be worked out; and beyond doubt, as the surveys and tests are made and the work undertaken, defects will appear, since no human plan is perfect. But considering the needs of the Nation in both naval and commercial spheres, the terminal-lake plan is so simple, so obvious, so operationally sound from the practical standpoint of the men who have to take the ships through, that it seems to meet all our foreseeable requirements at a moderate cost within a predictable time. Behind it stand that most alert and progressive marine interests, the Canal pilots to a man, those engineers who have had experience with great waterways, and every naval expert who has with his own eyes seen what operation of the Canal means at present.

What plan the Congress in its wisdom will finally adopt no one can say. But it is no more than fair to the legislators in Washington to believe that they will declare in favor of the utmost that operating experience can suggest, technical expertness can plan, and the initiative of the American people demand for their service. All the political and selfish interests in this and other countries can be disregarded, all the nonsensical whimsicalities like ship-tunnels, elevated railroads, and whatnot forgotten along with the defense problems, which latter must be solved as an entirely separate affair. The more we know of this Big Ditch—the only truly interoceanic canal in the world—the more certain are two things: the improvements made must insure a faster, safer, greater flow of traffic; and the more reasonable the solution we work out, the less the public eventually will have to pay out in cash as the ultimate consumer.

Defense of the Panama Canal

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. POTTS. Mr. Speaker, in accordance with unanimous consent given to me, I insert in the Appendix of the CONGRESSIONAL RECORD the following radio talk which I made over Station WMCA in New York City on Saturday, December 27, 1947:

As the year 1939 and the war in Europe approached our Army and Navy became profoundly apprehensive about the Panama Canal, not only as to its defense but also as to its capacity to accommodate the extra large battlewagons then being built for our Navy. We know this now. It could not be disclosed then. You see, when the Canal was built the locks were made 110 feet wide. At that time that width was considered more than ample to cover the needs of our Navy in the foreseeable future. But naval building changed very greatly in the interval between the two world wars so that by 1939 we had naval vessels with beams greater than 110 feet. These ships could not fit into the locks. Incredible as it may seem, these ships had to go around Cape Horn at the tip of South America to get to the Pacific from the Atlantic, or vice versa. They were thus subjected to greater danger from enemy submarines as well as delay in getting into action in the Pacific theater of the war. So far as these ships were concerned, the purpose of the Canal, which was to expedite the transit of ships between the Atlantic and Pacific Oceans, was defeated.

The importance of the Canal in war is graphically demonstrated by the report of the Governor of the Canal Zone, General Mehaffey, that over 6,400 transits by combat vessels and about 10,300 by other military craft were made during the war period.

The experiences of World War II indicated the need of reconsidering our interoceanic needs in peace and in war. As a result, the Governor of the Canal Zone was charged by an act of Congress with making a comprehensive review and study, with approximate estimate of costs, of the means for increasing the capacity and security of the Panama Canal to meet future needs of interoceanic commerce and national defense. He was also to make a study to determine whether a canal or canals at other locations might be more useful to meet the future needs of interoceanic commerce or national defense than can the present canal with improvements.

The Governor, Gen. Joseph C. Mehaffey, recently completed his report and the President has transmitted it to Congress with a recommendation for a sea-level canal at the present canal site. The cost of such a project is estimated at $2,500,000,000. Over 1,000,000,000 cubic yards of earth and stone would have to be removed. It would take 10 years to complete. That is as long as it took to build the present canal.

Why is the Congress and the people of the United States being asked to provide funds at this time for the Canal?

It has been estimated that the Canal will not be taxed to capacity by commercial ships desiring transit for many years. Consequently, present consideration of canal improvements is impelled principally by reasons of national defense especially since the advent of the atomic bomb.

The report of Governor Mehaffey reflects a profound anxiety as to the vulnerability of the Canal in event of war. We hope and pray that a new war will not be inflicted upon us. But we are not children and so we must face reality, brutal as it may be, in this atomic age.

Of course, the Canal, as it exists today, could be wiped from the face of the Isthmus of Panama by bombardment from atomic missiles. We all know this. The question before us then is what can we do to establish effective measures of defense? This is the problem which is posed by the Governor's report and this is the issue upon which we must bring to bear our most expert knowledge and judicious consideration.

It has already been concluded by the engineers examining the problem that either a lock canal or a sea-level canal would satisfy the needs of interoceanic commerce and the

needs of naval vessels. But it has also been agreed that a lock canal cannot be designed and constructed to give absolute security against loss of the waterway or to provide as great a degree of security against traffic interruption as the comparatively invulnerable sea-level canal. However, the sea-level project will be substantially more costly to develop. Accordingly, Congress will be required to balance security factors against comparative costs in determining what expansion plans will be approved.

Even before the report of the Governor of the Canal Zone was submitted, as required by law, the House Subcommittee on the Panama Canal, of which I have the honor of being chairman, gave intensive and extensive attention and study to the problem in its many complex and important phases. The members of the subcommittee in April of this year went to the Canal and after a period of the most exhaustive and detailed examination drew up a report. This report was filed with the House of Representatives on July 2, 1947, and in it is contained the thoughts and conclusions of the members of the subcommittee. This report makes no recommendations as to what particular form the reconstruction of the Canal should take nor does it make any recommendations regarding alternative sites for the Canal. However, it is largely upon the basis of the facts contained in this report that the legislation, which will make possible the reduction of vulnerability to attack upon the Canal, will be drawn up for submission to the Congress.

The term "sea level" canal means to the layman that a ship comes from one ocean, sails into the Canal at one end, and out the other into the second ocean. That, however, is a misconception. The Pacific Ocean has a 20-foot tide; the Atlantic Ocean, a 2-foot tide. It is only when there is a meshing of tides during the day that the Canal would be truly sea level. That would only be about 30 percent of each day. At other times a tidal lock would have to be used to control the difference of 18 feet in tide levels.

Many naval experts, in turn, prefer the present-type canal—a lock canal—as the best from a navigational standpoint and safety to ships in transit.

Contrary to popular belief, navigational hazards do exist in the Canal of today, which has experienced many accidents and some sinkings. It is said that the sea-level canal will aggravate these perils and would also involve a tremendous expenditure of funds. On the other hand, it would make the Canal less susceptible to complete uselessness in the event of attack.

Governor Mehaffey in his report said:

"Weapons of attack are of primary importance in the determination of Canal security. The atomic bomb introduced a new era of destructiveness in war. Even conventional weapons have increased so much in power, range, and accuracy that practically all existing defenses have been outmoded. New types of airplanes, guided missiles, and rockets are increasing manyfold the difficulties of interception. New devices for directing these weapons are taking the attack out of the hit-or-miss category. The nature of these weapons is such that dependence cannot be placed entirely upon the military defense to prevent a successful attack."

One thing is certain. If the Canal is to be properly defended, we shall need to prepare it to withstand the destructiveness of the atomic bomb and modern conventional weapons.

Possibly the atomic bomb will not be used in the next war, if there should be one. In World War I, poison gas was used. But not in World War II because its use had been outlawed. Perhaps the use of atomic bombs will be outlawed. But whether that be so or not, we cannot omit consideration of the atomic bomb in our determination of adequate Canal defense needs.

Even with a very strong military defense of the Canal, no assurance would exist that an enemy could not penetrate to the Canal with aircraft of great speed carrying conventional or atomic weapons, or with aerial rockets and torpedoes. Nor is there any assurance that a suicide attack of the Japanese "Kamikaze" type or one employing guided missles, launched from land, airplanes, surface vessels, or from submarines, could be averted. It can be expected that new modern weapons will have sufficient power, range, speed, and accuracy to make their complete interception impossible. Unless a canal is safe against these highly destructive weapons, active defense cannot prevent its extended closure or loss for the duration of a war.

It has been said by high authority that the largest conventional weapons would not be a significant threat to the security of the sea-level canal and that were an atomic bomb to be dropped directly into the Canal, traffic could be restored within a period of a few weeks, with full allowance for the difficulties involved in removing radioactive debris.

Let us consider together for a moment some other matters which will also have to be considered in determining the nature of the improvement.

Navy men say that if the Canal is made sea-level, tidal currents will be introduced. Navigation thus will be made more difficult and therefore some naval officers say it can be expected that accidents will be multiplied.

You will recall that the bed of the Canal proper is 85 feet above sea level. It is the function of the locks to raise and lower ships in transit between the Atlantic and Pacific Oceans. If the locks were blown to bits, the waters of the Canal would promptly cataract into the oceans, leaving behind a muddy mountain pass.

To make the Canal sea level, it will have to be dug down an additional 85 feet the entire distance of the Canal and through the Continental Divide, that range of mountains running down through Central America.

Severe and many slides were experienced in Gaillard, formerly Culebra cut, which runs through the Continental Divide, caused by the excavation when the Canal was built. If it is dug down an additional 85 feet, and the mountains on both sides made that much higher with a consequent greater weight and pressure on the sides of the cut, it is likely that the slides will be more numerous and intensive and a hazard to navigation.

Occasionally islands are pushed up from the floor of the Canal, creating a continuous dredging operation. These are brought about by the great weight of the mountains on the sides of the Canal pressing in on it, the tendency of which in the settling process is to push these islands up in the Canal. If it is dug down an additional 85 feet, it is also likely that many more of these islands will be created.

If it is to remain a lock canal, the question of lock width will have to be given serious consideration. This in turn will depend on what the best minds in naval engineering can foretell will be the nature of naval architecture and construction over a long period of time.

The committee has also reported on suggestions concerning the advisability of building a canal or canals at other sites in Central or South America or both. In all cases it must be kept in mind that the defense of the Canal is not a problem which can affect the United States alone, but, on the contrary, it is quite apparent that every nation in this hemisphere has the most vital concern in seeing established a canal system which not only will be able to transit ships plying the seas in times of peace, but also one which will offer the maximum possible security in times of war. And one, moreover, which will in itself be a mighty bastion against sudden and violent aggression. For their own protection, therefore, it is quite reasonable to suppose that every nation in this hemisphere, and especially those contiguous to the Canal, will cooperate in their own interests as well as for the interests of all the Americas.

Of course, the best defense against war is peace. Two days ago we celebrated the birth of the Prince of Peace. God grant to those in authority—in and out of government—that they shall be so plenteously endowed with a desire for peace, that never again shall humanity be subjected to the utter devastation and demoralization which war brings about.

Poland Should Be Free

EXTENSION OF REMARKS
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a radio address I delivered Sunday, January 4, 1948, over radio station WORC, in Worcester, Mass. This address was made in support of the Justice for Poland program sponsored by the Polish American Congress, Inc.

The address follows:

Ladies and gentlemen, as United States Representative from the Fourth Congressional District of Massachusetts, I consider it to be not only a pleasure, but a duty to take part in your program.

The pleasure arises from the opportunity presented to express sincere tribute to the millions of my fellow citizens of Polish extraction, in whose hearts burns the same love of freedom that drove Thaddeus Kosciusko to fight on the side of a few weak colonies against one of the great powers of Europe. We have in America no finer citizens than those Poland has given us; none more devoted to the fundamental concepts of a free society; none more willing to suffer privation and hardship, and to die, if need be, to preserve for themselves, for all of us, and our children, the precious heritage of freedom that has been bequeathed to us. We, in America, can well be grateful to Poland and to the Americans of Polish descent for their marked contribution to the progress, from its inception, of our country.

The duty evolves from the obligation resting upon me, and every officer of our National Government, to tell our people the truth about American domestic-world affairs, and specifically to raise our voices on behalf of those peaceful, freedom-loving peoples who today are being cruelly dominated by the ruthless forces of imperialistic suppression.

In our confused postwar efforts to promote a just peace on earth, based upon the principles of the Atlantic Charter and the Charter of the United Nations, there is no sorrier blot on the annals of history than the disgraceful betrayal of the smaller nations, particularly Poland, by the major world powers, including, I am unhappy to say, the United States.

The treatment of Poland is a problem which most Americans here, and millions abroad, regard as the test case of American resolve toward questions of international justice and that fair play among nations which alone can provide an enduring basis for peace.

It is unnecessary, I know, to recite to you in any detail the part played by Poland as our loyal and gallant ally in the recent war. Her military effort on practically all European fronts, the courage of her indomitable

people, their fighting spirit and readiness to sacrifice their lives for their independence and the principles at stake in the common cause, surpassed the expectations of everyone in the world. In fact, Poland's record, as a fighting nation, as a devoted and faithful ally, as the only nation which did not produce a quisling, stands unequaled.

You will recall that on the 3d of September 1939, 3 days after Germany's attack on Poland, Great Britain declared war on Germany in accordance with her treaty to defend Poland's independence and territorial integrity.

You will recall further that on July 30, 1941, the day that the Polish-Soviet treaty was signed by General Sikorski and Ambassador Majeski in London, Mr. Anthony Eden, then British Secretary of State for Foreign Affairs, handed to General Sikorski a statement which ended with these words:

"I also desire to assure you that His Majesty's Government does not recognize any territorial changes which have been effected in Poland since August 1939."

You also know that the Atlantic Charter, which was incorporated in the United Nations Pact of January 1, 1942, declared:

"Their countries seek no aggrandizement, territorial or other. They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned. They respect the right of all peoples to choose the form of government under which they will live and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

Free public opinion in all the countries which were signatories of this pact interpreted these phrases to be a guaranty by the United Nations, jointly and severally, of the independence and territorial integrity of Poland and the other small nations.

The basic pledge given during World War II to the fighting Polish Nation was that the common victory would bring full restoration of Poland's independence and its territorial integrity.

Neither the United States nor Great Britain have lived up to this pledge. In the three successive agreements reached at Tehran, Yalta, and Potsdam we scrapped the Atlantic Charter and all provisions of international law to become a party to the extinguishment of Poland's independence. The Polish people were forced, in a series of acts inspired by Soviet Russia, to accept a territorial settlement without being given any opportunity to express their views; the administration of Poland was given over to a group of Soviet officials sponsored by the Russian Government.

Shortly after the Polish elections were held, last January 19, 1947, the President of the United States himself declared that the so-called free and unfettered elections promised to the Polish people at Yalta and Potsdam, were carried out, under a rule of fraud, coercion, and intimidation.

The Honorable Arthur B. Lane, former United States Ambassador to Poland, declared publicly on April 3, 1947, that "he could no longer stay in Warshaw because his presence there might have been construed as an acquiescence to the rule of terrorism and oppression exercised by a Communist-dominated administration over the Polish Nation.

The Honorable ARTHUR H. VANDENBERG, President of the United States Senate, stated on January 29, 1947, that "a world war, which started on behalf of Polish liberty, could scarcely be considered adequately won until Polish liberty is something more than a rigged and terrorized election which defies and defeats every elementary concept of autonomy, self-determination, and democracy and which nullifies the most solemn pledge of which Britain, the United States, and Soviet Russia are capable."

All the leading United States authorities agree that Poland, the first nation to fight against the common enemy, has been deprived of its independence, sovereignty, and territory by one of the victorious allies with the consent of the other United Nations.

It is my considered opinion that the whole European dilemma cannot be brought to a satisfactory solution until the Polish question has been solved. If we fail to correct this original injustice, all our actions, based as they must be on that mistake, will be fraught with portentous implications for the future.

I believe that most Americans are daily becoming more concerned about the present fate of Poland, which stands in accusing testimony to our failure to live and act according to the principles for which our people have fought and died in two world wars.

It is increasingly apparent that we have not only sacrificed moral principle but also needlessly weakened our strategic and economic position in a confused effort to preserve by appeasement something of what was gained for all of us by force of arms. The American public realizes now that, particularly, with respect to Poland, the United States is suffering serious strategic set-backs and losses in prestige all over the world.

In simple moral justice our Government must insist that the Polish people be allowed a free and unfettered election to express their inalienable right to order their internal existence as they themselves see fit.

The great wrong that has been done to Poland must be righted, if the United States of America, and the United Nations are to maintain their own self-respect. The appressed people of Poland are not asking special favors from any nation; they are only requesting their God-given right to be relieved from cruel subservience and be permitted to live as free citizens of a nation ordained and developed under the same principles of individual, personal dignity upon which our own beloved nation is based.

The cause of Poland is, and will be, the one great test to determine if this Nation and the United Nations possesses the moral conscience and courage to carry out the great basic principles for which we fought the war, of establishing freedom and liberty for all peoples.

In personal recognition of the magnificent devotion and sacrifice of Poland and the Polish people, as an American ally, I am honcred to pay my humble tribute and to extend my pledge of continued efforts to the sacred cause of Poland and human freedom.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. ALLEN of Illinois. Mr. Speaker, I listened to a news commentary this morning on my way to the Capitol and was so amazed by the subject matter discussed that I have asked the gentleman who made the statements to supply me with a copy of his comments.

I submit herewith the statement made by veteran news commentator George E. Reedy over Station WOL, Mutual network, this morning at 8 o'clock.

I undoubtedly was not the only Member of this body who listened with the same degree of amazement to Mr. Reedy's broadcast this morning. However, I feel that his remarks should be of interest to every man in the country, as well as the membership of this House. I need not elaborate on his statement. However, I do feel that both sides of the aisle should be forewarned of an incredible development in the President's anticipated message tomorrow.

Mr. Reedy's statement follows:

Taking the credit for another man's idea is always a good stunt if you can get away with it. It's even better when you can prevent the other man from doing it himself and still grab the glory at the right psychological moment.

There are strong indications that that is the Democratic strategy at the session of Congress opening today. No one will be positive until the President reads his State of the Union message. Nevertheless, it's in the wind.

The informed guesses are that the President will rock Congress with a request for tax reduction. If he does, the resulting furor will be worth any price of admission. It will be one of the best shows staged on Capitol Hill in years.

The President, of course, is the man who blocked two attempts at tax reduction during the last session. To be sure, they were Republican attempts, and that may have made the difference. With a Democratic name on such a bill he might feel happier.

Naturally, no one expects the President to offer the same proposals advanced by the GOP during the last session. There will be differences, and they may be important differences. Undoubtedly, the approach will not be the same.

Nevertheless, the fact remains that President Truman twice vetoed tax-cutting bills during the last session. In both instances the Democratic minorities were able to muster enough strength to make the vetoes stick.

The principal reason given for the vetoes was that the bills would contribute to inflation. In other words, taxes were being used as a method of cutting down on people's income, so they couldn't buy as much and run up prices.

If the President should change his mind this year and come out for a tax cut, he will have to answer some embarrassing questions. To justify his position he will have to prove that inflation has passed and is no longer a danger.

The Republicans are in no such embarrassing dilemma. They have maintained all along that reducing taxes will not contribute to inflation. On the contrary, they argue that it will help the situation by increasing purchasing power.

Their principal argument at the moment is that the country must either have a tax reduction or a new round of wage increases. They contend that the former is better, because it will be spread out over a large group of people.

The Republicans have their own tax-slicing bill and have made it the No. 1 priority legislation of this session. They are expected to hammer it through in short order. This year they hope they can pass it over a veto.

They may be right. It is hard for any politician—Republican or Democratic—to vote against a tax cut in an election year. That is one operation that is popular with almost everybody. A man who opposes it takes his political life in his hands.

Of course, it may be true, as many Democrats claim, that the voters are not interested in lower taxes. Should that be true, however, it would be passing strange for the President to recommend such action.

At the moment the signs point to his doing just that. Should that be his recommendation, the battle will not be over the legislation but over the credit for it. It's going to be quite a scramble, and at this distance no one knows who will win.

Universal Military Training

EXTENSION OF REMARKS
OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. O'HARA. Mr. Speaker, the organized drive and propaganda for universal military training has been going on for some time. I have noted a thoughtful editorial entitled "Volunteers Are Better," in the St. Peter Herald, St. Peter, Minn., of December 12, and a letter recently published in the Washington Post, Washington, D. C., which illustrate another question properly raised, as to the conflict between the proponents of universal military training and those who advocate the Marshall plan.

While the letter points out this conflict between universal military training and the Marshall plan, it does not comment upon the fact that some of the most violent advocates of both universal military training and the Marshall plan are one and the same persons and organizations.

It is also timely to call attention to the fourth Intermediate Report of the Committee on Expenditures in the Executive Departments, House Report No. 1073, Eightieth Congress, first session, Investigation of Participation of Federal Officials of the War Department in Publicity and Propaganda, as it Relates to Universal Military Training.

Under the leave to extend my remarks in the RECORD, I include the following editorial and letter:

[From the St. Peter (Minn.) Herald of December 12, 1947]

VOLUNTEERS ARE BETTER

In a recent column written by Past Commander B. D. Livingston in his column called Legion News a forceful and convincing article favoring universal military training appeared. We hold no brief with the writer for demanding military preparedness, for keeping in step with the world, militarily speaking, and for always being aware of the precious freedoms we possess but too often forget about.

But there is absolutely no foundation for believing that just because we will have UMT that there won't be another Pearl Harbor. The ways of the Lord are manyfold.

Of course we should be strong enough to resist attack. But wouldn't a strong concerted voluntary program that would take in the National Guard, the Reserve training program of the Army, Navy, Marines, and the Air Force, the Regulars for all branches and an expanded ROTC program for both high schools and colleges do the trick. No country that has used the compulsion method of military preparedness has ever had good luck with it. At least until a strong voluntary program of military preparedness has been tried, compulsion should be considered a secondary measure.

[From the Washington (D. C.) Post]

UMT AND THE MARSHALL PLAN

America must choose either to help reconstruct Europe or to pass compulsory military training. It cannot do both without injuring the American economy. During the next 4 years the Marshall plan for reconstruction of Europe will cost the United States about $20,000,000,000. Peacetime conscription for the same period would cost in all close to twenty billion.

The yearly cost of conscription would be between three and five billion dollars a year, according to an article in the July 1947 Reader's Digest by the Nation's leading military writer, Hanson Baldwin.

Aid to Europe will, of course, provide markets for American products as well as prevent the growth of communism. Communism is unlikely to spread among people whose needs are being met.

Universal military training, which is far less frightening than the atom bomb, would neither scare Russia nor prevent the growth of communism in Europe, if all our other vast military preparations have not produced these results. Instead, it would withdraw much-needed labor from the production of consumer goods in this country. A shortage of consumer goods and a surplus of money in the hands of the consumers is a major factor in causing inflation.

Marriner Eccles, Chairman of the Federal Reserve Board, was quoted in the press of September 26 as warning that the country faces danger of economic collapse if inflation continues unchecked, and that "military expenditures comprising the largest single item in the budget * * * are one of the most important factors that contribute to inflation." He suggested that it would be better to reduce expenditures on the Nation's military forces. He said, "It may be we could spend less on military forces if we spent more to maintain conditions on which democracy and peace depend."

If we cannot add three to five billion dollars each year to our military expenditures without the possibility of economic collapse, it would be folly to pass conscription. Nothing would do more to encourage the growth of communism at home and abroad than the economic collapse of America.

Not only must a choice be made between reconstruction and conscription, but if the Marshall plan is going to cost about twenty billion dollars there ought to be a reasonable assurance that it will succeed. Insistence on the passage of compulsory military training now would certainly imply lack of confidence in the ability of the Marshall plan to accomplish its purpose. It would obviously be difficult to make a case for compulsory training if the reconstruction of Europe does accomplish its purpose.

Moreover, a provocative move like the adoption of conscription would seem to imply that the reconstruction of Europe was just another aspect of the power struggle between Russia and America and not really intended to help achieve peace. This in itself would injure America. Marquis Childs, writing from Paris, was quoted in the press of October 8 as saying:

"If in coming into being the Marshall plan takes on the appearance of another and grander move in the struggle for supremacy, the chances of final success will be small. The ordinary man who has endured so much wants to believe that it represents the hope of a better world."

To give the Marshall plan of reconstruction the best possible chance to succeed the proposal for compulsory military training should be dropped.

Myer, Professor, New York University; Dr. Ralph McDonald, Secretary, Department of Higher Education, National Education Association.

WASHINGTON.

Marshall Plan—International Gamble

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. John S. Knight, editor of the Chicago Daily News, correctly points out that the so-called Marshall plan will involve risks and sacrifices. The American people should know and fully understand what is involved in this gigantic program. Under leave to extend my remarks, I am including the following editorial which appeared in the Chicago Daily News on Monday, December 22, 1947:

INTERNATIONAL GAMBLE—MARSHALL PLAN TO INVOLVE BOTH RISKS AND SACRIFICES

President Truman's message on the Marshall plan presents to Congress and to the American people the biggest, most daring—and most expensive—peacetime program this Nation has ever been asked to consider.

In effect, the Marshall plan makes the United States underwriter of a new 17-member United Nations.

If the plan is adopted the American frontier is no longer the Rhine; it is the stratosphere.

The plan proposes that we gamble $17,000,000,000 on the proposition that 16 other nations can and will cooperate with us to restore economic and political order in Europe and thus lay the foundation for peace and prosperity throughout the world.

It is a colossal gamble. So many unknowns and variants and intangibles are involved that no sane mathematician would attempt to work out the odds.

In its simplest terms the Marshall plan proposes that the United States contribute during the next 4 years approximately $17,000,000,000 in grants and loans to 16 non-Communist nations of western Europe. The money is to be converted into food, raw materials, and machinery to speed economic recovery.

Also, in President Truman's own words, it is designed to make sure that the 270,000,000 people of those countries do not turn, in their distress, to communism.

"Such a turn of events," said Mr. Truman, "would constitute a shattering blow to peace and stability of the world. It might well compel us to modify our own economic system and to forego, for the sake of our own security, the enjoyment of many of our own freedoms and privileges."

Aid to China is to be considered separately. Also, by inference, the President left the door open to other European nations which might at a later date want to participate on the same terms as the original 16.

To receive our aid, each country must agree to carry out a seven-point program:

1. Increase its own agricultural and industrial production.

2. Stabilize its currency and maintain a proper rate of exchange.

3. Cooperate in eliminating tariffs and other barriers that interfere with trade.

4. Cooperate with other nations for the welfare of Europe as a whole.

5. Stimulate production of certain raw materials and facilitate procurement by the United States for stock piling of raw materials we need.

6. Deposit in a special account the equivalent in their own currency of the grants they receive from us, such funds to be used only in a manner mutually agreeable to them and to us.

7. Furnish their people and the United States appropriate information concerning the use made of our aid and the progress under agreements with us and other countries.

These agreements were entered into in substance by the 16 nations last summer. To date they have done little toward putting them into effect. If the interval had been used effectively to put their own houses in order the plan would have more support in the United States.

Meanwhile, the situation has deteriorated in some European countries—notably France and Italy—and in the United States. Our inflation has increased the cost of the commodities Europe needs by approximately 7½ percent since the Paris Conference was held. This suggests that if the plan is to go through, we, too, will have to put our house in order.

Certainly we will have to increase our production in agriculture and industry. We will have to stabilize our currency. We will have to carry out at home some of the governmental reforms we demand of the beneficiaries of our bounty. High on the list of such reforms are governmental economy and efficiency.

Mr. Truman skirted the subject of our domestic responsibilities warily.

He devoted a few words to stating that the undertaking would be costly, would require self-sacrifice, and carried no guaranty of success. He suggested that rationing and controls might be necessary. He warned that efforts would be made to incite strikes in Europe to hamper working of the plan.

He made no mention of the necessity of avoiding strikes at home, if we are to attain the production goals necessary to make the program succeed here and abroad.

He made one concession to widespread demand: The program, if adopted, will be administered by a new governmental agency, separate from the State Department, but guided by it.

The Economic Cooperation Administration would be headed by an administrator, drawing $20,000 a year. His first deputy would receive $17,500. A director, maintaining liaison with the cooperating countries, would have ambassadorial rank and allowances, and would receive $25,000 annually. The total ECA administration pay roll would be about $712,500 a year.

President Truman said he presented his message now rather than after the new Congress convened in January because it is essential that the plan be in operation by April 1, 1948.

That does not give Congress and the people much time in which to consider one of the most important and revolutionary pieces of legislation the Nation has ever had to face.

The battle in Congress promises to be heated and prolonged.

If we adopt the Marshall plan it means more than acting as banker, commissary, and wet nurse for western Europe. The plan is intended to give western Europe and ourselves military security. If it is to work, we must make ourselves stronger industrially and economically. We must meanwhile make ourselves stronger in arms, lest potential enemies threaten to thwart the plan's objectives by force.

Particularly, we must have the world's biggest and best air force, and bases throughout the world from which it can operate.

Many such bases are available in the countries we propose to aid or in their colonial possessions. The cooperating countries should grant us basing rights, wherever necessary, as part of the Marshall plan agreement. Such bases are as essential to defense of western Europe as they are to us. They are essential to the world peace and prosperity that the Marshall plan seeks to achieve.

We must realize that if we adopt the Marshall plan, it will mean more than adopting a new foreign policy. It may also turn out to be a major factor in our domestic affairs for years to come.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. PHILLIPS of California. Mr. Speaker, the Congress is about to take up the so-called Marshall plan for discussion in committees and on the floor. This will be an interesting and a historic discussion. It is important in that debate as in all discussions which affect the future of the American people, we should have facts, accuracy, honesty, and a minimum of propaganda.

Under leave to extend my remarks, I include the following editorial comments on this subject which appear in the current issue of American World Intelligence, a bimonthly letter, written by Dr. C. S. Norborg in Washington, which has an increasing and well-deserved circulation, both in the country and abroad. The article follows:

EUROPEAN HONESTY VERSUS AMERICAN PROPAGANDA

Once again, the American public (and the U. S. Congress) will be flooded with the half-truths and sentimental double-talk to which the present administration always repair, when it wants to sell the people a financial foreign-aid plan.

If the recent propaganda efforts of the Foreign Policy Association and the Washington Post are samples of what we are in for, the European recovery plan will be sold to an uninformed American public opinion as (1) a device with which to stop communism; (2) an attempt to build a bulwark in western Europe against Soviet expansion; (3) a plan by which the free governments of Europe will be helped to recover from the war; and (4) a "calculated risk" which—given a chance—will pay good dividends for all, including the United States.

But, is this the real story?

Surrounded by this irresponsible American propaganda, it is morally refreshing to be able to quote exactly what leading European statesmen have told us both publicly and privately. They are very forthright about their interpretation of the so-called Marshall plan, which incidentally, was outlined on the front pages of European newspapers 6 days before Mr. Marshall spoke at Harvard on June 6, 1947.

Here is what the Europeans say:

1. Western Europe looks upon the Marshall plan as a financial aid, pure and simple, without any strategic or anti-Soviet angles.

2. The Marshall plan is but the American part of an over-all plan of inter-European recovery, the success of which will rest also upon a tremendous trade with the Soviet Union and the Soviet-controlled nations of eastern Europe.

3. With the indispensable assistance of the United States during the next 4 years, western Europe hopes and plans to raise its production to a level of from 140 to 170 percent of the prewar level.

4. This tremendously expanded production western Europe plans to sell by exporting it to the four corners of the world. The precise export picture for 1951 is, for example, as follows:

[Millions of United States dollars]

Exports to—	1938	1951
United States	443	1,484
Rest of American continent	807	2,461
Other nonparticipating countries	2,365	6,816

In other words, the Europeans expect in 1951 to export both to the United States and to the rest of this continent three times more (in dollars) than they exported in 1938.

The total figures for exports from the participating countries stand at $10,761,000,000 (1951) as compared with $3,615,000,000 in 1938.

5. The Europeans bluntly warn that the world trade recovery will fail if American dollars are not available in South America, Canada, the Far East, Southeast Asia, and other mutual trade areas.

6. Finally, the Europeans still maintain that the European currencies involved cannot be stabilized except by having sufficient gold being made available: $3,000,000,000 is the minimum needed, and those $3,000,000,000 of gold must come from the United States Treasury.

How trivial, how misleading the American propaganda talk must appear to any informed person: Why should the American people always be cheated?

American World Intelligence firmly believes in the necessity of pooling the economic, political, and productive strength of the free nations. However, we have had first-hand opportunity to watch the inefficiency and secrecy of our representatives in international affairs and believe that no good can come to America or to free men elsewhere by the continuation of cheap, superficial, and nonfactual propaganda.

Henry Wallace Waves Magic Wand, Bringing "Peace, Prosperity"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following article on Henry Wallace by John Griffin which appeared in the Boston Sunday Post, Boston, Mass., recently:

HENRY WALLACE WAVES MAGIC WAND, BRINGING "PEACE, PROSPERITY"—TRIES TO TELL AMERICAN PEOPLE HE, ALONE, HAS ALL THE ANSWERS—REMEMBER HIS SCARCITY PROGRAM?

(By John Griffin)

One of the greatest searches in all history is close to ending. It is the search for peace. Down through the ages, men have looked in vain for some way of assuring peace, but the secret has always eluded them. It seems to have been the eternal quest, the goal of men great and small.

Sometimes the road seemed open, but always something formed a block and caused a detour. Men have kept trying, however. They have formed a league of nations, an organization called the United Nations. They have striven mightily, but have never reached the goal.

SEARCH IS ENDED

But the search is all over now. It ended last Monday night at approximately 10:45 o'clock, a date and hour that will surely live in history. At that time, the great secret was revealed. All that is necessary is to vote for Henry A. Wallace for President of the United States.

In addition to that, Mr. Wallace is going to throw in prosperity, too, all for the price of one vote. Certainly this is a wonderful bargain to set before the American people and, of course, they will jump at it.

Here's how it happened, according to Mr. Wallace's own version:

He went to the leaders of the Democratic Party and laid down certain terms as the price for his support of that party's candidates in the coming election. They said to him, "Henry Wallace, we welcome your support, but we will not change our policies."

And that, Mr. Wallace says, was "the answer to millions of Americans who demand the right to vote for peace and prosperity." Well, that took care of the Democratic Party all right. That leaves the Republican Party to be handled.

As for the Republicans, there is no hope at all, Mr. Wallace states, for you can't expect them to be interested in peace and prosperity. So draw your own conclusions; Mr. Wallace is the only choice left. And he's willing.

SHOW THE WORLD

So he goes a step further, and says that "the bigger the peace vote (meaning, of course, the vote for Wallace) the more definitely the world will know that the United States is not behind the bipartisan reactionary war policy that is dividing the world."

He doesn't see any difference between the Republicans and President Truman. Both, in his opinion, are opening the door for war and are making certain that if war doesn't come in our lifetime, it will surely be ready for the next generation.

Well, nobody wants that, so the answer is clear. All you need to do is cast your vote for Wallace and say right out loud, "We are voting peace and security for ourselves and our children's children."

Simple enough, isn't it? How can Wallace lose? He has a perfect set-up. Here he is, the guarantor of peace and prosperity and security for generations to come. And who's opposing him?

A Truman, a Marshall, a Vandenberg, Dewey, Taft, Stassen, Saltonstall, and all the Democratic and Republican leaders and prospective candidates, all knowing nothing about peace and prosperity, all wanting war and depression.

ALL THE WARMONGERS

Look at all those men who have conferred with the Russian representatives, Stettinius, Byrnes, Marshall, and the rest. All of them giving their time and effort in exhausting efforts to bring about another war.

Think of the courage of Mr. Wallace to come right out flatly for peace and prosperity. There's a man for you. He doesn't want war, with all its misery. He doesn't favor depression and want. No, sir; he's for peace and prosperity.

He is not like the rich monopolists who have always been more ready to sacrifice their sons than their money and now have reached the point where they are willing to sacrifice both for the sake of world control.

Oh, yes. There is one other thing I forgot: Mr. Wallace is also for abundance and against scarcity. Someone might be unkind enough to point to Mr. Wallace and say, "Look who's talking?" Those unregenerate souls might be those who recall who was the apostle of scarcity a few years ago. But they won't embarrass Mr. Wallace; he doesn't embarrass easily.

If he did, he certainly couldn't be talking about the need for a United Nations disarmament conference "to rid humanity for all time of the threat of the atomic bomb and all other methods of mass destruction." Because that is just what the United States has repeatedly tried to do, only to find the Russians in opposition.

But let's not get into difficult things like that; it only makes the situation more complex, when actually, according to Mr. Wallace, it is very simple. All we have to do is have a peaceful settlement of our differences with Russia.

HAS MAGIC WAND

That ought to be easy, even though several leading American statesmen appeared to have failed at the task. Turn it over to Henry Wallace. He will wave his magic wand and all will be well. The Russians will immediately become cooperative and wholesome in all their dealings, they will look upon all our differences objectively.

They won't try to communize Europe or to split up Germany, or to interfere in Balkan affairs. They won't call all Americans who support the American foreign policy "warmongers and hatemongers and imperialists." All will be sweetness and light and the Russians will be gentle of spirit and wholehearted in looking at things objectively.

So if you want to, you can join the forces of peace, progress, and prosperity and support Henry Wallace. It's as simple as that, according to Mr. Wallace. And if you don't join, you are probably a dirty Fascist and reactionary and a monopolist and an imperialist. So there!

There was one line in the Wallace speech which seems to stick out. "It just doesn't make sense," he said. He was referring to the monopolists who want to sacrifice their sons and their money. He was not referring to his own speech.

But it applies pretty well at that.

United States Air Supremacy the Only Hope for a Permanent Peace

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following radio address entitled "United States Air Supremacy the Only Hope for a Permanent Peace," delivered by me over the National Broadcasting Co. network, December 26, 1947:

Ladies and gentlemen, the most important and by far the most vital of all principles in a realistic platform on foreign policy for the United States is the rapid achievement and the continued maintenance of full and adequate preparedness for defense on the sea, on the land, and more especially in the air. All the funds required to keep us the strongest military nation on the planet should be unhesitatingly appropriated by the Congress, and then, having done this, the Congress should insist that the armed services efficiently and effectively move to an early and full realization of this proposed goal. A strong and powerful United States is the surest guaranty for the perpetuation of a society of free nations. Only by adopting and acting upon the principle of sufficient preparedness will we be able to win the long-protracted struggle in which we are engaged for the achievement of an enduring peace.

On several occasions I have stated that air supremacy by the United States must for our own national interests become an actuality at the earliest possible moment, regardless of cost, the effort, or the sacrifice involved. Air power is peace power. United States air supremacy is the only hope for a permanent peace. In a telegram to President Truman and the Republican leadership of the Congress on August 21 of this year I strongly urged the calling of a special session to adopt the Marshall European Recovery Program and to strengthen the armed forces of the United States, particularly the Air Force.

There is an imposing array of impelling reasons why the United States must have air supremacy. Overwhelming air power is required to protect our world-wide interests. In view of the Russian program of expansion and aggression, air strength is necessary if we are to make our voice heard in world affairs and if encroachment on strategic points is to be resisted. Complete control of the air is the only defense against the atomic bomb. The vast oil supplies of the Middle East which will soon furnish the life blood of our economic system must not go unprotected. The money which we propose to spend on the Marshall plan to bring recovery to western Europe will be thrown away if we do not achieve air superiority to make our security and the respect for our will certain. Failing to strengthen our armed forces the position of the United States in world affairs will be jeopardized and the decline of the leadership of this Republic will be a favorite subject for dissertations by the historians of the future.

Our position in world affairs must be made perfectly clear. We should have it thoroughly understood that we will use our strength in the future to stop and defeat aggression just as we have done on two occasions within the last 30 years. We should emphatically state that an attack directed at certain strategic positions, the integrity of which we deem essential to the security of the United States, will be considered an unfriendly and inimical act. The world should be informed that when there is any encroachment upon strategic areas, such as the approaches to the Atlantic, Gibraltar, Greece, the Dardanelles, Turkey, Iran, the Near East, the islands of the Pacific, and so on, the aggressor making the encroachment will be met at once with our concerted, sustained, and unrelenting resistance. Any movement on the points I have mentioned would constitute an attack on our country and a threat to our national life. To take such a position as I have outlined requires air power—swift, overwhelming, devastating air power.

Any nation contemplating an atomic attack on the United States will hesitate only if she knows that within a period of hours from the time the attack is made there will be delivered in reprisal a knock-out, devastating, retaliatory blow from the air. The United States can be immunized against assault from the air by building a completely unassailable and invincible air force. With air supremacy and atomic supremacy any aggressor would not entertain the idea of an attack upon us because it would be perfectly clear that the cities of the country making the attack, the industrial centers, the lines of communication, and great segments of the population would be wiped from the face of the earth by a practically instantaneous single paralyzing blow from the air. Only by being fully prepared to deliver such a blow within a matter of hours after the first indication of an impending assault upon us will we be able to consider ourselves in possession of any measure of security. We have the ability, the resources, the strength, and the will which we must begin to exercise to create an air force fully capable of accomplishing the objectives I have set forth.

The rapid pace of our ill-timed and unwise demobilization left us scarcely anything from the wreckage of the most powerful fighting force in all history. One could weep at the asininity of our performance. Within a few months after the demobilization order, the Air Forces were unable to put one single squadron in the air at war-time standards of efficiency. We liquidated 320 groups and 80,000 airplanes, terminated contracts involving more than $10,000,000,000, closed more than 600 zones of interior stations and about 1,000 overseas stations. We disposed of surplus property in a total amount of $25,000,000,000 and lost most of our experienced personnel, both military and civilian.

The peak strength of the United States Air Force during World War II was as follows: Military personnel, 2,411,294. There were 243 groups with 104 separate squadrons, the approximate number of planes, 80,000.

When hostilities ceased, the Air Force Staff reached the conclusion that the minimum level at which the United States Air Force could be reduced in peacetime and still fulfill its responsibilities would be 70 tactical groups and 22 separate squadrons with necessary supporting services. The attainment and maintenance of an Air Force of this size has been the basis for the Air Force's recommended budgets to the Bureau of the Budget and to the Congress. The funds to support this 70-group program have not been forthcoming and the current appropriations for the fiscal year provide for only 55 tactical groups and supporting services.

General Spaatz in a statement at a public hearing before the President's Air Policy Commission on November 17, 1947, said "we need 6,869 aircraft for the 70 groups, including training; 3,212 for the Air National Guard; and 2,360 for the Air Reserve; the total amounts to 12,441 airplanes. To keep this force modern and up-to-date we require an annual procurement of about 5,200 planes. Also a reserve of 8,100 airplanes is essential.

The money we allotted to the Air Force for the current fiscal year is $3,388,000,000. To establish the minimum 70-group program as recommended by the United States Air Force, we should have appropriated approximately $5,235,000,000 for the fiscal year. To achieve the absolute minimum air force for safety and to have a reserve of approximately 8,100 planes as determined by General Spaatz, we must allocate a much larger sum of money to the Air Force.

If the Air Force has a 70-group peacetime organization backed up by a reserve and an Air National Guard, it would demand a procurement program for airplanes, a training establishment and other activities which would require an expenditure for Air Force purposes alone amounting to approximately $6,000,000,000 annually, beginning at once. This means for the next fiscal year. Such a program would call for a force of 401,000 military and 150,000 civilian personnel, making a total of 551,000.

On December 15, I introduced a bill providing for a supplemental appropriation of $500,000,000 to be expended on the Air Force between now and June 30, 1948. This sum could be obligated and used economically during the remainder of the current fiscal year for the purpose of implementing the proposed 70-group program. Beginning with the fiscal year 1948 we should appropriate to achieve the irreducible minimum air protection for the United States, $6,000,000,000 annually. It should be emphasized and reemphasized, iterated and reiterated, that the suggested supplemental appropriation of $500,000,000 and the annual appropriation of $6,000,000,000 beginning with the next fiscal year will provide for this country only the barest minimum peacetime Air Force to maintain our national security.

Even with the allotment of funds I have advocated it would be 1952 before the United States could realize the 70-group program were we to start at once. When this 70-group program is a reality we will have only the basis on which air supremacy could be achieved. Should we be attacked, this minimum Air Force would be just sufficient to blunt the enemy's first offensive. We would not have air supremacy and before we could attain it a period of 18 months would be required. To win a war we must have an Air Force of approximately 175 to 200 groups.

In view of these startling facts and in view of the feverish manner in which the Soviet Union is increasing her armed strength, we must act with haste to acquire air security for the United States. It is utterly ridiculous to continue to talk tough if we have no intention of moving to secure adequate preparedness. The United States cannot make its will felt with a $3,000,000,000 Air Force. I hope that we will exercise the foresight, the courage, and the statesmanship to grant at least the appropriations necessary to realize the 70-group program. Personally, I would make available much larger funds in order that we might reach the goal of complete air supremacy in the immediate future.

The Present Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials by Mr. A. R. Wilder, the able editor and publisher of the Amboy Herald, Amboy, Minn., which will be of special interest to my colleagues because of their common sense and practical approach:

AS EXPECTED

Sure, just as we expected, the Republicans are now being accused by the Democrats of failing to do in one session of Congress, and against a Democratic President, what the Democrats have failed to do in nearly 15 years. And we think we are more lenient in our attitude than the supporters of present administration in that we make no attempt to deny that they have accomplished some good in that time. But when it is expected that just because the Republicans have had a congressional majority in only one session of Congress, and are thereby expected to right all the wrongs accumulated in over 15 years of the present controlling powers, we think that is just a little bit too much. A lot of detail could be added to back up that statement, but that is the gist of the situation at the present. Also we find the present administration adopting policies and strategy which they hope will entangle the Republicans in case they should be given the entire reins of government at our next election, and which in itself is a tacit admission that they do not expect to win. For nearly 15 years the present administration has played a superpolitical game, and it would not be in the least bit surprising if the people of this Nation would follow the present trend at the next election and make a change.

PRICES

The Minnesota poll reveals that more than three-fourths of the people in the State want Congress to do something about prices. But when it comes to settling on any definite price program the poll reveals that they fly off onto to so many angles that not any one of them gets more than a very small minority. Those that wanted lower prices polled the largest minority vote of 24 percent, and all of the rest of the angles on the price situation had a much smaller minority vote, even down to only 1 percent. And we wonder how Congress can pass any legislation that will fit that kind of a mess. To sum it all up, we might just as well say that we all want lower prices for what we buy and higher prices for what we sell, and who don't? But on the basis of the above it looks as if it might be dangerous to tamper too much with price controls, and let the present situation work itself out in due course. However if some restrictive legislation were passed on black markets and similar abuses of prices, there might be one angle that could receive some just attention, and which is long past due.

Community-Wide Demonstration Commemorating Palestine Partition, Revere, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following speech delivered by me before the community-wide demonstration commemorating the Palestine partition, Sunday, December 21, 1947 at 8 p. m., in Revere, Mass.:

Fellow Americans, the United Nations has made its first major decision.

This infant organization, upon whose development the security of mankind depends, devoted more time, study, and anxious effort to find a solution to the problem of Palestine than to any other issue to come before it.

It is significant that the first constructive step of the United Nations was to right an ancient wrong which has troubled the conscience of the world for many, many years. The United Nations, faced with the conflicting claims of Jews and Arabs, has struggled with this serious problem during months of intensive investigation and debate.

Then came the last week of November 1947.

In Palestine—that tiny area of land which is the hub of communications between Europe and Asia—a land crossed by the great artery of a pipe line which carries the liquid wealth of oil from Arabia to the Mediterranean ports, a land tense with the intrigues of great powers, the climax of an age-old drama had arrived. Crowds stood for hours in front of radio loud-speakers on the streets of Tel-Aviv. Newspapers worked night and day, rushing special editions off the presses as they tried to give a blow-by-blow account of the great debate which was taking place in the General Assembly of the United Nations in New York. The verdict hung in the balance. Earlier the committee had voted for the partition plan by a margin of 25 to 13. But 2 nations were absent and 17 had abstained from voting. There lay the crux of the whole situation. Why were so many nations on the fence? Which way would they lean? The outcome would alter the foreign policy of great nations, and, as such, was a matter of world interest. To the 1,800,000 Jewish and Arab people of the Holy Land it was more than this. All the hopes and fears and cross-purposes of centuries were coming to a head.

This might be a life-or-death decision for the people of Palestine.

Thirty years ago Great Britain was delegated to rule Palestine under a League of Nations mandate that promised eventual establishment of a Jewish national home in the Holy Land. This mandate specified that "nothing shall be done which may prejudice the civil and religious rights of non-Jewish communities."

Britain failed in the job of trying to satisfy both the Jews and the Arabs. It has cost her much in treasure to garrison this key country. Because she has tried to keep to the middle of the road in her administration of Palestine, she has reaped the harvest of world indignation.

The partition plan, written chiefly by the United States and Soviet Russia, calls for the termination of the mandate by next August 1. By October 1, two independent states and a United Nations trusteeship will come into existence. They are:

The Arab state, comprising 4,500 square miles, with a population of 804,000 Arabs and 10,000 Jews.

The Jewish state, embracing 5,500 square miles, with a population of 397,000 Arabs and 538,000 Jews.

The United Nations supervised area of Jerusalem, with 289 square miles and a population of 105,000 Arabs and 100,000 Jews.

This does not take into account the 75,000 Jews who are expected to emigrate to Palestine in the first half of 1948, with a larger influx toward the end of the year.

Britain said that irrespective of what the United Nations might decide, she was going to give up her mandate and get out of Palestine. She refused to participate in any United Nations plan unless it was accepted by both Arab and Jew. The responsibility which has proved so costly to Britain in men, money, and prestige at last became too much for her. After repeated attempts to get both groups together, the British Government, under the additional pressure of those who wanted her to get out of Palestine for good, threw the whole problem into the forum of the United Nations.

What would the 17 nations who had abstained from voting in the committee—what would they do when the roll call of the Assembly was read? We have no proof that the United States Government persuaded those who were undecided, to vote for partition—but we strongly suspect that Mrs. Eleanor Roosevelt and other public-spirited Americans had something to do with it. For when the final vote was tallied, partition had won.

And there was great rejoicing among the Jews of Palestine—among the refugee Jews in Europe who look to the Holy Land as their only salvation—and among the Jewish community in the United States. I am happy to add that many of your fellow Americans who are not Jews, shared your rejoicing. We have always inclined toward those people who have the belief, the courage, and the persistence to follow through in their quest for freedom. For free peoples need the support of one another in this world where tired nations are in danger of giving up their birthright for the illusion of security. The struggle for liberty is a long and difficult one, as the Jews know, better than any other people. The winning of it is only the beginning—a notable beginning which should inspire us to defend it with vigilance, and to care for it as a living quality which we must nourish for its greater development.

Since the UN made its momentous decision, Britain has quickened her plans to get out of Palestine. Furthermore, she says that British troops will not be available to enforce order between Jews and Arabs. She intends to terminate her mandate as early as May 15 of next year. This, apart from the earlier date set for withdrawal of her troops, was what she had already said before the UN General Assembly. To this, however, she has added a new provision, stating that she does not want the United Nations to send a commission to Palestine to prepare the way for partition until May.

Clearly, this raises the possibility of a serious situation. The UN's administrative machinery to carry out the partition is made up of representatives from Bolivia, Czechoslovakia, Denmark, Panama, and the Philippines. It will be aided by a secretariat drawn from the UN staff.

It will follow these steps.

1. It is now making a preliminary study of its task. Early in January it will go to Palestine.

2. The partition plan has already outlined the general boundaries. The Commission will fix the exact ones.

3. The Commission will work with Jewish and Arab groups to set up the government structure of the new states.

4. On the date that Britain yields up her mandate, the Commission will become the transitional government of the Holy Land.

5. On October 1, at the latest, the Commission will formally transfer sovereignty to the two new states. Partition will then be completely in effect.

The British decision to pull out earlier, without allowing the Commission to start its interim work before that time, might create a vacuum which would lead to widespread violence and bloodshed. The British must be prevailed upon to reconsider, and give the Commission sufficient time to establish a provisional government before she withdraws.

But, apart from this emergency angle, how is partition to be enforced? The UN is hopeful that its prestige will have a moderating effect. If this fails, the problem becomes one for the 11-nation UN Security Council.

It can proceed in two ways. First, it can order members of the UN to invoke economic and diplomatic sanctions against an aggressor state. Second, it can call on member nations to provide troops to deal with the situation.

In view of the tense international situation, and the distance of transport separating the United States from Palestine, our Nation is presently reluctant to supply troops. We have vital oil interests in the Middle East. There is anxiety and tension among the 11,000 Americans directing an investment of hundreds of millions of dollars in these countries. Many of them live in isolated communities where they would be completely cut off in the event of a holy war. It is felt that if we send troops, the Arabs, spurred on by Russia, might provoke a major crisis which would lead to war. On the other hand, if we abstain, Russia might propose that she provide the Security Council's troops—a move that might give her a complete grip on this strategic region. Britain will not lend her troops to enforce partition.

The brief picture I have just drawn, looks at the worst possibilities in the situation, so that we may anticipate and avoid, the worst.

What is the immediate picture? In the 3 weeks which have passed since the United Nations made its decision, hundreds have been killed and wounded, and many thousands of dollars in property damage has been suffered, as Arabs attacked, and Jews defended themselves.

Part of this may be due to the release of overwrought emotions. Part of this stems from the Arab campaign of creating a major nuisance in the hope of obtaining concessions. Perhaps part of it is calculated to save the Arab "face."

And how do Jewish leaders regard these attacks?

They are realistic. They know that the Arabs deeply resent the decision to establish a separate Jewish state. What the Arabs are prepared to do about it—is the factor which must be carefully appraised.

The Jews believe, and rightly, that the United Nations, and particularly the United States as a main sponsor of partition, cannot leave them out on a limb.

Zionists claim that if the British troops are drawn back too quickly toward ports of embarkation, it will put the Jews at a disadvantage against Arab fighters who are expected to follow in the wake of the departing British. English soldiers will be withdrawing through an area which is intended to become a Jewish state and Jews may be handicapped in getting their defense forces organized with British troops in the way. The Arabs, on the other hand, have only to close in as the British pull back.

It is not believed, however, that full-scale warfare of Arabs against Jews will break out. Officials in Palestine anticipate that guerrilla warfare will be carried on by the Arabs against their Jewish neighbors.

The Arabs will boycott goods from Palestine, placing a strain on the economy of the new Jewish state, while guerrillas make raids upon railroads, industrial installations, and upon agricultural projects. Under such an attack, Palestine may have to fight hard for survival for some years after partition. Those of us who believe in her cause are so confident that she has the resourcefulness and the courage to do so.

The Jews have the Haganah.

The Haganah's strength is a secret, but it is believed that they have a total of about 70,000 members, of whom some 10,000 are well-trained, first-line fighters. Among them are several thousand men seasoned in World War II, as British troops and officers. A reservoir of raw material is the additional 30,000 or 40,000 young people between the ages of 17 and 25, now being registered for national service.

No, the Jews are not asking for men. They have their own. But, to guard against any eventuality, they need arms, which they wish to buy from the United States. We have given arms to Greece and Turkey. Can we do less for the young Jewish state, whose cause we have supported with so many words? I say that we cannot and will not abandon them now. The United States must send military supplies to Palestine at once.

But Palestine also needs help in the financial field, in order to survive economic warfare. For this she looks to friends in the United States, as well as in other parts of the world. With characteristic belief in the justice of their cause, the Jewish people are working with a will to help themselves before they ask help from others. Palestine is an old land but its settlements are new, built up from the wasteland by work and sweat and the inspiration of a dream that is on the verge of becoming reality, because the Jews are making it come true.

Aware of the economic needs of the young state as it faces the problems of self-government while harassed by neighboring Arab states, American Jewry is responding to the challenge. During the past week, plans were mapped to raise $250,000,000 in 1948, for aid to the Jewish nation that is coming into being. This is the largest quota ever set by any private relief organization in the history of the United States.

It will require back-breaking effort and sacrifice to raise this huge total which is needed to defend Palestine and put it squarely on its feet as a self-governing and self-sustaining nation.

Your zeal and the cooperation of your fellow-Americans will put this drive across.

The Jews of Palestine will, if need be, fight for their freedom. With your help, and my help, and that of all believers in the future of freemen—they will, most certainly—build for it.

Your people have wandered 20 centuries in search of a haven for your brethren who

are oppressed. Now it is at hand. Within sight of the goal, the Jewish people will not be stopped by those who would challenge their birthright.

For Palestine is born. And it will survive and prosper.

Address of Gov. Earl Warren, of California, to Hollywood Republican Committee

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. McDONOUGH. Mr. Speaker, the recently organized Hollywood Republican Committee which has for its declared purpose to support and defend the American way of life held its first dinner meeting at the Beverly Hills Hotel. The principal speaker was the Governor of California, Earl Warren.

The president of the Hollywood Republican Committee is motion picture actor George Murphy and the vice president is Robert Montgomery. Other officers include Walt Disney, Leo McCarey, Adolph Menjou, Ginger Rogers, and many others prominent in the motion-picture industry.

The Hollywood Republican Committee representing, as it does, many prominent executives and actors in the motion-picture industry will be an effective element in the 1948 campaign, and by its organization and its effective work up to the present time has added prestige and influence to the Republican Party in the State of California.

Following is the address delivered by Gov. Earl Warren:

This gathering is a good sign of the times. To me it represents what is going on in the minds of Americans everywhere. People are reaching out now for an opportunity to be helpful to our country in the solution of our many problems, domestic and foreign. They recognize in these problems both the seeds of progress and of disaster. Single-handedly, however, they often cannot tell which is which. It is only when they are viewed from every angle and from every source of light that one can be clearly distinguished from the other.

It is to accomplish this purpose that people are increasingly recognizing the necessity of associating themselves together for the purpose of political thought and action. It is not only a phenomenon of our day; it has long been a characteristic of the American people. It was this instinct that brought our party system into being a century and a half ago.

Strangely enough, the founding fathers did not perceive the necessity of political parties. Some were violently opposed to the mere suggestion of them, but their development was inevitable. As problems of government appeared on the surface people debated them, made patterns for their solutions, developed philosophies, and gave names to their groups, as a result of which political parties came into being.

Through the years these parties have risen and fallen according to their usefulness. Fortunately for the American system our people have always been satisfied to solve their problems through the medium of two parties. On occasions when they were not measuring up to the standards set for them by the electorate, or when dissension had torn their ranks asunder, new parties were launched. Always, however, within a short time the American people would settle down again to the two major parties which they could use most effectively in the solution of the current problems.

The Republican Party itself came into being through the dissolution of one of the major parties of the day. Many groups were vying for leadership. The present Republican Party supplied that leadership. It started as a party of principle, a party of the people. For almost a hundred years it has been a dynamic force in the life of our Nation.

The Republican Party has had its "ups and downs" as have all other human institutions. It has been in power and out of power. It has at times performed great things for the Nation. At other times when it became self-satisfied and lethargic, it invariably paid the price for its omissions.

But the core of the Republican Party has always remained sound. It has never wavered from true American principles. Invariably, therefore, we have been able to rebuild around it until it could again assume a dominant place in the political life of the Nation.

We now stand on the threshold of the greatest opportunity the Republican Party has had in a generation to serve the needs of the American people. Last year the people turned to the Republican Party by making it the majority party in both Houses of the Congress. They gave it the opportunity to develop the programs which will solve the many and great problems of our day. They gave it a training ground on which to prepare for complete leadership next year.

No majority in Congress has ever been assigned a more difficult task. It took over at a time when the world was in a state of flux and seething with long-established hatreds which were accentuated by the poverty and destruction of war—at a time when our own domestic life had been disrupted by years of this same war.

The Republican Congress has worked hard at its task and is now at grips with the challenging problems of the day. It needs our help. It needs groups that are active in the formulation of public opinion. It needs it in the way you are giving it tonight, by associating yourselves together to advance Republican causes rather than merely to campaign for Republican candidates.

Political parties are not designed merely to elect candidates to office. Any party that so limits its activities is doomed to ultimate failure. Their main purpose is to create sound public opinion by developing issues and pointing up the answers for those who hold public office.

No man or small group of men know all the answers to the many problems of the day. They are too numerous to fall within the experience of any man. They are too complex for one human mind to encompass. The answers to them are to be found in the hearts and minds and collective experience of the American people. They can only be refined through exchange of opinions, debate, publicity, and resulting action. In recent years there has been too little of this in the Republican Party. Groups like your own can supply this deficiency. They can give to Republicans who have the urge to do so, and there are millions of them, the opportunity to help in the solution of the problems of their day. That is the reason I believe this meeting is a good sign of the times.

We cannot afford to have this process going on actively only among the extremists in our society. The Communists work at creating public opinion 24 hours of every day. Because they do this and are so vocal, there appears to be many more of them than there actually are. Their influence is out of proportion to their numbers. I know that to be true in this country, and I believe it to be true in other parts of the world. I am sure you find that this same situation exists in the motion-picture industry.

With all well-wishers of the motion-picture industry, I have been interested in discussions, pro and con, concerning the persons and activities of asserted Communists in the industry.

It is a good thing, now and then, to look into possible communistic infiltration wherever it may occur, and especially in such an important agency of influence as motion pictures. But it is not sufficient merely to identify Communists. We must nullify their effectiveness.

The inspiration and conviction which bring men and women into an organization such as this one will do more to discourage a Communist and defeat him than any other form of effort. I would venture a guess that for every Communist or fellow traveler in your industry there are literally thousands of men and women who abhor communism and who would fight to prevent its spread. The trouble too often has been that while the Communist furthers his cause, we who are unalterably opposed to it sit by and do little to advance ours.

You have taken a step in the right direction by joining together in this organization which not only condemns communistic doctrines, but proposes to put up a fight for the security and survival of principles which communism menaces.

All that is necessary for us to do to make communism impotent in America is to stick to our democratic principles as the Communist sticks to his objectives, and through the application of our principles solve the basic problems of American life so effectively that there will be no hunger for either food or human rights upon which communism can construct its system. Human misery is the only foundation on which communism can build.

But until the world is much healthier than it is at the present time, communism will be a problem for every country on earth. It is not sufficient for us to reduce it to an irreducible minimum in our own country. We must also lend encouragement—both moral and material—to those countries that are endeavoring to maintain their independence in spite of its aggressions. Our relations with Russia have become serious, not because we care what kind of government Russia has for Russians, but because Russian communism is a form of aggression that is bludgeoning its way across state borders and into the lives of nations who want nothing more than the opportunity to work out their own problems without outside domination. This aggression is contrary to the America spirit of fair play and to the commitments that the nations of the world, including Russia, have recently made to one another.

The world is in turmoil at the present time, and there are many people who believe war with Russia is just around the corner. I do not share this belief. Such a war would be a world war. It would involve all the civilized nations on earth. It is my belief that the people of these civilized nations have the intelligence, and the enlightened self-interest, which will compel them eventually to try in every possible way to avoid World War III. They must know that such a war would amount to self-destruction of the winner as well as the loser.

It is possible, of course, that our country cannot guarantee peace as much as we desire it. There are too many factors over which we have no control. But we can delay conflict and perhaps avoid it ultimately by frankness, forbearance, and good will.

I do not believe that vacillation, expediency or appeasement on our part will avoid

trouble with Russia. Nothing but firm adherence to those principles to which we have subscribed in the United Nations and the Atlantic Charter—principles designed to establish peace through united effort and justice, will mobilize the sufficient world intelligence and cooperative action that is necessary to prevent war. To be able to do this we must keep our country spiritually and militarily strong enough to assure not only ourselves but the world that we are able to and will keep our commitments in furtherance of permanent peace.

We must help those nations that are endeavoring to retain their national integrity through the processes of free government, while striving at the same time to rehabilitate their war-torn economies. We must do this both on the grounds of common humanity, and also as a matter of enlightened self-interest. Unless these nations are successful in reestablishing themselves on a free and self-sustaining basis, the world will continue in its unhealthy condition as it is today. Even America cannot prosper ultimately in an unhealthy world.

It seems to me that there are two phases to this problem—one, to relieve destitution; the other, to make the stricken countries self-sustaining. To undertake the former without a sound plan for the latter would eventually weaken our own economy without strengthening theirs. Mere subsistence is not rehabilitation. Neither will it prevent the spread of communism. Any plan adopted must both strengthen the aided countries and, at the same time, not weaken ours. In transfusing economic blood into the anemic bodies of Europe and Asia, we must not bleed this country white. It would serve no world purpose to pour dollars or commodities into Europe at the expense of weakening the economic structure of this country. It is the fond hope of the Communists that we will make just such a mistake in order that they may be able to build upon the misery resulting from our failure.

We want to help our neighbors of the world. We can do it very substantially where they are also willing to help themselves. But they must help themselves. The amount given in each instance should in my opinion be not only in relation to need, but also in relation to the sincerity of purpose of the aided country to maintain free government, to live at peace and in cooperation with its neighbors, and to make a real effort to rehabilitate itself through hard work. Just how and to what extent we are to help depends largely upon them, but in the last analysis, of course, upon all the people of this country. The more political groups such as yours study the problem, the more enlightened our ultimate decisions will be.

In our concern with international affairs we must not lose sight of the necessity of keeping America an inspiration for the freedom-loving peoples of the world. The way we solve our own domestic problems will have much to do with their opinions. The eyes of the world are upon us, and there is no longer a clear line of demarcation between our foreign and our domestic affairs. They are interrelated to a degree which makes consideration of one without the other impossible. The examples of working democracy will mean even more than the principles we espouse. The best example we can give is to maintain the standards of living, cultural attainments, and security for all our people that characterizes a free and healthy state.

We must solve the housing problem, expand our educational and health facilities, and attack the high cost of living and other inflationary tendencies. The solution of such problems not only strengthens our own faith in democracy, but discourages and renders impotent all extremist organizations of either the right or the left.

Here in California we must work at our local problems that are mainly incidental to our rapid growth. We have 3,000,000 more people now than we had before the war. It is as though the entire population of the great State of Virginia had been picked up en masse and set down within the boundaries of our State in the last 7 years. Every facility of government and of community life has been strained to the limit. Resources that formerly appeared to be inexhaustible now call for conservation measures. Our economy has changed. We are now one of the great industrial States of the Union. Life here is changing also. It is our duty to see that it does not change for the worse, because those of us who live upon the resources of our country and State today as well as those who are entrusted with the affairs of government are but trustees for the future. If we are to serve a useful purpose we must try to prepare our country to serve the needs of our children and their children even better than it has served ours.

If we measure our devotion and our civic activities in proportion to the way America has treated us, our opportunities for service are unlimited.

I repeat it is most fortunate for the well-being of our Nation that new committees like yours here tonight are being organized.

From the manner in which you are proceeding, it is evident that you mean business and that you will make a genuine contribution to the integrity and effectiveness of our party efforts. Your personal and active interest in Republican Party affairs and in the formation and promulgation of party principles is a fine and encouraging thing—both for Republicans and for the people generally.

Your participation in the councils of the party will be welcome, not only because many of you are known and admired by millions of our countrymen to whom your names and personalities are so familiar, but because you bring to the party new leadership, new viewpoints, and new perspectives.

The usefulness and vitality of a political party are determined by its capacity for growth, by its ability to attract and hold the confidence both of the mature citizen and of the young men and women who are just entering upon the stage of life.

I believe our party, the Republican Party, is the one great political organization in the United States today to which the people can turn for competent leadership, and I believe the people themselves realize this.

It is up to us as Republicans to make sure that such trust and confidence are justified. We can't let them down, and I don't think we will.

Cost of ERP

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial entitled "Cost of ERP," which appeared in the Fort Wayne (Ind.) News-Sentinel, issue of January 1, 1948.

One of our greatest dangers in approaching the problem of continued aid to Europe is that we think of American aid in dollar figures rather than as actual, tangible wealth and resources. A dollar sign followed by a long string of figures has very little meaning for most of us, for the average person simply cannot comprehend the immensity of the astronomical sums involved. The figures begin to make sense only when they are translated in concrete, understandable terms such as used in this editorial. I sincerely hope that we in Congress, and all other Americans, will measure the cost of ERP by such simple, everyday yardsticks.

COST OF ERP

How many people understand how much is $1,000,000,000? Americans read of huge appropriations voted in Congress. The New Deal accustomed them to the billion-dollar lingo but it didn't teach them how to visualize the immensity of the astronomical sums it so casually and recklessly spent.

Never was it more vital for Americans to understand the size of the $6,000,000,000 bill they'll have to foot for the first year or so of the $17,000,000,000 Marshall plan if it's approved in the form the administration would like.

We are indebted to a reader for suggesting that if the United States plans to give away six billions, then it would be handing out the equivalent of total assets of the following companies:

General Electric, Ford Motor Co., Sears, Roebuck & Co., Chrysler Co., Armour & Co., F. W. Woolworth, Eastman Kodak Co., Atlantic Refining Co., Aluminum Co. of America, Goodyear Tire & Rubber Co., Republic Steel, International Harvester Co., Reynolds Tobacco Co.

To get a broader idea of the scope of these properties, one has only to observe what the Ford Motor Co. alone would embrace. It would mean principal plants at Dearborn and River Rouge, assembly plants in several cities, mines, timber holdings, inventories, and all other properties. To this add the broad expanse of physical assets owned by the other companies.

We wonder how many Americans realize that the Marshall plan would require American resources on such a gigantic scale. Our informant says "this is $6,000,000,000 in a form I can understand."

Americans have a high standard of living because as a people they have produced it. Giving away their substance and reducing that living standard won't raise the standards of any of the 16 nations involved unless we can, at the same time, give them the American spirit of enterprise and determination to produce.

Time for Reasoning

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach an editorial from the Parkersburg News, published in Parkersburg, W. Va. The statement is timely and supports the indisputable fact that we can best serve the cause of freedom abroad by demonstrating the fact that democracy, as we know it, is superior to any form of superstate.

The editorial follows:

TIME FOR REASONING

There has been an ominous increase in the fear of Russia on the part of the American people during the past few months. This is not said out of a desire to minimize the

seriousness of the international situation. However, it must be remembered that it is possible to fan the flames of fear and suspicion until a nation comes to believe that war is inevitable. And once that stage is reached, war always comes sooner or later.

David Lawrence put this well when he said, "The danger in a battle of words is that it can conceivably develop into a battle of arms." It is unfortunate that American statesmen have been goaded into using language that is not often employed between countries not at war. The Russians, of course, provoked them into it. Even so, difficult as it may be to keep our tempers, we cannot gain anything by warlike talk simply because Russia employs warlike talk. To quote Mr. Lawrence again, "It is a time for restrained phrases and for persuasive argument. It is a time not for feeling but for reasoning."

We can best serve the cause of freedom abroad, in our relations with the Russians and all others, by backing up our material aid with a demonstration of the fact that democracy, as we know it, is superior to any form of superstate. We can, in other words, help combat the spread of communism by example. We must keep our people and our industries free of the governmental controls which plague Europe. And, at the same time, we must continue to work to the limit of our abilities with all nations, regardless of ideology, to maintain the peace of the world. Fear hysteria will never achieve that vital end.

Let's Not Repeat Mistake Following World War I in Our Peace Effort

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial of the Kingsport Times, Kingsport, Tenn., of December 12, 1947. Mr. W. J. McAuliffe, the editor of the Kingsport Times, is not only a very capable editor but is an eminent historian and political scientist. His editorials on the subjects of meeting the threat of communism by making democracy work and on not repeating the mistakes we made after World War I in our present quest for peace are great contributions to the thinking of our day. Typical of these editorials is the one included here, as follows:

THOSE SADDEST WORDS

The recent death of Nicholas Murray Butler, former president of Columbia University, recalls the fact that Dr. Butler received the Nobel peace prize, along with Jane Addams, in 1931. That honor was not undeserved and came as a reward for many years' work in behalf of world peace. Dr. Butler was a leader in a group of great Americans who gave time and energy to creating a better understanding among the nations, in the hope that some day a means would be found to find a substitute for war in the settlement of international problems.

But recalling that award brings to mind another story. In 1931 Woodrow Wilson had been in his grave about 6 years, a grave in which the League of Nations was also buried. That League was given its mortal blow by the failure of the United States to join it. The cause of that failure lies partly at the door of Nicholas Murray Butler; whether one calls it blame or credit depends on whether one thinks that it was a good or a bad thing.

Dr. Butler, as we said, had been a worker in the field of world peace for many years. He was a worker in that field before Woodrow Wilson and Jan Smuts conceived the idea of the League of Nations. So had Theodore Roosevelt and William Howard Taft and Elihu Root and Herbert Hoover and a great many other eminent Republicans, in public office and out.

But the group of Republicans led by Henry Cabot Lodge were not workers for world peace. They were in fact cynical of the idea that war could be abolished, and they were, as far as the United States was concerned, isolationists in their approach. This group set out to kill the idea of the United States joining the League. Where was Nicholas Murray Butler and his group in this critical time?

These men were caught on the horns of a dilemma. Recognized as proponents of cooperation, committed by all their past action and words to the principle of an international organization to prevent war, they found themselves obliged to choose between supporting the program of Woodrow Wilson, thus opposing the active heads of the Republican Party, and supporting the senatorial group, thereby letting slip the chance of organizing a real league.

These great men chose the latter course, and thereby the course of history was changed. Because they did the world was committed to travel the same road, and not permitted to try the great experiment. This is true because the League without the United States had as little chance of living as the United Nations would have without our participation today.

An attempt at compromise was made. They professed to believe that amendment to the League constitution was necessary; and that it was Woodrow Wilson who prevented our joining by refusal to accept the legitimate amendments or reservations of the Lodge group. Later they went a step further and supported the campaign of Warren Harding, telling the American people, in a sort of manifesto, that they favored the United States joining the League of Nations, but the best way to get participation was by electing a Republican President.

We do not know how much this word influenced the voters. Likely, Mr. Harding would have been elected in any case. Nor do we know whether the statement was made in all sincerity or not. What we do know is that a Republican President was elected and the idea of bringing up the subject of joining the League was not revived. And it is not of record that any of these great men made an effort to have it revived.

The blame for failure of the United States to join the League is often placed on Woodrow Wilson, particularly since later thinking decided that it was unfortunate that we did not join. Many people who think we should have joined at that time ask what made Woodrow Wilson so stiff-necked in his pride of authorship? But it was not just pride.

Nobody knows what would have happened if we had joined the League. But we can say definitely that we would not have joined if Wilson had accepted any amendments or reservations. Because, if we had acted on the principle that we had the right to amend the League constitution or make reservations in any particular at all, then every other national legislative body would have the same right, and each would have to pass on the reservations made by all the rest. What sort of constitution would come of that? No agreement would ever be reached. Woodrow Wilson knew that we had to take the League as it was just as the Senate knew it had to take the United Nations Charter as it was. Amendment would have to come by action within the League.

But of course the unhappy truth is that the League was only a pretext, not an issue. It was just opportunity for the Republican Senate leaders to destroy Wilson. The group of eminent Republicans, of which Nicholas Murray Butler was one, bowed to those leaders. We will never know what might have been if they had chosen the other path. It might have made so much difference. It might have been—those saddest words.

Accomplishments of the Committee on Public Lands During 1947

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. WELCH. Mr. Speaker, during the year 1947 the Committee on Public Lands, of which I am chairman, carefully considered and favorably reported to the House of Representatives 124 bills and resolutions at a minimum cost to the Federal Government and at an amount far below that which is authorized by the Congressional Reorganization Act. The House passed 109 of these bills, 68 of which have become law. This is a record of which the members of the committee can be justly proud.

The name of the committee is a misnomer, because it is no longer limited to public lands legislation, but under the Congressional Reorganization Act is a consolidation of six former legislative committees of the House, viz, Territories, Indian Affairs, Irrigation and Reclamation, Public Lands, Insular Affairs, and Mines and Mining. Thus, it will be seen that the Committee on Public Lands has legislative jurisdiction involving nearly all of the Nation's natural resources, and it includes a wider range of legislation than almost any other committee in the House.

In the interest of expediency I appointed five subcommittees as follows: Public Lands—chairman, Congressman BARRETT, of Wyoming; Irrigation and Reclamation—chairman, Congressman ROCKWELL, of Colorado; Territorial and Insular Possessions—chairman, Congressman CRAWFORD, of Michigan; Mines and Mining—chairman, Congressman LEMKE, of North Dakota; and Indian Affairs—chairman, Congressman D'EWART, of Montana.

The Congressional Reorganization Act authorized the appointment of four professional staff members in addition to six clerical staff members. The basic salary of each professional staff member could have been $8,000 annually. Such professional staff members would be of no possible use to the committee unless they made field investigations which would have cost an amount equivalent to their salary. In the interest of economy the committee has not made these appointments nor has it filled the full quota of clerks, with a resultant saving of a minimum of $60,000 during 1947.

It was decided that instead of employing a full staff, members of the committee would go into the field and make personal studies of the most important problems under the committee's jurisdiction. To carry out this program I requested, and the House authorized, $25,000 to be expended by the committee for field studies.

There were 20 hearings held by the full committee and the subcommittees in California, Washington, Colorado, Wyoming, Montana, Nevada, and Alaska. While the committee was allowed $25,000, it expended only $12,548.50, approximately half the amount authorized and appropriated, for the payment of all costs, including members' traveling expenses and transcripts of hearings.

The Plan Should Be Ignominiously Defeated

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. ELLIS. Mr. Speaker, today I submit for your consideration an editorial from the West Union Record, published in West Union, W. Va., and edited by Walter Stuart. This is a Democratic paper, circulating in a great farming section of our State, and no doubt reflects the thinking of these fine people. They are fed up on foreign relief and are not being fooled by the administration's boom for the Marshall plan.

The editorial follows:

Congress has voted to give three European countries and China twice as much of the American taxpayers' money as it cost the United States to build the Panama Canal. And Congress did it with about as little debate and with about as little interest or solicitude as if it had been considering a bill appropriating money for the erection of a post office or a dam here in the United States. Only six votes were cast against it in the Senate, and, before the bill was sent to conference, it went through the House without a roll call, only a few feeble voices being heard against it. The bill as slightly amended by the conference committee went through the Senate without a roll call and was opposed by 82 votes in the House.

Upon the reassembling of Congress a determined effort will be made to secure the enactment of the Marshall plan, a plan by which, if adopted, the United States Government will obligate itself to give Europe four or five billion dollars a year for the next 4 or 5 years.

That plan should be ignominiously defeated, but as the so-called interim or emergency bill went through Congress so easily it is very likely that the Marshall plan will be favorably acted upon although it will meet with much more opposition than did the emergency bill.

Congress and the President seem to be more interested in the people of Europe than they are in the people of their own country. There are millions of people here in the United States today who are having a hard time to live and who should be as much the concern of the Nation's lawmakers as any of Europe's millions.

We should give to the needy people of Europe as much food and clothing as we can spare without lowering the standard of living in our own country or without weakening the Nation's economy, but we should certainly not obligate ourselves to give any definite amount each year for a period of years. Let us give what we can on a year-by-year basis and no more.

What sense would there be in our pledging to give Europe a definite sum 1 year from now, a like sum 2 years from now, 3 years from now, and 4 years from now? Who knows what the conditions will be in Europe 1 year from now or 2 years from now? Why, of course, nobody knows, certainly not anybody in Washington. Why then obligate ourselves to give Europe four or five billion dollars every year for 4 or 5 years? Could anything be more foolish, more unbusinesslike, more unstatesmanlike? Would it not be far more sensible to hand out supplies as Europe needs them and as we can stand to hand them out and then quit as soon as Europe becomes self-supporting or is no longer in need of relief?

It appears that the President and Congress are not giving money and supplies to Europe so much for the purpose of helping the people of Europe who are in distressed circumstances as they are doing it for the purpose of preventing the spread of communism or of preventing Europe from falling prey to communism.

Who knows that Europe is about to go Communist or would go Communist if she should not be aided by money and supplies from the United States? Certainly not President Truman nor any member of his official family nor anybody in Congress. It is simply nothing but a guess that Europe will adopt communism if she is not helped by the United States to get back on her economic feet. The threat of communism is being used solely for the purpose of gaining support for the Marshall plan. If it were not for the threat of communism, the Marshall plan would stand little chance of enactment.

The average European, no doubt, has just about as much sense as the average American, and human nature over there is just about the same as it is over here. If the people of Europe want communism and believe that it will better their condition, they will have communism in spite of all the money and supplies that the United States might be able to pour into their country. If they do not believe in communism, they will not accept communism, regardless of any pressure or influence that might be brought to bear upon them by Communist countries.

If the people of Europe want communism, it is none of our business. They have a right to any kind of government they want. The American people have never tried to deny Russia the right to any kind of government she has chosen to have. Then why should we deny the same right to the countries of Western Europe? They have the same right to their choice of government as Russia has to hers.

Survival in Chaos

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. ANGELL. Mr. Speaker, Mr. Philip H. Parrish, editor of the Oregonian editorial page, published in my congressional district, recently returned from a second tour through Europe and is writing his views and observations on the problems of these war-devastated countries. Mr. Parrish is a keen student and experienced writer and his observations are worthy of careful consideration by all of us who have the responsibility of deciding upon the issues involving these war-torn countries. The first of the series of articles is as follows:

SURVIVAL IN CHAOS—WRITER'S RETURN FINDS PEOPLE OF EUROPE MORE IN STRIDE FOR SNATCHING LIVELIHOOD FROM AMIDST DEBRIS OF WAR

(This is the first of a series of articles detailing observations made recently in Europe by Philip H. Parrish, editor of the Oregonian editorial page. Mr. Parrish spent 7 weeks in Germany, Austria, France, and England as a sequel to similar 1946 visit.)

(By Philip H. Parrish, editor, the Oregonian editorial page)

This first article is by way of being a misplaced conclusion. I am writing the conclusion first for the convenience of Secretary of the Army Kenneth C. Royall, Gen. Dwight D. Eisenhower, and Gen. Lucius D. Clay, to whom a prompt report is due, and also for the benefit of such readers of the Oregonian as may not have the desire or the opportunity to follow through a series of articles.

When invited by the War Department to resurvey the European theater something over a year after my first visit, and report on progress or retrogression, I assumed that it was to be as one of a group of repeaters.

It was somewhat alarming to find, when we reported in Secretary Royall's office in the Pentagon on the morning of November 13, that only Barry Bingham, president and editor of the Louisville Courier-Journal; Charles Gratke, foreign editor of the Christian Science Monitor, and I were in that category. We are the only ones who so far have retraced a War Department tour. Mr. Bingham was along with me in 1946. Mr. Gratke—who, incidentally, is an Oregonian and an alumnus of the university, and an old friend—was a member of a still earlier party.

ARMY PRESSURE LACKING

It can be imagined that the burden of responsibility suddenly assigned to the three of us was no whit lessened when General Eisenhower, as his only statement to the gathering, asserted that he and the Department of the Army were going to be particularly concerned with what the repeaters had to say—good or bad.

(It needs to be stated here, and insisted upon, that no one indicated directly or indirectly that the high command was looking for a good report. There were no restrictions on what we saw or learned. Nothing was off the record unless we ourselves felt it should be. And though it will be difficult to convince the skeptical of this, we were not led around by the nose. All of us have had rather more experience than most persons in not being led by the nose.)

GERMAN PEOPLE CHANGE

Anyhow, what follows is a summary of the changes in the European scene—particularly in Germany and Austria—between the autumn of 1946 and the early winter of 1947-48, as it appears to one observer. There may be modifications later, and especially additions, but in general this is how affairs seem to me to stand:

First. There has been a startling alteration in the attitude of the conquered peoples—specifically the Germans. The Austrians have always been considered liberated rather than conquered and did not have a hang-dog demeanor even in the beginning.

In the case of the Germans, the alteration has been so gradual as to be almost unnoticed by those on the scene but to the visitor it is unmistakable. In the fall of 1946, they avoided the American in the street. They walked on the other side if possible, with head down and eyes on the ground or

averted. They still did not know what the Americans were going to do to them, what burst of anger and punishment they might encounter. Also, there was a frantic air about them. Each was on the prowl for a cigarette butt, a lump of coal, a piece of paper, or string. They poured along the streets carrying their brief cases and bags in which they secreted their black-market goods and whatever they might pick up. Their frantic air resulted from a combination of fear and confusion—confusion as to just how to supplement their diet—along with supplementing clothing and fuel—in a world of fallen buildings and no lights.

FEAR OF UNITED STATES FADES

The change results from two facts: In the first place, the United States has restored nearly all powers to the German governments and acts for the most part in an advisory capacity. The Germans are surprised at this but they take it at face value. They feel they have little or nothing left to fear from us. They say in effect: "We are your Germans now. What are you going to do about us?" They no longer look aside in the streets and sometimes are even impudent, though not often.

In the second place—and perhaps most important—they have learned the technique of survival in chaos. It is not that they have more to eat and wear. They grow hungrier and shabbier. But they are no longer frantic, because they know the exact procedure necessary. If one is a farmer, he knows just how to secrete the maximum of crops and sell on the black market. If one lives in the bigger towns and cities, he has counted his possessions over and over. He knows just how each possession is to be slipped to the butcher or baker, or carried out to the farms. He understands their value, and how long a man and his family can expect to live on what remains.

ROPES OF MISERY LEARNED

If one resides in Berlin, he appreciates the exact dangers of running the Russian blockade into the countryside around. He appreciates the chances of his being hauled off a train by a Russian wielding a specially devised hook, and of having his bag of potatoes—bought for the winter—taken away from him.

He has learned the ropes of misery. He still picks up butts but he does not leap for them. That takes too much energy.

Second. The German is flagrantly not working, and generally speaking he has no intention of working so long as present conditions exist. And before denouncing him, we should face the simple realities of existence as the German faces them.

Suppose he is a laborer receiving 200 marks a month. He can get all the rationed goods allotted to him with 100 marks. That is, he can get his rationed food, soap, fuel, clothing and so forth, as well as pay his rent and electricity bill. He has half his wages left over—100 marks—which looks pretty good. But with this second 100 marks he can only deal on the black market, and on that market 100 marks amounts to only, for example, a fourth of a pound of coffee—little more than a package of American cigarettes.

CIGARET HIGH PAY

In other words, with the official rate standing at 10 marks to the dollar and the black market rate as bad as 175 marks to the dollar, it does not pay the German to work any harder than is necessary for him to keep on the official ration list. After that the important thing is that he conserve his strength so that he will be able to scour the countryside for leavings, make excursions among the farms, pick up wood in the forests and cart it into the cities, beg for cigarets around the Army camps. (A German who acquires one cigaret a day makes as much as one who labors 8 or 10 long hours in the rubble.)

Perhaps I should revise my statement. The German actually is working, but on the black market after hours, not on the job. It profits him more to beg or steal a bar of soap somewhere than to become foreman of his plant and be paid off in valueless marks.

The tragedy of all Europe is the lack of a firm currency, and in Germany, where we are most heavily involved, the situation is most critical.

RUSSIAN PATTERN CLEARS

Third. The past year has witnessed a remarkable clarification of our contest with Russia for the soul of Europe, and particularly it has witnessed clarification of the pattern of Russian procedure.

I do not think there is one of our party of editors but would agree that without the Marshall plan, or its equivalent, communism would flood to the Atlantic, either forcing our withdrawal or precipitating war. Nor do I think there is one who disagrees with the policy of giving back frank talk for frank talk, as adopted this sumer—though some feel our policy should have been adopted without fanfare rather than announced.

However, the details of the conflict will be discussed later. At the moment the vital thing is to make plain what I mean by the "clarification of the pattern of Russian procedure." Here in America we tend to think of the Russians as assaulting western Europe with great blasts of verbal propaganda. They do that all right. But far more important is the fact that they are materialists, who believe economic control means ultimate ideological control and who are operating on that basis. In every area behind the iron curtain they are gaining majority stocks of the leading industries. In the Russian zone of Germany this is done by means of a single gigantic holding company; in Hungary it is by four companies. And so forth. The details vary from country to country but not the over-all purpose. Russia intends to run these countries after it pulls out its military forces, and it does not intend to pull out its military until the financial control is established.

OFFICER PROVIDES DATA

Along with a special article on the subject, I have a remarkable document to release in regard to the economic penetration of Hungary, done by an American officer who was denounced by the Communist press a few weeks ago as "the spy in uniform." He gives the dates, places, and names. There will be a remade and largely Sovietized eastern Europe when and if the Kremlin orders the troops out. It is too late to do anything about it now, but the knowledge may help us in the future.

While Russia was accusing us of economic imperialism in the west, it has achieved such imperialism for itself in the east. It has perfected the methods which the Nazis used in their expansion.

Fourth. In regard to our actual administration in Germany and Austria, reactions must be mixed. The troops are better than a year ago—older soldiers serving longer periods of enlistment. There is every reason to feel pride in them. So also with the high command under General Clay at Berlin and Lt. Gen. Geoffrey Keyes at Vienna. These are professional soldiers picked for their ability, and now in the occupied areas only because it is their assignment.

MILITARY GOVERNMENT RULE GOOD, BAD

However, among the temporary officers and the run-of-the-mill civilian officials of military government there is an incredible admixture of decent people, carpetbaggers, earnest idealists, and plain adventurers. One could understand how that would be. After the fighting stopped, most of those trained for military government headed home. Their places were taken by some who actually felt they had a duty to perform and by others who were "on the make" or feared the competition at home. Their ranks could stand a lot of improvement.

As to the over-all policies of military government, as worked out in cooperation with the State Department, yes and no. A year ago the Germans were trying to accustom themselves to the idea that government was being turned back to them, with American officials only advising and using the veto. The feature of the year has been the German response to this responsibility, and it is not too good. They are using their political independence to defeat the social, juridical, religious, and educational reforms without which political democracy cannot survive. For instance, Bavaria has openly defied military government in regard to reform of the aristocratic school system, and Wuerttemberg-Baden and Hesse have given no more than meaningless lip service. Also, the dreadful German party system continues to exist. And the free press we have established could not survive 6 months if left to the mercy of the parties and the governments. Personally, I think there needs to be a return, in some degree, to orders in place of advice. There are basic procedures without which no democracy can function.

On the other hand, though the economy of western Germany has been disrupted by the severity of the past winter and the drought of the past summer, I am convinced that military government has done a fairly creative job with industry and that it deserves the principal credit for getting the scene set for a political and economic union of the American, British, and French zones. Such a union is a minimum need, now that the Russians have proved adamant in regard to a general solution. And General Clay has operated well in preparation.

RED MARCH REVERSED

Summary: During the year Russia moved with absolute ruthlessness to strip the areas behind the iron curtain of movables and secure permanent financial control over the immovables, so that its effective control will continue after its troops are gone. It has been helped psychologically and materially by the fact that east of the curtain, in a farming region, there were extra good crops, while west of the curtain, in industrialized Europe, there was one of the poorest crops on record.

So, in the spring and summer communism was on the march. But the march was slowed down by our fairly prompt and generous response with food, and in the past few weeks the implementation of the Marshall plan—giving our policy some permanency—has turned the march into a definite retreat.

Two weeks ago today—from the time when this is being written—most of my party flew into Paris to discover that the French general strike had collapsed the night before, and that a million and a half union members were prepared to leave the Communist-dominated organizations which had sacrificed them on behalf of the Kremlin's war against the Marshall program.

At that same hour, I landed in London, where the conference of foreign ministers was in its final stage, but this time with Bidault and Bevin unswerving in their support of Marshall, and Molotov retiring in the worst disarray of his career.

History was breaking around our ears, and with a friendlier sound than we had been accustomed to during recent months.

MOLOTOV TYPIFIES FEAR

However, during those days in London, when Molotov's isolation was becoming complete and communism was in confusion in France, there was a disturbing picture which kept returning to mind. At the time when we landed at Northolt Field, west of the city, amused British customs officials had pointed out to us Mr. Molotov's special plane, under heavy guard of Russian soldiers, off in one corner. They had informed us that even the

gas was flown in by special and guarded plane from Russia.

So, on the morning of Saturday, December 13, when I took off for Paris—the same morning that the meeting of foreign ministers finally collapsed—I looked out the window of my British Viking toward Molotov's corner and had a slight case of the willies.

There can be no assurance of peace on earth so long as the representative of so great a power as Russia lives in a primitive atmosphere of fear and ambition. It is worth our prayer, anyhow, that somehow they may learn to move among us as just pilgrims like ourselves.

The Third Step Necessary for Permanent Peace

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. KEFAUVER. Mr. Speaker, most of us felt that in our effort for peace it was necessary to take a stand against expansive communism by coming to the aid of Greece and Turkey. Most of us were convinced that it was required to provide emergency aid to the people of western Europe to hold the line until conditions could be stabilized by the European recovery program. Even after the successful application of the Marshall program, a third step is going to be definitely necessary if world order is to be given any real degree of permanence. It is time for us Members of Congress to be thinking seriously of this third step. It is succinctly but clearly described in a feature article by one of the South's most capable editors, Mr. Edward J. Meeman, in the Memphis Press-Scimitar of December 26, 1947. The article is as follows:

THIS UNITED STATES CAN NEITHER STAND ALONE NOR SAVE THE WORLD

(By Edward J. Meeman, editor, Memphis Press-Scimitar)

President Truman has asked Congress to authorize $17,000,000,000 for the European recovery (Marshall) plan and to appropriate $6,800,000,000 for the first 15 months.

This will be opposed by those who, tired of the rest of the world, imagine that we can crawl back into our thin shell and find safety.

Yet the Marshall plan is only the irreducible minimum required for our safety. It is only the second step, of which the Truman doctrine was the first. There is a third and greater step we must take beyond the Marshall plan.

In the Truman doctrine we said to communism: Thus far shalt thou go and no further. We went to Greece and Turkey, which we once regarded as far-away lands, and said: This is the frontier of our liberties—the frontier of our national safety. President Truman's announcement was an act of great political courage. Its daring has not been fully appreciated because of the fact that its necessity was so quickly accepted by public opinion. The Truman doctrine has recently been given even wider scope when we served notice that we will not stand for aggression against Italy.

ONLY EMERGENCY MEASURE

The Truman doctrine should be regarded only as an emergency measure. It is a limb we had better not stay out on too long. We do not have the strength to defend the safety and liberty of the free world alone. Magnificent as was her courage, Britain could not have defeated Nazi aggression with her own power alone. If we had not joined her, she would have gone down. We had better not count on having the same luck—better not count on the chance that we will pick up some allies after we get into a war. We had better get those allies now, by firm, unbreakable bonds.

Let us get those allies not through power politics, but by the natural next step in world organization. We have done some bold things which are really a sharp break with our traditions. We have joined a United Nations; we have served notice on the world that we will not stand for aggression in Europe. But we have overlooked the most natural thing for us to do—we have not joined hands, hearts, and forces with the peoples whose traditions are like ours and whose objectives in the world are like ours—peace, freedom, and democracy. Perhaps we have overlooked it because it is so obvious.

LET'S DO IT NOW

Let us do now what we should have done in the first place—form a federal union of the free, composed of the nations of the British Commonwealth and the democracies of western Europe. We could not possibly win a war without them; let's federate with them now, so that we know they will be with us in time of crisis. (Maybe that crisis is already here.)

The United Nations is a good thing; let's keep it. It is a valuable international forum. It is a valuable agency through which to work out many international agreements and to improve world conditions by joint action of the nations. But it cannot prevent aggression from striking or defend us from aggression if aggression strikes. The belief that it could do so was based on the illusion that Russia intended to cooperate with the western world

Within the outer circle of the United Nations let's form the inner circle of the union of the free. Let the federal union of the democracies have a common international policy, common defense forces, common currency, mutual free trade. The creation of such a union would assure such wide markets for free enterprise that the collapse for which communism is hoping could not occur. Some of the democracies which would be included in such a trans-Atlantic union have large dominions and colonies, assuring us of such a storehouse of natural resources that democracy would be impregnable.

TWO MISTAKEN EXTREMES

The isolationist who thinks that this Nation is strong enough to stand alone is mistaken. The interventionist who thinks we can save the world alone is equally mistaken.

The defense of freedom is the job of all free peoples equally. The benefits of freedom, economic and spiritual, belong to all free peoples alike. They can assume this joint responsibility and enjoy these benefits in but one way: through the federal union of the free. It must come eventually if freedom is to survive in a world which is so largely unfree; it had better come now. For the hour that necessity forces it upon us may be too late.

Mr. Speaker, it will be observed that Mr. Meeman in this article, as he has in other writings on the subject, proposed to go far in merging the economies and national interest of the nations which would make up the Federal Union of the Free. I am not now prepared to go this far and from a practical viewpoint we know, and Mr. Meeman knows, that the aims he seeks will have to be attained gradually and by degrees. It is stimulating, however, that he and other thoughtful men are shooting at the ultimate objective. A beginning should be made now. We, in Congress, should lose no time in trying to work out arrangements for close cooperation in every feasible way between our country and the other democracies of the world. Plans for a common international policy, coordination of defense forces, and mutual trade with free or low tariffs would be a good beginning. The future of our world depends upon what we do with this third step.

Hon. Sam Rayburn

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. LYLE. Mr. Speaker, on this anniversary of Mr. RAYBURN's birth, it is not possible to overlook the great contribution he has made to the stability, strength, and honor of our Government. There can be no finer birthday wish than that we may have his wise counsel at the policy table of our Government for many, many years, and that the men who take their seats in this body may approach the stature of SAM RAYBURN.

On behalf of the people of my district, I offer him congratulations and best wishes.

Address of Mr. Justice William O. Douglas

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address by Mr. Justice William O. Douglas, of the Supreme Court of the United States, principal speaker at the dinner in Chicago on the occasion of the one hundredth anniversary of the birth of John Peter Altgeld, which was held at the Hotel Stevens on December 30, 1947:

John Peter Altgeld is probably unknown to most Americans. He seldom figures in our history textbooks. Few adults or school children identify him with the great human causes which have shaped the American character. His name has not yet become, as it should, a symbol of the clean, powerful force which we call American idealism.

He has, indeed, been an "eagle forgotten." But as Vachel Lindsay nobly said of him, "To live in mankind is far more than to live in a name." Altgeld does, I believe, "live in mankind." It was the cause of mankind which he pleaded. Though his name may no longer be identified with the issues which he espoused, their vitality in the years which followed him reflect the courage and faith with which he embraced them. Moreover, those who would not have seen eye to eye with him on many of the contentious issues

of his era nevertheless gain inspiration from the character of his advocacy.

He feared no man. As a lawyer, his clients did not cause him to stand mute when his conscience urged him to speak out. As a politician, he did not follow the safe course of indecision or of ambiguous pronouncement when his instinct for justice told him to meet an evil head-on. As a private individual, he did not turn his back and withdraw to the ease and comfort of his wealth when the victims of an industrial system cried out against its inhumanities.

The powerful social forces of his age moved him to action. He was blunt, outspoken, and at times indiscreet. Edgar Lee Masters once said that perhaps "his weakness was that he hated the bad so much that it obscured his love of the good." He certainly made up in daring what he may have lacked in discretion. His was the frontal attack—he stormed the walls of the enemy at high noon; he did not delay in order to infiltrate their fortress at midnight. He was, indeed, an expendable. The heat of his zeal, the tremendous demands of his nervous energy consumed him in a brief and hectic 55 years.

He lost almost every major cause he pleaded. But those were the skirmishes and the battles which were mere episodes in a larger and more far-flung campaign. His failures caused new recruitments. A full generation later men who never knew his name were summoned by the ideas which he had generated or espoused. They marched to great victories of which he perhaps had never even dreamed.

His activities were, in the main, restricted to Illinois. But the ideas which he represented spread throughout the land as seed travels on the great airways of the world. His platform power was potent, though his spoken word was carried by the tongues of men, not by the magic of radio. The issues of which he spoke later became national issues. Millions became advocates of his lost causes. A generation unborn at his death witnessed victory in the war of which his lost battles were a part.

One who follows a trail through the wilderness may not know who first laid it out, who blazed the trees that mark its course. The pioneer who went ahead and marked the trail may, like Altgeld, be unsung. Those who later come to know its rigors—the crags which it mounts and the treacherous lowlands which it skirts—will want to pay tribute to him who first dared walk it. As Irving Dilliard said, the State of Illinois paid such a tribute in a literally inspired way in 1941 when it chose Altgeld Hall as the name of the building to house its distinguished college of law. Such monuments to his name do more than honor him. They help insure that his ideas continue as potent forces in our national life.

Altgeld came to maturity during the days of our robber barons. The great industrial and financial strength of the East had won a war and had grown stronger in the process. A large productive capacity, a huge reservoir of capital awaited new ventures. Men of vision saw untold opportunities in the exploitation of the western two-thirds of the continent. Parrington has described the beginning of this gilded age in pungent terms:

"A passionate will to power was issuing from unexpected sources, undisciplined, confused in ethical values, but endowed with immense vitality. Individualism was being simplified to the acquisitive instinct. These new Americans were primitive souls, ruthless, predatory, capable; single-minded men; rogues and rascals often, but never feeble, never hindered by petty scruple, never given to puling or whining—the raw materials of a race of capitalistic buccaneers. * * * The romantic age of Captain Kidd was come again, and the black flag and the gospel banner were both in lockers to be flown as the needs of the cruise determined. With all coercive restrictions put away the democratic genius of America was setting out on the road of manifest destiny. * * * It was an anarchistic world of strong, capable men, selfish, unenlightened, amoral—an excellent example of what human nature will do with undisciplined freedom. In the gilded age freedom was the freedom of buccaneers preying on the argosies of Spain."

Banker, industrialist, builder, and speculator were the driving forces in that tremendous undertaking. Some maintain that, at least in days of peace, the job never could have been done so fast any other way. However that may be, it is clear that it was extravagant in its cost, inhuman in its methods, corrupt in its influence.

The agrarian groups were exploited by the mercantile and industrial interests. A scourge of poverty and want—10-percent interest and 10-percent corn—swept the farms. Out of such stuff grew the Granger movement and later the Populists and other groups bent on reform.

Jungle warfare was the technique that fashioned the trusts. Big business rose out of the ruins which it had made of little business.

The newly acquired wealth became, in part, a slush fund to corrupt legislatures, to purchase favors from public officers. The credit mobilier scandal and the whisky-tax frauds were typical.

The Nation had just rid itself of chattel slavery, renouncing for all time the idea that men could be bought and sold and exploited like cattle. But it seemed to many that the Nation was on the verge of embracing a form of industrial slavery, which in its consequences was almost as vicious as the slavery which had just been abolished.

The great industrial projects of that age required men as well as capital for their execution. But in the eyes of the promoters, men were as fungible as the ties of the railroad tracks which spanned the continent. There was at least some effort to protect the capital placed in the ventures and to give it rights against the day of loss and failure. But there was little or no effort made to compensate for the arms and legs and eyes and lives of human beings that went into these great industrial undertakings. Workmen's compensation laws, employer's liability laws were still in the future. There were only a few who talked of social justice.

Many workers, living in company towns, were beholden as in feudal days to a master; and this time their master was a corporation.

Child labor was widespread. Long hours of work obtained for men and women alike. Unhealthy and unsanitary conditions of work were found on every hand. The 8-hour day was a radical idea. Trade-unions were sabotaged. Collective bargaining was still largely a dream.

The claims of stockholders and bondholders against enterprises had long been recognized. But there was no similar recognition of the claims of labor. Workers had no right to work; they had no claim to a fair wage.

Men struck for more wages so that they might live decent lives, so that they might raise sturdy sons. Strikebreakers were brought in, and the poorly organized strikers were usually defeated. A great industrialist handled his strike with these words: "There is nothing to arbitrate. The workers have nothing to do with the amount of wages they shall receive."

The reaction was severe. There were probably some men of violence on the scene who would destroy the system that gave birth to the new industrial oligarchy. But men of good will—zealots and reformers—were also pilloried as anarchists. So were those who only protested against the chains of their new slavery.

There were riots and bombs. Violence begat violence. Troops—Federal troops—were called out to enforce injunctions issued by Federal courts. These were injunctions not only to protect property but to keep plants open and to outlaw strikes. He who defied the injunction went to jail. He was in contempt of court.

A great restlessness swept the country. There was a depression in the early nineties and millions were unemployed. They swept over the Cascades and the Rockies on the move to Washington for currency reforms, for a public-works program. Some stole trains and were jailed. So were the hitchhikers who rode the boxcars. Strikers, too, were jailed. Contempt of court became a weapon in industrial warfare. It was a powerful weapon. It alined the forces of government—the courts, the marshals, the troops—on the side of industry and against the workers. Government was there not to adjudicate the justness of the claims, not to mediate nor to arbitrate the disputes, but to crush and suppress those who protested against the injustices of the new industrial era.

These issues were injected into local and national politics. A distinguished line of muckraking journalists, starting with Henry Demarest Lloyd, emerged and wrote in words that all could understand an indictment against the age of plunder and exploitation.

Antimonopolists pressed their reforms. Those who protested against the great and uncontrolled power of industry often advanced as their cure-all the socialization of business. Many good people were alarmed. Mr. Justice Brewer, who severely criticized Altgeld, was of the view that "the cry for socialism comes largely from the dissipated, the lazy, the dishonest." Men stood condemned as un-American whose programs of reform were not more radical than the vision of our own Tennessee Valley Authority and Grand Coulee. The specter of socialism did indeed stalk the land. Mr. Justice Holmes, writing in 1897, observed that "when socialism first began to be talked about, the comfortable classes of the community were a good deal frightened"; in fact, the fear of socialism "influenced judicial action both here and in England." Many in high places believed that this society of ours was headed for a pitched battle along class lines.

It is easy in retrospect to draw a false picture of an age merely by emphasizing the extremes which history has recorded. The sketch of the gilded age which I present may suffer that defect. But whether it does or not, I think it fair to say that this is the view Altgeld had of the era. The enormous injustices which he saw violated his sense of social justice. He first wrote and spoke his protests; then he moved to action, giving and expecting no quarter.

As Governor of Illinois he put through a law aimed at sweatshops, at the employment of children who were under 14, and at the employment of women over 8 hours daily or more than 48 hours a week. The latter provision was held unconstitutional on grounds which reflected the dominant political philosophy of the age—that it violated both the employer's and the worker's freedom of contract. He put through a law in aid of collective bargaining, which made it a crime to dismiss an employee because of membership in a labor union, and thus sowed one of the first seeds out of which the National Labor Relations Act grew a generation or more later. He inaugurated a system of mediation and arbitration of labor disputes. He put through a law that outlawed limitation of production, price fixing, pooling agreements, and other restraints of trade. He got an inheritance tax law passed. He was offered $500,000 if he would sign a bill which would tighten the hold of the traction and other utility interests on the State. He vetoed the bill, stating it was a "flagrant attempt to increase the riches of some men at the expense of others by legislation." Thereafter he campaigned for public ownership of utilities.

He protested vigorously against the use of Federal troops to break strikes. He resisted

the use of the injunction in industrial disputes. As Harry Barnard graphically shows, it was Altgeld who coined the phrase "government by injunction" and drove home at every opportunity the oppression which that practice fostered. The Norris-La Guardia Act, passed in 1932, thus can trace its ancestry to him.

As Governor he put his influence behind the development of a strong, progressive university. He feared that monopoly capital might spawn its own seats of learning and dominate the minds of men as well as their bodies. He also knew that the character of a university is a "force that creeps silently over the land and by day and by night molds the sentiment of men." He therefore wanted a university which would represent the great common people of this country, which would be the friend and the helper of the toiling masses, of those people who do the work of the world.

He well knew the workings of the judiciary because he had been a judge. So when he saw rulings of courts which seemed to him prejudiced and partisan, which tipped the scales against the common man and in favor of the vested interests of that day, he cried out in protest. In 1893 he said, "The men who administer the laws are human, with all the failings of humanity. They take their biases, their prejudices, with them on to the bench. Upon the whole, they try to do the best they can; but the wrongs done in the courts of justice themselves are so great that they cry to heaven." He saw the corrupt use of wealth extending its influence so far as to create judges "who do its bidding."

Altgeld knew what we are apt to overlook or forget, that the procedural safeguards of the Bill of Rights were designed to protect the citizen against the tyranny, not only of legislatures and of executives but of judges, too. He knew that power could be abused, whether it was industrial power or judicial power. He knew his history and had read those chapters which reveal that even courts sometimes show a callous disregard for human rights. Their robes do not always conceal their tyranny. The framers of the Constitution, knowing that, designed the constitutional requirement of a fair trial to protect the accused, not only against the police and the prosecutors but against the judges as well. All these things Altgeld knew, and that is perhaps why, as Charles A. Madison says, "he was harshest on judges who abused the spirit of our laws to the hurt of the people."

When Altgeld became Governor four of the men found guilty in the Haymarket riots had been hanged. Three were still in prison. Altgeld reviewed their cases and granted them pardons. The pardon was for him a simple, uncomplicated act. For as he told Brand Whitlock, he knew he was "merely doing right." He felt that way because in his judgment "those fellows did not have a fair trial." Unfair attitudes of both judge and jury had, in his view, infected the trial.

The reaction was violent as Altgeld knew it would be. He at once experienced what many both before and after him experienced—that he who calls for the application of the Bill of Rights to unpopular minorities, as well as to the other groups of the community, often becomes himself suspect. Thus when Altgeld insisted that even anarchists were entitled to due process of law, he was dubbed an anarchist. But a man whose devotion to our system of government was so great that he did not want it to become the tool of a capitalist oligarchy was not even remotely related to the anarchists. He was merely seeking to apply the philosophy of Jefferson to the workaday world of the 90's—due process of law for every man, whatever his race or creed or political faith; social justice for those at the bottom, as well as those at the top, of the economic pyramid.

But the label stuck. Then came the bitter years. He lost both his wealth and his health under the pressures of his enemies. The man who had the courage to adhere to the spirit of our Bill of Rights and extend its benefits to a despised and hated minority was hounded to his death by powerful influences bent on his destruction. Yet I am confident it will be recognized as true 100 years from now, as it is increasingly recognized today, that of those on the public stage in that era it was Altgeld who brought the brightest honor to the democratic ideal.

Some issues survive all ages. But most of them have a habit of being redefined in the special context of the next generation. Hence this review of the issues which drew Altgeld's fire has relevancy here only as a reflection of his philosophy. It is that philosophy which remains a vital factor in American life, although the issues which gave it content have been resolved or forgotten. Altgeld's philosophy has relevance to current American problems in at least two respects.

First. Altgeld placed human beings higher than the dollar in the national scale of values. A nation's industrial plant represents not only the daring of capital and the imagination of executives, but the blood and sweat of men. The men and women who compose a nation are its greatest natural resource—greater than its mines or forests or rivers. The nation is healthy only if its people are strong. The state must concern itself with their economic disasters. For the greater share of their troubles are due not to laziness but to economic forces beyond their control. There is in most men a lively sense of decency, of good will, of fraternity. The poor have those instincts, as well as those blessed with more worldly goods. The powers of government should be directed to protect them in their struggle to survive and in their efforts to live in dignity and to share the fruits of freedom.

Altgeld felt with Cardinal Manning that even a starving man had the right to eat. And he thought it was an insult for those who started in life with good brains, good training, and excellent advantages, and who are now well-housed, well-clothed, and well-fed, who know nothing about the actual conditions or wants of the poor, to lecture them on laziness or shiftlessness.

We will be wise if we carry that philosophy into the world problems which confront us today. There are active bidders for the good will and support of the common people of the world. There are emissaries of totalitarian regimes in the capitals of the world, bargaining with bags of wheat for the souls of men. They are our competitors, but we need not emulate their example.

The victims of war in Europe and Asia need and ask our aid. But these people must not be treated as if they can be purchased with the dollar. We must not manage this great crisis of democracy as if it were an auction; as if the peoples of the world were on the block and going to the highest bidder. The sensitiveness of people increases with their suffering. The peoples of the world have suffered beyond our comprehension. If we so manage this crisis as to leave the impression that our standards are mercenary, we will have generated a revulsion to our system which may well be irreparable.

As a result of their struggles all peoples of the world are closer together. Their common interests have made them parts of something which is bigger than their own country. That is true of us, too. We have wider horizons, greater obligations. So when we come to the aid of the distressed people of the world, we act not out of charity alone but in answer to a responsibility to support in peace the ideal for which we were willing to wage a war.

Someway, somehow, we must let the peoples of the world know that. We must reach behind the facade of ministers and cabinets and commissions and let the common people feel our warm handclasp. We must let them know that we understand their suffering. We must make sure they know that our desire is not to make them our satellites but to meet them as equals in a world where standards of decency and justice prevail.

My remarks are not directed to agencies of government. I refer more particularly to the role which all groups—civic, cultural, and religious—can play in keeping close ties with the peoples of the world. Behind even the iron curtain of eastern Europe are human beings whose thirst for freedom is as great as our own. We must manage to let them feel the warmth of our understanding and friendship. We must not let them become the forgotten people of the world. They must know that their problems are our concern, too, that we respect their worth as human beings, that they also are part of the brotherhood which we have come to symbolize in the world. Governments may be imposed on these people. But the people themselves are the ultimate source of political power in every state. The pattern of an enduring peace will be found only in their hopes and aspirations.

Altgeld once said that "All great reforms, great movements, come from the bottom and not the top." That is true in the international as well as the national field. Thus, it is doubly important that we do not lose the link which we have with all peoples whose dream is political, intellectual, and religious freedom.

Second. There is another current problem to which Altgeld's philosophy is relevant. On the domestic scene his courage and steadfastness of purpose are needed for protection of the civil liberties of our people.

We are apt to leave that task to the far away court in the State or National Capital. Those courts, by their examples, exert a great influence. But the great percentage of the grist is found in the lower courts. A more accurate measure of the vitality of our Bill of Rights is not in the sporadic rulings of our highest tribunals but in the day-to-day attitudes of the lower courts. Moreover, it is not in the courts alone that the strength of our civil liberties is to be ascertained. The executive and legislative branches of government also have responsibilities for enforcement of the Bill of Rights. The administration of the voting booths, the habits of the police in law enforcement, the nature of the city's ordinances—these all are indices of the vitality of the Bill of Rights in the life of the community. So is the attitude of the community. For an indifferent community, like a misguided one, will surely breed disrespect for the standards embodied in the Bill of Rights.

We may never reach perfection in our practice of the ideals of the Bill of Rights. But there is no earthly reason why with education and organization it cannot become an increasingly potent force in the everyday lives of our people. The extent of a community's respect of the human rights of all of its citizens is in fact the measure of its progress in civilization. Altgeld broke the trail—making it easier for every man of conscience who followed.

The creation of a healthy community attitude is not the exclusive task of any one group. The task starts in the homes, in the schools, and in the churches. But city and State officials, editors, lawyers, and other groups of citizens have an important share of the responsibility. I remember recent instances where tyrannical judges sitting in local courts rode roughshod over the civil liberties of defendants charged with crime. In one case it was a doctor, in another an editor who thundered personal disapproval and started campaigns to rid their cities of those oppressive practices. They were, indeed, the ones that alerted the local bar associations and caused civil liberties committees to be formed to patrol the local scene.

These are not always easy steps to take. When Altgeld insisted that even anarchists

were entitled to due process of law he himself was labeled a subversive influence. That will often be said today when one insists that the safeguards of the Bill of Rights be extended to all groups, including any minority group in our midst that may be at the whipping post or the subject of temporary hysteria.

Yes; it takes courage to stand between an unpopular minority and the community, insisting that our Bill of Rights was designed for the protection of all people whatever their race, creed, or political faith. The lawyer may feel uneasy when it seems that important clients may slip away because of his attitude. The editor may be tempted to stand mute by reason of the views of important advertisers. Even the clergyman may be under pressure to hold his tongue because of the influence of some of his parishioners.

But those who are devoted to the democratic ideal expressed in our Bill of Rights will take the direct and daring course. Once they are sure of their facts and know they are doing right they will, like Altgeld, espouse the cause of the victims of ignorance, prejudice, or passion. They, too, may be pilloried or cursed. But institutions become great by the greatness of the men who champion them, by the greatness of the advocacy that defends them. A people indifferent to their civil liberties do not deserve to keep them, and in this revolutionary age may not be expected to keep them long. A people who proclaim their civil liberties but extend them only to preferred groups start down the path to totalitarianism. They emulate either the dictatorship of the right or the dictatorship of the left. In doing this they erase a basic distinction between our system of government and totalitarianism.

To allow that to happen is to lose by default. Far better to lose pleading the cause of decency and of justice. Then we win greatness even in defeat, and leave behind a rich heritage for those who later rebuild on the ashes of our lost hopes. But there will be no failure if we adhere steadfastly to our faith. For the goal of people of all races is toward a system which respects their dignity, frees their minds, and allows them to worship their God in their own way. None has yet designed an article of political faith more suited to those ends than our own Bill of Rights.

Problems of a Congressman

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the York (Pa.) Dispatch:

MANY ODD INQUIRIES REACH CONGRESSMEN—ONE CALLER ASKED GROSS HOW TO SELL CIGARS TO LEGISLATORS—ELUSIVE WORD FOUND

YORK, PA., January 6.—Responding to a last minute year-end inquiry, Congressman CHESTER H. GROSS, of the Twenty-first Congressional District, comprising York, Adams, and Franklin Counties, today made public a compilation of activities handled in his district office in York. The Congressman revealed that more than 1,000 persons visited his office during 1947 with their problems.

More than one-half of these constituents were from York County, but Adams and Franklin Counties were also well represented. Furthermore, many personal contacts were made during bimonthly visits by the Congressman and his district secretary, Lee K. Smith, to the county seats in Adams and Franklin Counties.

In making this, which is probably the first annual report ever made by a Congressman representing this congressional district, a great diversity of problems and interests are revealed.

A break-down by groups and interests shows:

Veterans: A total of 512 visited the office. Principal interest centered around pensions for veterans and dependents, hospitalization, relief, claims involving back pay, subsistence, lost articles as a result of service, errors in discharges, release from prisons, bringing back soldier dead, etc.

Businessmen: A total of 155 sought information as to the next move in Government, taxes, etc., so as to enable them to get a sense of direction in the conduct of their business. Many wanted copies of bills and laws or appointments in the various departments of Government, while others sought information as to proper contacts to sell their merchandise to Government agencies.

Immigration problems: Total, 42. Most of these involved cases of American citizens endeavoring to bring their kin or relatives to this country, principally from Greece and Italy.

Individuals: Total of 81, all Republicans, whose principal interest centered around "active party leadership."

INQUIRIES FROM LABOR

Labor: Total of 59 raising a wide range of questions, such as whether their check-offs were legal; others wanting to feel certain that the Taft-Hartley Act would not injure the cause of labor. A few wanted to know how to sever union connections and still hold their jobs.

Professional men and women: Total, 25. Interest was directed to taxes, the Taft-Hartley Act, the Wagner-Murray-Dingell bill, better known as the socialized medicine bill, and the bill for Federal aid to education, etc.

Federal employees: Total of 44 cases raising questions of retirement and disability compensation, aggregating more than $20,000.

Farmers: Total, 180; whose problems and inquiries concerned subsidies, soil-conservation payments, the agricultural outlook, need for farm labor and equipment, requests for information as well as agricultural bulletins dealing with general farm problems obtainable from the Congressman and of which the office carries a generous supply.

Rent cases: Total of 20 involving complaints on the part of landlords that rents are too low, while tenants were inquiring for living quarters at rentals they could afford to pay.

Clergymen: Total of 26, interested mostly in the question of universal military training, the problem of getting food and livestock to needy people in Europe, as well as expressing concern over the Stratton bill now before Congress which would permit the admission to this country of 400,000 displaced persons.

Relief and public assistance: Total 17, individuals seeking relief through Federal and State agencies.

Claims against Government: Total 18, ranging from $50 to $250,000, filed by individuals and corporations for reimbursement for traveling expenses, transporting personal effects, loss of personal property, damages, and contract violations.

Passports: Total 13, chiefly industry representatives and others leaving the country on business or pleasure.

Postal employees: Total 12, interested in their jobs, advancements, and legislation affecting their civil-service status.

Service academies: Twelve boys seeking appointment to West Point and Annapolis.

Mail-delivery cases: Nine concerning extension of postal service, with a few complaints about postal service.

Miscellaneous cases: Total 58, men and women who wanted to discuss trends, express themselves generally, or, in other words, "wanted to tell it to their Congressman."

"MISSING WORD" FOUND

Listed in still other categories were inquiries concerning a word to complete a crossword puzzle (the word was located in an office dictionary); selection of an "honest" lawyer; how to sell cigars to Congressmen in Washington; hotel and tourist reservations; whereabouts of straying husbands; tickets to football games, passes to horse races, radio broadcasts, courtesy cards for admission to visitors' galleries of Congress, etc.

All this made a busy and interesting year for the Congressman and his staff, Congressman GROSS said. He explained that the compilation covered only activities with respect to his York or congressional district office. Not covered was the business handled in his Washington office which was similar in many respects. The work there included giving guidance and entertainment to various groups visiting Washington from time to time. Such groups numbered from 25 to 200 persons. Also, the Congressman said, is the task of handling the regular daily chores, such as answering the mail, attending committee meetings and the sessions of the House.

Statement on the President's Message, January 7, 1948

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. MASON. Mr. Speaker, at the opening of the special session last fall President Truman asked for a return of his wartime police powers to ration goods and to control prices. The Congress refused to grant those powers knowing how they had been used and abused. In his message on the state of the Nation President Truman demands those powers and controls knowing full well that the Congress will again refuse to grant them.

During 1947 the administration entered the wheat market and bought up hundreds of millions of bushels of wheat for export. This Government buying of huge quantities of wheat for export forced the price of wheat up from $2 plus per bushel to $3 plus per bushel in 9 months' time.

Every farmer knows that the price of corn, of meat, of dairy products, of poultry and eggs are all tied to the price of wheat and fluctuate with the price of wheat.

After causing present high prices by its own market manipulations, or wheat buying spree, the administration now demands of Congress through President Truman wartime police powers to ration goods and to control prices, which Congress is in no mood to grant.

High prices are only symptoms of the disease that is afflicting this Nation today. We should treat the disease itself by removing the cause. Controlling the symptoms will not remove the trouble.

President Truman also wants to reimpose the excess-profits tax that was

repealed in the Democratic tax-reduction bill of 1945, which he signed in the face of a $20,000,000,000 Treasury deficit for that year. The repeal of the excess profits tax in 1945 was a great stimulus to American business enterprise; it brought about a tremendous increase in production, and also in the number of jobs available. In fact it achieved the goal of 60,000,000 jobs 2 years ahead of the time F. D. R. predicted. Now President Truman wants to reverse the trend of expanding business, increasing job opportunities, and badly needed production, and go back to a period of contracting business, decreasing production, and fewer jobs. As one member of the Ways and Means Committee I am not for his tax program. It is unsound and contrary to all past experience. It would have the opposite effect to what he hopes for it. If 10,000,000 low-income taxpayers are exempted from paying Federal taxes as he proposes, and there would be a decrease in the number of jobs available from 60,000,000 jobs to 50,000,000 jobs—which would be the probable result of his tax program—would the country be better off?

An Unbiased View of Europe

EXTENSION OF REMARKS
OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. KNUTSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following memorandum I have mailed to the entire membership of the two Houses which was prepared by a very able and distinguished Swiss citizen who stands high in the business life of that country, analyzing the situation in Europe:

JANUARY 5, 1948.

DEAR COLLEAGUE: A prominent Minneapolis flour miller, whose product formerly went to all parts of the globe, has sent me a report on the European situation, prepared by a gentleman highly connected with Swiss banking and industry, who acts as adviser to clients in the United States. I feel that this report should be made available to every Member of Congress as it presents an angle on the European situation that should be helpful to us in determining our future policy in Europe.

Yours very truly,

HAROLD KNUTSON,
Member of Congress.

MEMORANDUM TO CLIENTS

OCTOBER 29, 1947.

In our memorandum of August 4 we called clients' attention to the fact that the real question about the Marshall plan was whether it could be made to work. The writer left for a trip to Europe in order to obtain, if possible, an answer to that question. The best place to seek such an answer was Switzerland. The Swiss think the way we do; they understand the European problems far better than we; they are internationally minded; they have no axe to grind as far as the United States is concerned and, before all, they are hard-headed realists.

At no time during my stay in Switzerland did I seek to reach conclusions of my own. Rather, I attempted to conduct a sort of qualified Gallup poll. Thus, the views presented in this letter are based completely on the consensus of opinion of Swiss people whom I consider properly qualified.

I was very fortunate at the outset to meet in Basle Mr. ———, a prominent attorney, who has visited the United States several times in a semiofficial capacity and who is closely connected with the leading Swiss banks as well as the Swiss Government. Dr. ——— is a specialist on the problems of international clearings, a man of high intelligence, and with a remarkable understanding of the American viewpoint. He arranged an interview for me with Mr. ———, of the Vorort of Swiss Commerce and Industry. The Vorort is virtually the economic and financial dictator of Switzerland, and regulates all clearing and import and export transactions. Mr. ——— warned me right away that he had no right to speak for the Vorort, but was merely expressing his personal views. Besides Dr. ——— and Mr. ——— spent considerable time with Mr. ———, of the Swiss Bank in Zurich, and Mr. ———, of Basle, who is the Swiss representative of very important French steel and coal interests. I also talked with any number of other people, but the four I mention above were so representative of Swiss opinion and their views, so strikingly similar, that the conclusions I came to and the suggestions I have to offer are based principally on my interviews with them.

(NOTE.—Actual names are omitted for obvious reasons.)

ANALYSIS OF THE PRESENT SITUATION

There is no practical way of implementing the Marshall plan. As the situation stands now, the European mess is so bad that it has to get worse before it can get better. A crisis is inevitable and American help at this stage will merely defer and aggravate it. This applies, of course, to the rehabilitation and rebuilding of Europe and not to the relief of hunger and want which should be placed strictly on a humanitarian basis and separated entirely from the reconstruction program.

England: The English need another Dunkerque. They are one of the greatest stumbling blocks to European recovery. Their stupidity is simply beyond belief. Unfortunately they are in command of the Ruhr and it is impossible to penetrate the barrier of ineptitude, incapacity, and red tape which they have set up. They won't do any work themselves and will not let anyone else work. The conditions in the Ruhr are appalling and are their direct responsibility. Here are a few stories to illustrate.

Mr. ——— took me out to the port of Basle to show me his coal yards (heavy shipping to Switzerland comes over the Rhine from the Atlantic seaboard and the North Sea via barge). A barge was unloading coal and he took me to it. "See this coal," he asked, "where do you think it comes from?" Of course I had no idea and said so. He spat on the ground in disgust and said, "Pennsylvania, via rail to Baltimore, via steamer to Antwerp, and via barge to Basle; and dammit all, the Ruhr is 100 miles away and we own two coal mines there. But do you think I can get any coal from the British? Not a chance. We have been unable even to see what shape our mines are in. So the Americans, instead of the British, get our Swiss francs, the Ruhr is starving, and not producing the coal and steel for which all Europe is clamoring."

Before the war the Germans used to make an excellent automobile known as the DKV, the plant being located in the Ruhr. A group of Swiss industrialists conceived the idea of reopening the plant, reequipping it, and putting it into production. Swiss capital was going to take care of everything. As no one knew exactly in what shape the plant was, a delegation was sent to the British zone to ascertain the facts. The delegation came back without any facts. The British would not even let them get a set of the old blueprints of the factory. No reasons were given. The Swiss are still wondering why good, hard Swiss francs and brains were not permitted to go to work. As one of the men put it, "The British have a bunch of school teachers sitting in the Ruhr who haven't the slightest knowledge of the problems involved. They don't even have the intelligence necessary to realize their own shortcomings."

The hard-working Dutch managed to raise a substantial crop of vegetables this summer and requested parmission from the British to ship the surplus to the Ruhr (3 hours by truck); the matter of payment to be arranged in some mutually satisfactory fashion, no question of actual money being involved. Permission was refused as, according to the story I heard, the British were fearful that the Dutch, their allies during the war, would possibly have some claim somehow on the Ruhr. The produce had to be dumped in the Dutch canals.

The Swiss do not care whether the British Government is socialistic or not. What they care about is the ineptitude of those at the helm and the unwillingness to work prevailing in England. As one Swiss paper put it sarcastically, "For the first time since its inauguration, the Labor Cabinet, in view of the crises, met on a Saturday afternoon."

According to Mr. X our gravest mistake was to grant the British a loan a year and a half ago. The show-down would have occurred sooner and Mr. X still hopes that after a real shock Britain will pull out somehow.

France: France is beyond a shock. It needs a dictatorship, as the French people have lost the virtue necessary for democratic government. A show-down is inevitable and the sooner the better. We have to gamble that the Communists will get licked. The average Frenchman is not so much pro-Communist as against everything. And the Communists will sabotage every effort of rehabilitation under present conditions.

It is estimated that gold and dollars hoarded by individuals exceeds $3,000,000,000. The official rate of the French franc (approximately 120 francs to the dollar) is out of line with reality. I bought French francs in Switzerland at the rate of 380 to the dollar, but try and export goods from France based on the true rate. Nothing doing. It has to be at the official rate. One of the comical results is that you can buy French wine in Switzerland cheaper than in France. The Swiss are doing a lot of business with France through the Vorort, which sees to it that the phony exchange does not hamper the Swiss and also that when credits are extended to France, the Swiss get merchandise in return at the proper price no matter what the official rate is for the French franc.

Right now the French have a phenomenal wine year, both in quality and quantity but no place to store it and not enough bottles for it. There is a natural market for this wine in the United States, and export of wine would give France some of the dollars they are clamoring for, but naturally the growers' price is based on the true value of the franc and not on the artificial rate maintained by law—and thus we do not get the wine here, the French Government gets no dollars, and the grower still has his wine. This applies naturally also to the French peasants who will not sell the products of their farms and incidentally have no incentive to increase production. The French workman, as usual, doesn't give a damn anyway. Any help to France outside of relief will be an incentive to do less rather than to do more. As Mr. ——— put it, "The only reason I have for believing that France will pull out is because I believe in miracles."

Italy: Italy is a hopeful spot, especially the north. Italians are hard at work, communistic sabotage and shortages of raw materials permitting. The lira is the only currency to have gone up in the black market

in the last 6 months (from 850 lira to the dollar to 650 to the dollar). There are practically no currency restrictions. All the Italians want is for people with hard money to buy their goods, live there, and leave their francs or dollars behind. Italy is in bad need of coal and steel, which, of course, should come from the Ruhr and not from the United States.

Sweden which was in a very strong position, is going down hill due to the hash made of the economic situation by the socialistic government there. The great mistake was the revaluation of its currency which resulted in a loss of some $500,000,000 in gold (about half of the Swedish reserve), and the imposition of import restrictions which were a hard blow to the European economy.

Denmark was doing remarkably well but now has an economic crisis based, of all things, on the surplus of foodstuffs—England under its new austerity program having stopped its purchases.

Holland would love to buy food from Denmark, but while the official rate for the guilder is 38 cents you can get all the guilders you want in Switzerland for 13 cents; so, of course, Denmark does not want to sell to Holland at a fictitious rate. The same, of course, holds true for England. The Danes would take pound sterling in payment for their produce at the true market rate, which is $2.20, as against the official rate of $4.04, especially so if pounds were convertible into hard money. But nothing can be done because British pride or stupidity or what not refuses to recognize the true value of the pound sterling.

According to Dr. ———, the currency problem is one of the sore spots of Europe and will have to be cured before any of our efforts are effective. The Swiss have set up a highly competent organization to deal with it, and as a result everything is obtainable in Switzerland and the Swiss manage to do business with everybody, even the Russians.

The Marshall plan is based on the idea that Europeans should help themselves. I am sorry to report that most Europeans either cannot (France) or will not (England) do it. Under these circumstances, outside of the purely humanitarian help which Europe needs because of general crop failures, any attempt to implement the Marshall plan is futile from a European standpoint and harmful from our domestic standpoint. Congress is meeting to consider rising prices and the danger of inflation. Won't we ever learn that one does not cure a sickness by discussing symptoms? Prices will come down fast enough if we stop our senseless exports to Europe and concentrate on domestic production.

Please bear in mind in considering the above that the Swiss have everything to gain from the Marshall plan. Economically it will permit them to increase their trade with France, Italy, England, etc. Politically the Swiss are in far greater danger of communism than we are. They are right next door to it, and, notwithstanding all of this, they just about said to me, "Good Lord, you Americans are not going to be suckers enough to fall for it."

A SWISS SUGGESTION

At the end of my interview with Mr. X he said to me, "Look, I hope you will not take offense at what I am about to say, but why do you Americans always want to save the whole world, and at the same time solve the problems of 57 nations? It just cannot be done! Why don't you work with us? We think alike, our money is at a premium, we understand what is going on in Europe and we are all set up to handle practical problems—one by one. Europe is now a festering swamp. You cannot drain and heal the whole of it. You will just sink yourself in the mire. Why don't you try to heal one spot at a time? Show the rest of Europe what can be done instead of talking about it. You must get one starting point somewhere and give Europeans a practical example. Do so and they will all be coming to you crying 'me too'."

In conclusion, I would like to offer the following suggestions of my own.

Segregate relief of Europe from rehabilitation; the latter to be on a cold-blooded business basis.

Whatever form our assistance to Europe takes, we should work very closely with the Swiss and take advantage of their know-how of European affairs.

Don't try to bite off more than we can chew.

The rebuilding of the Ruhr will do more for Europe at a smaller cost than anything else we can possibly do. What is the sense of shipping coal and steel to Europe which we need so badly ourselves, when most of Europe's requirements can be produced in the Ruhr at a fraction of our cost. If the Ruhr problem is properly handled, it could be put into full production within a year. Europe would be supplied with coal and steel and the drain on our economy will be stopped, partially at least.

By following a realistic program, we will show Europe and the Russians that we mean business and are not a bunch of suckers.

Benefits of Tennessee Valley Authority Program

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I just received from Mr. E. R. Deaver, of the Deaver Dry Goods Co., of Knoxville, Tenn., describing the advantages which have come to the people of the Tennessee Valley as a result of the program carried out by the Tennessee Valley Authority.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAVER DRY GOODS CO., INC.,
Knoxville, Tenn., December 23, 1947.
Hon. JAMES E. MURRAY,
United States Senate,
Committee on Public Lands,
Washington, D C.

DEAR MR. MURRAY: This will acknowledge receipt of your letter of December 18 and in reply to same I am pleased to give you any information I can pertaining to benefits received from TVA.

There is no doubt that the flood control brought about by building dams has done a great deal to stop soil erosion and to furnish rural and urban communities with cheap electrical power.

I can readily understand how you would receive some adverse criticism, but in my opinion this comes from a very small minority who felt that they were being personally inconvenienced by being forced to give up some productive land. Now that these families from the flooded areas are relocated they seem very happy in their surroundings and are more alert to the opportunities they have to improve their farms, homes, churches, schools, and living conditions generally.

There has been a movement in progress for some time sponsored by the civic organizations of Knoxville and working in conjunction with the Extension Division of the University of Tennessee, bringing to the attention of the entire section that has been affected by the building of these power and control dams, to awaken the people of the section to the possibilities they have.

As a result of this movement more scientific farming is being carried on and in this year there has been 186 communities competing in a friendly manner for prizes offered to the ones showing the greatest progress in their respective communities. This movement is also closely connected with the university and through the county agents throughout east Tennessee they are given information that has a lot to do with their progress.

Summing up all the results that I have seen I am convinced personally that the project as a whole is very beneficial.

Without meaning to burden you with extra mail reaching your desk I am enclosing a pamphlet prepared by the committee referred to above, which will give you a condensed i .a of the fine work being done from the standpoint of agriculture and home improvements.

Then too, there is no way to estimate the value of the recreational facilities afforded by the fine lakes well stocked with game fish where hundreds of boats are in use daily.

Without burdening you with figures which are usually rather monotonous, we can safely say that thousands of tourists are visiting our section and they marvel at the improvements being made.

Please be assured that I very much appreciate the report sent me and in closing may I say that I remember very pleasantly meeting you personally at one of the meetings held in Washington concerning hosiery.

With apologies for the lengthy letter and assuring you that if there is any further or more detailed information you would like I shall be very glad to cooperate in any way possible.

Yours very truly,

E. R. DEAVER.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. O'CONOR. Mr. President, the people of America will give support to a sane and properly considered program for aid to the devastated countries of Europe, just as soon as the fullest information is imparted to the people. I think it most desirable that the fullest discussion be had of the Marshall plan in all its implications. From a desire to assist in the dissemination of all pertinent information, I issued recently a statement upon this general subject matter. I request unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

To the hungry millions of Europe's war-devastated areas, it must seem symbolic that at this Christmas season, when the age-old promise of "peace on earth to men of good will" resounds throughout the world, America proposes a program of help and rehabilitation which would open a way to the peace and progress which these unhappy people crave so desperately.

The Marshall plan for assistance to 16 countries, proposing the outlay of an estimated 17 billions of dollars, is the most gigantic humanitarian program ever conceived upon this earth. While there will be doubt in many minds as to whether that amount actually will be needed, and whether also our own economy can withstand the impact of such a tremendous additional load, nevertheless I believe that all men of good will everywhere will approve America's willingness to assist these nations to regain their economic balance, and to become again respected, self-supporting members of the family of nations.

"Before one could reject the Marshall plan in its entirety, it would be necessary to consider the alternate possibility of a helpless Europe, deprived of American aid and wallowing in the misery of the chaos that must inevitably ensue. The end of that chaos, we can be certain, would be absorption into the Communist orbit. The ruin of these tottering countries, if America withholds her aid, can only result in a Europe gone completely communistic which means antagonism to every American concept of living and of government.

When the treacherous Japanese struck at Pearl Harbor on that fateful Sunday in 1941, and in the dark war years that followed, no one could reasonably question the tremendous expenditures for defense which piled one upon another. Those expenditures, we rightly believed, were for the defense of democracy and decency, for the saving of civilization itself. Not less threatening to the future of free peoples everywhere is the tide of misery and despair which now threatens so many countries of Europe, and will surely overwhelm some or all of them unless, with the assistance of American food and machinery and finances, they can be rescued from their present helplessness, and put once again upon the solid path of self-sufficiency.

The whole conception of this gigantic program is so far reaching in its ramifications that it is difficult for the average citizen, secure in our own American economy here at home, fully to visualize. As a prerequisite we must have faith in the leaders who have the information available upon which to base such momentuous decisions. I have such confidence in those of our leaders who have carried forward our bi-partisan foreign policy so successfully in recent times. Likewise, I have confidence in Secretary Marshall's understanding of the forces at work in Europe which threaten to pull down the whole fabric of civilization.

I am heartily in favor of the European recovery program in principle. I believe that every American of good will likewise will subscribe to it. Whether $6,800,000,000 is the proper amount for the first 15 months of the program will be debated thoroughly in the Congress and in hearings before the responsible committees of that body. Likewise, whether a grand total of $17,000,000,000 will be necessary, or whether, with the nations in question striving to help themselves once they are assured of our helping hand, they can regain their status as self-supporting sovereignties on a lesser amount must also await future determination.

It is vital, however, that assurance be given the leaders of those countries promptly that a continuing program of assistance will be available. I believe there is need for, and I am convinced that there will be forthcoming, adequate checks and balances on the expenditures in this first 15-month period to June 30, 1949, and as a prerequisite for further allotments of funds. Consequently, the American public and, of course, the Congress will have the benefit of this experience in deciding if the recipient countries are doing their part in order to secure continuing benefits.

It is a gigantic task to which America is asked to set its shoulder. After more than 2 years of futile attempts to erect a peace, it seems more evident with each passing day that lasting peace can never be achieved except with self-supporting, self-respecting nations. This result, I believe, can be achieved by, and only by, some type of continuing American aid.

The only adequate program offered thus far, based on certain knowledge of present conditions and of future needs of the individual countries, is the Marshall plan. Fundamentally it is sound and entitled to our support, under conditions and stipulations that will insure the realization of its objectives for the mutual advantage of America and of the friendly peoples of Europe.

Future Desperate Gamble for Residents of War-Torn Berlin

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 7, 1948

Mr. ANGELL. Mr. Speaker, the following article is the third in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

FUTURE DESPERATE GAMBLE FOR RESIDENTS OF WAR-TORN BERLIN—CAPITAL STATUS STILL IN DOUBT—QUARRELS OF VICTORS BRING HEAVY CLOUD

(This is the third of a series of articles detailing observations recently made in Europe by Philip H. Parrish, editor of The Oregonian editorial page. The writer spent 7 weeks in Germany, Austria, France, and England.)

(By Philip H. Parrish, editor, the Oregonian editorial page)

Berlin differs from other German cities only in that it is much bigger; that it is farther north than most, and so in the winter colder and darker; that it is more a governmental creation than the natural creation of economic forces; that it stands far out in the Russian zone of occupation. Thus the differences merely serve to intensify the struggle for life among the millions who pack its outlying houses, damaged apartments, and cellars among the rubble.

Standing downtown one could hardly tell but what he was in Munich or Essen or Frankfurt. But the climate is harsher; there is constant trouble in the air through the quarrels of quadripartite management; the countryside with its food is farther away, and the trip there is more dangerous because of the Russian guards who surround the city. Nor does Berlin know who will be its ultimate master, or whether it will ever be a capital city again. It has no assured resilience, such as that of the Rhine cities. Any study, just now, of mass-man in calamity should begin and end in Berlin.

It began with me on this second visit—and ignoring for the moment the official meetings with General Clay and his staff—with a drive through the evening streets with Lt. Col. and Mrs. Glen W. Campbell.

That, in itself, had its drama, for Mrs. Campbell is a daughter of Edward L. Wells, so long our Portland weatherman, and her brother Ed is chief engineer for Boeing. The vast havoc around us as we drove through the desolation of the Tiergarten, past the Chancellory, and on through the dim streets, was in large part Ed's technical achievement.

"I want Ed to come over and visit us," she said. Mrs. Campbell gives much of her own efforts to charity.

GIRL LEADS TOUR

Just then an old woman came out of the shadows to stop us and beg cigarettes in exchange for pictures of Berlin as it had been.

It was through the good offices of the Campbells that I set out the following afternoon with Ilse Borzym, 23-year-old German girl who works at their house, to see what the depths of the city were like. They had asked what I wanted to do, and it had seemed a good idea to get into the streetcars and subways. There are no automobiles for the Germans—only for the conquerors; so movement must be by mass transportation or by bicycle or by foot. (Queer description of us, isn't it?) I had been fascinated by the jamming of the surface cars. Ilse spoke English and we could get by.

Once, however, will be enough.

We got on at Zehlendorf station in the southwest (our zone) and turned east past Templehof airport and up northward on the Ringbahn through some of the most congested of the Russian-held working-class areas. We circled northwestward on the Ringbahn, and on the northern side of the city transferred to the newly reopened Nord-Sued Bahn—the subway that roars beneath the city, north and south, and which brought us out at Schoeneberg, near our starting place, where Colonel Campbell was waiting and was welcome. (The subway had been closed until recently because in the final days of the Berlin siege the crazed SS troops released the river waters into it, drowning uncounted numbers of their own people who had taken refuge there.)

Our trip required nearly 2½ hours, and took us through the most crowded sections at quitting time. On occasion we had to fight and squirm and struggle to keep from being trampled underfoot or smothered.

LIGHTS TURNED OUT

Then the lights would be turned out, in order to conserve power, and the cars, jammed beyond conception with swaying humanity, would roll along in darkness—everybody reeking because of the lack of soap, and especially because of potatoes. I had visions of being wrenched away from my interpreter, and of having to battle my way out, and home, among these grim beings who looked neither to the right nor left, and never smiled.

Once Ilse whispered to me:

"Sometimes there is trouble in the cars. The people are so tired after work and it is so difficult to get home."

One should only shudder at the thought of what would happen in one of those blacked-out holes if even one man gave way to the "furor Teutonicus"—shudder and struggle for breath.

Once when Ilse had explained something or other to me, a German at her elbow interrupted with a stern guttural phrase. Afterward she told me that what he said was: "Tell him the truth."

I think she did. Certainly there were many details I must have missed without her aid. She pointed out how many persons were wearing shoes made of cloth tops sewed to wooden soles. At first the people had been fairly well supplied with shoes but now these were giving way, and among those who received no contributions from abroad the wooden soles were almost the only answer. Also, note the garments made from blankets. These were multiplying. The tailor was bribed, with something, to make over a piece of blanket into coat or pants. One could sleep in the garment at night as well as wear it in the day.

LITTLE LEFT UNGUARDED

"These were very fine cars on the Ringbahn," Ilse said, as though a little surprised herself at their present condition. She rides her bicycle to and from work and avoids the mass transportation. "They had good upholstery."

"Where is it now?"

She shrugged. "The people needed for a little something at home. They are wearing it."

Anyhow, the cars are now just hard boards. And such lights as there are in the cars are heavily covered, with bars. Bulbs are scarce and cannot be left within reach. Indeed, nothing in Berlin except bricks and stones is left unguarded if one hopes to preserve it. Even automobiles are stripped within a few moments, down to the body proper. Thrill crimes—the crimes of violence—are rare. The people have no time or strength for them. But pilfering and theft have become a part of the life of the great majority of persons. (General Clay told us that he himself might steal under similar circumstances, with his children hungry.)

BIG BURDENS CARRIED

But the feature of our trip, if I were to name one, would not be the packed misery, or the greatly increased shabbiness. It would be the burdens that men carry—that is, both men and women.

Naturally there is no such thing as delivery of purchases in Berlin, or in any other German city. So delivery would explain much lugging in itself. But also it serves to distract attention from what is lugged illegitimately. Down in the subway stations one sees men staggering under great boxes, attached to poles, which they can barely get up the stairs. An old woman drags along under a bag of potatoes which bends her almost double. Children with immobile eyes go by carrying this or that. There is a dizzy and unending movement of people in all directions, and of people who want to be overlooked. They just want to get home, without speaking and without being noticed or stopped, with their burdens.

It was a relief to emerge into the cold of the city. And that night it was cozy to sit late in the close little apartment where Ilse lives with her parents, Herr Paul Borzym and his frau, Frieda. Ilse's fiance, Richard Tischler, was present also. He is an auto mechanic employed at the European Exchange Garage, and his ability with English helped in getting answers to my questions. I went with great detail into the economy of the family—and the situation of similar families—and believe I was answered honestly.

This family group was fortunate because Ilse and Richard both work for the occupation forces and can bring home extras. Also, the father and mother receive their little apartment by acting as caretakers for the apartment house. There are no children to worry about. But presumably there will be if Richard and Ilse get up nerve to marry. They are afraid now of the single room somewhere in the ruins to which they will be assigned by the municipality in case of marriage. Also, it costs 35 marks and up on the black market to buy even one pot to cook in. The Campbells, though, have promised pots, and the young folks are going to try it presently.

Herr Borzym has a job in the records office in the city hall. Prior to 1937 he worked on a lathe in a factory but suffered a spine injury. In the final months of the war, along with others who were incapacitated, he was taken into the Army and thrown in front of the Russians on the eastern front after only a few days of training. The Russians didn't think it worth while even to hold him for the work camps.

FORTY-EIGHT MARKS DEDUCTED

He gets 188 marks a month at the city hall, amounting to 140 marks of take-home pay after deductions.

His way of supplementing the family diet is by fishing. He gets a license each year for Wannsee Lake, northwest of the city, and goes there once or twice a week during the season. The fishermen line up 10 or 12 feet apart along the bank, and their take is a few tiny roach.

"Father," said Ilse, making a face, "grinds them up heads and all in the kitchen grinder. Says they are best that way. Mother and I do not like it so well."

Herr Borzym nodded at me laughingly from his chair, having caught the turn of the conversation.

Ilse receives 160 marks a month as a domestic, of which 110 marks are take-home pay. (Richard receives 320 as a mechanic, taking home 220.)

Out of Herr Borzym's take-home pay of 140 marks, about 50 will cover all the general food which can be had on the ration list; the rent would be 36½ marks—that, at least, being the ceiling; 3½ for cooking gas; 5 for electricity; 1.75 for the ration of coal when it can be had; 2 for use of the radio on restricted hours; 5 for vegetables when any can be found—a total of 104 marks. Thus 36 marks a month are left over theoretically.

And what could be done with 36 marks?

They reported the following black-market prices:

One pound sugar, 80 to 90 marks; 1 pound butter, 250 to 300; 1 pound coffee, 350 to 400; shoddy cloth for a suit, but unsewn and no thread, 800 to 1,000; 1 pair lady's hose, 150; 1 bar American soap, 30 to 50; a candle, 5; a light globe, 16. Put the 36 marks where you wish on this list.

They have had no milk since 1943. Breakfast, on the average, will consist of dark flour soup with water and salt, or bread, and an ersatz coffee. Herr Borzym takes his lunch with him on his bicycle, perhaps bread with a smear of fat on it, and a touch of vegetable. Supper is usually soup again. Sunday may be better. The family, under the ration, should have a total of 4 pounds of meat a month.

BLADE USED 3 WEEKS

Herr Borzym has a ration of one razor blade every 3 weeks. (A photograph of Frau Borzym's allotment of laundry soap for 6 weeks accompanies this article.) No thread, no needles. The little things bother a woman around the house.

I took my leave without asking questions as to whether or not this particular family traded in the country or otherwise resorted to the black market, and how. They would have answered frankly, I am certain, but in recounting their story I wanted to use names, and it is best not to use the names of those running the Russian blockade. Disappearance has become common in Berlin. An American-licensed German newspaper recently charged that about 6,000 persons who had displeased the Russians have vanished from the western-held sectors of the city.

Besides, I already had the information on that blockade. By prearrangement I had been met by a young German professional man and his wife, and spent hours with them on the details. The very clothes they wore had come from the cousin in Oregon who got in touch with me, and they were eager to be helpful.

This young German would be judged in the street as educated and successful. And he is. At least, he receives basic pay of 600 marks and makes a legitimate salary sufficient to live on, particularly where there are two small children. So he has become a blockade-runner and black-market trafficker on the side. At carefully chosen times of the year, depending on what has been harvested, he disguises himself in his seediest clothes, takes what may be a last look at the children, kisses his wife, and makes off in the darkness before dawn for one of the roads leading out of the city. There he creeps through the line of German police operating under Russian direction, or, more often, bribes a German truckdriver for 20 marks—the average price—and gets far out into the country in a box or curled under a pile of rags. There he alights and starts out to make the best deal possible with whatever it is he has brought along to trade.

He explained: "Last week—and that is the last time until spring, because the harvest is over—I had a bicycle tire. I got 30 pounds of flour.

"You ask what is it the farmer wants most? The farmer wish to have no money, but all other things. No people wish to have money. The farmer wish clothes most. Or glass for his windows. It is the joke that he wish to have a carpet for his cowhouse. I go to him and say, 'I have a shirt; you give me potatoes.' Or I say, 'Take my shoes; give me potatoes.'"

GOODS RUNNING LOW

My friend is getting down to the bottom of his bag of possessions now. He won't return to the country until spring, and he figures that by then he will have to sell his camera, perhaps for 6,000 or 7,000 marks.

"And after that is gone?"

He shrugged, "There is nothing left."

Possibly then it will have to be thievery.

I asked to whom he would sell his camera for 6,000 or 7,000 marks. "Not to Germans," he replied. "The richest are the Polish farmers. They come in with pork. They have pockets stuffed full of thousand-mark notes."

Of course, getting out of the country is only the first and easier part of his adventure. Then he must reenter Berlin with his potatoes or flour. Perhaps he has gone south, in the Dresden direction, from which there are many trains nightly. He is fortunate indeed if he gets inside, in the jam, where he can pass undetected. Ordinarily he will be hanging to the outside somewhere, and when the train draws onto a siding to let other trains pass he will have to dart off and hide behind a tree or bank to avoid the police with their hooks. These are special hooks to drag the blockade-runners from the trains.

If they catch him the children will cry for food through the winter. And perhaps he will not return to tell them why.

All of which illustrates how it is—as I observed in the opening article of this series—that the Germans are no longer frantic. This man and all his neighbors have learned the ropes of misery. It has become a calculated routine with them. They face the chances with cold eyes. Only those can hope to live who are not afraid to die, and make no missteps.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. O'CONOR. Mr. President, realizing the imperative necessity of keeping America well prepared to cope with any emergency, I am of the belief that the American people have a right to expect a forthright statement from its elected representatives upon the important question of universal military training.

Accordingly, I prepared such a statement, and ask unanimous consent to have it printed in the Appendix of the RECORD

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNIVERSAL MILITARY TRAINING

(By HERBERT R. O'CONOR, United States Senator from Maryland)

Among all the many problems facing America today, that of preserving our national security is paramount. That there is a real

threat to that security in the defiant attitude of Russia and its satellites, no reasonable person can well deny.

At the moment America may hold a trump card through possession of the atomic bomb. Russian propagandists have indicated that their country now is able to manufacture the bomb. Whether that is true, or whether America actually is the sole possessor of the bomb today, it is generally agreed by leading scientists that our potential enemies will be able to develop atomic bombs themselves within the matter of a relatively few years.

Furthermore, every well-informed person is aware of the rising tide of communism. The clash of ideologies underlying the democratic and totalitarian systems naturally leads to misunderstanding, distrust, and possibly could lead to the breach of friendly relationships. While we pray God that neither we nor our children may experience another war, we cannot take anything for granted.

We must be prepared to cope with any emergency which may arise. Especially in view of the unsettled condition of world affairs must we remain so strong that no nation will dare to attack us.

Of course, there will be many who will reject the possibility of another unprovoked, undeclared attack. However, representatives of the Soviet Union have made it amply clear in the discussions before the United Nations, and in their animosity to European aid through the Marshall plan, that they hold America to be the No. 1 enemy of communism.

In their vision of speedy world-wide conquest, these opponents of freedom rightly regard America as the spokesman for and the leading advocate of individual freedoms throughout the world.

As the greatest industrial country in the world, the country which armed and financed the Allied nations in World War II, America would have to be silenced, Soviet officials know, before they could proceed to realize their dream of world domination. And make no mistake about it, they will do their best to insure that America is silenced completely, if they think the time is ripe to launch their world attack on democratic nations.

To meet such a threat, America must have an air force prepared in size and in equipment to launch immediately an overwhelming counter attack, and she must possess likewise a highly trained military force in every section of the country. Not only must these forces be skilled in procedures to meet any air- or sea-borne invasion that likely would follow an all-out bomb attack but they must also be versed in methods to cope with the peculiar problems that would be occasioned by widespread economic disruption or by radioactivity in the bombed areas.

One method of meeting such an eventuality, namely, a huge standing army, the American people would reject without much ado. Experience over the past months has shown, likewise, that voluntary enlistments cannot be depended upon to meet such an emergency. The only other avenue, therefore, to guarantee the establishment of the needed armed forces would be Universal Military Training.

Obviously, and naturally, any program of military training will meet with definite objection in a country where the idea of permanent military conscription has always been abhorrent. As parents we dislike the idea of having our sons taken from home during the formative period of their youth. While admitting the force of the arguments that can properly be advanced against Universal Military Training there still remains the alternate possibility. America could be destroyed in atomic warfare unless, sometime in the near future, the most comprehensive preparation for all-out defenses are developed.

In perfecting a plan for Universal Military Training it is imperative that we keep uppermost in mind the need for specialized training of a "key" force to concentrate upon the atomic bomb. Because of scientific advances it is incumbent upon us to have this special group devote itself exclusively to the peculiar problems incident to the use of this devastating implement of warfare.

Add up all the arguments that can be advanced against military training, and compute, if you will, the danger to the youth of our country, their loss of interest in their interrupted education, conjure up all the losses such a system would occasion, and they still are small as compared to the loss of our freedoms which could quickly follow an atomic bomb assault upon an unprepared America.

America's security, the whole future of world civilization, is under constant threat as long as world conditions remain as they are. Until permanent peace is assured we must remain powerful enough to discourage any potential enemy. Universal Military Training offers the only sound program of preparation that has been advanced for the safeguarding of America's security.

Repeal of the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and concise editorial appearing in the Trainman News, official publication of the Brotherhood of Railroad Trainmen, December 20, 1947.

This editorial points out the fallacies of the Taft-Hartley Act, the serious damage it is causing in promoting industrial unrest, and the need for its early repeal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AFW: "REPEAL THAT LAW"

After reading Gerhard P. Van Arkel's factual article, The Taft-Hartley Act Really Hurts Labor, in the December Railroad Trainman, we are more convinced than ever that a lot of labor trouble can be avoided by prompt repeal of the Taft-Hartley Act.

The strike now disturbing the Chicago newspapers and the restive situation developing in the Remington-Rand plants are evidence that the law not only may be what the doctor ordered for employers who want to make unions powerless, but is also a direct cause of labor trouble.

As Mr. Van Arkel says (and as former general counsel of the National Labor Relations Board he is competent to speak authoritatively on the subject), "The unexpressed purpose of the Taft-Hartley Act is to break up unions and defeat collective bargaining."

We contend that to deny any union access to the procedure of government simply because its officers have not accepted the insult and certified that they are not Communists is an utterly new philosophy in this country and a provision of the act which we believe is clearly unconstitutional. It is made to order for the employer who is looking for a reason not to bargain with the strong, militant union equipped to represent the rank and file of the workers.

In the Remington-Rand case, the NLRB refused to recognize the United Electrical Workers' Union, CIO, notwithstanding the fact that a majority of employees selected that union to bargain for them. Can you think of a better way to promote labor trouble and provoke a strike? In this instance the Taft-Hartley Act is the cause of the trouble and the Federal Mediation Service, the arm of the Government charged with the responsibility of promoting and preserving industrial peace, is powerless to act. As you watch developments in the Remington-Rand dispute, mark this one down as directly traceable to the NAM's brain child.

Consider the unwise feature of the law which prohibits the closed shop under any circumstance, regardless of the desire of the employees and employer. Here again is a new philosophy and another provision which probably is not constitutional. It is the cause of the strife between the International Typographical Union and the Chicago papers. And here again the Mediation Service is powerless. As you watch developments in this case and observe the trouble spreading to other cities, bear in mind that it is a result of the antilabor law.

Under another equally obnoxious provision, a union is prohibited from expending or contributing money to promote or discourage election of candidates for Federal office. The union, according to Senator TAFT, Republican, Ohio, may not even make a candidate's voting record available to its members. This feature destroys political freedom and restricts rights of all citizens. We can't believe that any court would hold this constitutional.

Certainly there was no mandate from the people for any such law. And if TAFT does not know it, he will be enlightened in 1948.

To allow the Chicago Tribune to go all out for TAFT or BALL or HARTLEY, while not permitting a union-owned newspaper freedom of the press, just doesn't make sense and is wholly un-American. Yet this would seem to be TAFT's understanding of the law which bears his name.

No wonder Mr. Van Arkel resigned from the NLRB the week the act went into effect. We commend him for having the courage of his convictions and the character so much needed today in public officials.

What we need now is men of equal character and conviction in Congress to work effectively for repeal of the Taft-Hartley Act before it creates more avoidable labor trouble.

A. F. WHITNEY.

Rehearsal for History

EXTENSION OF REMARKS
OF
HON. E. WALLACE CHADWICK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. CHADWICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malvina Lindsay:

REHEARSAL FOR HISTORY

(By Malvina Lindsay)

CONGRESS ON TRIAL

They look like most other men and women, these members of the Eightieth Congress who are beginning their historic session of 1948. Yet we who are audience at their new drama see something special about them. Familiar as they are, we regard them with fresh curiosity. They are suddenly set a little apart.

Perhaps it is because they are about to try out for their roles in history. How will posterity finally judge a VANDENBERG for his performance? Or a TAFT? A MARTIN? A TABER? Or the seven Congresswomen, minute symbol of the feminine millions who are praying for freedom from fear of war? Or a freshman

legislator who has one of the 531 votes that may sway the destiny of the world?

We think of all that is expected of them—to curb inflation, prevent depression, get enough houses built, settle the factious universal training issue, make the Nation's moral decision about Europe's tragic displaced, decide which turn a critically sick world is to take—toward recovery or relapse.

We see them standing out with a few other little groups in the procession of Congresses since 1789. Another reconstruction Congress is at the job of building peace, which is always so much harder than waging war. Will it do any better than did the stubborn, myopic, politics-ridden one of 1919? Or the passionate, vengeful one of 1867? Will the seeds of peace or of war be sown in the reconstruction it ordains? Will another Thaddeus Stevens achieve legislation of fear and hate? Will provincialism and political ambition bring about timid, negative subterfuges when bold, far-visioned action is needed?

We shudder momentarily at thought of the endless debate ahead—the demagogic archaisms that will provide a field day for cliché experts, the chauvinistic and petty utterances that will advertise our worst side to the world. Yet that is part of our freedom—and there will be noble expressions, too, which school children may some day learn.

We think sadly of the world cry for leaders. "There is paralysis in leadership from the Elbe to Washington," laments the London Economist. Our fellow Americans sigh, "If only we had some great figures as in the early days of the Republic."

Yet we know that the leaders of those days appeared to their contemporaries much as ours do to us. They were ridiculed, berated, even physically attacked. The first Congress was widely criticized for logrolling and for catering to money interests. A later Congress passed the notorious Alien and Sedition Acts which ruthlessly invaded civil liberties. Yet these Congresses at times acted with audacity and vision to strengthen the foundations of the Republic. Is there not a chance this one will take the steps that will strengthen foundations of freedom throughout the world?

After all, we tell ourselves our legislators have the advantage of hindsight. They know of hate's bitter reconstruction fruits of the sixties and seventies. They know of the whirlwind of boom, bust, and war that was reaped in part from congressional plantings of selfishness after the First World War. Nor is this Congress dominated by the vengeance and passion that prevailed in 1867. It is not ruled by the provincialism of 1919. One-third of its Members were abroad last summer. Most of them know that our oceans have become creeks.

We see these men and women, weighted with their loads of decision, sitting in Senate and House, watched by the world. Modern communications have brought them an audience of hundreds of millions—the hungry, the homeless, the suffering, the eager, the cynical, and the scornful abroad; the anxious, the searching, the hopeful at home. Never has a Congress played to such an unseen "house." Surely it will be inspired to a great and self-forgetful performance.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock from the New York Times of January 6, 1948:

IN THE NATION—ISSUE ON ERP ADMINISTRATION IS NOW PLAIN

(By Arthur Krock)

WASHINGTON, January 5.—The pretense has been dropped that the agency to administer the European recovery program would, in the form recommended to Congress by the President, be independent of, or even separate from, other executive agencies. Senator CONNALLY and Representative EATON, of New Jersey have conceded that, if Congress adopts the President's blueprint, the administrator of the ERP will be a subordinate of the State Department, with his every act as well as policy under its detailed direction.

Two fantastic arguments were employed by the Senator and the Representative in their attempt to further the State Department's ambitious plan to take minute charge of a vast economic and business operation. Mr. CONNALLY said that, if this ambition is not gratified by Congress, "Moscow would placard it to the world as an evidence of Russian victory over President Truman"—the logical conclusion being that Congress must agree with Mr. Truman 100 percent on every detail for the same reason. Mr. EATON said he has serious doubts that a truly independent agency to administer the ERP would be legal, because the Constitution reserves to the President the conduct of foreign affairs. The logical ultimate of this argument is that it would be unconstitutional for Congress to decline to appropriate in the field of foreign affairs any sum requested by the President for any purpose.

The importance of these observations does not derive from their substance, which is flimsy indeed, but from the concession of fact involved. This is that, despite the evasive words used in the President's message and the State Department's accompanying break-down of the administrative plan, the Chief Administrator of the ERP, like his principal assistants abroad, is designed to be just another employee of the Secretary of State.

That makes the issue plain, and gives to Representative HERTER, Speaker MARTIN, probably Senator VANDENBERG, and others in Congress who oppose this arrangement, a clear field to devise an administrative plan which will not be subject to the same objections as that sold to the President by a State Department increasingly bent on becoming an operating instead of a policy-making branch. These objections are:

1. The proposal follows a model that became the symbol of inefficiency and waste during World War II, being based on the principle of responsibility without commensurate authority.

2. The administrator would be the captive of the State Department because (a) he "must be subject to the direction of the Secretary of State on all matters affecting our foreign policy," and every "matter" he deals with necessarily does that; (b) Congress could not reach him for an accounting without breaking through two executive barriers, the Department and the National Advisory Council; (c) he would be obliged to recruit his assistants abroad from the Foreign Service of the Department, and these are given the titles of "Ambassador" and "Minister" to clinch the control; (d) all reports from these assistants to him, and instructions from him to them, must be channeled through the Department and cannot be handled by him d'rectly.

A series of endless frustrations and disputes would be the consequence of this arrangement, as our experience in World War II amply demonstrated when an administrator was assigned a large task without direct authority to accomplish it. The administrative plan recommended to Congress by the President even excludes all decisive phases of allocation and procurement from the official in charge. All this foreshadows a running battle among the executive departments; and between the executive and the legislative branches of Government whether or not the same party controls them both after the 1948 elections.

With such a set-up it should have been obvious that congressional analysis would soon cut away the screen of words which represented the new agency as independent and separate. But Mr. Connally and Mr. Eaton have made unnecessary a painstaking effort to do that by conceding the misrepresentation.

When it is remembered that calls have been uttered by the Executive for the ablest men in the country, with appropriate experience, to man the program, the attempt becomes the more remarkable. Obviously few men who meet that description would undertake the task if the State Department is really to run it and it is to be manned by its foreign service employees, trained in a specially limited field. One probable exception, of course, is Ambassador Douglas, who, being already a member of the State Department, might conclude he would be permitted to run his own show.

Alternative plans, like Representative HERTER'S envisage a truly independent and separate agency, subject to proper coordination with economic and foreign policy, but with complete operating authority for its director, the right to recruit and dismiss his own staff and to deal with its members and their reports at first hand.

The Mufti of Jerusalem Again

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. KLEIN. Mr. Speaker, repeatedly the crimes of Haj Amin el-Hussein, Mufti of Jerusalem, have been presented to the world, from this floor and from every forum of public opinion. His history is a matter of record running back to the First World War. In World War II he was openly allied with Hitler.

No adequate explanation has been forthcoming of his escape from France and his return to power in Araby. No one has been able to explain the failure to put the Mufti on trial with the other war criminals. Hitler, Mussolini, and their cutthroats are dead; only the Mufti has survived his vicious crimes and gained new infamy, surrounded by others of his ilk in defiance of the United Nations.

I commend to you, Mr. Speaker, and to everyone else who esteems justice and despises treachery, a vigorous editorial from the Washington Post of Tuesday, January 6, 1948, which I am inserting in the RECORD under leave:

MIDDLE EAST

No means are available to us to check British charges that Jewish refugees seeking to enter Palestine from the Balkans are hand-picked Communists or left-wing sympathizers with links to the Stern gang. But the kind of Arab who is leading the resistance to the UN plan to partition Palestine needs no check. His record is plainly written in the pages of the war's history. At the head and front is the Mufti of Jerusalem, the notorious Haj Amin el-Husseini, the man whom Mr. Churchill called Britain's worst enemy.

The Mufti, slipping through British fingers, spent the war in Berlin, plotting with the Germans against Britain's interests. He has around him the same breed of troublemakers as himself.

This was brought out in a recent dispatch from Jerusalem. The most active man in the field at the moment, according to Emile Ghory, a leading Arab nationalist in Palestine, is Sheik Hassen Salameh. Sheik Salameh during the war was a German major, and he was dropped by parachute in Palestine to undermine the British. Unlike the Mufti, whom the French picked up in Germany, only to let him escape from Paris, he was never caught. This is the character who is in charge of the Arab forces in the whole Lydda-Jaffa district, and, according to the New York Times correspondent in Jerusalem, "probably was responsible for the numerous recent train robberies." The other field commanders have the same common denominator of anti-British and pro-Nazi activity. They are merely identified as leaders in the 1941 revolt in Iraq headed by the Mufti and Rashid Ali which sought to turn Iraq over to the Nazis. It is curious that these Arab gentry get no mention in recent comment of British spokesmen in Britain.

Since the General Assembly's Palestine recommendation the comments from London have been as irregular as some of the acts in Palestine of the British-officered Arab Legion of Transjordania. The concern in London seems to be with the attribution of pro-Soviet motives to the Jews in Palestine. To be sure, there are Communists in Palestine, as in every other country. In Palestine they appear to make up the notorious Stern gang, which arose as the result of the delay in attending to the Palestine problem. It is a small group of terrorists. In all likelihood they were back of the dynamiters of the offices of the Arab Higher Committee in Jaffa last week end. But we take leave to doubt whether the 10,000 or so Balkan refugees trying to get into Palestine are, as to the bulk of them, Communists. All we know about them is that they include 5,000 children fleeing from anti-Semitic lands where they have been freshly persecuted. It is time that the British spokesmen tuned their comment to a regard for their responsibilities as the mandatory power and for their membership of the United Nations.

The Christmas Message of Pope Pius XII

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 7, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, from the watch tower of the Vatican came a Christmas message on December 24 that applies to all people who believe in the fatherhood of God without which there can be no brotherhood of man.

It is significant that Palmiro Togliatti, a potent foreign agent of Moscow, who seeks to add Italy to the Communist chain, should have attacked the Vatican again only a few days ago at the Sixth Congress of the Italian Communists in Milan.

Togliatti knows that Christianity ideologically defeats communism. The Communists seek to make a god of the state and a materialistic animal of man. They seek to make a mockery of the family and to destroy religion, which is the relationship between man and his God. The Communists know their enemies. They know that the Vatican is a spiritual bulwark of defense, not only to western civilization but to men everywhere in the world against the hard-driving world ambition of Marxists who seek to enslave all men to communism.

VATICAN CITY, December 24.—The English text of the Christmas Eve message to the world, delivered by His Holiness Pope Pius XII is as follows:

ENGLISH TEXT OF PONTIFF'S 1947 CHRISTMAS EVE MESSAGE TO ALL MEN OF HONESTY

"The feast of Christmas and the new year close at hand bring with them certain signs which point a warning finger toward the days to come.

"The customary greetings exchanged at this season, which ascend to heaven in a cloud of incense and of prayer, cannot and will not, for all the deep and sincere affection prompting them, allow us to lose sight of the condition which confronts us at the present hour, when Europe and the wide world have reached a turning point of their destiny. The gravity of the crisis is unquestionable, its possibilities for good or evil immeasurable, its issue unpredictable.

"When last year on this same occasion we addressed our Christmas message to the Catholic world, and to all men of good judgment and good will besides, who could have had it in his heart to predict for humanity, tired of war and hungry for peace, what has today become a cruel, undeniable reality?

"Christmas bells will still ring in the feast, as from the days of old. But for many closed, embittered, and tormented hearts they ring out in the desert, where they wake no living echo any longer.

"Now that another postwar year has passed, with its burden of distress and suffering, of disillusionment and privation, those who have eyes to see and ears to hear cannot but be pained and humiliated by this: Europe and the world—even to distant and tormented China—today are farther from real peace, farther from complete and definite safety, farther from a new order based firmly on agreement and justice, than ever they were before.

"The champions of negation and disagreement, with the long line of profiteers in their train, are jubilant at the thought—or the illusion—that their hour is near.

"Contrariwise, the friends of peace, the promoters of a lasting reconciliation between the people of the world, feel the twinge of anguish in their hearts when they compare the moral and social wealth of Bethlehem's good tidings with the misery of a world that has wandered far away from Christ.

"But genuine Christians, for whom the whole of life, the source of all its lights and worth, consists in 'thinking with the Church,' perceive and realize better than anyone else the meaning and value of times like ours; times of dense darkness, but of blinding light as well; where the enemy of Christ reaps a vast, tragic harvest of souls, but many also of the good are leading better lives; where generous hearts can scale victoriously the peak of heroism, while numbers of the tepid and the faint of heart, slaves of human respect and afraid of sacrifice, slip into mediocrity or sink into the vile depths of degradation, like these who 'neither rebels proved, nor yet were true to God but for themselves were only.' (Dante, Inferno.)

"In the titanic struggle between the two forces now competing for the mastery of the world, if hatred is all that is needed to marshal under the leadership of the evil one men who would seemingly have every ground to disagree, what could love not accomplish toward uniting in a world-wide league those whose high purpose, noble instincts, and community in suffering have drawn them together by ties stronger and more intimate than any difference or divergency which could keep them apart? To the millions who are disposed to become members of this world alliance, the charter of which is the message of Bethlehem and its unseen head the king and peacemaker who lies before us in the manger, we direct at this juncture our heartfelt appeal.

"The brand on the brow of one generation, and the source of its disruption and decadence, is the tendency, every day more obvious, to insincerity, a lack of honesty, and this not merely as an occasional expedient, or of obstacles unforeseen. No. Today it amounts practically to a system. It has been raised to the distinction of a strategy, in which the lie, the garbled word or fact, and trickery have come to be an accepted weapon of offense, which some people wield with the skill of professionals, boasting even of their competence.

"So clearly, as they view it, has the suppression of all sense of right and wrong come to be part and parcel of modern technique in the art of forming public opinion, of controlling it and making it serve their political ends. For they are bent on winning at any cost the battle of class interest and theories, of ideologies and power politics.

"We do not propose to describe here in detail the havoc wrought by this tournament of insincerity in public life. But we are in duty bound to open the eyes of Catholics all over the world—and of all others besides who share our faith in Christ and a transcendent God—to the dangers which this prevalence of falsehood presents for the church and Christian civilization, for the entire religious and even merely human heritage which has supplied the peoples of the world with the substance of their spiritual life and of their real greatness for the past 2,000 years.

"When Herod of old was plotting anxiously to slay the Babe of Bethlehem he hid his plan under a pious mask, and tried his best to make the honest men into unwitting spies. Likewise today, his modern imitators move heaven and earth to conceal their real purpose from the masses, and make them the unconscious instruments of their designs.

"But once they have won power and feel the reins securely in their hands, little by little they let fall the veil, and pass by successive stages from oppression of the dignity and liberty of man to abolition of all authentic and independent religious life.

"Here, then, is the question we put to all honest men: How is humanity to recover, how can any new order worthy of the name emerge from the mistakes and agitation of this present hour of confusion, if the lines which mark off friend from foe, yes from no, and faith from lack of faith are to be erased and moved about?

"The church, though her heart is ever full of love and sympathy for these erring souls, cannot fail to denounce error, in loyalty to her divine founder's declaration: 'He who is not with me, is against me.' (Matt. 12, 30.) She cannot but tear the mask from the 'forgers of lies' (Job 13, 4) who come forward as wolves in sheep's clothing (compare Matt. 7, 15), as founders and pioneers of a new golden age. She cannot but warn the faithful not to let themselves be lured from the path of rectitude, or be deluded by fallacious promises.

"Our position between the two opposing camps is exempt from every prejudice, from any preference for this or that people, for this or that bloc of nations, as it is foreign to any sort of temporal consideration. To be with Christ or against Christ—that is the whole question.

"Each of the opposing sides believes itself constrained to this mistrust, as by a duty of elementary precuation. Obviously, this very fact leads to the building of an immense

wall which renders hopeless every attempt to bring to the bewildered human family the blessings of true peace.

"Have we not had occasion, even during the past few weeks, to experience the tangible results of this mistrust? Have we not seen a most important conference of the great powers adjourn without having taken those essential and decisive steps along the road to peace for which the world in its anguish was waiting?

"There can be but one way out of the straits to which the cult of insincerity has brought the world—the return to the spirit and practice of straightforward honesty.

"No one today—to whatever social or political movement or party he may belong—who wants to bring the weight of his convictions and his public acts to bear upon the present or the future destiny of nations, has any right to wear a mask, to appear to be what he is not, to avail himself of the strategy of the lie, of tension and of threats, in order to restrict the honest citizens of every land in the exercise of their just liberty and civil rights.

"You will readily understand, then, how pained we are to see hostile propaganda distorting what we think and say, embittering men's hearts, hindering the peaceful exchange of ideas, and deepening the chasm which separates from us so many souls redeemed by the blood of the same divine and loving Savior. At the bottom of it lies, unfailingly, the same identical duplicity, deliberately adopted and ruthlessly employed as the most incisive weapon with which to combat justice and truth, and hinder mutual understanding, reconciliation and peace.

"The inevitable outcome of such a situation is the splitting of humanity into powerful and rival groups, whose highest law of life and conduct is a basic and invincible mistrust. Here is at once the tragic paradox and the curse of our time.

"That is why we would remind you, dear sons and daughters, that we celebrate tomorrow the birth of Him from whose lips one day escaped the cry: 'Veritas liberabit vos' (John 8, 32); the truth (which is His teaching) shall make you free. Never, perhaps, has this cry reechoed so loudly as it does today in a world hungry for peace but forced to groan beneath the oppressive yoke of falsehood.

"Let all Christendom, too, make answer—to Him who was made flesh that He might be for all "way, truth, and life"—in a prayerful plea that the truth may find its way back to the hearts of the rulers of nations, whose yes or no may determine the fate of the world. And with the truth may there shine out upon the earth no deceptive mirage, but Bethlehem's bright star of peace divine."

II

"Those who were absolutely determined to win the war were ready for any sacrifice, even unto death. Those who sincerely wish to win the peace must be ready for sacrifices just as generous, since nothing is more difficult for convulsed and embittered human nature than to forego reprisals and lay aside its unforgiving rancor.

"The injustice and cruelty committed by those who unleashed the Second World War aroused waves of righteous indignation, but served, alas, at the same time, to develop the seeds of a natural inclination for revenge.

"The saner portion of mankind—even among nations chiefly involved in the conflict—unanimously denounced the excesses and atrocities which a political system, falling into moral nihilism, not only practiced during the war which it provoked, but even dared to justify in theory. Facts and documents recently come to light have only served to confirm that those who sponsored and worked out this system are mainly responsible for the world's misery today.

"Men of the postwar period could have easily confronted this degeneracy with their own moral superiority; unfortunately, in not a few instances they have let slip a golden opportunity. It must be admitted that the history of the world during the days and weeks and months immediately following the war was very far from being one of unmixed glory.

"The punishment justly meted out to the chief culprits could have inspired Dante's pen with scenes for the Inferno, but the great poet would have shrunk from depicting the reprisals wrought upon the innocent.

"Forced migrations and compulsory hard labor followed later, defying the most elementary laws of humanity as well as the letter and the spirit of the rights of nations. Who, then, could be surprised that the sense of justice which had been rightly shocked at the sight of such deeds perpetrated by one side should also react similarly when it sees others commit them?

"Who can measure what futher moral domestic and social distress, what harm to the cultural and economic stability of Europe—and not alone of Europe—will be caused by the compulsory and indiscriminate displacement of peoples, what sorrow at present, what anguish for the future? Only a broader vision, a wiser and more judicious policy on the part of those who hold the fate of the world in their hands, can provide a tolerable solution for an otherwise insoluble problem.

"All honor, then, to those of every nation who shirk no privation or shun no labor to hasten the fulfillment of such a noble enterprise. Let them not be troubled at the contradictions and opposition they will have to meet and which precisely in these days seem to have grown more intense, in stimulating another war of nerves, provoking discord, reducing to naught the efforts of the champions of unity and peace. Let them be confident that the hour is at hand—as we trust and ask in our prayers—when the King of Peace will grant victory to those who do battle for His cause with a right intention and with the weapons of peace."

III

"The human race, then, will be powerless to emerge from the present crisis and desolation and to go forward to a more harmonious future unless it restrain and control the forces of division and discord by means of a sincere spirit of brotherhood uniting all classes, all races, and all nations with the one bond of love.

"We launch such an appeal to the entire world today, the eve of Christmas, because we see this spirit of brotherhood in danger of being stifled and crushed; because we see selfish appetites getting the better of sound reason, and the cruel tactics of oppression and violence prevailing over loyal understanding and mutual respect, and the utter disregard for any consequent evils to the detriment of the zealous maintenance of public welfare.

"The church, whose maternal heart embraces all nations with equal affection, is following with great anxiety this new development in national and international conflicts.

"When faith in God, the Father of all men, begins to grow dim, the spirit of brotherly union also loses its moral foundation and cohesive force; and when the consciousness of a society embracing all men, as wished by God, and which includes reciprocal rights and duties, determined by fixed norms, begins to die out, there arise in its place a morbid hypersensitiveness to what divides, a ready propensity to overstate one's rights, true or imagined, and a neglect—at times thoughtless, but not for that reason less ruinous—for the essential needs of others.

"At this point, the way is open for the struggle of all against all; a battle which knows no other right except that of the strongest.

"Our age, alas, has provided some sad examples of fratricidal war, resulting with relentless logic from the weakening of the spirit of brotherhood.

"Even the land which heard the hymn of the angels announcing peace to men, which saw the Star of the Saviour shine forth, and where the Divine Redeemer died crucified for our salvation—even that Holy Land, with all its memories and shrines most dear to every Christian heart, is now divided and has become the scene of blood and strife. And Europe herself, the center of the whole great Catholic family—is she not perchance today, a warning and an example of the plight to which the loss of the spirit of brotherhood can reduce a part of the world once so beautiful and flourishing? The wounds she suffered during the late war are still unhealed, and already the sinister light of a new conflict flashes on the horizon.

"Oh, if all honest men were to unite together, how quickly would the victory of the brotherhood of men be realized and along with it the rehabilitation of the world. Such people already constitute a substantial element of public opinion, and show that they possess really human instincts, with political wisdom as well.

"But there are others just as numerous, whose mere word has considerable weight in hastening or impeding the peace of Europe—the necessary initial step toward world peace—and who follow a course directly opposite. Are they afraid, perhaps, that if Europe were to recover, regain her strength, and become conscious once more of her Christian mission, she would wish to rid herself of the deadly germ of atheism and revolution and live a life of her own, free from unhealthy foreign influence?

"It is obvious that a Europe shivering and feverish from economic difficulties and social chaos yields more readily to the seductions and illusions of a fatuous ideal state than a healthy Europe with her vision clear.

"Meanwhile, the propagators of such deceptive schemes spare no effort to make converts to their cause among the fanatics and the simple, whose aim, in turn, it will be to drag their people along the path of ruin that others have traveled before them, not from choice but because their civil and religious liberty had been systematically repressed.

"Have we not had occasion to see here, on the sacred soil of the city where God has established the Chair of Peter, the emissaries of a concept of life and human society based on atheism and violence sowing cockles in the good earth of Rome, and doing their utmost to convince her sons that they have discovered and set up a new culture more worthy of man than the ancient and eternally youthful Christian civilization?

"Since things have reached such a pass, the time has surely come for everyone who cherishes the human and spiritual heritage of his forefathers to rouse himself from sleep, take up the arms of faith and courage, and preserve the city, civilization's mother, from religious, moral, and social deterioration, such as might render very difficult, to our keen regret, that solemn celebration of the coming holy year desired by Catholics the world over.

"If, however, the frank words we utter during today's celebration know no boundaries, they refer only to doctrines denying faith in God and Christ, and certainly not to the nations or groups of nations who are the victims of these doctrines. For these latter the Church ever cherishes the same constant love. Nay, the more they suffer the greater is her love for them. It is in the days of trial, rather than in untroubled hours, that men of all nations should realize that they are brothers. The real meaning, the lofty mission, and the power to reconcile of this brotherhood has never been, nor shall ever be, extolled with such force

as it was by 'the first-born among many brethren' (Romans 8: 29), who from Bethlehem to Golgotha preached by His example more than by His words that great and universal brotherhood of men.

"Over this Christmas a dark cloud is gathering. As the people's anxious yearning for peace grows ever ever more intense, the inability of their leaders to satisfy it by merely human means is just as apparent. Do not the honest efforts of some to arrive at an equitable peace and the systematic planning of others to prevent its fulfillment bring perchance to mind the picture of a dangerous game of chance of which the stakes are forture or ruin?

"Into the meeting places of men the spirit of evil creeps unnoticed, 'the angel of the abyss' (Apo. 9, 11); the enemy of truth, the fomentor of hatred, the denier and destroyer of all sense of brotherhood, believing that his hour is nigh, uses everything at hand to hasten it. Nevertheless, we desire to end our Christmas message with an irrepressible appeal for hope and confidence.

"Although faith in the Divine Redeemer prompts Christians to ponder everything in the light of the truth—ever ancient, ever new—of aged Simeon's declaration concerning the Child Jesus at the presentation in the temple: 'Behold this child is destined for the fall and for the rise of many . . . and for a sign that shall be contradicted' (Luke 2, 34), still we know that the number of those who do not separate themselves from Christ by unbelief, who cling to Him, who are ready to give their lives for Him and who place in Him and in the resurrection their unwavering hope—we know that the number of these is great, that it is increasing and growing strong. We see them radiating energy and influence for good in every sphere of life. We see that other men of good will are joining them.

"To you all, therefore, beloved sons and daughters, we say: Your hour is come.

"At the assemblies of statesmen another unseen spirit presided as Sovereign Lord, the Omnipotent God to whom nothing is secret and who holds in His hands the thoughts and hearts of men, to bend them as He wills and when He chooses; God, all of whose inscrutable designs are governed by His paternal love. But to fulfill these designs He wishes to make use of your cooperation. In the day of battle your place is in the vanguard, fighting at the front. The timid and those afraid to come out in the open are very close to becoming deserters and traitors. He is a deserter and a traitor who would give his material support, his services, his talents, aid, or vote to parties and to forces which deny God, which put might in place of right, and threats and terror in place of liberty, which make of lying, opposition, and incitement of the masses to revolt so many weapons of their policy, thus rendering national and international peace impossible.

"Let us bring ourselves back 300 years, to a Europe torn by the horrors of the Thirty Years' War. The year 1648 brought at last the message of peace, the dawn of restoration.

"Pray and work to obtain from God the grace that the year 1948 may be for wounded Europe and for the nations torn by discord a year of rebirth and of peace. So pray and work that after the rout of the spirit of darkness, the angel of the bottomloss pit, the sun of justice may rise over the world: Jesus Christ our Lord, to whom the honor and glory in time and in eternity.

"And now let our Apostolic blessing, a pledge of divine grace and aid, go out to all our beloved sons and daughters, those of this episcopal city of ours as of the whole word. But let it extend especially to those groaning under a heavier weight of distress and pain; the sick, the poor, the unemployed; the homeless and all who are hungry and cold; for those bereft of freedom, family, country through the tragic happenings of a dreadful war, through other men's injustices, or through their own past mistakes and faults, and who feel the pang of discouragement and anguish all the more keenly at this holy season; to the prisoners of war not yet restored to their dear ones; to the refugees and the displaced; in a special way to those, particularly priests, suffering persecution, prison, exile, threats of torture and of death simply because of their fidelity to God, to Christ, to the Church, and to their duty."

Our Changing Land Policy

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. HOPE. Mr. Speaker, under unanimous consent given me to extend my remarks in the RECORD, I am including herewith an address delivered by Mr. E. H. Taylor, associate editor of the Country Gentleman, at the second annual meeting of the Soil Conservation Society of America, at Omaha, Nebr., on December 4, 1947.

This address is a most constructive and challenging criticism of the land policies followed by this Nation since its beginning. It is the ablest discussion I have seen of the importance of land conservation in the future social and economic development of our country. It should be read by every Member of Congress and all others who have a duty and responsibility in determining public policies in the field of conservation.

The address follows:

Mr. Chairman and members of the Soil Conservation Society of America, after long and troubled reflection I have concluded that your program committee contains some practical jokesters. They gave me a subject entitled "Our Changing Land Policy." It was kindly suggested that if I traced some of the significant historical changes in our land policy it might help us all to understand better why we are where we are now—and where we might be going.

I have earnestly tried to carry out this assignment. In my efforts to find that land policy, which the committee asked me to describe to you, I have read a dozen or so books dealing with the administration of this Nation's land and have delved into a number of congressional debates and enactments. And now a firm respect for truth and honesty compels me to say that I cannot live up to the promise made on your program. To trace and interpret our changing land policy just can't be done, for reasons that should become apparent to you before long.

It has been said, "If we know the past, we can better understand the present." How true that statement is I never quite realized until I began this intensive study of our land history. In greater part it is a history of what happened to a public domain, vaster and richer than ever possessed by any other nation. In its entirety this public domain embraced 1,300,000,000 acres, acquired by conquest, cession, purchase, and outright occupation. Within less than a century and a half it had all been disposed of—settled and farmed, devoted to grazing use, logged over, and mined, or set aside into national reserves.

By what manner of means was all this turn-over of land accomplished? What were the acts of farsighted statesmanship and the wise principles which shaped the distribution and treatment of this mighty store of natural resources? Here surely we should find signs of that land policy, which my subject assumes. But the historian-economist, Benjamin Wallace Hibbard, author of perhaps the best work on our land history, has only this to say:

"While there were many individuals with interesting, even excellent, ideas as to how the public domain should be administered, it cannot be said that a conscious policy worthy of the name existed. * * * It was rather a series of expedient actions."

The curtain lifts on the first of these actions involving the land soon after independence was achieved. The young Republic was in debt and it had few sources of revenue. But it owned an unsettled territory, stretching from Ohio to the Mississippi, more than 265,000,000 acres, acquired by defeat of England and by cession from the original colonies. The statesmen of the time saw in it one of the means of solving their financial problem. Both the land ordinance of 1785, in which Thomas Jefferson had a hand, and Alexander Hamilton's Report to Congress on the Public Lands held that the public domain should constitute a source of national revenue through the gradual sale of land.

For more than a third of a century this emphasis on the revenue function of the land was to prevail. But there was little agreement otherwise.

At the very start there was a sharp difference of opinion whether the land should be sold in large blocks to land-settlement companies—and speculators—or in small acreages suited to the financial ability of the settler, at auction, or to the individual buyer. The result was a compromise—one of so many that were to develop. The auction method was adopted. Land was sold in large blocks—to the Ohio Co., the Scioto Co., and others, in one of which, I am sorry to say, Congressmen were the promoters. It was also sold in settler-sized blocks.

The land history of the next quarter of a century is a long series of controversies—over the price of land, the terms of credit, and extensions of payment. Prices started off at a minimum of $1 an acre, were raised to $2 an acre, but with concessions to land companies that were sometimes as low as 16 cents an acre. Credit terms began at one-half down and the rest in 2 years. This time limit for final payments was lengthened to 3, then to 5 years. When settlers became hard-pressed Congress frequently voted extensions, depending on whether the eastern or western viewpoint prevailed.

For land was ensnarled in one of the many conflicts of interests, which have marked our history. The West, seeking new settlers and development, wanted low-land prices and easy terms. But the East feared the loss of its population and the increasing political power of the West. Its growing industrialism wanted a plentiful and cheap labor supply, which every easing of land settlement made harder to hold.

So the historian, writing of that period, merely comments: "No policy developed for making the best or most logical use of the public domain."

But one marked change took place in 1824. As a result of unprofitable experience, the credit system was abolished. Almost as an incidental afterthought Congress attached a reduction in the price of land to $1.25 an acre. It was the beginning of a trend, away from the emphasis on the public lands as a source of revenue and toward an emphasis on the human values they might serve.

Lending a powerful voice to this trend was the appearance in the Senate of one of the great figures in our land history—Thomas H. Benton, of Missouri. He was pontifical, egotistical, and no doubt often irritating to his fellow Senators. But he deserved the title

of "Statesman of the West," and he looms as one of our few statesmen of the land.

In a series of speeches in the 1820's he advocated graduated land prices and even the free settlement of land. "The freeholder," he declared, "is the natural supporter of a free government, and it should be the policy of republics to multiply their freeholders. Pass the public lands easily and cheaply into the hands of the people; sell, for a reasonable price, to those who are able to pay; and give, without price, to those who are not. I say, give without price to those who are not able to pay, and that which is so given I consider as sold for the best of prices."

Settlement and cultivation, he maintained, were the true means of increasing wealth and the national income. Revenue could be derived from the sale of land but once, he asserted, while the land, settled and under cultivation, would be a source of endless future production.

Senator Benton did not achieve any of his objectives at the time. But he planted seed that was to bear abundant fruit later on. And he invested land with a social purpose that was to carry on down to our day in the stress on the family-owned and operated type of farm.

The historian comments: "Benton did not originate a policy so much as a philosophy of the land. Great changes, it is true, were to follow along the lines of his thinking. But they were not the products of any orderly program but rather of circumstances that rendered them advantageous for other reasons."

His ideas failed at the time because land became involved in another of those struggles between conflicting interests. From Hamilton's time the Federal Government had two main sources of revenue—duties on imports and income from the sale of public lands. In the first 45 years sales of these lands totaled 87,538,347 acres, yielding a considerable outlay of money to a Government that then cost little. But by Jackson's second administration the Government could see itself soon out of debt. There was, in consequence, less need for revenue. The South was hostile to the tariff and wanted lower duties or none at all. The West wanted cheaper land prices or, better free land.

The industrial East was alarmed over both possibilities. Here the adroit Henry Clay began a series of strategems. He entered into an agreement with John C. Calhoun for the retention but gradual lowering of the tariff. And he proposed that the proceeds of the land sales be distributed among the States. The guise was to promote internal improvements, but the intent was to keep up the price of land by arousing the covetousness of the States. This proposal was brought up at one session of Congress after another until it was finally passed in the form of a deposit of the Government's surplus funds with the States. But the deposits continued less than a year, for then the panic of 1837 was on and the Federal Treasury was broke.

It was not the first—or the last—time that politics was to sacrifice the welfare of the land.

But another influence, more powerful than politics, was soon to enter upon the scene. From the outset grants of land for various public purposes had become an accepted practice. They had been awarded as military bounties and for the protection of the frontier. Section 16 in each township had been set aside to promote education. In all, through this original act, a further grant in 1841, and the Morrill Act in 1862, for the establishment of agricultural colleges, the Government gave more than 100,000,000 acres for educational purposes.

Then, as the newly settled areas began to demand outlets, grants were made for wagon roads, canals, and river improvements.

These gifts tended to shape a phase of the popular and official attitude toward the land—it was something that could be exchanged for improvements that the people wanted. This paved the way for a development that was to hasten land settlement and to shift the historical balance of interests in this country. It was the coming of the railroads and the grants of land to promote their construction.

The first of these land grants to subsidize the building of railroads was made in 1850, with the Illinois Central the recipient. Alternate sections of land for 6 miles on either side of the railroad—or their equivalent if the land was already settled—were given to the States, through which the Illinois Central was to pass. The land was to be sold and the proceeds turned over to the railroad's builders. The price of the public land intervening between these railroad-grant sections was raised to $2.50, on the theory that the benefit conferred by the railroad increased its value to that extent.

Before the period of railroad building, financed in part by land gifts, ended, the Government was to make total grants for that purpose of 129,028,558 acres and the States 37,789,169 acres. The wisdom and justice of these land grants, the means by which some of them were obtained, the subsequent use of these railroad lands all have been subjects of question and controversy. I shall not enter into their merits. But I do venture the opinion that no other factor had so revolutionizing an effect on the course of our land history.

With the advent of the railroads, the industrial East began to realize the possibilities of the western markets and to become more favorable to rapid land settlement. Easy and comparatively fast transportation opened up distribution outlets for industrial goods. In return the abundance of cheap food from the West relieved the pressure on wages. The great mineral and lumber resources of the West were made accessible, with eastern capital the chief beneficiary. The northern and western alliance began. It was to have historical repercussions.

The first of these was a more friendly attitude toward homestead—or free land—proposals. Such spokesmen as Horace Greeley and Amos Lawrence reversed their former positions and became champions of a homestead law. A Pennsylvania Congressman—Galusha Grow—became the chief advocate of homesteads. A pre-emption or "squatters' rights" act, termed by one historian "the first democratization of the public land," had been passed in 1841. Homesteading had been officially approved for the Oregon Territory. The spirit of manifest destiny was pushing the Nation to the shores of the Pacific, and giving the settlement of the intervening territory an urgent importance. From 1840 on some form of homesteading act was introduced at nearly every session of Congress.

It seemed Benton's dream was about to be fulfilled. But land again became involved in a political issue—the struggle between the slave and the Free States. Southern leaders saw that the small landholder, who would be multiplied by a homestead act, would prove a barrier to the extension of the plantation, slave-farming system. Antislavery interests were equally quick to see the same fact. So, for 15 years, homesteading was delayed by this deeping conflict between political and economic interests. A hybrid homestead act was vetoed by Buchanan in 1859 in deference to his southern supporters.

The victory of the new Republican Party in 1860 insured the passage of the Homestead Act. It was delayed by the needs of the Treasury, but only until 1862.

With the Homestead Act a period in our land history ended and another began. The public lands ceased to be regarded as a source of revenue. Their use for the subsidization of railroads was to attain still larger proportions, but it is significant that the year 1871 saw the last railway grant. The rapid settlement and cultivation of the public lands by an independent, home-owning population had become recognized as their best use.

Like all Government actions in respect to the land, it was late. Two-thirds of the land suited to homesteading had already been occupied. There were other failures of foresight in connection with it. Yet this comment by one land historian seems fair: "With all its shortcomings the Homestead Act has more to its credit than any other one act passed by the Federal Government. A million and a third homesteads were taken up and carried to completion under it." Some of us here were to grow up on homesteaded farms.

It did not constitute a policy, only the culmination of a long tendency to make land easier of settlement. Nor did it bring order into our land affairs. The Homestead Act was based on experience in the settlement of the middle country. It broke down when it attempted to cross the Plains and enter an area of different climatic conditions.

Here, as in all of the Government's land activities, one grave deficiency was to have costly effects. This was the failure to classify the public lands—the very essence of a rational land policy. Thus for the first half century all land, good and bad, sold for virtually the same price; and under the Homestead Act, all public land was considered equally adapted to entry in 160-acre tracts, regardless of the character of the land or its geography.

Under this blind and improvident system, enormously valuable mineral and timberlands were to pass into private hands for a pittance in comparison to their real values. The results were an incalculable loss to the Federal Treasury, the promotion of fraud and corruption, and the exploitation and waste of natural resources. There were other byproducts, still all too familiar. The lands west of the one-hundredth meridian became the scene of ill-fated attempts at homesteading settlement, of wars between the "nesters" and the rangemen, and of tragic failures and disappointments to thousands of homesteaders.

The wise advice of Maj. J. W. Powell who, I believe, spent his last years in Omaha, was disregarded. After a survey of the West he recommended that what is now mostly range country should be settled in large tracts, suited to pasturage. Instead Congress attempted to repair the flaws in the Homestead Act by numerous pieces of patchwork legislation: The Kinkaid Act, the Enlarged Homestead Act, the Stock-Raising Homestead Act, the Timber Culture Act, the Desert Land Act, the Carey Act and still others. But no act of Congress could enable a homstead-farmer to succeed on land that nature intended to be grazed by animals. The limitations of geography, and not the wisdom of Government, have had to work out the solution to this problem of land use.

Not until 1891, when most of the public domain had passed into private hands and much of the most valuable parts had been possessed by the railroads and the mining and lumber interests, did Congress act to protect the little remaining against exploitation. It then passed a General Revision Act of all land legislation. And not until 1907, in Theodore Roosevelt's Administration, did the first real movement for the conservation of our natural resources take shape. But it was mainly concerned with waterpower, timber, and minerals. The first official move toward conservation of our greatest natural resource—the land—was to wait another quarter of a century.

I believe the review of our land history might properly end here. All of you are familiar with the subsequent actions of the Government—the Reclamation Act, the legislation establishing the Soil Conservation Service and the Agricultural Adjustment Act. In their merits, and in their shortcomings, they are in keeping with the rest of our land record. None of them attains the rank of a land policy, although they might contain the seed of such a policy.

Somehow, after such a fashion as I have outlined, the land of this country has been settled and turned to use. Of all our mighty store of land resources, less than 100,000,000 acres remain to be reclaimed by the costly processes of drainage or irrigation. It is a sadly mixed history—this occupation of the world's greatest land empire. If we consider only the courage, the hardihood, the sacrifices, and the resolution of the pioneer settlers we can well feel a glow of pride. In all too many histories and official documents these pioneer settlers have been held up as "soil robbers" and blamed for the wastage and destruction of our natural resources. There were, among them, some who were guilty of such abuses—through ignorance, greed, or shiftlessness.

But here and now I intend to put the blame for the dissipation of our land resources exactly where it belongs—on the Government of the United States and on the men who constituted that Government from time to time. By their improvident and short-sighted actions they set the example for a wasteful attitude toward the land. By their failure to enact policies that would safeguard the disposal of the public lands they encouraged speculation, fraud, and exploitation. By making land the football of politics they set back the type of development that would have best served the interests of the Nation. The miracle is that the development of our land resources turned out as well as it has. For that fact we can thank the intelligence, the spirit, and the enterprise of a majority of the people who have settled and cultivated the land. As to the record of the Government in that respect, I shall quote the remarks of perhaps the best-qualified historian on that subject:

"Thus far there has been no genuine land policy in and for the United States. True enough, there have been temporizing plans, some of them good for a time, and for certain sections. But a plan involving and comprehending the welfare of the whole Nation, we have not had."

Now you understand why I am unable to carry out the assignment given me by the program committee. We have had no past land policy to change. We have no present land policy to which we are changing.

What we have had have been trends in the prevailing attitude toward the land. What we have now is a changing trend, one toward the maintenance of our land resources. Like the trend toward the use of the land to encourage an independent, home-owning citizenry, this also has had its seer and spokesman. He is Hugh H. Bennett. One of the few things of which I am proud is that I first met him, and helped a little, when he was still a lone voice crying in the wilderness. He it was who first really awakened the country to the irreparable loss it was suffering from soil erosion—from all the ravages of water, wind, and neglect that were deplenishing our land resources. He not only saw the need; he had the constructive ability to bring together in a practical program the practices that would insure a good stewardship of the land. If history is just, it will list Hugh H. Bennett as one of the half dozen most useful Americans of our time.

But again, as with Benton, the trend he initiated is slow of achievement. Our land history is being repeated—the needed action always late. And again, as in our past, it is the people who are ahead of the Government. The farmers themselves, and not Washington, are now the chief motive force in the trend toward conservation of our land resources. They are realizing more and more that the soil is their primary capital asset, and that its proper use and care is the first commandment of good farming. I have been impressed by the number of them who have appeared before the congressional committees and put soil conservation first, asking that benefit payments be made only for those practices that will be of permanent value in maintaining the productivity of the soil. The huge crowds that have attended the demonstrations of complete conservationizing of farms signify the wide farm interest. In a recent poll in Wallace's Farmer as to who is the most successful farmer, by far the largest vote was cast for the one who follows the best soil-conservation practices.

Sportsmen now see that wildlife conservation is inseparably linked with soil and water conservation. Wildlife must have food and cover and clean streams if it is to exist. Only the conservation of our soil and water resources will provide these essentials.

Again, as with the homestead idea, the trend is gradually gaining the support of business interests. Bankers are learning that an eroding farm means a declining security for a loan or a dwindling deposit in the bank. The implement companies and other suppliers of farm equipment are enlisting behind conservation because only productive land will afford them an enduring market. The local businessmen in the thousands of small towns, who depend upon farm trade, are beginning to understand that the soil is the sole basis of purchasing power in their areas. The meaning of conservation is also taking hold in a larger sense. I quote from an editorial in the Kansas City Star, entitled "The Land That Feeds Us":

"The soil losses in the Middle West this year concern every American housewife who has to pay the price at the butcher's counter. They concern the poorly fed Europeans who wait for American shipments. But here in the Missouri Basin the issue is far greater. The future of Kansas City, Topeka, Omaha, and all the other cities in the Missouri Valley depends on stopping the wasting away of the land that supports them. There is no alternative. * * * Soil conservation is a national must. It is an absolute essential to the whole flood-control program. It goes far beyond the reservoirs and levees to keeping the soil on the land and water on the soil. Flood control and soil conservation roll together into one vast program—keep the soil on the land, keep all the water on the land that the soil will hold, harness the water resources of the basin for the use of man. We had better wake up to the fact that soil and water are the sources of life."

All of these are valuable contributions to a changing trend in the general attitude toward the land. But they do not constitute a policy. A policy would be an enactment by Congress, establishing the conservation of the Nation's soil and water resources as a declared purpose of Government and adjusting other programs and policies to it. This we do not have, and it isn't going to be easy to get. The land has again become involved in another issue—the world struggle now going on between different social systems. For the time being the short-term needs of our foreign policy seem likely to take priority over all else—even the interests of the land. Actually a sound land policy is the strongest arm of any long-time foreign policy, as will shortly become evident. But there is another reason why such a policy is not in sight. It is the simple fact that a majority of those who presently make up our Government do not realize any better than those of the past the paramount importance of our food-producing resources to the progress, stability, and destiny of this country.

Let us, for the sake of record, make clear their full meaning to the life of the Nation. It is my considered opinion that the abundance of our food-producing resources has been the greatest single factor in the social and economic development of this country. There are conclusive reasons for that opinion and I shall state them now.

1. The bounteousness and variety of our food supply, coming from a comparatively new soil, have given us a vigorous and energetic population throughout our history. Only a people, well-nourished and strong, could have accomplished so much in so short a time. For corroboration and for its significance to our future, I shall quote a statement by Dr. George R. Minot, of the Harvard School of Medicine, who said recently, "Initiative, progress, success, and the happiness of a people tend to go hand in hand with an abundance of food and a good diet."

2. An adequate supply of food has been one of the strongest supports of our free political institutions. We are having demonstrated to us, on the present world stage, how precarious is the life of governments where the food supply is inadequate. Hunger is the greatest threat to the stability of any form of government. We have never had to face it here. There have been times when some of our people did not have enough to eat. But those occasions were due to the failure of political and social leadership, never to a shortage of food.

3. Our vast industrial development would have been impossible without an abundance of food. The processing and marketing of food is in itself our biggest single industry, drawing upon innumerable others for materials and equipment. But in another and still more significant way our food resources have facilitated the growth of our complex industrial system. With the single exceptions of the periods following the two world wars, food has not only been plentiful but cheap. This insured a labor force physically capable of doing the work. More important, it left a large margin of earnings to be spent on the products of industry. Over the long record kept by the Department of Agriculture the food basket has accounted for little more than 20 percent of the average spendable income. Nowhere else in the world has it been possible to satisfy the food needs of a people and have so much of a balance left to be used in raising the common standard of living. Suppose this margin above the food requirement slips down, as it inevitably will if the deterioration of our soil resources continues, to 70, to 60, to 50 percent—what will happen to industry?

4. The three essentials in war are: Manpower, weapons, and food. A nation without adequate food resources and with its supply lines destroyed is a defeated nation. Never, in all our wars, have we had to worry about an ample supply of food. We have been able to take full care of ourselves and to provision our allies as well. God grant that we may never suffer another war, but if we do we can be sure that a sufficient food supply will be as vital as in the past. A reserve of productivity, stored in the soil, will be as necessary as a stock pile of bombs or other weapons.

5. The products of our soil have been and are now one of the strongest forces for success in our foreign relations. All but forgotten is the fact that for three-quarters of a century they accounted for our favorable balance of trade, enabling us to pay off the capital investments foreigners made here when we were a creditor nation. We know well what they mean now. They are the most powerful arm of our foreign policy. Without them the Marshall plan or any other effort to stay the march of communism in Europe would be impotent. Our food producing resources will be no less indispensable to an effective foreign policy in the future. Upon their maintenance depends our strength at home and the ability to produce the surplus supplies needed to back up our

foreign policy. A sound land policy does not run counter to our foreign policy; it is its strongest support.

6. The maintenance of our food-producing resources is the very foundation of our national security. Our rival for world leadership is master of the greatest storehouse of natural resources left on earth. But we have ruined one-fifth of our original grant of tillable land and we are using up the remainder faster than it is being restored. All history holds for us the lesson of nations that ignored the waning of their food resources. Their epitaph is written in the Book of Isaiah: "Thy speech shall whisper out of the dust."

And yet, in the face of all of these facts so vital to the destiny of the Nation, this is what an eminent land historian has to report: "During the century and a third, over which our legislation has extended, there has been little attempt to couple land policies with the ultimate need for food."

Isn't it time that we had such a policy, one that comprehends this ultimate need for food and the basic importance of our soil resources to the economy and security of the Nation?

You and I know the answer well enough but too many other people do not. The necessary job ahead is to make the facts known, to bring home to these others the element of their own self-interest that is at stake. And, as the facts plainly show, the interests of all—city as well as country—are involved. The present condition of scarcity and high prices of certain primary foods is but a preview of what will be normal 15 or 20 years from now if the present deterioration of our soil goes on unchecked. I am not an alarmist, but I saw what the floods of last spring did to the richest of our farm lands.

There are obstacles to be overcome—the still persistent myth of land plenty; the historic tendency of Congress to adopt temporizing measures instead of the needed reality; the subordination of the land to other interests and issues; the uncalled-for fight over who shall administer the conservation program; and the "parlor conservationists," who would go to extremes as in their present war on the range cattlemen.

But these obstacles can be overcome. I have faith that they will be. The changing attitude toward the land, evident over the country, can become an irresistible movement. An increasing number of men in Washington, CLIFFORD R. HOPE, BEN JENSEN, Senator ED THYE, Secretary Clinton Anderson, to name but a few—understand the importance of our soil resources to the welfare of the Nation. Perhaps from among them will arise a new statesman of the land to write his name above even that of Benton.

Yet we might as well be honest about this job of conserving our soil and water resources. It's something of which everybody speaks highly and lets it go at that. So far as real effort is concerned, we've just been using a boy to do a man's job, or rather dividing it up among two boys. It isn't going to be done right until we're committed to it in a national land policy that allows no further evasion. Some of us have worked out this outline by which such a policy might be stated: "That it is hereby recognized that the conservation and maintenance of our basic food-producing resources are essential to the national security and to the physical and economic well-being of the American people; that the wastage of our soil and water resources, resulting from soil erosion, loss of soil fertility, flood damage, and the silting of our streams, lakes, and reservoirs, has become of critical national concern; that the enactment of a permanent national land policy, for the purpose of conserving these basic resources, is necessary to prevent their further exhaustion and the consequent endangering of the national security and the physical and economic well-being of the American people; and that this national land policy shall be established and used as a foundation for other agricultural policies and programs."

Such an enactment, stated in those terms, really commits us to do the job and should give us the tools with which to do it. All of us can see the useful results it would have. I shall cite some of them. It would command public support because it represents a manifest public interest; it would provide a practical and defensible basis for the payment of benefits in any future farm program; it would act as an effectual check upon any near-time crop surpluses while insuring our ability to produce more when it is needed to feed our growing population or to meet emergencies; it would expedite flood control and reduce the public expense caused by the silting of streams and reservoirs; it would make possible an upgrading of the American diet and give the people more of the kind of foods they have shown they want—the foods rich in minerals, vitamins and the first-class proteins (for a good land policy is a necessary preliminary to a good food policy); and it would eventually stop this insidious loss of irreplaceable national resources.

I am not a believer in conservation just for conservation's sake. I believe in it because I recognize in it a co-worker with the laws of nature, and of nature's God, as revealed to us in the processes by which the earth was made productive. And there is still another reason. We are engaged on this continent in an experiment with a form of society in which men and women may live and think and work and worship in freedom. That experiment can succeed only if the natural resources to sustain it are kept adequate. I want it to have that chance.

Review of Senator Wiley's Book Laughing With Congress in American Bar Association Journal

---

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. BREWSTER. Mr. President, I know my colleagues will be interested in a review carried in the December 1947 issue of the distinguished magazine, The American Bar Association Journal, on the subject of the book Laughing With Congress, written by the senior Senator from Wisconsin [Mr. WILEY]. The review draws attention to many of the high lights and interesting characteristics of the volume.

Taking themselves too seriously has been the chief defect of the dictators. A sense of humor assures a sense of perspective. I therefore ask unanimous consent to have inserted in the Appendix of the RECORD the review, together with the introduction to it, in order that we, at least, may not fall into the difficulty which has afflicted so many other nations.

There being no objection, the review and introduction were ordered to be printed in the RECORD, as follows:

LAUGHING WITH CONGRESS—SENATOR WILEY TELLS MANY HUMOROUS INCIDENTS

(By Walter P. Armstrong, of the Tennessee bar (Memphis))

("An anthology of American political laughs," to use Paul F. Douglass' apt phrase, has been assembled by Senator ALEXANDER WILEY, of Wisconsin, chairman of the Senate Committee on the Judiciary, member of our association since 1923, and stanch coworker for many of its objectives. The grand art of laughing is, of course, an important part of the process by which, under a free government, proposed legislation is tested by men's wits, pretense and impromptu ideas are deflated, and the cross-roads scrutiny finally points the way to national policy. We doubt if rubber-stamp legislators under a dictatorship or a planned economy ever poke fun at each other and at other branches of government as do the Members of both Houses of the American Congress. Senator WILEY has strung together an amusing batch of stories and anecdotes, and it may be that some of our readers in these tense days will relish good, clean fun. But something more emerges—a philosophy of legislative government, a sanity of the lumbering democratic process, a realization that the over-all picture is on the good side.)

No doubt it was Senator WILEY's customary courtesy toward his fellow Members that led him, in selecting a title for this little volume,[1] to emphasize the mirth-provoking sallies that originate on the Hill rather than the shafts of wit that are flung at the body of which this Wisconsin lawyer is a distinguished Member. It was a permissible choice, for the brew is 'arf an' 'arf of the sayings of those who have laughed with and of those who have laughed at Congress.

Criticism of Congress is one of the few things in which the American people have shown a continuing consistency. Representative EVERETT DIRKSEN in 1942 compiled a long list of historic criticisms of Congress, the earliest of which dates back to the beginning of the nineteenth century; three[2] of the most popular of the current Broadway plays have scenes ridiculing Members of the House or Senate. There are no lacunae in the years between.

The general idea seems to be that a Congressman will attain the proper humility only when, like Kipling's Tommy Atkins, he has "stood beside and watched himself be'avin' like a bloomin' fool." I have always thought that the thing was overdone, for Congress in the main is an intelligent, conscientious, hard-working body, fairly representative of the American people. It is because he shares this view that Senator WILEY good-naturedly quotes freely the most extreme jibes of the Congress baiters. I may add that the Senator has no need to shrink from the "hair shirts" he exhibits, for he has no penance to do; he has always been a capable and energetic Member whose work has reached its flower in his chairmanship of the Judiciary Committee of the Senate.

MEMBERS OF THE CONGRESS CONTRIBUTE MUCH HUMOR TO THEIR SESSIONS

More entertaining than the invectives—nearly always exaggerated and frequently dull—that have been hurled at Congress is the humor for which the Representatives and Senators are themselves responsible. Of this there's an excellent cross section. As the entire period of congressional history is covered, necessarily some of the stories are not new. There's the one about those mortal enemies, John Randolph, of Roanoke, and Henry Clay, meeting face to face on a sidewalk too narrow for them to pass. Randolph: "I never turn out for scoundrels." Clay (gingerly stepping out into the mud): "I always do." And the one concerning the colored barber and the new Senator. Barber: "By de way, Senator, you remind me of Dan'l

[1] Laughing With Congress, by ALEXANDER WILEY. Illustrations by Leo Manso. New York, Crown Publishers, September 1947; $3. pp. ix, 228.

[2] Finian's Rainbow, Call Me Mister, and Command Decision.

LAW LIBRARY
FEDERAL WORKS AGENCY

Webster." Senator: "Is it my brow or my speeches?" Barber: "No, boss, it's your breath."

More in the modern manner. Member: "Have you heard my last speech?" Another Member: "I hope so." Reprints from the CONGRESSIONAL RECORD "are printed without profit and read the same way." Congressman: "I don't pretend to have had the advantage of education; I am a self-made man, sir." Fellow Congressman: "I am glad to learn this; it certainly relieves the Lord of a great responsibility."

These retorts are perhaps not typical, for most Congressmen who essay humor are in their anecdotage and usually seek to make their point by a pertinent story. The anecdotes which are included are the most original and amusing I have come across in the last few months outside of Bennett Cerf's column[3] in the Saturday Review of Literature.

OASES FOUND IN THE ARID WASTES OF CONGRESSIONAL DEBATES

It is not easy to transfer oral humor to the printed page—so much depends upon unexpectedness, appropriateness, facial expressions, intonation. Senator WILEY has performed this difficult task well and has guided us to any oases in the arid waste of the CONGRESSIONAL RECORD.

Some of the humor is unconscious. Perhaps some day a Congressman who has involuntarily retired will tell us what he really thinks of those constituents who at times tried men's souls. Senator WILEY does give one or two instances where his colleagues' constituents have proved pestiferous, including the one who wrote for a copy of the Declaration of Independence "with all the recent changes"; but to the Wisconsin voters—half apologetically—he explains that "laugh-time" represents not "more than a tiny fraction of 1 percent of Congress' proceedings," and that "on no occasion was any official business sacrificed in order to complete this volume."

SHREWD AND PITHY COMMENTS ON THE WORK OF THE CONGRESS

One of the excellencies of Senator WILEY'S method is that he does not confine himself strictly to his subject. He includes Jerry Kluttz's[4] glossary of "bureaucratese, or the language of the red tapist," which is the wittiest and most penetrating challenge to bureaucracy that I have seen. From time to time Senator WILEY interjects shrewd and pithy comments on the work of Congress. Not even all the quotations from his colleagues are humorous. Senator HILL'S defense of Gen. George C. Marshall is an admirable example of modern congressional eloquence:

"I recall what General Joffre said. Someone asked him, 'Who won the battle of the Marne?' General Joffre replied, 'I don't know who won the battle, but if it had been lost, it would have been Joffre who lost the battle.' If we were to lose the war, if we were to have any unusual catastrophe, any terrible situation of any kind, I imagine that George C. Marshall, as Chief of Staff, would have to bear the prime responsibility."

We are being deluged with a spate of serious studies of Congress. Senator WILEY'S book, dealing with the lighter human side, not only provides an excellent supplement to these, but it reveals the atmosphere and gives the flavor of Capitol Hill as no one of them does.

[3] Trade Winds. Senator WILEY'S congressional stories are racy of the soil, while Mr. Cerf's smack of the supersophistication of the New York literary set.

[4] Columnist of the Federal Diary in the Washington Post.

Memorial to the Late Senator James J. Davis, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 7, 1948

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorial to the late Senator James J. Davis, of Pennsylvania, printed in the Moose Magazine, volume 33, No. 11.

There being no objection, the memorial was ordered to be printed in the RECORD, as follows:

JAMES J. DAVIS DIES; NATION, FRATERNAL WORLD MOURN DIRECTOR-GENERAL OF THE LOYAL ORDER OF MOOSE

The Honorable James J. Davis, 74, of Pittsburgh and Washington, humanitarian and statesman, died early Saturday morning, November 22, 1947, in Washington Sanitarium, Takoma Park, Md. His death was attributed to uremia.

Mr. Davis, director-general of the Loyal Order of Moose, founder of Mooseheart and Moosehaven, former United States Secretary of Labor under three Presidents, and former United States Senator from Pennsylvania, was without doubt the world's outstanding fraternalist and one of the most distinguished statesmen in American history.

His life story outshone the pattern of success made famous by Horatio Alger. James Davis was born into a family of humble means in Tredegar, Wales, October 27, 1873, and was brought to this country by his parents when he was 8 years old. While still a boy, he was doing a man's work at hard, grueling labor as he helped to support his family. By his own labors and determination, plus a natural gift of leadership augmented by idealistic vision, he lifted himself to international prominence. He became the main driving force to build the Loyal Order of Moose from a faltering membership of 246 to the dynamic humanitarian organization it is today with more than 800,000 members and a program of loving care for orphaned children and impoverished old folks. The child city of Mooseheart, Ill., and the city of contentment for the aged, Moosehaven, Fla., are world-famed. His was the vision that built them.

Although such a marvelous accomplishment would be more than enough to crown the lifetime career of the most exceptional among men, it was only half of the success story of James J. Davis. The other half of his brilliant career was in American Government where he attained the highest honors that can be held by a naturalized American citizen—membership in the Presidential cabinet and a seat in the United States Senate. It has been said many a time that if James J. Davis had been born in this country instead of Wales, he might have become President of the United States.

James J. Davis was one of six children who, with their parents, immigrated to this country from Wales in 1881. The family settled in Pittsburgh, Pa., then moved to Sharon, Pa. Davis, Sr., was by trade an ironworker, as were his father and grandfather before him. Jim followed his forebears into the mills, and at 11 began working in the iron and steel works at Sharon. In 1892, when he was 19 years old, he went to Pittsburgh to work as an iron puddler. (In later years, he wrote the biography of his life under the title of "The Iron Puddler." The laboring men of America and the political and fraternal leaders of this country knew Davis affectionately as "Puddler Jim.")

In 1893, Jim Davis moved to Elwood, Ind., to work in the steel and tin-plate mills. By this time, despite his youth, he had acquired considerable knowledge of the relationship between industry and labor, a knowledge that was going to serve him well as he surged upward to governmental heights in later years. He was popular with his fellow workers and his leadership talents were becoming apparent.

He was elected president of the Amalgamated Association of Iron, Steel and Tin Workers and held the office for many years, greatly furthering the interest of employees. Mr. Davis became city clerk of Elwood in 1898 and 4 years later was elected recorder of Madison County. He had prepared himself for such advancement by a business course and the study of law and accountancy.

Jim Davis joined the Loyal Order of Moose at Crawfordsville, Ind., on October 27, 1906—his thirty-third birthday. He was the two hundred and forty-seventh member of the fraternity which had been organized in 1888 for social purposes and was virtually dormant.

Jim Davis had found his vehicle for humanitarian service.

From that moment forward, the Loyal Order of Moose became almost the pulsebeat of Mr. Davis' life. His qualities of leadership and magnetic personality had come to full flower. With his driving energy and enthusiasm pushing him to the forefront, he quickly became director-general of the Moose, a position that he held until his death more than 41 years later.

Among his gifts was the knack of organization and the ability to rally to his cause conscientious men of high ideals. He had the vision that the handful of members would some day be a multitude and the determination and courage to plot a course and hold steadfast to his goal. He traveled from border to border and coast to coast, painting with thrilling words his dream of a better world, founded on brotherhood, and with service to the helpless. He preached the principle of men banding together, "one for all and all for one," sharing their substance that orphaned children might have a home and an education; and that the aged might pass their last days in happiness and security.

He was inspiring in his vision and good men by thousands rallied to his call. He had only a beautiful dream to offer but he radiated assurance that the dream eventually would be a reality. Lodges sprang up all over the country. The strength of the Moose grew.

In 1913, the first part of Jim Davis' dream came true. On the rolling prairie of Illinois, 35 miles west of Chicago, Mooseheart, Ill., the child city, was founded to provide care and education for children of deceased members of the fraternity. Jim Davis and the men who had rallied to the Moose banner were putting into practice their belief that every child is entitled to at least a high-school education and a trade. Mooseheart was the fruit of Mr. Davis' sage observation that "no man stands so straight and tall as when he stoops to lift up a child."

Mooseheart that day in 1913 was not the beautiful community of 150 charming buildings set deep amid green lawns that one sees today. Mooseheart was a circuit tent pitched in a field. Thomas R. Marshall, Vice President of the United States, dedicated the community with the words: "Thank God that here, on this most sacred day, humanity has again proved its right to be called the children of the Most High, has reached out its hand in love and loyalty to the needy brother

and has disclosed not only the right but the duty of this great order to exist."

Nine years later, when Mooseheart had flowered forth from the prairie into a beautiful and ever-growing community, the Loyal Order of Moose founded its home for the aged, the city of contentment, Moosehaven, in sun-kissed Florida, on the banks of the sparkling St. Johns River, at Orange Park, 14 miles south of Jacksonville. Both Mooseheart and Moosehaven—the dreams of Jim Davis and his pioneer Moose—stand today as models for the world.

Mr. Davis' work with the Moose made him friends and boosters in every section of the country and raised him to national prominence. A laboring man himself, he was trying to bring security through the Moose to all workingmen, providing a means for protection of themselves and their families. In 1921, Mr. Davis was appointed United States Secretary of Labor by President Harding and retained that office in the Cabinets of Presidents Coolidge and Hoover. He resigned from the Cabinet in 1930 when he was elected United States Senator from Pennsylvania for an unexpired term of 2 years. His popularity was attested by the margin of his victory, almost a million-vote plurality. In 1932, he was elected for the full-term of 6 years by a majority that was far ahead of the rest of the Republican ticket, another testimonial to his popularity. He was reelected for the third time in 1938.

In addition to his leadership of the Moose, which included chairmanship of the Mooseheart Board of Governors and the position of pilgrim governor, head of the highest honorary degree of the order, Senator Davis held membership in other fraternities, including the Masons and Odd Fellows. He was a member of the Pittsburgh Athletic Club, the Chevy Chase Club, the American Republic, the Press Club, and the Congressional Club of Washington. He had received honorary degrees from Bucknell and Drake Universities, St. Bonaventure College, the University of Pittsburgh, and Pennsylvania Military College, of Chester, Pa.

He is survived by five children—all of whose names begin with "J" like his own—James, Jr., Jane, Jean, Joan, and Jewel. Mrs. James J. Davis, Sr., died some years ago.

Senator Davis held top rank as a statesman, but time probably will record his most enduring monuments as Mooseheart and Moosehaven.

The Grain Situation and the Distilling Industry

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 7, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following summary on the grain situation and the distilling industry. Upon this subject much has been written and said and undoubtedly much more will follow. The summary has been prepared on behalf of the Distilled Spirits Institute, Inc., and the Licensed Beverage Industries, Inc. A full discusion of any subject should present both or all sides of the question. Especially for this reason, as well as in the interests of the dispassionate, unemotional consideration of a pressing problem of today, I am pleased to insert the summary.

THE GRAIN SITUATION AND THE DISTILLING INDUSTRY

A SUMMARY

Beverage distilling industry's use of all grain is comparatively small in terms of total available supplies.

Since repeal in 1933 the beverage distilling industry has used on the average less than 1 bushel out of every 100 bushels of total available supply [1] of types of grain used for distilling in this country.

The averages used throughout this summary are for 13 years, rather than 14, as it must be noted that no beverage spirits production took place during 1944.

The statistics are all fiscal-year figures.

Average annual amount of all grain used in production of distilled spirits since 1933

[56-pound bushels]

Average amount used by beverage distilling industry ---------- bushels--	35, 828, 000
Average annual total available United States supply [1] ---------- bushels--	4, 613, 867, 000
Beverage distilling use of total supply ---------- percent--	0. 78

[1] Includes current crops, carry-over, and imports of types of grain used for distilling.

Total grains used in the production of distilled spirits (including miscellaneous grains)

[56-pound bushels]

Fiscal year ended June 30—	Used by beverage-distilling industry	Total United States supply [1]	Beverage-distilling use of total supply
	Bushels	*Bushels*	*Percent*
1934	14, 482, 051	[2]	
1935	33, 006, 619	2, 881, 361, 000	1. 15
1936	48, 156, 776	3, 592, 618, 000	1. 34
1937	50, 702, 560	2, 904, 235, 000	1. 75
1938	25, 659, 121	4, 005, 408, 000	.64
1939	23, 698, 452	4, 377, 770, 000	.54
1940	25, 072, 315	4, 577, 274, 000	.55
1941	30, 599, 082	4, 698, 210, 000	.65
1942 [3]	46, 807, 221	5, 296, 640, 000	.88
1943 [3]	18, 772, 505	5, 993, 152, 000	.31
1944	[4]	[4]	[4]
1945 [3]	19, 414, 445	5, 518, 043, 000	.35
1946	54, 937, 596	6, 291, 527, 000	.87
1947	53, 108, 069	5, 230, 163, 000	1. 02

[1] Includes carry-over from the previous crop year, production and imports during the current crop year.

[2] Not available.

[3] From Oct. 8, 1942, through June 1945, American beverage distillers produced war alcohol for the Government almost exclusively. Grain use data of the U. S. Government is not segregated as to use for war alcohol or beverage spirits; accordingly, grain "used by the beverage distilling industry" from the fiscal year 1943 have been estimated by the research and statistical bureau of Licensed Beverage Industries, Inc., in an attempt to approximate beverage distilling industry uses.

[4] War period—no beverage-spirits production.

Source: Prepared by Licensed Beverage Industries, Inc., from data of the Alcohol Tax Unit, Bureau of Internal Revenue, Treasury Department, and the Bureau of Agricultural Economics, Department of Agriculture.

Normally the beverage distilling industry's use of wheat is very small in terms of the total available wheat supply.[1]

Since repeal in 1933, eliminating war years and their aftermath (1942–46), the beverage distilling industry has used about 1 bushel of wheat out of every 25,000 bushels of the available supply of wheat.

[1] Includes current crops, carry-over, and imports.

Average annual amount of wheat used in the production of distilled spirits since 1933 excluding the war years, 1942–46 [1]

Average amount used by beverage distilling industry ---------- bushels--	49, 179
Average annual total available United States supply [2] ---------- bushels--	1, 039, 655, 000
Beverage distilling use of total supply ---------- percent--	0. 005

[1] From time to time during the war years, distillers were required by the Government to use wheat because of the bumper crops of that grain and the shortages of corn then existing.

[2] Includes current crops, carry-over, and imports.

Wheat used in the production of distilled spirits

[56-pound bushels]

Fiscal year ended June 30—	Used by beverage-distilling industry	Total United States supply [1]	Beverage-distilling use of total supply

The principal grains used by the distilling industry are corn, rye, and malted barley. Since repeal, the industry has used on the average of less than 1 bushel out of every 100 bushels of the available corn supply; [1] its use of malted barley has averaged less than 2 bushels of every 100 bushels of the available supply; [1] while use of rye has averaged less than 12 bushels out of every 100 bushels of the available supply.[1]

In examining the figures that follow, the similarity between the years 1936–37 and 1946–47 should be noted. In 1936–37 the industry was building up whisky inventories after prohibition. Now it is building up toward normalcy after war stoppage of production.

Average annual amount of corn, rye, and malted barley used in the production of distilled spirits since 1933

[56-pound bushels]

	Average amount used by beverage-distilling industry	Average annual total available United States supply [1]	Beverage distilling use of total supply
	Bushels	*Bushels*	*Percent*
Corn	20, 664, 000	2, 913, 443, 000	0. 71
Rye	6, 815, 000	57, 706, 000	11. 81
Malted barley	4, 533, 000	282, 359, 000	1. 61

[1] Includes carry-over from the previous crop year, production and imports during the current crop year.

[1] Includes current crops, carry-over, and imports.

It was noted on the previous page that the beverage distilling industry in the years since repeal has used an average of 11.81 percent of the total available United States supply [1] of rye. Some explanation of this percentage figure is in order.

Rye has always been a relatively insignificant crop in terms of total available grain supplies or for use as a food. By and large, rye is a "marginal" crop—that is, it is grown as a "filler-in" crop in between the harvesting and planting of other major crops.

The alcoholic beverage industries have always been one of the principal users of rye grain and, in fact, a large part of the rye crop sown each year in certain parts of the country is specifically grown for use by the alcoholic beverage industries.

Aside from alcoholic beverage industries' use, domestic use of rye is limited; a small part of each year's total crop is ground to rye flour, and the balance is used on the farm. The largest rye supply total on record since repeal—88,000,000 bushels in 1943—was only one-fortieth the size of that year's corn supplies and one-nineteenth the size of that year's wheat supplies.

Rye used in the production of distilled spirits

[56-pound bushels]

(Farmers regard rye as a marginal crop. Its domestic uses are limited and it is exported only on rare occasions and then in extremely small quantities)

During the distillation process, starch only is removed from the grain, whereas yeast is added. All the proteins and all the vitamins remain plus the extra vitamin and nutritive value of the yeast used in fermentation. Thus, processing grain by beverage distillers leaves 100 percent of the feeding value for beef, dairy cattle, swine and poultry, if these distillery residues are used properly to supplement grain feeding on the farms of the Nation. Practically every distiller in the country utilizes his grain mash for animal feed purposes either as dried grains and dried solubles or as spent grain mash in liquid form.

The full value of distillery-processed feed can be more clearly understood by this example: Any farmer can take 20 percent of his grain to a distillery, have it distilled, take back the residue and feed it to his livestock with the remaining 80 percent of his grain and not lose, in the entire procedure, one single ounce of feed value.

The Assistant Secretary of Agriculture, Charles F. Brannan, declared in a radio address on November 11, 1946, "These special protein elements help make prime beef prime; help make hens lay more eggs; help broiler chickens to develop more rapidly, and improve the litters of sows."

Continuous research into the further development of distillers' feed recovery is being spearheaded by the Distillers Feed Research Council which has its headquarters at 1232 Enquirer Building, Cincinnati 2, Ohio.

One bushel of corn equals $49.65 in excise taxes

It has been explained that the beverage-distilling industry's use of grain is comparatively small; it has been explained that 100 percent of the feeding value of the grain used by distillers is retained and may be returned to the farm in the form of high-protein livestock and poultry feeds. But it should be emphasized that a single bushel of corn processed by the distillers brings into the United States and State Treasuries a total of $49.65 in excise taxes alone. This is an amount 20 times the market value of the original grain. Here is how this figures out:

From a 56-pound bushel of corn costing approximately $2.50 at current prices beverage distillers can produce 4¾ gallons of 100-proof whisky. At the wartime excise-tax rate of $9 per gallon, which is currently still in effect, the Federal Government collects $42.75 in excise taxes alone from these 4¾ gallons. The average State government, moreover, collects approximately $6.90 additional in excise taxes alone (at the average rate of $1.45 per gallon) on the whisky produced from that same bushel of corn. These two figures added together total $49.65 in excise taxes alone—they give no consideration to the other revenues received directly and indirectly by Federal, State, and local governments through other taxes—licenses and permit fees, etc.—levied on distilled spirits.

In the 1946 calendar year, Federal, State, and local governments received a total of approximately $2,448,000,000 from taxes, fees, etc., levied on whisky and other distilled spirits, making this commodity the largest single tax producer of all products manufactured by American industry.

Thus, the small amount of grain which the beverage-distilling industry uses each year in the production of beverage spirits yields billions of dollars in revenue for Federal, State, and local governments.

The facts on whisky supplies

Because of the stoppage of whisky production during the war years when distillers used their facilities to make war alcohol, an unbalanced whisky inventory situation resulted, and the industry has been striving to get back to a more normal position.

Because of this, there is today and there will be for several years to come a shortage of aged and bonded whiskies.

Of the whisky currently sold approximately 90 percent is what is known as blended whisky. This is a combination of neutral spirits and aged whisky, the relationship between the two being variable, depending on the brand in question.

There is on hand at the present time (as of August 31, 1947) sufficient neutral spirits to produce approximately an 8 months' supply of blended whisky.

De facto prohibition

If it can in any way contribute to saving grain for the hungry peoples of the world, the liquor industry wants to do so. The liquor industry, as we know it today, was brought into existence by an affirmative vote of the American people in 1933. Its leaders are doing everything within their power to see that the industry discharges its social responsibilities to the American people. The distilling industry wants nothing except the right to continue to function in its proper place in a free-enterprise system of business.

However, there are some aspects that must inevitably be considered in this connection.

Because of the curtailment of production during the war and the consequent unbalanced whisky inventory situation, any total prohibition of production, coupled with the high wartime tax rates, is an incentive to illicit distilling and moonshining. This has already started on a large scale in the Eastern States and has been further encouraged by the recent release of sugar from rationing. Illicit distilling will inevitably lead to the antisocial evils of the prohibition era—mobsters, gangsters, gang wars, and crime waves. Any total shut-down of the production facilities of this industry has other consequences; it means loss of employment in the production departments of distilleries which will be closed down, as well as other disruptions.

The answer to all of these problems is not complete prohibition of production of distilled spirits. This industry wants to do everything within its power to effect a real saving of grain. It is ready, willing, and anxious to contribute its experience toward achieving this end and asks nothing more than to be allowed to participate in the planning to accomplish this in a sane and realistic manner that will be productive of the most good and the least evil.

Isn't It Obvious That Stalin Is Supporting the Marshall Plan?

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I enclose the following excerpt from a letter:

DEAR MR. BUFFETT: Congressmen who are hysterical on communism in Europe and Asia have been made so by the Communists. Can none of them be shown that every Comintern move, from the Kremlin to the fellow travelers' stooges in our press and radio, is designed to support the Marshall plan?

Can't they see that every Soviet move is timed? And for a motive?

Why does Molotov rage? And Pravda attack the United States of America?

Why was the Comintern formed—and publicized—when it was?

Why does it pull off abortive uprisings in France and Italy just at the moment when Congress in special session is debating stopgap aid?

Are any of these moves calculated to lull Congress and Americans to sleep? Or are they calculated to make Congressmen hysterical on communism?

As originally proposed, the Soviet Union and all its "liberated" eastern European countries could have come into the Marshall plan. If they had, this country would have gone on handing them money and goods. So why didn't they? Is it assumed that, suddenly proud and self-respecting, the Kremlin wants no more American hand-outs?

The reason they didn't come into the Marshall plan is that, if they had, anti-Communist sentiment in this country would have opposed the Marshall plan, perhaps strongly enough to have stopped it.

The reason that the Kremlin officially has been screaming, raging, foaming at the mouth against the Marshall plan, the reason for the Molotov and Pravda attacks, the reason for the Comintern and for the Communist outbreaks in Europe, is that every one of them weakens the opposition to the Marshall plan in this country. In heaven's name, isn't it obvious that Stalin is supporting the Marshall plan?

The Kremlin is like a sleight-of-hand magician. Any fool knows enough not to watch whatever it directs attention to. The way to see the trick is to look in the other direction, at the other hand. But Congressmen gawk like school children and believe what the trickster intend. them to believe. Can't you teach them how to play "odd or even"? Don't they ever play poker?

Western Europe is going to collapse; in fact, it has collapsed already. The Republican Party is not going to escape being made the goat for pouring this country into the sewer. Americans, in general, drive cars; when they see a wreck piled up on the highway, they know enough to try, at least, not to pile their own cars into it. They know enough not to support the Marshall plan.

Suppose your party leaders say "Yes" (as they are doing) to the hand-out, and the Communist collapse comes in the areas to which the hand-out is going. Do they think that then they won't be made the goat?

Can't they get it into their heads that no bank robber ever decided not to rob a bank because there was too much money in it? The Comintern is an organized band of gangsters; it will take any country that it can, when it can, if taking that country fits Kremlin world strategy. It makes no difference whatever whether the people are eating or not eating in that country at that time; the people have nothing to do with the matter.

The Marshall plan is a fairly important move in Comintern world strategy, because it weakens this country (the only one left on earth with strength enough to resist the Comintern at present); it increases inflation and economic chaos here, and that is all to the good as preparation for resumption of world war, because in modern warfare the strong economy wins.

Meanwhile, the military advance is through the Balkans to the Dardanelles, and the United States of America helps that along by demanding the partition of Palestine and turning that whole area anti-American.

You will see, too, that the tactic that works so well in re the Truman-Marshall plan will be used in regard to compulsory military training here; that is, the open Communists will openly rage and roar against it, while all the concealed Communists (the liberals, New Dealers, fellow-traveler writers, commentators) will support it, chanting, "America must be strong." Because universal military training weakens the country that adopts it, and especially weakens the economy, which is this country's strength. You will see, too, that at precisely the right moment, when universal military training is before Congress, the Kremlin will make some threatening gestures, to scare our scared Republican leaders still more—if possible.

Sincerely yours.

Mr. Speaker, here is a chronological record of acts of the present administration favoring communism in the past 5 years:

First. Unconditional surrender.

Second. The Tehran Conference.

Third. The Morgenthau vengeance plan.

Fourth. The Yalta Conference.

Fifth. The Potsdam Conference.

Consider this list. The effects of the first two plans and the actions taken at the three conferences showed each episode to be a sucker play for Communist gains.

After this unbroken series, Is it not only possible, but highly probable, that the Marshall plan will turn out to be another sucker play for Stalin, a prospect my correspondent points out so convincingly?

Mr. Speaker, many Members concede that the Marshall plan is a gamble. Would not they serve America best now by refusing to gamble any longer on the plans of an executive branch with an unanimous record of failure in Russian relations?

Where's Your Meat?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, no Member of this House would deny that the meat shortage in the fall of 1946 played an overwhelming part in the Republican victory at the polls. Once again we find the question of meat uppermost in the minds of the people in this country. This issue could well determine the outcome of the general election next November.

This morning a prominent radio commentator, George E. Reedy, of Station WOL, called attention to this issue. Under leave to extend my remarks, I am including his statement in full:

A compelling issue is likely to take the spotlight at this session of Congress and displace the Marshall plan in public interest. It is the frightening specter of a meat shortage, which experts believe will hit us in early spring.

Neither political party will be happy to see such a thing bob up in an election year. No one can gain from it, and nobody can be sure of just who will be hurt. But everyone remembers the violent public reaction the last time it happened.

The meat shortage in the fall of 1946 unquestionably played a large part in the overwhelming Republican victory. The public laid the blame at the door of the Democrats and voted accordingly. When the smoke cleared away Congress was in new hands.

The coming shortage is something that cannot very well be prevented by either political party. It is due to a number of factors that are out of control. They all add up to very little meat to put on the table at any price.

The question that will have to be faced is just what can be done about it? The answer would be worth a fortune to any up and coming politician. So far, however, no one has offered to produce even the suggestion of a politically wise answer.

Undoubtedly there will be strong proposals to reimpose rationing and price controls. But it is unlikely that the American public will stand for it. Every indication is that the voters still have unhappy memories of the OPA.

The last shortage was ended when controls were lifted. Today, of course, there are none to lift. Even if there were it could not do much good. The coming situation will be a real shortage of meat and not just a reluctance to sell at low prices.

The President has already asked for standby authority to impose rationing in the event of a shortage in critical goods. Even his own party members in Congress, however, refuse to back him in this move.

They rightly consider it political suicide. No politician is going to commit political suicide. That is something that happens

only once in a matter of decades. As a rule, an officeholder prefers to go right on holding his office.

Nevertheless, something will have to be done. The leaders of both parties are well aware of the dangers inherent in the situation. The estimates of the coming meat shortage have been too well substantiated to be doubted.

The Democrats, acting through the administration, are debating a program of voluntary rationing. They hope to conserve enough meat now to tide the country through the critical days ahead when the shortage really hits.

Should such a program be successful the leaders of both political parties would be greatly relieved. They would far rather see the issue out of the picture altogether than spend the next few months trying to pin the blame on their opponents.

The failure of a voluntary rationing program would put the next move up to the Republicans. As they are in control of Congress they are the ones who have to do the legislating. Theirs is not an enviable position.

The American people have always considered meat a basic part of their diet. They have reacted violently to any proposal and any situation in which it is cut down. It may well be that meat—and not the high cost of living—is the real key to the 1948 elections.

Col. Julius Klein

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a well-written article with respect to Col. Julius Klein, national commander of the Jewish War Veterans of the United States of America. I have known Colonel Klein for almost 20 years and have a tremendous admiration for his ability. He is a veteran of both World Wars and won distinction in each, as well as the admiration and friendship of Gen. Douglas MacArthur for his bravery. He has now assumed a post in which he will be in position to carry on the great work which he has done for our country, and I am pleased to join Mr. Herczog in his remarks, and also Senator BREWSTER in the comments which he previously made concerning Colonel Klein on June 5, 1947, at which time there was printed in the RECORD a report of Colonel Klein with respect to occupation troops in Germany.

[Translation of an article published in the November issue of AZ Ember]

COL. JULIUS KLEIN

(By Geza Herczog [1])

We have a dear friend who lives in Chicago, but is nevertheless nearer to us than if his residence were here on Fifth Avenue. He is a born American—a native product in every sense—but he understands not only the language but the slightest sigh of every American of foreign extraction. He was as well known at the Imperial Hotel in Vienna as at the Romanischer Cafe in Berlin; he was present at the Paris Peace Conference, as he was on the boundless battlefields of the South Pacific. He worked in the palm-bordered university city of Hollywood at their studios as he did in the sooty city. A man out of the ordinary, whose talent is great, but whose goodness and kindness are greater still. His brain is superb, but his most important physical organ is his heart, and because within it there is a special treasure chamber for everything that is Hungarian we, in return, love him and respect him.

This extraordinary man is Col. Julius Klein, 46-year-old Chicago newspaperman.

He is a bred-in-the-bone newspaperman, excitingly typical of Chicago; the characters in Ben Hecht's and Charles MacArthur's Front Page might have been modeled from him. Since everything he does is filled with the electricity of complete conviction and the atomic energy generated by his heart, he has attained high distinction in newspaper work, as well as in other fields. At one time he was one of the most famous foreign correspondents of those in the Chicago contingent. Because it is not his passport that makes him American, but his flaming belief in freedom and human dignity in this, the last stronghold of these things, General Pershing gave Colonel Klein his confidence, as did Franklin Delano Roosevelt; Herbert Hoover respects him, as does Dwight Green, Governor of Illinois. There is no notability in American public life who has not asked his advice at one time or another, or who would not gladly open the door of his house if Colonel Klein were knocking on it.

He fought through the First World War, an adolescent lad, a soldier in the United States Army. He had reached the rank of captain shortly after the war to save democracy ended. He was proud of his rank in peacetime, too, and during the truce between the two wars, however anachronistic it may have appeared to be, and sometimes contradictory to his surrounding—in a Hollywood studio or a Chicago editorial office or a Hungarian restaurant in New York, or in the Bismarck Hotel in Chicago—he was always "Captain Klein," always on a war footing, always mobilized, always ready for the call to the colors. He did not await the outbreak of the Second World War. He was the first to enlist, back in 1940, a year before America's entry into the war, for he foresaw what was coming more clearly than the then Members of Congress, a majority of whom passed the Selective Service Act. In the Second World War he became a colonel, not an office colonel, but a combatant, and that of the best. He shared with his fellow soldiers from Chicago every danger of jungle warfare. He became an office colonel on the day the war ended; after VJ-day, Robert P. Patterson, Secretary of War, asked him to become one of his special assistants.

Who is this outstanding man, this soldier here, this brilliant journalist—first in everything he attempts?

A Jew. An American of the Jewish faith, to state it with precision.

He is not a Jew because he was born one, and therefore accepts, with head held high, the particular hardships of that destiny. He is not a Jew in the sense that he keeps his hat on in the house of worship, or does not smoke on the Sabbath. He is a Jew not merely by birth and fate, but a Jew by conviction. He believes that the Jewish philosophy was the cradle for the teachings of Christianity, the origin of the New Testament and the Koran, and that the Ten Commandments are the only constitution by which life can be governed. He is a proud—more, a haughty—Jew, an active, indefatigably fighting Jew, one who, in a single lifetime, has performed tasks sufficient for a hundred people, tasks of fighting for the rights of Jews, not only here, but all over the world. Julius Klein is the national commander of the Jewish War Veterans of the United States. Those who wish to find out what a powerful organization that is should read I. Kaufman's book, American Jews in World War II. There they will learn that 550,000 American Jews served on every front in the world.

A touching coincidence: The writer of these lines interrupted his work on Sunday morning to attend ceremonies at the Riverside Memorial Chapel in memory of Lt. Murray J. Ritter, heroic son of Lajos Ritter. Beside the flag-draped coffin, the Jewish veterans stood with their arms—Julius Klein's soldiers saluting a beloved comrade. One of the 550,000.

The Jewish War Veterans' National Convention, held in St. Paul, immediately following the first ballot in which Colonel Klein led Jackson J. Holtz, a Boston lawyer, by 2,500 votes, unanimously elected Colonel Klein their national commander. Of the 800,000 Jewish soldiers who took part in the two world wars, the organization now has an active membership of 104,000, in 612 branches.

After his election, Colonel and National Commander Julius Klein gave a brief address. "A hundred percent Americanism" without wavering in the direction of any other "ism" whatsoever was his topic. He expressed the wish to work in perfect harmony with all other veterans' organizations—this spokesman for the Jewish veterans of both world wars.

A scene to which readers of AZ Ember were witness in the Yorkville Casino was an unforgettable one. It was in 1942, at the beginning of the war, at the loyalty celebration conducted by AZ Ember. Julius Klein, then a lieutenant colonel on his way to the front, heard that his friend, AZ Ember, was organizing a celebration to express the loyalty of Hungarian-America in America's war. Julius Klein stepped onto the stage, sought out Ferenc Gondor's box, and saluted toward it—saluted precisely, in a soldierly way, in a manner prescribed for the forces of the United States.

AZ Ember now returns the salute to the national commander of the Jewish War Veterans of the United States.

[1] Geza Herczog is one of America's most outstanding playwrights and is the author of such famous plays as The Life of Emile Zola, The Wonder Bar, etc.

What Should We Do in China Now?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a radio address given on the Town Meeting of the Air January 6, 1948:

WHAT SHOULD WE DO IN CHINA NOW?

(By Hon. WALTER H. JUDD, Town Meeting of the Air, January 6, 1948)

The preceding speaker, Mr. Lauterbach, has followed the usual technique of calling the Chinese so many names that some are apt to be diverted from the really important consideration, namely, what events in China mean from the standpoint of our own compelling stakes there. I believe those stakes require that we give open and effective assistance to the government and people of China in their efforts to keep from being subjugated by the well-organized and armed Communist rebellion. Without vigorous American aid the Chinese Government will almost certainly collapse, just as will the Governments of Greece, France, Italy, and

several other countries without American aid. Such a collapse in China would have the gravest consequences—for Asia—for Europe—and for the United States.

1. It would bring the vast resources and manpower of China under the control of a ruthlessly efficient Communist government, subservient to the Soviet Union.

2. Asia could then be taken under the Soviet wing almost at will. If Chiang Kai-shek's 20-year struggle against Communist imperialism in Asia is lost, who else or what else in the Far East can possibly stop its spread?

3. We would be forced for years ahead to send American dollars to subsidize Japan and Korea, and America soldiers to defend them, or else walk out on our promises to those peoples and abandon the whole western Pacific.

4. Let no one be so naive as to imagine the Philippines can ever become self-sufficient or long remain free, if the continent of Asia comes under Communist—which means Russian—control. It is 50 years of splendid investment of American lives, effort, and money in the Philippines that will go down the sewer if we are so short-sighted as to pay attention to purple adjectives instead of to the interests of the United States.

5. With China and other parts of Asia behind the iron curtain, England, France, and Holland would be unable to rebuild their trade with the Orient. Without it how can they recover so they can get along without American subsidies in endless billions of dollars.

6. Most important of all, if Chinese resistance should be broken, Russia would have satellites and security all along her Asiatic frontiers. She would then be able aggressively to concentrate all her attention and efforts on Europe in her announced purpose of defeating recovery there. How much chance of success would the Marshall plan have then? Or, put it this way—How many additional billions in American dollars and resources would then be necessary to keep Western Europe free?

One cannot imagine the hard-headed men in the Kremlin being as stupid as Hitler and getting themselves into a two-front war. In my opinion our best chance of preventing World War III is to make sure, if we can, that Russia does not get control over the Chinese, thereby eliminating her Asiatic front and becoming free to concentrate all her efforts and strength on her other front—Europe.

But is not the Chinese Government so undemocratic it does not deserve our support? So inefficient and so corrupt that any aid given will inevitably be wasted? The answers are, no, not if the aid is well handled. Eight years of war, invasion, and occupation have inevitably weakened the Chinese Government seriously. It has suffered even worse from the Communist threefold strategy—in full operation since early 1944. First, to destroy the Chinese Government at home by wrecking the nation's economy and communications and bringing its people to despair. Second, to discredit the Chinese Government abroad by magnifying its weaknesses, and ignoring its very great strengths. And third, by portraying the Communists as merely patriotic Chinese peasants not connected with Russia.

It is instructive to note that Moscow's organ in the United States, the Communist Daily Worker, recently scoffed at what it called those good-hearted but misguided people who believe that the way to defend the Yenan government is to pretend that Chinese Communists are really Jeffersonian Democrats. The Daily Worker thinks Communist victory in China is now so near that it no longer needs to maintain the hokum about agrarian reformers. It has served its purpose—the pretense bought time and produced confusion. Now the mask can be taken off.

The Chinese Government despite its weakened condition as a result of 8 years of war and occupation and the opposition of the Communists demonstrated its determination to move toward more democracy by calling right after VJ-day a national assembly to work out a constitution. The Communists refused to participate but the assembly went ahead and produced a year ago a constitution which was inaugurated on Christmas day. Of it General Marshall stated, "in all respects it is in accordance with the principles laid down by the all-party political assembly last January (1946). It is unfortunate that the Communists did not see fit to participate in the assembly since the constitution that has been adopted seems to include every major point that they wanted." General Marshall at that time apparently still thought that what Communists say in their propaganda is what they really want. He has had some expensive lessons since then, both from Chinese Communists, and from Messrs. Molotov and Vishinsky.

There are bad elements in the Chinese Government. Recent history indicates all is not well in our own. But no realistic person can expect the Generalissimo to throw out the support he has until he is sure of receiving other support in its place—any more than American Presidents repudiate the support of machines here which are as corrupt as any in China.

Right after Pearl Harbor, Congress, without a negative vote, appropriated $500,000,000 to help China under the same government it has now, the same one it is said we must not now support. Why did we help it then? Because it was a good government, democratic, efficient, without corruption? No. Because we saw it was imperative for our own security that China be kept independent and on our side, holding the line until we could rebuild our sunk navy, capture the islands one by one, and ultimately—3 years later—bring our superior power against Japan.

Well, is it less important, less vital to our security now? Indeed not.

The crux of the matter is this: If China is free, she can and will move rapidly toward greater democracy and better government, as was proved during the period of peace from 1932–37. If China is taken over by the Communists, there will be no more opportunity for her to move in those directions than there is today in Poland or Yugoslavia. The more we want improvement in the admittedly bad conditions in China, the more we must support the government which is trying to keep China free—and on our side.

We recognize that France and Italy cannot recover until we help them. But we won't help China until she recovers. It is precisely like saying to a desperately ill patient, "You get well first, and then we'll give you the penicillin."

No aid will be given to China, or to any other country for that matter, on a blank-check basis. Aid will be given only on the basis of carefully drawn agreements. They will specify a joint or cooperative administration, including the use of Americans to observe, advise, and report. Congress has by law directed our President to stop at once all aid to any country if that country is not using the aid properly and in accordance with the joint agreements.

On such a basis it is possible to carry out a program of assistance to China with no greater corruption and waste than in other countries. It has been done repeatedly in the various famines and floods in China during the last few decades.

If we try either to order the Chinese around or condescendingly and patronizingly look down upon them, then we should not start a recovery program there or anywhere else because it will fail. But if Americans are willing to work with the Chinese, they will find them as reasonable and cooperative as any people on earth.

The Communists cannot be checked without American moral, military and economic assistance for the Chinese Government. But that government cannot adequately improve living conditions for the people so as to regain their full confidence and support unless some basic reforms are carried out even while the war is in progress. The Generalissimo realized this fully when I talked to him about it in 1944, and he is fully aware of it now—as I know from a long conversation with him only 2 months ago. But how can anyone actually expect him to make drastic changes just on the hope of support from us—especially when we have let him down tragically several times in the past.

The less we help the Chinese Government, the worse it gets; and the worse it gets, the less we help. That vicious circle must be broken, or the results for ourselves will be disastrous. Only we can break it—by forthright assistance now.

The obstacles to success in China, except for the lateness of the hour due to our own indecision, are no greater than in Europe and in some respects, less. It is sounder and involves less risk to the United States to build on the existing government in China than to have it collapse and come under the Communists—which means under the Kremlin. Our choice is not between the present government in China and something better. I wish it were. It is between the present government in China and the Communists—which is infinitely worse.

If China is not to be free, then it would have been far better for her to be under Japan rather than under Russia. Not to aid her now may well mean that all the sacrifices in men and money in the Pacific during the war were useless; or even worse than useless, because if we wind up with one imperialistic power, Russia, dominant in both Europe and Asia, then we will have less security than when we started.

If there are risks in supporting the Government of China—and there are—the risks in not supporting it are infinitely greater. Let us not make the same tragic mistake twice in one decade.

Development of Atomic Energy

EXTENSION OF REMARKS
OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by my colleague from North Carolina, Hon. CARL T. DURHAM, at Guilford College, N. C., on Monday, January 5, 1948:

The whole world seems greatly concerned these days with the future. Our newspapers are filled with conjecture about what is in store for us. I can't help but wonder, whenever I see the word "future," just when the men who use it expect it to arrive. Of course, we have a future, and we are rightly much concerned about it. But what we do today determines to a large extent what we will be doing tomorrow and next month and next year. Out of the crude materials of our daily political, social, and economic life we are building the future about which we read and hear so much.

If each of you could visit the laboratories of the Atomic Energy Commission, as I did in September, the day-by-day construction of the future would be immeasurably more

impressed upon you. Inspecting those laboratories and the plants which they serve is part of my job in Congress. Your jobs are here, far removed from the dozens of workrooms of our atomic scientists. Yet, what they are doing will have an immense effect on your future. For that reason it is very important that each of you attempt to keep informed about what is going on in those laboratories. Only in that way can you intelligently aid and guide the methods of application of those developments.

War and peace lie side by side in our laboratories. Atomic bombs made a memorable debut at Hiroshima and Nagasaki more than 2 years ago. Since that time, an increasing amount of our scientific effort has been devoted to adding to our basic knowledge of atomic energy. The progress that has been made in these nonmilitary areas will affect our lives just as surely and perhaps even more completely than did the atomic bombs.

We must know what is happening in those laboratories—we must understand and examine the projects under way in the workshops of our atomic scientists—we must prepare for what lies ahead. For the science of atomic energy will one day enter into every phase of our lives. We can know more today about what lies ahead than most of us realize. No writer of fantastic fiction or soothsayer is needed to depict what is in store for us and for our children. Knowledge of what is going on in the laboratories plus sound common sense will tell each of us what tomorrow will bring, if we but look, listen, and make an effort to understand. Let me tell you a little about how atomic energy may affect your lives tomorrow—how it is already affecting you today.

The first area is that of atomic power—industrial atomic power—the kind that will light your homes and run the trains and steel plants. An atomic power plant is now under construction in upper New York State at the Knolls Laboratory near Schenectady. There, General Electric, working under Government contract, is busily engaged in constructing a new type of power-generating plant. This test model is intended to produce enough electricity to light a city of several thousand people. Out of this experiment, it is hoped that enough will be learned to permit eventual construction of commercial plants.

At present, such a plant is expected to produce electricity at a considerably higher cost than coal-powered generators. Costs may come down, but the main use for such atomic power plants will be in areas where other types of power plants are not feasible. Thus, metallic ores which are now prohibitively expensive to operate because the whole mass of rock must be transported to refineries, might become cheap to operate. Atomic-powered refineries at the mine sites would eliminate the need to transport anything other than the metal itself.

Predictions as to when we may expect a critical segment of industry to be atomic-powered vary, but a conservative average of the more informed predictions leaves us with an estimate of about 1970. Atomic power is on its way, and that is the all-important fact to be placed in the balance.

The power plants of which I have been speaking will resemble conventional power plants using coal or oil and requiring transfer of heat from a sort of boiler to a generator. In the deeper and more basic laboratories scientists are working feverishly on the problem of direct energy utilization. No one, even they, can say when they will emerge with an answer, but until they do the possibility of direct energy production from atomic fission remains. That is the unknown and distant future about which the most brilliant of men can scarcely hazard a guess. The power bill to run your car is in that realm—not the foreseeable future. Atomic power already on the horizon is great enough so that there is no need to fool ourselves. Learn to distinguish between fantasy and fact, and you will be better prepared for life in the atomic-powered future of 1970. There is plenty of time after that to speculate about life in the year 2000.

To the individual in his own home the benefits of an atomic power plant such as I have described may seem remote. What of other benefits? Well, a whole host of scientists are busy applying known atomic information to the field of agriculture. These men hold out hope of realizing one of the oldest dreams of mankind—the ability to grow better and more crops with less effort. Agricultural experiment stations all over the country are seeking the answers to the nature of plant nutrition and growth. Out of their work are already coming ways of getting higher crop yields per acre, better crops, and improved disease resistance. These findings will show up on your dinner table. Atomic energy, like the international situation, is about to take a place at your dinner table. The results are not going to become evident all at once, but gradually atomic science can help to lower the cost of the food on your table and to place more food on the tables of all the families of the world. Those are worthy and desirable goals—those are the attainable goals of scientists studying atomic energy today.

More people will be able to enjoy the higher standards of living tomorrow because of what our atomic scientists are doing in the medical laboratories today. The history of medicine has been a constant struggle to overcome the biological enemies of mankind—the disease which afflicts and destroys millions of potential productive citizens of free nations. Today, in hundreds of hospitals and laboratories, scientists and doctors are using the powerful new tool of the atomic age—the radioactive isotopes of almost every element known familiarly as tracers. These tiny bits of matter produced in atomic furnaces can be added to almost any known substance and traced as they move about. Thus, radioisotopes are assisting biologists in the study of hundreds of human ailments from glandular excesses to cancer. In some cases the radioisotopes are more than tools—they are medicine in themselves. So it is with leukemia—a disease of the blood—which is greatly reduced in its action through the use of radioactive gold.

Atomic energy has brought problems to the medical profession as well as assistance. New diseases and new biological weapons are now possible and must be studied and understood in order that the dangers of this great scientific discovery may not overbalance the benefits. The hazards of radiation are still relatively unknown. In time we may expect not only preventive methods but also basic medical benefits to result from scientific investigation of the horrible new dangers. Remember the terrible scars suffered by the survivors of the Japanese bombings? Study of those scars is yielding information about cancer. Have you seen the pictures of hemorrhaging caused in animals exposed to the Bikini tests? Already, knowledge of heart disease and the ailments of old age is coming from study of those animals. Every aspect of atomic medical science offers new hopes for life for more people. Think of it. One day you may owe your very life to the knowledge scientists have gained through the study of atomic energy. That's not a very far-removed benefit, is it? Your life and mine might be saved some day because we encouraged doctors and scientists to study atomic energy. Our lives might be lost because we failed to appreciate that simple fact and so worked to forbid scientists to investigate the atomic horizon. That is not a pleasant prospect and alone should stimulate us to encourage our atomic scientists.

The greatest hopes for the future in the atomic age lies in the field of pure science, however. Out in the area of the scientific unknown there are facts which may one day revolutionize life itself. Only through constant research can our scientists forge ahead into that area. The secrets of photosynthesis which makes plant life possible, of cellular reproduction which makes all life possible, and of atomic structure makes matter itself possible—those secrets still lie beyond our grasp.

The huge Government-built laboratories, the atomic piles and cyclotrons—these are the sort of tools the scientists of today must have. These things cost more money than any private group can afford. Yet, the further advancement of science depends on having these tools. That is the reason underlying the Government program of sponsoring research and development in the field of atomic energy. We will benefit from those developments as a collective whole—we must finance them as an equal entity.

I have refrained from the overoptimism of popular science and business writers in telling you what lies ahead. Atomic energy is a part of our lives, but not a fantastic part. Clean sanity is ever at a premium, and especially in a field such as this in which so few are expert. I have held out no hope to you of atomic-powered cars and washing machines in a few years because those things are unrealistic. Those who write and speak of them, however cleverly, are not being honest with you.

Interplanetary rocket travel and fuel pills are as much a conjecture as they were several years ago. Speculate if you wish, but don't fool yourselves into thinking that they are practically here. When they will be depends on far more factors than I can resolve.

Finally, it is only fair to ask, "What are our chances of gaining even these practical benefits of atomic energy in a world torn by political and economic conflict?" The future holds these tangible things, but if they arrive in a world chilled and made powerless as a result of atomic warfare they would be of little use. That is the sober and mature counterbalancing fact to this picture of a roseate future.

This is our balanced picture. On one hand, we have the daily arrival of new atomic science benefits which make life better for all of us. On the other hand is the daily threat of atomic conflict which threatens to make our world of tomorrow an uninhabitable horror. The statesman, the businessman, the teacher, the housewife—each of them has the citizen task of understanding this balance and taking part whenever our democratic process requires in deciding how best we as a people can advance into the future without upsetting this balance in our own disfavor. This is a great challenge—it requires each of us to draw upon all our training, knowledge, understanding, and common sense. With each other's help—in our living rooms, classrooms, and legislative halls, and with the help of God—I believe we can meet the challenges which lie ahead in this atomic age.

The Free-Enterprise System

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Phelps

Adams, from the New York Sun of January 5, 1948:

THE FREE-ENTERPRISE SYSTEM—WHAT IT IS; HOW IT WORKS; WHAT IT HAS DONE

(By Phelps Adams)

When the stork picked you up, slung you comfortably from his bill, and began winging his way earthward with you, the chances were fifteen to one against you. But you were lucky. You hit the jackpot. You live in the United States of America!

This means that you live better than the people of any other nation on earth. Nowhere else in the world could you acquire so many of life's material riches in return for so small an expenditure of effort. In no other country will an hour's labor buy so many of the necessities, comforts, and luxuries of life. Never in history has any people known a standard of living as high as that which Americans enjoy today.

America harbors only one-sixteenth of the earth's population, but she produces nearly seven-sixteenths of the world's goods. Her people own 46 percent of the world's electric power, 48 percent of its radios, 54 percent of its telephones, 59 percent of its steel capacity, 60 percent of its life-insurance policies, 85 percent of its automobiles, and 92 percent of its modern bathtubs.

Yes, it is statistically true that in the 150 years of her dynamic, adventurous life, America has made more progress than all the other nations have made in 6,000 years. Why? What has she got that the rest of the world has not?

She has only 6 percent of the world's area. Other nations have more land and more people. Some are more richly endowed with natural resources. Several enjoy a general level of health, education, political freedom, and native ingenuity approximately comparable to our own. Carry the comparison on down the line, and you will be forced to the conclusion that the one thing which America has that the other nations lack is the American system of free enterprise.

That you live in America is circumstance; but that America lives as she does, is not. For a century and a half Americans have planned it that way.

WHAT IS FREE ENTERPRISE?

The American system of free enterprise, on its record, indisputably is the most progressive and completely democratic form of capitalism yet devised by man. It is the only economic system extant which provides investor, producer, and consumer with freedom of choice and opportunity.

It is a system under which all the productive facilities of the Nation are owned directly by the people themselves. The people alone—not their Government nor their politicians—determine what wages shall be paid for what services, and—without governmental coercion they decide how much capital shall be invested, in what competing enterprises, at what prospective profit.

The 9,000,000 individual enterprises in America know only one boss: the customer. Every time the customer buys a car, an ice box, a radio, or a bucket of paint, he casts a vote that determines which business shall be big and which shall be small—which shall grow and give increasing employment and which shall fail and produce unemployment. The only way a business can grow big and stay big in America is by winning the larger share of the votes that are cast daily by the American consumer.

American enterprise today provides gainful employment for more than 60,000,000 persons, who work only at the pleasure of their customers. But these 60,000,000 workers are the customers. As workers, they constantly exact higher wages; as customers they insistently demand lower prices. Caught squarely in the middle, management is forced, under this tremendous competitive pressure, to operate more and more efficiently and to produce better goods at lower cost. When it ceases to do this it ceases to exist.

Thus the American system of free enterprise may truthfully and accurately be defined as the economic system under which the worker exploits management.

CONTRAST WITH OTHER SYSTEMS

Capitalism and communism stand at opposite economic poles. Their essential difference is this:

The Communist, seeing the rich man and his fine home, says, "No man should have so much." The capitalist, seeing the same thing, says, "All men should have as much."

That difference lies in the point of view. Communism—born of poverty and hunger—seeks to perfect a system for the equal distribution of a scarcity of goods, so that ultimately no man has enough of anything. Capitalism—born of hardship and toil—seeks to provide such a plentitude of goods that, ultimately, all men may have enough of everything. Communism is content that no man should be rich; capitalism strives that no man shall be poor.

A third system, socialism, represents a kind of economic purgatory wherein nations hang suspended between the riches of capitalism and the poverty of communism. Here the government owns and operates part or all of the nation's enterprises. By taxation or otherwise, it raises the necessary capital, and then decides what this capital shall be used to produce. Since the government alone determines what shall be produced, it also decides what its people may buy, what they shall pay, what wages they shall receive, and at what jobs they shall work.

They have no choice in the matter. There is no customer control of production. There is no competition. There is only monopoly, and since monopoly inevitably becomes lazy and inefficient, the people must pay too much for what they buy. Production and purchasing power decline and the system tends finally to give up the struggle and drown in the ever-spreading waters of communism.

These are the three basic economic systems at work in the world today. How have they operated? Which has succeeded? Which truly provides the greatest good for the greatest number?

THE RECORD

Economically speaking, the system which provides the greatest good for the greatest number is the system which provides the greatest supply of goods for the greatest number. By any standard of comparison that system is free American capitalism. It has enabled every American worker to produce and to possess more than six times as much goods as the average worker outside the United States. No other system has equaled—or closely approached—that record.

During the war, one nation, singlehanded, outproduced the combined powers of the Axis. That nation was America.

One nation was able to arm and equip all of its own fighting forces and still give vast quantities of supplies and munitions to its allies. That nation was America.

Many military analysts concede that while the Allied troops outfought the enemy all over the world, the decisive victory was won on the American assembly line which literally buried fascism under a never-ending deluge of production.

Behind the battle lines, throughout the war, both sides engaged in a grim race to produce a weapon of total destruction. The scientific geniuses of many nations contributed to the final discovery and design of that weapon, but only one nation possessed the industrial capacity to produce it in time. That nation was America.

And now that the war is over—now that the nations of Europe have turned to socialism or have been engulfed in communism—they seek the help of the only nation on earth that can produce enough and give them enough to keep them from actual starvation. That nation is America.

Is it mere coincidence that the United States also is the only nation left which enjoys free enterprise as we have known it?

The record speaks for itself.

THE SECRET OF PRODUCTION

The secret weapon which has enabled American free enterprise to triumph in the competitive battle of production is the machine. American capital has provided the American worker with better tools than the workers of any other nation possess. The story can be told in a few simple statistics:

One hundred years ago it took only $557 worth of capital to provide the tools, machines, and plant facilities used by a single American factory worker. He labored 70 hours a week for a bare existence.

Today it takes 11 times as much capital to provide tools for this worker. He puts in 40 hours a week. His hourly earnings, in terms of dollars, are about 16 times as high as they were 100 years ago. In terms of purchasing power they are about five and one-half times as great. Over the century, the gross value of this worker's product has increased in almost exact proportion to the amount of capital invested in his job. His purchasing power would have increased, it will be noted, in almost the same proportion had he not chosen to forego nearly half of his earnings in exchange for additional leisure.

But this is only half the story.

One hundred years ago the worker was economically muscle-bound. The volume of his output was limited by his muscular strength. The precision of his work was similarly limited by the individual dexterity and skill which he possessed. Since he produced little, he earned little. There was little to buy, and little that he could afford to buy. Even so, the price charged for the things he produced was fabulous in relation to the cost at which things of the same quality could be produced today. But most things of that quality could not be sold at any price today.

By way of illustration, take one staggering example:

In 1908, before the automobile industry was the highly mechanized, mass-production institution that it now is, it took one man 8 hours to shape the top half of a gasoline tank. Today one man—and one machine—does the same job in 1 minute. If a whole automobile were produced by the hand methods of 40 years ago, and at today's basic wage of $1.49 per hour, that automobile would cost $50,000.

Because one machine can do the work of a hundred men, because it can work with a precision that the most skilled and dexterous of men could never achieve, and because it can operate with incredible speed, Americans today can buy $50,000 worth of automobile for about 3 percent of that price.

And that is the story of the machine and the secret of American production. One hundred years ago machines did only 6 percent of man's work. Today they do 85 percent of it, and do it better, cheaper, and faster. while man gets more pay in an hour for running a machine than he did in a day for exhausting his muscles.

To this story, however, must be added one brief postscript. For a century men—both here and abroad—have looked upon the machine with deep suspicion, foreseeing the day when it would enslave and destroy them. Because it would do the work of a hundred men they insisted that it would throw a hundred men out of work. Their fears caught the popular imagination and were echoed in literature and on the stage. Frankenstein and the stage play "RUR" were fascinating drama, but they were very bad economics, because they helped to perpetuate one of the most expensive fallacies in all history.

What are the facts? Well, in 1890, when only a few machines were at work in the

United States, 18,000,000 persons were gainfully employed—29 percent of the total population. Today 60,000,000 are gainfully employed, or 43 percent of the total population. Machines have created jobs, as well as wealth and leisure for the workers in the Nation that has used them most extensively.

YOU ARE A CAPITALIST

Before any man can go to work in the average American industry today, someone must put up $6,500 in cash to provide the machines, tools and plant facilities that man will use. To supply this cash is the job of the capitalist.

To millions of Americans, unhappily, a capitalist is a silk-hatted, pot-bellied, cigar-smoking caricature with dollar signs on his vest. The concept is as ridiculous as it is tragic.

The truth is that under American free enterprise the capitalist is every man and woman who has a savings account, a life insurance policy, or a share of stock. Capitalists, in America, are the families that are seeking to set aside something for their old age. They are people who are looking beyond the mere desire for a shorter workweek, to the hope of providing a shorter working life for themselves, or a better future for their children.

They, in a word, are the millions of little people who deny themselves the luxuries of today in order to provide the necessities of tomorrow. And theirs, economically speaking, is the kingdom of heaven, for without them there would be few jobs and little to buy.

Many of the biggest corporations today have more stockholders than workers. The most reliable statistics available in Washington indicate that 90 percent of all the stockholders in the country have incomes of less than $5,000 per year. The latest available tax returns show that in 1944, more than half of all the corporate dividends paid out went to "little people" in the brackets below $5,000. In that year alone, $150,000,000 in dividends and interest was reported by taxpayers whose adjusted gross income was less than $1,000.

These, however, are only the direct investors. In addition, there are 50,000,000 savings bank depositors and the owners of 147,000,000 life insurance policies, who—all together—have created a reservoir of capital totaling $200,000,000,000. These people are capitalists, too, for much of this money is reinvested by the banks and insurance companies. And since there are only 2,500,000 persons in the country whose income is more than $5,000 a year, and only 138,000 who get more than $25,000 a year, it is obvious that the rich bulk small.

But even these little people, who by self-denial, supply the funds that buy the machines that provide the jobs and produce the goods, expect a return on their investment. Whether it is in the form of interest on their savings, reduced premiums on their life insurance policies, or dividends on their stock, they demand a profit. For their services to industry they ask payment just as insistently and just as reasonably as the worker does for his labor. They want a fair wage for the work their savings do, and without that incentive they are no more willing to invest than a worker is willing to labor without pay.

This is not greed, nor a desire to exploit their fellowmen. It is a simple matter of security. If they can earn a profit of 6 percent on their savings and put aside 10 percent of their pay every week, they find perhaps that at the end of 40 years of their normal working life, they can provide for their old age. But if the profit is only 2 percent, 40 years won't do it.

And when inflation comes—as it has after every war—they find that the sum which they had thought would give them security will no longer suffice. To live, they must have a larger profit, just as the workingman must have a higher wage. Thus, as prices mount, wages rise and profits tend to do the same.

So it all boils down to one simple fact which the critics of free enterprise prefer to ignore: The selfsame workers who are the customers, are also the principal owners of American industry. And when the soap boxer denounces profiteers, whom is he talking about?

Why, bless my soul, it's you.

FACTS ABOUT PROFITS

For more than a year, now, you have been told that today's skyrocketing prices are due to the exorbitant profits of industry. But is that really true? What would the cost of living be were there no profits?

Official Government records show that corporate profits last year amounted to about 6.2 percent on sales. That means that when you spent a dollar for a manufactured article 6 cents of that dollar was profit. But that 6 cents bought you more probably than all the rest of your dollar.

That 6 cents provided all the machines that produced the article—and machines, remember, did 85 percent of the work on it. Animal power did 10 percent. Human energy did only 5 percent of the work; yet for that human energy you paid ten times as much as you did for the machines.

It is that 6 cents, moreover, which has made it possible for you today to buy a $50,000 automobile for 3 cents on the dollar. Without it there would be no machines, and machines work much cheaper than men. Year in and year out, the average American industry pays ten times as much in wages and salaries as it pays in profits for the machines it uses.

But Philip Murray of the CIO will tell you that the 6 cents was an "unconscionable profit"—much more than you should have paid. He will tell you that industry made $12,000,000,000 more in profits last year than it did in 1939. He will not, of course, tell you that labor made $62,000,000,000 more in wages than it did in 1939. Both figures are correct. Neither means a thing, except in relation to the total national income.

So, let's see what really happened to that 6 cents profit you paid.

The significant fact is that less than half of it went to the investors who paid for the machines. Government reports show that only 3.1 percent of the total national income went to stockholders last year. Yet, in only three of the past 18 years did these investors receive a smaller share of the total national income. They did not do nearly as well as usual.

What happened to the rest of the profit? It had to be placed back into the business to meet rising costs. The inventories—the raw materials and the supplies out of which the finished product is manufactured—rose tremendously in price. It took more money to buy them, so more money had to be tied up in them.

Then, too, factories and machines wear out. Out of its earnings industry must always establish a fund to replace them. But replacement costs have gone up enormously, and the funds originally set aside for the purpose are no longer adequate. For example, it costs twice as much to provide the plant and machinery necessary to produce a ton of steel today as it did before the war.

A Department of Commerce study shows that in the first 6 months of last year, industry needed $11,000,000,000 to meet the higher costs of inventories and the replacement of tools. But all the funds it had set aside for that purpose, plus all the profits it was able to retain, amounted to only $7,500,000,000. It had to borrow the other three and one-half billions.

So the bald truth is that the 6-cent profit which you paid was not enough to meet even the current needs of industry—let alone to provide for the normal expansion of plant and facilities which must take place if America is to have the new jobs and the additional goods that her ever-increasing population demands.

Clearly, you didn't get gypped.

WHAT'S WRONG WITH IT?

The greatest paradox of this bright New Year is the fact that free enterprise, with its unparalleled record of achievement, is under attack and on the defensive all over the globe. Millions of men and scores of governments are turning their backs on it, and today there are not half a dozen nations in the world which still embrace it completely.

Its enemies bombard it with catchy phrases which are glibly parroted by thousands and believed by millions, while its champions can defend it only with facts which many refuse to believe and decline to verify for themselves. So the facts are engulfed in a torrent of fallacies. Let's look at a few of them:

Opinion polls show that an overwhelming majority of the American people believe that stockholders get the largest share of the income produced by the manufacturing industry. The majority is wrong. Government records show that of all such income produced in the past 18 years the workers got 86 percent.

Opinion polls show that 40 percent of the American people believe that corporate profits exceed 25 percent. Government records show that over the last quarter century manufacturing corporations have had an average profit of about 4 percent, and that their highest profit in any of these years was less than 7 percent.

Soap boxers charge that free enterprise has resulted in a maldistribution of income, and that 2 percent of the American people own 80 percent of America's wealth. Not only is that not true; it is silly. Studies just completed by Notre Dame University show that over a 30-year period 88 percent of the total national income was paid to persons receiving less than $5,000 per year; 8 percent was paid to those in the $5,000 to $25,000 bracket; and only 4 percent went to those receiving more than $25,000 annually.

They also tell you that big business smothers little business; yet the truth is that big business is the best customer that little business has. About half of the parts for the products manufactured by big business are purchased from smaller enterprises.

They cry monopoly, but there are 500,000 corporations and 3,000,000 unincorporated businesses competing against each other in this country today. Five hundred thousand new ones have been born in the past 12 months and 200,000 old ones have closed their doors. Thirty percent of all corporations failed to show any profit in 1944—the latest year for which tax statistics are available.

They charge that the financially overstuffed executives of the big corporations get the lion's share of the pay roll. That isn't so either. If the salary of the three top executives in General Motors Corporation was divided among all the workmen, it would take each man 6 days to buy one pack of cigarettes out of this money.

And so it goes. Check the facts and you will find that there is only one well-founded and significant charge that can legitimately be leveled at the American system of free enterprise, namely, that over the years its progress has been interrupted regularly by recurrent circles of boom and bust. That evil persists. It stands as a challenge to the Americans who have built the greatest—and the only successful—economic system in the world.

But here again two highly pertinent facts should be borne in mind, first, American business has relatively little control over the present boom cycle upon which we appear

to be embarking. Most economists agree that its causes lie chiefly in the war and in the inflationary policies pursued by the Federal Government. Second, no other economic system has solved the problem that plagues free enterprise. Thus far the others have prevented booms only by creating permanent busts.

The American system of free enterprise is your business. Its success is a matter of life or death to you. It will survive only so long as men strive sincerely and understandingly to improve and perfect it. But the next time some long-haired orator tells you that it is an evil and oppressive thing which should be scrapped and urges you to follow in the despairing footsteps of Great Britain or of Russia, check the facts and ask yourself the question:

What nation will then be left on earth to bail us out when our folly, too, has run its course?

German Men, Women Lose Weight in Fight for Life

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. ANGELL. Mr. Speaker, the following article is the fourth in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

GERMAN MEN, WOMEN LOSE WEIGHT IN FIGHT FOR LIFE—NATIVES NEED FOOD, SHOES—FEAR LESS COMMON IN AMERICAN ZONE

(By Philip H. Parrish)

I had thought to wrap up in a single article my picture of the great cities of industrialized Germany trying to survive in catastrophe. But yesterday I didn't even manage to get out of Berlin.

The other cities, however, follow, in general, the pattern.

We approached them from the south, the party having flown to Vienna and then to Trieste, returning to Germany for Thanksgiving Day at Berchtesgaden in the Bavarian Alps overlooking Austria, where the first fall of the year deposited a foot and a half of snow on the passes and covered the town itself with several inches. From there on down through the American zone of Germany, our trip was by motor caravan. We drove northward from the Alps across the stormy plateau of the upper Danube to have a couple of days in the Bavarian capital, Munich, then westward across the frigid landscape and over the Danube-Rhine divide to Stuttgart, capital of Wuerttemberg-Baden; and on, after a couple of more days, down the Rhine valley to Frankfurt-am-Main.

Then there were several days on the lower Rhine in the British zone, specializing in the Ruhr and including the cities of Essen, Duesseldorf, Duisberg, and Cologne. There we lived, out of politeness, on our private train, since the British do not have too much hotel space or food.

STORES LACK LIGHT

Anyhow, it was always the same with the cities. The same overcrowding and devious life in the ruins; the same routine of contact with the countryside; the same deterioration of clothes and shoes; the same slowdown of work in order to conserve strength for barter and the black market. And everywhere, so far as the open market is concerned, the stores are dark little shops reconstructed in the injured buildings and offering postage-stamp collections, picture frames, or hand-made knickknacks. Christmas was coming on, and hungry-eyed crowds formed around the tawdry windows, searching for something to buy. I suppose many of the people were well supplied with their almost worthless marks from the black market.

There was one contrast with Berlin, however. Here the people had lost most of their fear of the invaders. They still salute the British officials punctiliously, though not the Americans, who do not require it. But in the ordinary run of things they feel they are not going to get hurt.

A man can go out of Frankfurt or Cologne with his pane of glass to trade to the farmer, or his fountain pen or collection of cigarets, and not skulk in dread that he will be dragged off the returning train, with his loot, by a Russian hook.

"It isn't the law," a German at Stuttgart told me, "but the American soldier is more likely to help me than take my potatoes."

That means that bartering between city and country is "regularized" if not legally accepted. And the situation has its complications. As matters stand, the farmers of the American and British zones surrender the least possible of their crops to the collectors who must keep up the stocks of the official ration stores. They hide away the maximum for barter with their secret callers from the city.

Even so, the weights of the town and city people, including Berlin, show a fairly firm tendency, and downward.

So-called street weighings have been taken since the beginning of the occupation, and those of September 1947 show that men aged 20 to 39 are 10.7 pounds under the weights fixed as normal for those ages; men 40 to 59 are 17 pounds under; men over 60 are 22.5 pounds under. Women of 20 to 39 show a weight deficit of 3.7 pounds; women 40 to 59, a deficit of 14.4 pounds; women over 60, a deficit of 20.6. The fall had been steady up to this summer when it appeared to slacken.

Actual starvation, however, is rare, to say the least, and military government is touchy on that subject.

"Personally," we were told by an Army officer who heads the health service in Land Wuerttemberg-Baden, "I have yet to see my first authentic case of starvation edema, except for the prisoners of war and expellees from the Russian zone."

RUINS STILL APPALL

The explanation obviously is that the food, though inadequate, has been spread fairly evenly, so that one person could not starve without many starving. The weights are eloquent as to the universality of hunger; the mortality tables are clear enough evidence that the masses are still above starvation, if barely so.

But what are these cities doing in the way of cleaning up? What are they doing in the way of rebuilding? Surely, they have bricks and stones enough? What are they doing for themselves? These are questions everyone at home asks me.

The answer is that the cities are but little improved in appearance over a year ago, though in fairness it must be agreed that a great deal of effort would show but little result against so great a task. The streets are more open, with the rubble carried off. Every city has its crews loading miniature trains—sometimes the crews consisting of women, especially the old, who want the extra food allotment which goes with this heaviest work. And nature itself is effecting some unidentifiable alchemy of mellowness. But it will be a long time before the cities are sightly, and a certain percentage of the wives and mothers of American personnel, joining their husbands and sons, continue to have the heebie-jeebies over discovery of the reality. Some have not been able to take it.

Nor can it be claimed that anything spectacular is being accomplished in the way of construction itself. At Munich, which is typical, I found the American officials most critical of the Bavarian Government's building program. Under it 60 percent of available materials—and remember that building requires more than brick and stones—is for the Government itself, with 40 percent for private construction. The 60 percent goes to bridges, roads, Government buildings, and a remarkable part to the restoration of monuments. The 40 percent, so far as I could determine, largely trickles out on the black market. There is shamefully little for industry and for housing to meet the overcrowding.

In this discussion—as in nearly every discussion of Germany—one always comes back to the black market.

With regard to construction, the case becomes obvious once it is mentioned. The butcher or the baker or the grocer or the farmer is the one who can get a shop repaired or a barn built. He has something more than marks to offer the officials who assign the priorities, the dealers who distribute the materials and the workmen who handle the hammers and trowels. One can't just start out on a job, unless he himself is the artisan. One has to wangle his materials and workers by gifts under the counter.

The government, of course, practices what amounts to forced labor. The workers must take jobs assigned to them or suffer loss of ration cards.

MANY YIELD CARDS

But even loss of the ration card has not coerced many of the Germans into conformity. Besides the black market operators themselves, there appear to be hundreds of thousands of ordinarily honest workmen who have given up their cards, or never asked for them, in order to hire out where they wish. A good mason, for example, can make far more by doing a job for a grocer who pays him with a pound of butter (350 or 400 marks), and requiring a week, than he could by laboring a month for 350 marks on repair of the autobahn.

And of course the magic of goods as distinct from marks is not confined to the building trades. It extends into all of the efforts at survival.

At Berlin, Ilse Borzym mentioned to me: "Our family is fortunate about shoes. Father gives the cobbler a roach or two he has caught in Wannsee. The cobbler is fond of fish."

MINERS DRAW BOON

So with the tailor. He has been asked to make a coat from an old blanket and his attitude is entirely changed by an electric light bulb to replace the burned-out one above his table. Or the plumber. He perhaps has a sweet tooth. And more than likely he has children at home.

Or take what I would judge to be the supreme example, since it involves left-handed acceptance of the black market situation by the occupation forces. The Americans and British, desperate to reverse the falling coal production in the Ruhr, not only offered greatly increased food rations, CARE packages as prizes and the right on the part of miners to purchase a certain percentage of consumer goods received as a result of coal exports. They also allotted each miner 5 tons of coal a year. Since this is far more than the miner needs, it sets him up as a little businessman on the black market. He is a man of wealth among the shopkeepers, craftsmen, and farmers.

There has been much celebration in recent weeks over Ruhr coal production climbing to a postwar peak of 285,000 tons a day, compared to a dispirited 200,000 this past spring. And such production, and better, is necessary for the recovery of German and European industry. But the miners are now by far the

most favored workers in the country, and if they won't settle to their sawing under present incentives, the case would be hopeless indeed.

Something I did not get around to mentioning is in connection with my experiment in the jammed surface stations and cavernous subways to Berlin.

Germany is much more dominated by its mass transportation than the American ordinarily stops to realize. Such transportation, particularly in the form of railroads, coincided in development with Germany's industrialization, unification and bid for world position in the past century. And since the state owned and planned the roads, there was no limit. Every city seems to be built around its vast downtown station, such as those of Stuttgart and Frankfurt—some like immense medieval castles, with walls after the Prussian fashion. Once Germany dreamed of a widespread chain of continental transportation, as witness the idea of the "Berlin-to-Bagdad railroad," so prominent in conversation before World War I. And even now the proud word "Mitropa" is embroidered on nearly every piece of linen remaining in the German trains.

The point, however, is that with virtually no automobile traffic as of today, these stations are crowded as never before, and their size and complexity and dim depths have conspired to make them "the" black-market centers. Considerable has appeared about this in the past three or four months in American books of travel, magazines, and newspapers. And it would be hard to overdo the truth.

REDS HOLD WORKERS

At Frankfurt, for example, where the station spreads for blocks, one can walk through at night and see enough suffering, desperate, criminal humanity to do for a lifetime. One finds himself, in the darkness, in a crowd of war prisoners getting off a Russian train. Their clothes hang raggedly. Their faces are expressionless and they move obediently like automatons. (Russia is not yet returning those well enough to work.) One moves on into the crowd beyond—people trying to get to and from work, weary with their loads; girls of the underworld; beggars; thieves. The black-market centers are usually definite but apparently shift as the law becomes mildly interested. Blocks and blocks of it.

The jam in these centers, as on the surface cars, has been complicated by the removal of so many people from the bombed downtown and working-class sections into the less bombed suburbs. On the average, the distance has become much extended from residence to work.

Maybe it was a latecomer from that midnight turmoil who wakened me early one morning, before daylight, when we were at the Hotel of the Four Seasons at Munich. At first I was drowsily conscious of a voice a block or two away, and thought that I was safely at home and it was a newsboy. Then it became louder, finally under the window, so that I got up and looked out.

Snow had been falling—was still falling—and in all the long length of the street there was only this one figure. I presumed that he must have been drinking, since he leaned against a corner of a building and then crossed slowly and unsteadily to rest against a street vendor's closed stand. But it was not until he had trudged on into the snow that I realized that his voice had a clarity and range which belied the idea of very much to drink. Rather, his voice would have done credit to a Wagnerian character. And there was Wagnerian tragedy in the fact that he could have passed, so very solitary, through the middle of a great city. I saw only one light go on in one window in answer to his implorations.

But it wasn't until morning that I realized that possibly I should have gone down into the snow in my bare feet. Ralph McGill came in from his side of the bathroom and asked what that commotion had been along toward morning. He said he hadn't awakened but that he had heard the words, cried out in German, "mother" and "bread."

The incident is beyond me.

If the lonely passer was not intoxicated, and if he talked through the deserted street of mother and bread, then the bootlessness of the people along the way becomes a social problem. Many of the American personnel told me they were shocked at the callousness of the Germans to one another under the conditions of disaster.

Anyhow, I don't know, I should have learned German in school.

The Economics of Power

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. POULSON. Mr. Speaker, this week hearings are being held in California to determine how much of our oil lands shall be set aside to enlarge the present naval reserves. This has been brought about by the fact that our oil resources are dwindling to such an extent that the Navy has become alarmed. In southern California there is only one substitute for oil and that is electric power. The source of supply of electric power does not become depleted, as does the source of oil supply. Therefore it becomes a necessity to immediately develop the unlimited power resources of the Colorado River.

The accompanying editorial from the Los Angeles Daily News clearly sets forth this problem, and I subscribe to it 100 percent:

THE ECONOMICS OF POWER

The Los Angeles metropolitan area development of the Colorado River system holds chiefly the promise of power.

While current interest in the Arizona-California squabble over water rights focusses attention on the Colorado as a source of reclamation, the power potential of the river is of even greater importance insofar as Los Angeles is concerned.

Los Angeles' power appetite is enormous. With the growth locally of both industry and population, available kilowatts are being devoured greedily. Still more kilowatts are needed. And they can be obtained only from natural energy resources—coal, oil, or water power.

As a means of satisfying this increasing power appetite, the local city-owned bureau of water and power, as well as private utilities, are carrying out expansion programs—new generating plants, new transmission lines.

Because no additional hydroelectric power has yet been harnessed, these expansion programs have had to be geared to the use of fuels such as oil and gas.

Some idea as to the extent to which fuels are being consumed, or may have to be consumed, in order to produce the kilowatts Los Angeles needs can be gained from the estimates of power officials.

Translated in terms of what two proposed projects on the Colorado might be made to produce is a significant reality. This reality is that oil, figuratively speaking, is flowing down the river and into the ocean at the rate of 15,000,000 barrels a year.

This is because power experts figure it take a barrel of oil to produce 500 kilowatts of electrical energy. Also, based on a current delivery price of approximately $2 per barrel, this means dollars, too, are flowing down the Colorado—about $30,000,000 each year.

Hence, what's being wasted through failure to develop fully the Colorado River system are not only millions of acre-feet of precious water—water that can reclaim arid desert lands and produce a flourishing agriculture. What is also being wasted in even greater quantity is real wealth—the wealth of the Nation's oil reserves, the wealth of dollars.

The two Colorado projects which would save 15,000,000 barrels of oil and $30,000,000 annually are the Bridge and Glen Canyon projects. Each has been blueprinted by Bureau of Reclamation engineers.

Bridge Canyon, at the headwaters of Lake Mead, would have an installed hydro electric capacity of 650,000 kilowatts. Glen Canyon, farther upstream, would produce 400,000 kilowatts.

Considering the requirements for electrical energy by the metropolitan areas of southern California, and by other similar, though smaller areas in southern Nevada and central Arizona, early construction of these projects is indicated.

Naturally, they're going to cost money—lots of money—which will have to be provided by the Federal Government. But as the oil and dollar similes have shown, not having these projects is costing much more money and is depleting the oil and gas resources of the Nation as a whole.

All estimates of future total power requirements in the southern California area point to enormously increased consumption. In residential, farm, commercial, mining, manufacturing, and transportation uses consumption of electrical energy is multiplying steadily.

Development of the Colorado resources clearly is the prime requisite for a future, prosperous Los Angeles.

That's why citizens should take an interest in the Colorado projects and spread the word, as the Bureau of Reclamation has said, that "this mighty river is a life giver, a power producer, a great constructive force."—R. E. G. H.

A Threat to the Republic

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an editorial by Mr. Felix Morley, which appeared in the January 14, 1948, issue of Pathfinder magazine. I recommend this for reading of all Members of Congress:

A THREAT TO THE REPUBLIC
(By Felix Morley)

Opposition to the $17,000,000,000 European recovery program is not due to any lack of generosity among our people nor any failure to appreciate the gravity of Europe's economic picture.

The underlying and justified fear of those who criticize ERP is that it may result in undermining our republican system of government. Such a result is possible for two reasons. One is obvious. The second is coming out now.

The obvious reason for anxiety about this tremendous relief program is its inflationary effect. It is simply impossible to make the contemplated shipments of goods to Europe, getting little or nothing in return, without creating domestic shortages. Shortages mean higher prices for food and manufactured articles in short supply. Higher prices mean agitation for higher wages. Higher wages mean still higher prices, and so on.

Strikes, even if apparently successful, only make the situation worse. Any strike means a loss of production. That means further shortages. As matters stand now, a strike may put more dollars in some pay envelopes. But this is offset by the fact that everybody's dollar is losing value.

The inflationary effect of ERP has been recognized by all of the many agencies which have studied the program. The general conclusion is that because of tremendous productive capacity we can afford the risk.

Even so, President Truman thought it advisable to ask Congress for authority to impose rationing, price controls, wage controls, and other forms of regimentation characteristic of what Mr. Truman himself called a police state. Congress has refused to grant this authority. It does not see how we can defeat communism by imposing on the American people the same sort of controls the Communists apply.

This issue was fought out during the debate on the stopgap relief appropriation approved by Congress just before it adjourned for the Christmas recess. None of the drastic economic controls requested by the President was approved and the stopgap assistance asked for the period until April 1 was cut by nearly 13 percent.

This may prove to be a precedent for cutting the $6,800,000,000 appropriation requested for the first 15 months of ERP. But a cut in that proportion will not diminish inflationary effects, stimulating demands for un-American governmental controls.

The effect of ERP on American institutions is not confined to the amount of money involved. There is an even more dangerous threat in the character of the administrative set-up.

The President proposes a new political agency, to be called the Economic Cooperation Administration. It would be responsible to the White House. The Administrator, said President Truman in his message of December 18, "must be subject to the direction of the Secretary of State on decisions and actions affecting our foreign policy."

It is an unfortunate fact, which the public is beginning to realize, that during and since the war the administration has not taken the public into its confidence on matters of foreign policy. For that reason Congress will resolutely oppose giving the Department of State absolute control over the expenditure of billions of relief dollars. This would mean secret diplomacy on a scale heretofore never even imagined here. And secret diplomacy could spell the end of our Republic.

Congress already has before it, in the Herter bill, a far more desirable measure for the control of ERP. This would set up a temporary Government corporation, with a bipartisan board of directors responsible to Congress. The whole operation would be out in the open, not hidden away in the corridors of the Department of State.

For the future of the Republic, the issue of how ERP is run is more important than the amount it spends.

Stanislaw Mikolajczyk Reports on Poland

EXTENSION OF REMARKS
OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Milwaukee Sentinel is printing a series of most significant articles by Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party. As you know, Mikolajczyk recently escaped from Poland where it is believed he would have been put to death if he had remained. The evidence of communistic terror emanating from all countries into which the Soviet Government has placed its despotic hand becomes overwhelming. Humanity cries out at the barbarism of the Soviet Government. Mikolajczyk's voice is only one in the chorus. The situation in Poland is all the more tragic because of the Christian tradition in that land. The Polish people are highly spiritual and have a strong attachment to Christian culture. That is why the heel of Russia presses hard upon the Polish heart.

Under leave to extend my remarks, I include the following article from the Milwaukee Sentinel:

MIKOLAJCZYK TELLS HOW REDS TORTURE PEOPLE OF POLAND—"MY NATION IN FRONT LINES OF NEW WAR," HE ASSERTS

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and President of the Polish Peasant Party)

(Installment I)

Poland, conquered by Adolf Hitler first and later forsaken by its own allies, may seem to be a remote land to the reader.

The names of its people, including my own, may be difficult to pronounce, and its tragedy may be dismissed by some as the normal plight of Europeans and particularly Poles.

But Poland today is you. When a Pole today is deprived of his God-given rights or is tortured vilely and put to death for simply believing steadfastly in what millions of democratic peoples elsewhere take for granted, you, too, are being attacked. And so is the sanctity of your home.

A fantastic World War began on Polish soil, after being conceived in the twisted minds of Hitler, Stalin, Mussolini, and Tojo.

And now an even more horrible war has erupted in Poland. It is a war against the dignity and freedom of all democratic peoples, and the Poles once again are in the front lines.

REDS IMPOSE YOKE ON WORLD

Just as World War II spread its tentacles out of Poland, this war could reach the homes of peace-loving people elsewhere in the world—and more quickly and with a thousand times the venom of the opening of the Battle of Britain and the attack on Pearl Harbor.

I know, because I am a survivor of the opening movements of that war of which I speak.

I know the determination, the pitilessness and the vigor of the new common enemy of mankind, communism directed from the U. S. S. R.

I know Stalin personally. I know the men behind him, and the workings of their minds and the yoke which they are now imposing on the world.

Forget for a moment my very name and the positions that I held in the Polish Government not only during the occupation by the Nazis but by the even more sinister invader of today—the Reds.

Simply assume you are a Pole, like myself, and that you are still possessed of your love of personal liberty, your feelings on the rights of man, and your beliefs that you have the right to speak, act, and vote as your conscience dictates.

MIXTURE OF MOCKERY, MURDER

One night, without warning, a group of armed security police, trained, directed, and controlled by a foreign power, enters your home and arrests you.

You ask to see their warrant and they laugh at you, for their warrant is the machine gun that is pointed at your stomach. In their pockets is your sentence, already made out, and your "trial" in the military court—if you are given one—will be only a fiction.

One of them casually pulls out a revolver, opens a drawer in your desk, puts the revolver in the drawer, lifts it out again, and accuses you of concealing weapons in violation of a "law" that is suddenly a mixture of mockery and murder.

Your wife and children and relatives and even associates are taken from you, and you may never see them again and—if you live—you will always be tormented by the terrors inflicted upon them.

You yourself are subjected to what could be 10,000 types of torture, for there is no limit to the infamy concocted by the Communist torturer. And if you survive and are released, you must sign a document in which you promise not to reveal what has been done to you or your family. If you break that promise, there are other tortures and no difficulty in arresting you again.

You are cursed in the controlled newspapers as a "bandit" or "Fascist" or "traitor" though you are none of these things and have proved it throughout your life.

Your crime? You liked a certain candidate for office and had announced your intention to vote for him. Or, perhaps, you had decided to run for office yourself—constitutionally your right—on a ticket that does not happen to please Moscow.

You would protest, of course. You might even die—as thousands of Poles similar to you have done—rather than yield to such an incredible tyranny.

But this is certain: You would say to yourself, "This cannot happen in the twentieth century. This cannot be the work of men by whose side we fought the Germans. The Americans and British will do something about this," you would say, knowing the heart-warming humanity of those powers.

There lies the ultimate tragedy.

What Russia and its agents are doing in Poland today is nothing but a bold perversion of solemn pacts and promises signed by Stalin, Franklin D. Roosevelt, and Winston Churchill, first at Tehran and then at Yalta.

Roosevelt and Churchill must have sincerely believed that they could do business with Russia. Those men, men of good faith, believed in the solemnity of the pacts which they signed with Stalin.

They simply underestimated Stalin. Nobody can do business with Stalin. Take this as the testimony of a man who tried for 2½ years, and then failed under the brutal force of Stalin's Communist agents in Poland.

Those historic pacts have been spat upon by Moscow and the stooges Stalin has placed in office in Poland by means of arrogant pressure, careful programs of villification against Polish democrats, and an "election"

which criminally frustrated the honest votes of a brave people which still believed that pacts and promises made by the three big powers were more than paper and hot air.

There have been vigorous protests from Washington and London, but they have been callously ignored by Russia and by the Reds who pose as Poles and dominate the police state.

They laugh at such protests, and when they do not laugh they carry out reprisals which cause additional bloodshed in my land—such as the destruction of the Warsaw headquarters of my Polish Peasant Party by Communists immediately after Mr. James F. Byrnes' speech at Stuttgart.

The only vestige of democracy left in Poland today—in a country, mind you, which Mr. Roosevelt earnestly hailed as "the inspiration of nations"—is in the pulpits of the church.

Only here can the so-called liberated Pole be told he should be free. Only here can he be openly told to love instead of hate, to tell truths instead of lies, to believe in his destiny.

But the Red offense against this last barricade of democracy in Poland has now been brought into the open. At the opening session of the Sejm, our Parliament, on October 29, 1947, Josef Cyrankiewicz, Prime Minister of the Communist-dominated Polish Government, accused the church of attempting to thwart the "people's democracy."

Two weeks later, in a brutal burlesque of a military trial, Cardinals Hlond and Sapieha were denounced by a specially instructed witness as collaborators with the anti-Government underground.

Do not be surprised at the news, in the near future, that there have been other trumped-up charges against clergymen as "collaborators," "saboteurs," and "traitors." All this inevitably in the maniacal tradition of dictatorships.

Poland is but one country in Russia's overall plan for conquest of the world. But it is a key nation, for it symbolizes the essential treachery of the Red plan and its ruthless lack of conscience. Though occupied throughout World War II, Poland produced no quisling government. It was an Ally. Today it is invaded again and is actually paying reparations to Russia.

Russia will strike former friend or former foe without discrimination. France and Italy have but recently barely evaded Communist-inspired civil wars which would have been the signal for the Red army to plunge to the Atlantic with legions of troops and the most modern armor, to "defend the rights of the suppressed peoples."

Russia has lost these two recent battles, but they were only battles. Russia has not lost the war it is waging on the dignity and freedom of all democratic peoples any more than the loss of some of its western cities to Hitler in 1941–43 meant that it had lost World War II.

It will try again, soon and on many fronts.

It will do its utmost to defeat the Marshall plan, whose aim is to stabilize and raise the European standard of living—a condition which is an antidote against the Reds' program, based on misery and chaos.

Russia is content that nothing can stop the march toward domination—political, economic, and military—of the entire world. Stalin can die, but his successors, Zhdanov, Molotov, and others, will carry on.

There are countless trained men in many echelons behind these leaders, waiting to step forward and pursue the Red program. Tomorrow I shall tell you about that program.

Report on Un-American Activities in the United States

EXTENSION OF REMARKS
OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following radio speech I made over the Columbia Broadcasting System network, January 7, 1948:

What to do about communism at home and abroad is one of the foremost questions facing the American people today. The Congress was recently called into special session in an effort to dike the floodtide of communism which threatens to sweep a great part of the world, a floodtide which we all know would destroy the very freedom of mankind. The surrender of a number of eastern European countries to Stalinism and the tottering of France and Italy provides stark realism of what is upon us.

We, in the United States, are not immune from the Communist cancer, for we have within our boundaries a small but highly organized, well disciplined, Moscow-directed conspiracy which operates under the misnomer of the "Communist Party of the United States." It is a conspiracy seeking to overthrow our Government, our American system of business, and, indeed, everything which we Americans hold dear and sacred. The question is, therefore, What are we going to do about this conspiracy? This is a most important question, and as chairman of the House Committee on Un-American Activities, I would like to report to you for a few minutes this evening on what the Committee on Un-American Activities has done on this subject during the past year, and what it intends to do in the future.

First, I would like for you to know a little about the committee, how it is constituted and how it functions. It is one of the 19 standing committees of the House of Representatives. It is composed of nine members and it is our function to determine what legislation is needed to cope with subversive influences in the United States. In order to legislate, it is necessary that the Congress have the full facts on a subject. Thus we, like all committees of Congress, serve basically as a fact-finding body. Facts can only be determined by a thorough and diligent investigation and inquiry. Congressional committees, equipped with the historic and unchallenged prerogative of investigation, perform for the American people one of the most necessary and effective functions of our democratic form of government, for it is through these investigations that the spotlight is focused upon the corrupters, the subversives, the war frauders, and others who cannot stand its beam.

When I became chairman of the Committee on Un-American Activities last January, we adopted an eight-point program. This program had as its objective the determination of the extent and character of subversive influences in the United States. We have worked diligently to carry out that program in order that we might avail ourselves of sufficient facts and information to determine what legislative action, if any, was necessary to protect the welfare of the United States against the un-American forces active here. In pursuing this program, we conducted many public hearings. We began by exposing Gerhart Eisler and revealed him as the No. 1 commintern agent directing the activities of the Communist Party here. He was thoroughly unmasked, his many aliases, his fraudulent passports, his tax evasions, and his perjured statements are no longer secrets. As a result of our exposure, Gerhart Eisler has been tried and convicted of passport fraud and for contempt of Congress, and is now facing a possible 6 years imprisonment and a $6,000 fine.

We likewise turned the spotlight on the activities of his brother, Hanns Eisler, who, like Gerhart, is an important cog in the world revolutionary program of Moscow. We showed how many high personages in and out of the Government had interceded in his behalf in an effort to secure for him a visa to legally reenter and remain in the United States, even though at the time he was illegally a resident here. Following our hearings, the Immigration and Naturalization Service issued a warrant for his arrest on deportation proceedings.

Communist Leon Josephson was exposed as a procurer of false passports for important Communists in the United States, and his refusal to be sworn and answer questions before our committee resulted in his conviction for contempt of Congress. He has been sentenced to serve 1 year in jail and pay $1,000 fine.

Eugene Dennis, general secretary of the Communist Party of the United States, was likewise convicted for contempt of Congress and sentenced to 1 year and $1,000 fine. During the course of the hearing on Dennis he, like, Gerhart Eisler, was shown to have traveled under false passports, used many aliases, and, in addition, had falsified his draft registration, and was a fugitive from justice of the State of California.

We held extensive hearings on the subject of Communist penetration into the labor movement. We had before us the best authorities on the subject of communism, including such experts as J. Edgar Hoover, William C. Bullitt, and many others, during a public hearing on two bills to outlaw the Communist Party. We also heard in public hearings a former Government official of the Soviet Union, who described to us the inner workings of the Soviet espionage system in the United States. We revealed to the public various "legal espionage" techniques being used by the Soviet Government here in America, such as their raid upon our Patent Office, in which they obtained hundreds of thousands of our military and industrial patents without giving us a single patent in return.

The committee has issued special reports on the American Youth for Democracy, Southern Conference for Human Welfare, and the Civil Rights Congress, in which we unanimously found these organizations to be Communist fronts. We likewise issued a special report entitled "The Communist Party of the United States as an Agent of a Foreign Power."

The voluminous files of our committee on "subversives" in the United States have been open to the Congress and to the intelligence agents of the Federal Government. To give you some idea as to the extent to which these files are used, during the past year 1,567 Federal agents came to our offices for information on un-American individuals and organizations.

In an effort to determine the extent of Communist influences in the important motion picture industry, we conducted hearings both in Los Angeles and in Washington. Over 40 witnesses were heard. By now, I think that most of you are familiar with the 10 Hollywood figures who refused to answer the question: "Are you now or have you ever been a member of the Communist Party?" for which they were cited for con-

tempt by the House of Representatives, and have been indicted by a Federal grand jury and are now awaiting trial.

You may also remember that the committee placed into evidence the date and number of the Communist registration cards of each of these 10 persons. This was supplemented by a detailed report of the Communist and Communist front affiliations over a period of years of most of these individuals. All of them occupied important high salaried positions as writers and directors in Hollywood. As a result of our hearings, the motion picture industry has fired these 10 persons, and has apparently set about to put its house in order, somewhat belatedly, however, I must say, but I wish to serve notice upon the motion picture industry and to advise the public that our investigation of Hollywood is far from over, and in the very near future the records of many more top salaried Hollywood figures will be spotlighted, and well they should, for it is sheer folly to permit the Communists and their fellow travelers to remain in strategic positions in such a powerful medium of propaganda, education and entertainment as the movies which draw over 85,000,000 spectators in the United States each week.

If any of you who listen tonight entertain any doubt as to the strength and influence of the Communists in the United States, you have only to reflect upon the elaborate campaign that was launched against our committee during the Hollywood hearings in an effort to destroy the investigation by any means. I am sorry to say that they were aided and abetted in this ill-fated but powerfully organized venture by certain prominent dupes and innocents in the motion picture industry. They did not succeed, however, and the recent action of the industry and certain recanting individuals in it, speaks louder than words as to the effectiveness of our hearings.

Now I would like to deal with our program for this year. As we all realize, we are rapidly approaching a shown-down with world communism, or the "totalitarian left" as I choose to call it, which is just as great a threat today as was the "totalitarian right" yesterday, exemplified by Nazism and Fascism.

What we do here on the home front to stop the spread of this cancerous growth will have an important effect in other parts of the world. With this in mind, as chairman of the Committee on Un-American Activities, I shall recommend the following program for the coming year:

1. Submit to the House as soon as practicable a series of bills designed to break up the Communist conspiracy in America. To expedite this, I have appointed a subcommittee, headed by my colleague Congressman RICHARD M. NIXON, of California, and I expect that they will begin hearings this month. They will wish to hear from the Attorney General and other Government officials and qualified experts, and, above all, from the people, as to the best means to legislate against the threatening forces of communism. Therefore the thoughts and opinions of the American citizen will be most welcome. We must bear in mind, however, that it is easy to say "Let's outlaw the Communist Party," but to effectively do it is another matter and we must be very cautious that in our actions we do not destroy or impair any of the rights and liberties which we hold so fundamental here in America.

2. Full public hearings on the activities of those in the United States who have organized themselves to spread antiracial and antireligious propaganda. These hearings, I propose, will be conducted by subcommittee which I have appointed, headed by my colleague Congressman JOHN MCDOWELL, of Pennsylvania, and should begin sometime this month.

3. Intensify the committee's present investigation of Communist influences in our educational institutions.

4. Public hearings by the full committee, beginning on March 1, on a number of Communist aliens who are illegally in the United States. Our committee has a complete record on these individuals and will demand their deportation.

5. That early in February hearings before the full committee on the extent of subversive influences seeking to exploit the Negro population of the United States be held. Early last year the committee appointed a Negro investigator to direct this inquiry. His report is now ready to be submitted to the committee and 30 witnesses have been scheduled to appear.

6. That public hearings should also be held on the Communist domination of strategic labor unions which are vital to the national defense of the United States.

7. I shall recommend that a conference be held, composed of delegates from each of the legislative branches of all of the governments of this hemisphere with the idea of working out a hemispheric unity of purpose in legislating against the further spread of communism in this hemisphere, and a mutual exchange of information on this subject between all countries of this hemisphere.

8. That the committee recommend legislation aimed at strengthening the authority of the Government in dealing with espionage activities, the need for which has been demonstrated by the activities of certain foreign agents exposed by the committee during the past year.

9. Resumption of the Hollywood disclosures.

10. That the committee staff prepare for public consumption reports on all Communist-front organizations operating in the United States.

11. That we continue to expose and ferret out those employees in the Federal Government who are identified with communism in the United States.

12. For 6 months the committee investigators have been exploring Communist influences in the field of atomic energy. This investigation is almost complete, and I shall recommend that the full facts be submitted to the Congress as soon as possible.

Let me assure you in closing that we will continue in the future as we have in the past to expose the subversives in America wherever they may be, for never before in the history of our Government has it been so essential that the Congress and the people be informed of the activities of those who seek to destroy our Government, whether they be on the totalitarian right or the totalitarian left.

Alaska Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the December 8, 1947, issue of the Cleveland Plain Dealer on statehood for the Territory of Alaska entitled "The Fiftieth State":

THE FIFTIETH STATE

The Territory of Hawaii, as we have already emphatically asserted, should be admitted to the Union by act of Congress soon after it convenes in its next regular session in January.

Without any protracted delay, after that action is taken, Congress should make Alaska the fiftieth State.

Alaska needs to be a State of the Federal Union in order to realize its vast potentiality for development. But, more than that, this Nation needs Alaska as an integral part of its economy, its political constitution and its defensive strength.

There is no longer any valid reason for maintaining Alaska in the condition of a distant relative from whom it is convenient and profitable to take, but to whom we are too selfish to give. And there is real danger in further delay in admitting Alaska to the Union, for not until the people of Ohio and Michigan and New Mexico regard the people of Alaska as one with the people of the present 48 States will this Nation have the same zealous concern for Alaska's protection as it does for the States that happen to be in a geographic entity.

We most urgently suggest that the Members of Congress, and we want to address especially Ohio's Representatives in the Senate and the House, make it plain that they will give early and sympathetic consideration to the bill for Alaskan statehood. That bill is before the House Committee on Territories. The case for Alaskan statehood, and a powerful case it is, is on the record for every Member of Congress to see.

The bill that would make Alaska a State of the Union ought to be reported out of committee soon after the convention of the regular session of Congress, voted up by the House and passed along to the Senate for action before the session ends.

Alaska, as anyone who knows its people, is well aware, meets the decisive test for statehood, the test of devotion to democratic government. Alaska knows well how to conduct government of the people, by the people, and for the people. It has earned the right to carry on such government in the dignity of and with the prerequisites of statehood.

Only two arguments against statehood for Alaska have been advanced which, we believe, are at all stumbling blocks to the admission of that Territory to the Union.

One is that Alaska hasn't sufficient population (only 90,000) to be a State. As a matter of historic fact, Alaska now has more inhabitants than did 13 States when they were admitted. Moreover, inadequate, obsolete, discriminatory territorial laws, which would be supplanted under a modern State constitution, stand as the greatest obstacle to large, healthy, and steady increase in Alaska's population. Laws of property acquisition and title transfer like those in the present 48 States would alone be enough to result in rapid growth of Alaska's population.

The other major argument used by opponents of Alaskan statehood is that "Alaska is not yet developed enough." It is the set of conditions imposed on Alaska as a territory, a territory in which the people pay all Federal taxes but get little in return except the leavings from the congressional pork barrel that has prevented the development of Alaskan industry, the carefully regulated but not strait-jacketed development of its immense and varied natural resources and the development of its trade with a United States that now appears to Alaskans as an under-sized funnel with a pinched tube ending at Seattle.

Alaska's potentiality for development in the field of agriculture has been criminally neglected, while across the Bering Straits from this Territory vast sums are being poured by a Soviet Government into experimentation that is making Russian land, under climatic conditions similar to those in Alaska, productive land. This state of affairs can be ended only by giving Alaska statehood and devoting to its agriculture the same means and technics that are employed in the agriculturally productive States of the Union as now constituted.

There is no reason, save the unreasoning selfishness of a very few, why two stars should not soon be added to the flag of the United States.

The Real Truth About Liquor

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a newspaper clipping entitled "Bible News Flashes," which contains an advertisement on the liquor question that appeared in the Boise Democrat, of Boise, Idaho, more than 60 years ago.

I wish every American could read it in the light of what is going on in this country today.

The matter referred to follows:

THE REAL TRUTH ABOUT LIQUOR

(Transcript by Charles Chester, Topeka, Kans.)

In 1886 James Lawrence conducted a saloon in Boise, Idaho, which he named the "Naked Truth Saloon."

In the issue of February 24, 1886, of the Boise Democrat he ran an advertisement of which the following is a transcript:

"Friends and neighbors, having just opened a commodious shop for the sale of liquid fire, I embrace this opportunity of informing you that I have commenced the business of making drunkards, paupers, and beggars for the sober, industrious, and respectable portion of the community to support.

"I shall deal in family spirits which will incite men to deeds of riot, robbery, and bloodshed, and by so doing, diminish the comfort, augment the expenses and endanger the welfare of the community.

"I will, on short notice, for a small sum, and with great expectations, undertake to prepare victims for the asylums, poor farms, prisons and gallows.

"I will furnish an article that will increase accidents, multiply the number of distressing diseases, and render those who are harmless incurable.

"I will deal in drugs which will deprive some of life, many of reason, most of their property, and all of their peace; which will cause fathers to become fiends, and wives, widows, children to become orphans, and all mendicants.

"I will cause many of the rising generation to grow up in ignorance and prove a burden and a nuisance to the Nation. I will cause mothers to forget their offsprings, and cruelty to take the place of love.

"I will sometimes corrupt the ministers of religion; defile the purity of the church and cause temporal, spiritual, and eternal death; and if any be so impertinent as to ask me why I have the audacity to bring such accumulated misery upon the people, my honest reply is, 'money.' The spirit trade is lucrative and some professing Christians give their cheerful countenance.

"From the United States Government I have purchased the right to demolish the character, destroy the health, and shorten the lives and ruin the souls of those who choose to honor me with their custom.

"I pledge myself to do all that I have promised. Those who wish any of the evils above specified brought upon themselves or their dear friends, are requested to meet me at my bar where I will, for a few cents, furnish them with the certain means of doing so.

"THE NAKED TRUTH SALOON,
"JAMES LAWRENCE, *Proprietor*.
"BOISE, IDAHO."

On Deflating Prices

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Dr. Norman Sweet, which appeared in the Fort Wayne (Ind.) News-Sentinel on January 4, 1948:

ON DEFLATING PRICES

To the EDITOR:

Our cost of living has now reached its peak—66.1 percent above 1939 prewar standard-of-living cost. Now, my suggestive hints for deflation are to have CIO, A. F. of L., UMW heads get together with the United States Chamber of Commerce and AMA heads and all work together unselfishly for America to increase production of commodities on a deflated basis until we have an economic balance established.

This will do away with partisan politics upon our great economic stronghold in 1948 Presidential election.

Let us all become one people, united together—labor and capital, Democrats and Republicans—all 100 percent Americans for democracy. This will do more to show Russia that its scheme to break America's economic back is futile. I dare not hope we are scientifically intelligent, unselfish enough to do this great thing.

However, anyone reading these deflation hints knows we could effect this absolute victory without threat of a third world war and the stabilizing of the UN organization.

However, production must be colossal. No strikes; let wages remain at present levels until deflation standards are effected and be used to continue our high tax rate and additional tax for European economic assistance, which, with great production, can be met without endangering our own domestic economic situation. Stalin then will be given a second economic thrust from all the American people.

This can be done and should be done and at once. Will our boastful labor-union chiefs, business leaders, and political aspirants be big enough to do this? If not, they are too little to hold the top positions of power in America. No exceptions.

NORMAN SWEET.

The President's Message

EXTENSION OF REMARKS
OF
HON. CARTER MANASCO
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. MANASCO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by George E. Reedy:

The confused welter of comments and interpretations on the President's message to Congress has boiled down to just one point. Mr. Truman has put the Republican Party on a spot, and it's going to be a tough one to get out of.

The message is being studied from every angle by GOP experts in all fields of legislation. But basically they know that most of it can be disregarded. The thing that counts—and the only thing that counts—is his proposal to cut taxes.

Leading Republicans have already assailed it as a demagogic proposal, meant only to draw votes from the left. Whether they are right, however, is beside the point. It is definitely a program that will appeal to large masses of voters.

The philosophy of soaking the rich and giving to the poor has always been popular in America. The New Deal rode to power on such a program and managed to stay in office for practically 15 years. There's no getting away from it. It is liked.

Republicans have already produced figures to show that the President's proposal would give less tax relief than their own proposal. Furthermore, they are on record as twice trying to cut taxes during the last regular session of Congress.

The President is now in a strong strategic position. There is no doubt that the Republicans will pass their own tax bill. But Mr. Truman, on the basis of his message to Congress, can snap back with a strong veto.

He can point to his own proposal which would have cut taxes in the low brackets and plastered them on corporations. From a political standpoint this is an appeal that will be hard to resist or explain.

Of course, there are obvious inconsistencies in this whole approach. Mr. Truman asks that business be taxed even more heavily than it is now. At the same time he recommends that businessmen be encouraged to expand their production.

The two ideas cannot very well be said to go together. But the one sticks out of his message like an automobile headlight on a dark night. The other is lost in the shuffle and is not very apt to strike home in the minds of the average American.

Whatever else may be said, there can be no doubt that the President is getting very astute political advice these days. The tax proposal was worthy of the late Franklin D. Roosevelt in the days when he kept Congress in continual jitters.

To pass it is out of the question in a Republican-controlled Congress. Not to pass it is to give the President an opening for a bitter attack on his opponents. It should not be forgotten that in 1948 the President is also a candidate for office.

The Republicans have no choice except to hurl every conceivable argument at the proposal and hope they can convince the country that they are right. It is not a very pleasant prospect, but there is simply nothing else to do.

The effects of the President's message will not be immediately apparent. He has merely laid the groundwork for the battles that are

to come later in the year. From the standpoint of political strategy it is a solid groundwork.

Of course, much can happen in the next few months. The changing tides of election-year controversy may alter the situation overnight. But no one can dodge the fact that the President has scored heavily in the opening round.

Radio Address to the People of My District

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on January 3, 1948:

Dear friends of the Triple Cities and my congressional district, it is my sincere wish that all of you in our most patriotic section of America enjoy a happier, more fortunate new year than you did in 1947.

For my part, I am glad we are turning over a new leaf. We can start fresh and forget about some of the mistakes during the months just ended.

Regardless of the doldrums we went through the recent past, the future must always look bright and promising. We must not have it any other way. To my way of thinking, 1948 will be a year of great issues and conquests on the domestic front, which, if won, will mean a grand, exotic life for the people of the United States.

Of course, to win these conquests, we must be prepared to exercise patience, fortitude, and charity instead of selfishness and greed.

The powerful and the prosperous must be satisfied to take less profit, if we are to be successful.

The rich and the consequential must be willing to divide up their material wealth among the hungry and the needy.

They must follow the direction of the Lord when he said to the rich young man, who wanted to follow him:

"Give up thy worldly treasures and render them to the poor."

The ambitious and the smart will reach their goals more speedily in 1948 if they consent to think of their fellow men before they take from the downtrodden.

We could arrive at the millennium within one short year if men were disposed to look upon their brothers with love and tolerance.

We could attain a paradise on earth if everyone, not just the few who now do, would carry out the principles of the Golden Rule.

Yes, our families, our friends, our neighbors, yes, even our enemies and ourselves would profit by putting into practice the simple exhortation, "Do unto others, as you would like to have them do unto you."

You and I cannot command the rest of the world to do these things, but we can appeal to them to follow the examples we might set. If we do our part, I believe the rest will come around.

There is no choice in today's world, but to do the best we know how. Nations are in distress, they are once again at each others' throats. We must try to keep the peace if it is humanly possible.

As for America, I believe we must work the hardest on her. I hate to see events at hand which promise to undermine and weaken the greatest Nation under the sun. I dread a continuance of the ruthlessness and selfish decorum I have seen all around me since the struggle for permanent peace began.

During the war, it seemed that nearly everybody thrust aside thought of self and rushed to preserve their country. I wish we could work half as hard today to preserve this land as we did then.

So I say that 1948 will see a battleground upon which the forces of greed will be challenged by those patriots who really want to save America.

If these patriots succeed in beating back our enemies, this form of government will prevail. We will continue to enjoy the highest standard of living on earth. We will keep on living safely with our neighbors and will honor them as they will honor us without thought of what race or religious group any of us belongs to.

If patriotism is triumphant over subversive elements, our citizens will not be torn by strife or civil conflict. They will be protected by the Bill of Rights and the Constitution which guarantee life, liberty, and the pursuit of happiness to all.

We have the choice now to take the road to ruin or the path to glory. We cannot keep going, however, in the direction we have lately unless we meet with disaster.

In view of the seriousness of our present plight, the hunger and want which inflation will bring about, the dangers now evident to our domestic front because of high prices, I want to appeal here and now for united action to remedy the economic ills now besetting us.

Yes, 1948 will be a crucial year, but we can make it the best yet for this Nation. We can resolve to eliminate the dangers by stamping out all evil practices which a few are pursuing at the expense of the great majority.

As your representative, as one in whom you have had faith and confidence for many years, I feel it my duty to disclose to you my intentions for the new year. The following is a set of resolutions for 1948 which I expect to try to carry out to the best of my ability. I realize I will have plenty of opposition from a selfish and powerful few just as I always have had, but I promise you I will fight on, no matter how great the odds, to keep these resolutions.

Therefore, I do hereby resolve:

1. To continue my agitation in Congress for an immediate end to the terrific prices you are now being forced to pay for the necessities of life.

2. To use whatever influence and power are at my command to battle the greatest curse the American people are facing, namely, inflation.

3. To wage war against the hypocrites and the scoundrels who have flaunted and are still sabotaging my efforts in behalf of our veterans and their loved ones.

4. To keep on fighting for the older folks, now dependent upon somebody else, or upon public charity, so they can enjoy reasonable pensions and annuities in their declining years.

5. To continue the struggle for a national bonus for veterans of World War II in line with the loan guaranty in the GI bill of rights for which I voted.

6. To introduce at the earliest possible moment a bill providing for payment of pensions to veterans of World War I, who have for the past few years been shoved aside and not considered as they deserve to be.

7. To fight to protect the workers of the Triple Cities and America against exploitation whether it comes from employer or labor agitator.

8. To help the farmer preserve his family-size farm which has made America agriculture great and is feeding not only America but the whole world.

9. To do my utmost to save our Constitution, our country, and the people of the United States from the viciousness, deception, and odious designs of our enemies who would overthrow and demolish the Government of our great land.

What Are War Industries?

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD a letter I have received from the Honorable James Forrestal:

THE SECRETARY OF DEFENSE,
Washington, January 6, 1948.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to your letter of December 17, 1947.

War industries include those which produce small arms and ammunition, specific war chemicals and gases, magnesium, primary aluminum and alumina for the purpose of producing aluminum, radioactive materials, hydrogen peroxide above 50 percent in strength, and beryllium.

Those peaceful German industries which will be allowed to develop freely within the limits of resources available include furniture and woodwork; ceramics; bicycles; flat glass, bottle and domestic glass; and potash.

Sincerely yours,

JAMES FORRESTAL.

Cooperative Associations

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. TEAGUE. Mr. Speaker, congressional committees are giving considerable attention to changes believed to be needed in Federal laws governing operations of cooperative associations. I have received many letters from people expressing opinions both pro and con on this matter which reflect serious thought and consideration.

Under leave to extend my remarks in the RECORD, I wish to include the following report by Mr. W. Bassett Orr, president, Bryan Feed & Seed Co., Inc., Bryan, Tex.:

SOME SIGNIFICANT CHANGES NEEDED IN FEDERAL LAWS GOVERNING OPERATIONS OF COOPERATIVE ASSOCIATIONS

(By W. Bassett Orr, president, Bryan Feed & Seed Co., Inc., Bryan, Tex.)

As a preliminary statement I want it clearly understood that I am unalterably in favor of our democratic way of life, and I believe that free trade and free enterprise are necessary

basic factors in our social and economic life in the United States, if we are to continue as a democracy. I would not for one minute agree to the conditions of any measure that would preclude any group of citizens of this Nation, whether they be farmers or others, from associating themselves together voluntarily in an effort to improve their mutual social and economic conditions so long as the action of such an organized group is not assisted or accelerated by law or subsidy in achieving the desired goal at the expense of some other citizen or group of citizens.

It is my belief that any organized group of citizens engaged in carrying on any legitimate business should be chartered by the State or Federal Government, thereby entitling them to receive all the benefits provided by law and generally accorded to any other similar group or organization engaged in carrying on a like activity. I believe further that any organization receiving protection or benefits through a charter issued by the State or Federal Government should be required to assume the corresponding responsibilities and liabilities that are necessary and justifiably in keeping with the benefits and protections granted in the charter by the Government. Inasmuch as existing laws afford various kinds of protection and immunity to stockholders in business corporations, so should the Government provide the same protection to stockholders or members of any organized and chartered cooperative group. In return for these federally granted favors, cooperatives, as well as their individual members, should be required to bear certain responsibilities that are in keeping with the favors granted them. I am opposed, generally, to any measure or practice that results in the granting of special privileges by the Federal Government to any person or group of persons, if the same privileges cannot be granted to any or all other citizens.

Most States and the Government of the United States now have laws that provide for granting of charters to organized groups of farmers engaged in business activities pertinent to the production of new agricultural wealth in the form of the products they raise. Generally these laws were adequate and reasonable when they were passed, and in actual practice usually they imposed no inequities on other persons or organizations. The beneficiaries of these laws were real farmers who made their livelihood from the land and associated themselves together for the purposes of shipping, transporting, handling, and marketing their agricultural products, or for the purchasing of supplies necessary in the production of these agricultural products. Such cooperative associations transacted most of their business with members and all savings or profits earned through the efforts of the association itself were passed back to the individual members as dividends. These associations were properly known as nonprofit associations because actually they did not retain the profits in the association as such. Even after Federal income taxes became such a large cost factor in business generally, these farmer-owned nonprofit associations were granted Federal income-tax exemptions, because it was assumed that the individual members of such an association would show on their individual income-tax returns the savings or profits received from the association income and thus the profits from such organized business activities would make their proportionate contribution to Federal income taxes through the tax return of the individual farmers.

Along with the many changes and complications which have arisen in recent years in the business life of individuals and corporations, so have many changes arisen with respect to the objectives of cooperative associations and in their operating practices, as well as in the make-up of the membership itself. It is with respect to these changed conditions that the revision of the present laws governing cooperatives is desirable. An example of some of these changed conditions is seen in an effort to understand the complex definition that must be given to the term "farmer." A few years ago any sixth-grade school child could explain the meaning of the word "farmer," but now the term "farmer" in its broadest meaning has become so complicated and the occupation of farming has been so invaded by people from the professional fields that the term "farmer" now is almost undefinable. One generally accepted definition of a farmer would include a millionaire New York businessman who owns a farm in the heart of a Texas oil field, and who carries on his farming operations merely as a hobby. Under existing laws governing the operations of cooperatives this farmer is entitled to the benefits originally intended for persons who actually produce agricultural products through their own efforts and who depend on this production for their economic livelihood. Pioneers in the development of the cooperative movement and the laws that subsequently were passed to further the movement carefully provided that all cooperatives receiving benefits under State and Federal statutes should be owned and controlled by the farmers themselves. Under the present conditions it is not uncommon to find the directorate of a chartered cooperative association comprised of such professional people as doctors, merchants, bankers, and even employees of State or Federal Governments. Oftentimes such professional people own farms on which they "lose" a considerable portion of their incomes in the form of operating expenses. They thus avoid the payment of income taxes justly due the Government. These professional people are not the only owners of rural property who have taken advantage of privileges granted under cooperative laws to avoid the just payment of income taxes. The theory that the payment of income taxes on profits realized through a cooperative is double taxation, when such income items are reflected again in the farmer member's personal income tax returns, loses much of its persuasiveness when one realizes that in recent years actual farmers have become expert at keeping their farm accounts in such a manner as to show as repairs or operating expenses many items of cost that in fact represent capital investments in permanent improvements. These conditions arise because of loopholes in existing laws, and represent losses in tax revenue to the Government and in turn result in increasing unfairly the tax burden on other citizens who may not be in a position to take advantage of such evasions. Such inequities should be corrected through revision of those laws governing the operations of farmer cooperative associations.

Many of the great leaders in the development of the cooperative movement in America saw in it the vehicle to be used in successfully combating the development of great monopolistic organizations. It was not expected that farmer cooperatives themselves might combine and themselves be guilty of becoming monopolistic in their operations. Yet, today, some of our largest monopolies operate under the powers granted by the Federal Government to cooperative associations. Oftentimes in such cases the operations of these giant organizations are so far removed from the individual farmer member that he has little or no real or personal interest in them.

These large cooperatives usually are run by a paid manager who, theoretically at least, takes orders on matters of policy from a board of directors. In practice, the professional manager often becomes a dictator in his own right and exercises the utmost control over the directors and ultimately the members. Usually these managers are well educated and well trained in business methods and are clever, capable, ambitious men who covet a successful name for themselves, and naturally desire to increase the reward from their efforts. It is to their best interests to enlarge the associations' operations and to expand its physical properties. Our present cooperative laws provide a splendid opportunity for this sort of growth and development by permitting a cooperative to issue, for all practical purposes, an unlimited amount of preferred stock as dividends to its members in lieu of cash dividends. This practice enables the cooperative association to retain in the business its earnings to be used for capital expenditures or other purposes and at the same time receive exemption from the payment of Federal income taxes on these earnings. This practice might not be so inequitable except for the fact that individual members of the association who receive these preferred stock dividends are not required to list such dividends on their personal income-tax returns. This is due to the fact that preferred stock of cooperative associations is merely a promise to pay at some unspecified time a certain amount of money, if and when the association is financially able to do so and provided further that the board of directors in their discretion decide that such payment shall be made. It is not difficult to understand that preferred stock of a cooperative that issues an unlimited amount of stock certificates without any regard to the true value of the stock and with no examination by the Securities Exchange Commission or even the stockholders themselves, usually is worthless paper, and should not be considered as income in the personal income-tax return of the holder of such stock. By the same reasoning, however, it is difficult to see the justice in permitting a cooperative association to retain in its treasury its earnings, income tax free, under the guise that it has been paid back to its members in the form of preferred stock.

In summary, let me emphasize that there is a need for the revision of our State and Federal laws governing cooperative association to the end that:

The language and phraseology of laws governing cooperative associations be changed so as to no longer require that members and directors of cooperatives be farmers but that any person meeting the full requirements for citizenship in the United States be eligible to membership in a cooperative and permitted to serve as a director when duly elected by the members.

The Congress of the United States should take the initiative in designating a term such as "profits," "savings," or some other suitable one, that for the purpose of fixing income-tax assessments under Federal laws shall represent the difference between income and expenses of a cooperative association.

The Congress of the United States should enact laws that require cooperative associations operating under a charter granted by the Government to pay the same taxes as are exacted from any other person, firm, or corporation engaged in a like or similar business activity.

Cooperative associations operating under a charter granted by State or Federal Government and issuing preferred stock as dividends in lieu of monetary returns should be limited in the amount of preferred stock issued to an amount in keeping with a fixed ratio of such stock to the net worth of the cooperative, and the practice of such cooperative associations with respect to issuance of preferred stock should be subject to review by the Securities and Exchange Commission, or the directors of the cooperative association should be required by law to make a report to the United States Treasury annually setting forth the names of the recipients of preferred stock and the respective amounts of stock issued. The Federal Government should amend the present income tax laws

so that it becomes mandatory that anyone receiving preferred stock dividends from a cooperative association whose operations provide for its issuing an unlimited amount of stock and not subject to review by the Securities and Exchange Commission shall list for income tax purposes such preferred stock certificates as income on their personal income tax returns.

Federal laws should be enacted that will provide for the Attorney General or some other proper Federal agency to investigate charges of monopolistic tendencies and practices on the part of cooperative associations and to provide suitable penalties for violation of antitrust laws, in case such penalties are not already provided for in existing statutes to the end that monopolies among cooperatives shall be dealt with and assessed penalties on the same basis as any other monopolistic organization that violates the laws of the land.

These statements outline the most significant changes that are needed at this time in the laws governing cooperative associations in order to correct the inequities now receiving so much attention from cooperative groups and those opposed to cooperatives and the public in general.

The Work of Congress

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. LECOMPTE. Mr. Speaker, as the New Year begins and the second session of the Eightieth Congress convenes Members of Congress would do well to scrutinize with care the work of the first session and appraise its accomplishments. Reading editorials in newspapers and magazines gives us a very fair picture of the view taken of our work by the country as a whole; and in this connection, under leave to extend my remarks, I include a fine editorial entitled "The Work of Congress" that appeared in the January 2, 1948, issue of the Ottumwa (Iowa) Daily Courier:

THE WORK OF CONGRESS

Political party policy is established in two ways—by the platform adopted by the quadriennial national convention and during the intervals between conventions by the records of the party's elected public officials.

Carroll Reece, chairman of the Republican National Committee, points this out in a letter today to 17,500 party officials and leaders throughout the country.

Probably the most important single factor in the determination of Republican success or failure this year will be the record of the Republican Congress.

That Congress made a brilliant record during its first session which convened a year ago. It kept every promise its Members made to the people during the 1946 campaign with the exception of a reduction in withholding and other income taxes. It was prevented from keeping its promise of tax relief by an unprecedented use of the Presidential veto power.

During the special session recently ended, despite handicaps imposed when domestic politics was injected into the European relief emergency, the Republican Congress made a record equally satisfactory to the American people.

There is no reason to doubt that the record of this Congress during its second regular session, which convenes January 6, will be in harmony with that established during the first regular and special sessions.

Members of the Republican majorities in the Senate and House have proved that they are fully aware of the responsibilities imposed on them by the fact that they control the most powerful legislative body in the world.

California Antisegregation Bill

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. SHEPPARD. Mr. Speaker and Members of the Congress, it gives me pleasure to present for printing in the CONGRESSIONAL RECORD an editorial by Mr. Eugene Nogueras, publisher, El Sol, a Spanish-language weekly printed in San Bernardino, Calif. This editorial received national recognition and award by the Common Council for American Unity. It follows:

With the signing of the antisegregation bill, Gov. Earl Warren has let the rest of the Nation know—especially those States where an FEPC is not operating—that public schools are truly public schools and not centers for the exclusive use of this or that group of citizens.

The act of the government as symbolized by Governor Warren brings to light the fact that something had to be done to correct constitutional abuses to citizens and residents that in the past, and up to this very moment, were and are segregated by reason of their nationality or their country of birth. The fact is that in our so-called civilized State the Mexican-American children are sent to special schools in their own neighborhoods commonly designated as "Mexican schools." How stupid to refer to a public school in California as a "Mexican school" when it should be of common knowledge that Mexican schools are functioning in Mexico.

The acceptance by Governor Warren of legislation concerning this vital problem indicates that the so-called dominant group have at last come to understand that the correct way of learning to live in a truly democratic society is by demonstrating to our children—our youth—that the act of being born is a mere incident, not punishable by the degradation of one citizen as against another. It is in the schools where customs and social habits are formed. It is in such places in civilized nations where one should start learning to respect the dignity of man. Perhaps when the future society accepts the desired ways in a nonsegregated school it shall understand that, also, in the social and the economic aspects men shall be appreciated by their moral, social, and intellectual contributions to that society and not as of today by appearances, that is the bark, the epidermis.

If my brother is unworthy and sins against society, my brother should be punished according to his acts, but if my brother is a decent individual, a respected and respectable citizen, it is criminal to abuse him because he is my brother and not a member of the privileged class that believes itself endowed with the power to direct and dominate our lives. He who punishes another man only because he believes that he has been differently conceived is a fool that has not learned that man is born not of his own choosing.

Governor Warren has only commenced to draw the first lines of the beautiful picture of true democracy with the signing of the bill that will eliminate segregated schools in California. May his example be emulated by other States of the Union where still is being practiced the archaic system of castes in our public schools.

Why Not European Bonds?

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. WEICHEL. Mr. Speaker, there are always those who are willing to help others but not with their own resources. This is especially true of those who would give away America. However, one's test of charity is giving of his own resources which could be accomplished by the private purchase of bonds. The matter is most timely, and I want to include the following very fine editorial of Spencer Canary, editor, Sentinel-Tribune, Bowling Green, Ohio:

WHY NOT EUROPEAN BONDS?

If Congress finds it economically unwise for the United States to adopt President Truman's plea of financing the Marshall plan for aiding Europe to recover, it might consider letting these countries issue long-time bonds, whose ultimate payment would be guaranteed by the United States.

The President suggests a 4-year program involving an expenditure of $17,000,000,000. The details are so many that it is estimated it would take 2 hours to deliver it at an ordinary speaking rate; and, of course, it will take many more hours for Congress to study and digest it. Congress is likely to refuse to commit America to 4 years of definite appropriations, for its first duty is to our people who elect members as our representatives. What they decide after the first of the year will bind all Americans who live during the period adopted; and their decision will affect future generations.

There are three reasons for our helping to rehabilitate war-torn Europe. These are peace, humanity, and future commercial trade. The first will have the most influence on judgments. If fair prosperity may be restored in Europe, war is less likely to occur; and those countries are certain to be moral forces in denouncing it; and, if it should be forced by Russia, they would be our allies instead of the Soviet's.

The call of humanity is always strong in the American breast and will be a factor.

To restore these countries to self-sufficiency would stimulate world trade. For Americans who export and their employees this prospect will be a stimulating influence for the present; but the specter of competition from these nations, when they shall have recovered, will dampen enthusiasm.

But for our people as a whole it is probable they would consider an investment of seventeen billion as a guarantee against war a reasonable premium to pay for insurance. However, Marshall himself and other leaders do not think his plan would be such insurance. They only think it would likely so to be. But it still would be a gamble.

One of the biggest needs of these countries is American dollars. If they were allowed to float low-interest rate bonds in America partly guaranteed by our Government, in order to get dollars, many Americans would buy them. Any sale of such should be limited

as to the amount to be bought by any single individual so as to spread their purchase over the country; and they should be nonnegotiable for a few years except in case of death so that they might not become a target for speculation and tie up funds needed for our own expansion of industry. It is probable that Americans, swayed by various considerations, would be ready to take their chances on ultimately getting all their money back, if the Government guaranteed half of it.

If you thought you could buy world peace and at the same time help humanity, you would chance losing half of $50 or $100 or much larger amounts, wouldn't you? To raise 17 billions by our 142,000,000 people would take an average of about $120 each or $300 per family.

The issue of such bonds should be limited for each country on the basis of a reasonable expectation that they would be paid by each country issuing them. This reasonable expectation should be a little more liberal than the directors of the International Bank fund are now willing to act upon, for taking a chance of repayment is an essence of the proposal.

However, a country would be less likely to repudiate its bonds of many issues than to try to twist out of paying Uncle Sam a big lump sum.

The bonds should be issued from year to year for the 4 years and a promise to pay through a series of years be made, just as municipal bonds are. They should not all fall due on the same date, as such payments in a lump might cripple a government in the future.

Of course, the United States would have to guard against counterfeiting or issues in excess of the amounts authorized by Congress. This probably would necessitate our Government endorsing and affixing its seal on each bond.

Flotation of the bonds could be through all banks with a small charge for doing so and without compulsion to handle them.

To Promote the Marshall Plan

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. KEATING. Mr. Speaker, friend and foe alike of the European recovery program, as well as the still open-minded, though for differing reasons, have hailed the decision of the administration not to insist that this Congress take the obviously improper step of attempting, futile gesture though it might be, to bind future Congresses to expend a specific amount in dollars over a 4-year period. Such a course would lead almost inevitably to misunderstanding at home and abroad, accompanied by charges of misrepresentation from both quarters. That there is now unanimity in this respect is confirmation of the statements of those who counsel careful study and thoughtful consideration of the devious ramifications of this many-sided problem.

Mr. Walter Lippmann, in an article which, under leave to extend my remarks, is set forth below, has called attention to another decision which should be made before we proceed further. Upon the identity of the top personnel selected to administer foreign aid may depend the decision of some Members whether to support or reject the measure. It is more than a mere detail. It is basic and fundamental. A wise decision on this issue may spell victory or defeat for the entire program. It is altogether fitting, therefore, that we know in advance as much as possible on this important phase of the problem before we are called upon to make a final decision.

Since the program was first proposed I have urged the impropriety, indeed probable illegality, of any attempt to usurp the functions of the Eighty-first and Eighty-second Congresses. I have also favored the general principles of the Herter bill, and share emphatically the views of its author, my distinguished colleague from Massachusetts, that a separate bipartisan agency should not only administer any future programs of overseas assistance, but also should take over at an early date the implementation of our already extensive commitments.

Also, I shall continue to press for the enactment of legislation to require the disclosure by our Government of the identity of each national of recipient countries known to have property or assets in the United States, together with the character, location, and value, if determinable, of such property or assets, to the end that satisfactory arrangements may be made to guarantee that such assets be held by the United States as security against any loans or credits made by this country to the nations to which these foreign nationals owe allegiance.

Upon the outcome of these and like controversial features will, in considerable measure, depend the extent of support accorded to the program itself.

Mr. Lippmann's valuable contribution to our deliberations follows:

TO PROMOTE THE MARSHALL PLAN

(By Walter Lippmann)

The agreement between Mr. VANDENBERG and Mr. Lovett to delete the total figure of 17 billions is the first of several practical steps that need to be taken before the Marshall plan will be ready for general debate in Congress. It was a necessary first step. For there was no point in asking Congress to accept a figure which is at best only an educated guess as to what may be needed for a period of more than 4 years.

The naming of the figure in the authorization bill would not have meant that Congress was committed to appropriate that sum, and no European government would have been justified in regarding the figure as an American commitment which it could count upon and take for granted in its calculations. But the American public and the European public would have been misled; they would not have understood easily why Congress named the definite figure 17 billions in a law if that huge sum of money was not in fact promised and made available.

A second step which might now be taken is the negotiation of an agreement on the agency which is to administer the European recovery program. In fact, there is much to be said for separating the bill which creates the agency from the bill which contains the authorization of money and defines the standards which are to govern the use of it. If this were done, the bill for the agency could be reported to Congress and passed before the debates on the program itself began.

There are many practical advantages in this procedure. The greatest perhaps is that Congress and the people would know quickly who was actually going to handle the money and the whole complicated operation. If they have confidence in the men who are to operate the program, they will have much greater confidence in the figures.

For these men, selected by agreement among the leaders of Congress and the administration, will have to be men of eminence and experience. The fact that these men, who will be bearing the responsibility, vouch for the figures will be a better test of the soundness of the figures than any amount of prolonged, abstruse, and abstract statistical calculation. Most of the Congressmen who have to vote will be in the position of a man who wishes to invest his savings prudently and profitably. In deciding where to invest he cannot really make up his mind by studying the financial prospectuses. He makes up his mind by looking at the names and records of the directors and managers of the corporation.

Moreover, in this way an agreement on the agency should be easier to reach. There are some abstract differences in principle between the State Department plan, the Herter plan, the Bureau of the Budget plan, and one or two other plans that will be proposed. But there is no point in debating these differences in the abstract, no point in getting into a wrangle about the blueprints of the organization. Once there is the basic agreement on the men who are to administer the business, the heat will go out of the argument about principles. The men will obviously have to be men who are trusted by the President, by Secretary Marshall, and by Congress. It will be these men, not the blueprints of organization, who will see to it that the program is consistent with our foreign policy and with the intent of Congress.

By giving priority to the agency the congressional committees will be doing what Congress, in its vote for the interim-aid bill, has already suggested. Section 14 of that law says that "the functions, applicable records, and funds provided for the purpose of carrying out this act shall be transferred to the administration of any organization for general foreign aid which Congress may provide."

The interim-aid bill provided funds which were to be used up by March 31. No one thought when that bill was passed, and few think now, that the general foreign-aid program will have been adopted and the funds appropriated by March 31.

Therefore, it is a fair conclusion that Congress contemplated the creation of a new administrative organization for foreign aid early in this session.

There are other advantages to be gained by creating that agency first, and as soon as agreement can be reached on the form of organization and the men who are to be appointed. One is that Congress can then demonstrate concretely its general approval of the idea, and yet not commit itself to the substance of the program until it has had a full opportunity to debate it. This will have a salutary effect in Europe at a time when the strain of the winter and the tensions created by the debates here will be serious.

The enactment of a short bill and the naming of the men will prove at once not only in London, Paris, and Rome, but in Moscow, Prague, and Warsaw that Congress, while it means to deliberate and is no rubber stamp for the administration, does in fact mean business.

Stalin will understand it. For Stalin, we may recall, refused to believe that the British and Americans really meant to invade the continent until Roosevelt and Churchill had appointed a supreme commander. If in a few weeks' time Congress creates the agency for the Marshall plan, everyone will understand that there is going to be a Marshall plan, however much delay there may be over the details of the program.

Another great advantage to be gained is that the European countries will have no further reason for delay in creating a European organization to police the commitments they made at Paris. The Marshall plan requires European cooperation, and no more time should be lost in organizing that cooperation. The European countries by acting together while Congress is discussing the program will be showing that the program is in fact what it professes to be.

Our people will be much more disposed to contribute the large sums which the plan calls for if they are convinced that they are contributing to the unification of Europe. They will not take kindly to this whole project if they are left with the impression that all there is to the plan is 16 separate shopping lists put together in one envelope.

Therefore, it is imperative that the European countries, led by Britain and France, act as soon as possible to prove that they are in fact cooperating. They will have no excuse for not acting promptly if Congress adopts quickly a law to create the American agency.

Bill Introduced To Give Reserve Components of the Armed Forces the Same Privileges as Regular Personnel

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. SMATHERS. Mr. Speaker, I have today introduced a bill which if passed by the Congress will, I think, do much to help preserve our country and its democratic institutions. Twelve million young men were actively engaged in the last war. Each one of them was trained to do one or more jobs as a part of a fighting unit. The Government of the United States expended much time and tremendous sums of money in training them. Many of those 12,000,000 men were in combat with the enemy. Those who survived gained an experience that is an invaluable one—one which cannot be bought nor taught.

Now that the ambitions and true intentions of the leaders of the Soviet Union and the Communist governments have been unmasked for all the world to see, we know that they constitute a threat to the United States and the peace of the world. Prudence demands we prepare to defend ourselves militarily as well as politically. In view of that fact is it not logical that we should avail ourselves of the experience and training of those 12,000,000 veterans who comprised our defense in the recent world war? An attempt to utilize them has been made through the various Reserve programs. However, none of those Reserve programs has thus far been successful, and the principal obstacle has been this: Veterans in the Reserve who went on training for less than 30 days were not granted the protection in event of injury that has been given to enlisted and officer personnel of the Regular Army, Navy, Air Forces, Marine Corps, and Coast Guard. Airplanes, machine guns, grenades, and all weapons of warfare are dangerous instrumentalities. They maim and kill just as easily whether Congress has declared war or not. Consequently most of the veterans have been reluctant to join Reserve organizations and subject themselves to the hazards of training without adequate protection for either themselves or their families.

To overcome this obstacle I have introduced this bill which provides in substance that all officer and enlisted personnel of the Reserve components of the Army, Navy, Air Forces, Marine Corps, and Coast Guard, including the National Guard, who might suffer death or disability in line of duty from an injury received while performing active-duty training, with or without pay, shall be entitled to receive the same benefits, compensations, retirement pay, and commissary and post-exchange privileges as are now provided for Regular officers and enlisted men of the armed services.

There is much talk in the Congress about the universal military-training bill. It has been estimated that if it becomes law it will cost the Government over $2,000,000,000 annually and take 14 months to organize and get under way. Thereafter, it will take considerable time to train the new men in the ways of warfare. Universal military training is therefore still a long way away.

In my opinion, it is the height of folly to waste the great reservoir of experience and training which we now have at hand in the form of veterans of World Wars I and II. It is a case of "not seeing the forest because of the trees." Undoubtedly, in the event of conflict it would be these veterans who would be the instructors and leaders of the young men proposed to be trained under the universal military-training program. Should not then all veterans be given every encouragement to immediately join up in the various Reserve organizations of the branches of our armed forces? This bill, I think, will go a long way in providing that inducement for them and thereby immediately strengthen our national defense at minimum expense. It is my hope that the Members of Congress who talk so much about national defense will join in pushing this bill through the Congress.

The President's Message

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. McGARVEY. Mr. Speaker, if President Truman can fulfill all the campaign promises made in his state of the Union address and still balance the budget—and it is incredible that he would propose a program without believing that it could be made effective—Congress should adjourn immediately after passing a resolution vesting the President with all legislative and administrative powers and go home to campaign for the 1948 elections. A great deal of time and hard work will be needed to defeat the man who can accomplish the things which Mr. Truman evidently thinks can be done without plunging the Nation into bankruptcy.

The Role of Government in Management-Labor Relations

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the opening address which I delivered at the round-table discussion on the subject The Role of Government in Management-Labor Relations, at the session of the annual meeting of the American Political Science Association held at the Statler Hotel, Washington, D. C., December 29, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF GOVERNMENT IN MANAGEMENT-LABOR RELATIONS

(The opening address delivered by Senator ELBERT D. THOMAS, Democrat, of Utah, at the round-table discussion on the subject The Role of Government in Management-Labor Relations at the session of the annual meeting of the American Political Science Association, held at the Statler Hotel, Washington, D. C., December 29, 1947 at 2 p. m. Those participating in the round table with Senator THOMAS were Miss Frances Perkins, member of the United States Civil Service Commission; Senator JOSEPH H. BALL, Republican, of Minnesota; Mr. Cyrus Ching, Director of Conciliation of the United States Conciliation Service; Dr. Paul F. Douglas, professor of political science of the University of Chicago; and Dr. Dexter Keezer. Dr. William M. Leiserson, former member of the National Labor Relations Board, acted as chairman.)

I have no desire to continue the months of debate that we passed through in the last few years, at this Round Table. My aim is merely to present the fundamentals behind the stand I have taken in those debates.

A guaranty of labor technique or management technique in law will not make for industrial peace. The acme of decent industry-labor relations in the United States, and the one on which all industry-labor relations should rest, came out of the pledge agreed upon unanimously by both labor and management at the Industry-Labor Conference held in Washington in 1941. Those representatives pledged:

1. There shall be no strikes or lock-outs.
2. All disputes shall be settled by peaceful means.
3. The President shall set up a proper board to handle disputes.

We fell from this high plane of achievement through congressional action, by (1) the Smith-Connally Act; (2) the Portal-to-Portal-Pay Act; and (3) the Taft-Hartley Act. Also, it should never be forgotten that even before the above-mentioned agreement was reached, the industry-labor conference was attacked on the floor of the Senate. While the attack was partisan, it was, nevertheless, encouraged by those elements in our country who do not want to see industry-labor

peace. The President was charged with having no authority for calling the conference. Then too, no sooner was the War Labor Board set up and started functioning than its decisions, following the good American habit, became precedents for other decisions and argument on the basis of standing on decisions turned the War Labor Board into an institution of law.

My conception of the meaning of liberty in our industry-labor relations may seem very trite. But to me there can be no liberty without respect for others. There can be no freedom without respect for the public welfare. There are no rights unless those rights are linked with duties and responsibilities. No better definition can be given for liberty and for freedom, in a political sense or in a labor-management sense, than the one expressed so often by Jefferson—that one can be free to do only so long as that which he does does not interfere with another. There are no absolutes in freedom.

We have had about 50 years in the development of the freeman in industry under Supreme Court definition and the expansion of legal rights in the growth and development of those definitions. Before that time man's right to seek freedom through organization was interpreted in law as conspiracy. It was in a Utah case where man's freedom in the modern industrial sense had its start. There had been a great disaster in one of our coal mines and scores of men lost their lives. This made our people thoughtful about conditions under which those men worked. The whole country had passed through troubles of the depression of the nineties, the labor troubles incident to that depression, and the political reactions to both. At that time there dawned in the minds of certain men that tired miners, overworked miners, were a menace to their fellows, and, therefore, to society. The 8-hour law in the mines was the result.

However, there was the sordid aspect to this great reform. The workingman was charged with advantage taking and the industry was charged with attempting to exploit and overwork laborers. But the idealist accepted the thesis I have advanced, and when the law was challenged in the courts the opposers to the law also took the idealistic approach. Suit was brought in the name of one of the miners who said he had a right to work as long as he wanted to work, that depriving him of working 12 hours a day was a destruction of his liberty and an infringement of freedom of contract. Strange as it may seem, but nevertheless it was true, and it occurred a few months before Mr. Dooley made his profound pronouncement that he did not know whether the Constitution followed the flag or not, but he was sure the Supreme Court followed the election returns. The Court denied that there was any freedom for the employee because it said the "proprietors lay down the rules and the laborers are practically constrained to obey them." (*Holden* v. *Hardy* (169 U. S. 363, 397).)

This case is important in at least three ways. First, the State stepped in showing a public interest. Second, the court denied that there was any freedom for the worker under the condition he had to work because the employer prescribed the condition and he had to submit. Therefore, there was no freedom of contract because the employer had the absolute right to hire and fire. And third, it showed definitely that if the individual employee was to enjoy any freedom he must gain it alining himself with other employees in the seeking, by united action, of a right for all to work at the pleasure of all as expressed by the majority of the group.

Note how a later interpreter of our law in the Supreme Court followed this reasoning. In sustaining the constitutionality of the National Labor Relations Act, the Supreme Court said, "a single employee was helpless in dealing with an employer; * * * that union was essential to give laborers opportunity to deal on an equality with their employer." (*National Labor Relations Board* v. *Jones and Laughlin Steel Corporation* (301 U. S. 1, 33).) Thus, as a new freedom was born through the act of the Utah Legislature and the decision of the Supreme Court just before the turn of the century, so it was confirmed by the Supreme Court of the United States in the middle of the last decade and the theory of liberty in industry-labor relations, as then defined, had its birth. The Supreme Court sustained the new theory of collective bargaining and for 10 years it became the recognized practice of our land.

Another development had taken place. Federal rights in the field of labor had become recognized and the old dictum that manufacturing, mining, and agriculture were of purely local concern ceased to hold. A definition of the public's welfare today in our industry-labor relations is as broad as our Constitution itself. Industry and labor as they affect commerce in the United States must seek their rights under the theory that those rights are of common or national concern.

The theory accepted in the Utah case, that, for the good of the State, the hours of miners' work per day could be limited, has expanded into the theory of the Fair Labor Standards Act. Upon three decisions of the Supreme Court, the one dealing with the Utah case, the National Labor Relations Act, and the Wages and Hours Act, the law of the last 10 years has rested.

The constant agitation on the part of those who have fought labor on the score that labor organizations denied men their freedom of action are using freedom only as a cloak to cover their attempts to destroy freedom and liberty for the working men and women of America. There were attempts to extend the Selective Service Act to force labor to work against its will. There were attempts to use service in the Army for punitive purposes. There were attempts to force the laborer to stay on the job, work where he was told to work. And there were attempts to draft certain fields of labor. But all of these failed, failed primarily because the American people in their judgment and in their thinking saw that, while the State had the inherent right to call men to service in the defense of their country, a right which was developed in law from a mathematical theory that the whole is greater than any of its parts, the State must maintain proper limitations on that right. Therefore, this theory should not be made to apply and the State restrained itself from becoming completely totalitarian and refused to move into the fields of industry and labor.

In the development of freedom and liberty for the laborer, the state built its theory upon the political concept that the majority shall rule. It turned its back upon the notion that liberty and freedom are absolute. The rights of the minority are maintained by a concept of common consent and a recognition of the notion that the minority must be protected. Thus, politically speaking, the genius of the American Government rests not so much upon the fact that the majority rule, as it does upon the fact that the minority shall be respected. The minority maintains its respect, its right, and its freedom by recognizing the right of the majority rather than eternally contesting it. Thus industry and labor both have liberty and freedom only so far as they are willing to submit to the will of the majority in the protection of and the working out of that liberty and freedom.

To assume that there is such a thing as an absolute right to strike would likely destroy all decent relationships between employees and industry, and probably would result in the destruction of the basic elements which hold society itself together. No law can provide any right at all unless it is linked up with certain duties and responsibilities.

American democracy, American freedom, and American liberty all center in a single concept—individualism with a social conscience and a sense of responsibility. When American democracy works and reaches its conclusions, it is understood by all that that which is done is done by common consent for the public good.

My concern is that by the whittling away of certain broad rights gained and principles laid down labor will lose its fundamental freedom and liberty. That, to me, is the evil behind one of the last Supreme Court decisions (*James F. Morris* v. *Wm. R. McComb*, No. 7, October 1947), the passage of the Taft-Hartley Act, and the amendments to the Fair Labor Standards Act, the passage of the portal-to-portal amendments. Labor's losses cannot be estimated at this time because a whittling of any foundation stone is not apparent at first, but let that which has been started in the last 2 years continue, and the great gains made for labor in the last 10 years will be nullified. I do not want to be accused of striking at the motives of anyone. Excesses and abuses generally follow in the wake of any new governmental habit. But those excesses and abuses should be corrected in such a way that the correction shall not retard or break down the liberties and freedoms gained.

Altgeld Centenary Banquet

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1948

Mr. LUCAS. Mr. President, on December 30, 1947, there was held in the city of Chicago a memorial meeting of representative citizens honoring the one hundredth anniversary of the birth of Peter Altgeld, one of the most forward-looking and progressive Governor Illinois or any other State of the Union has produced. A very memorable and extraordinarily illuminating address was delivered on that occasion by His Eminence Samuel Cardinal Stritch, of Chicago. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Archbishop Spalding, at the Altgeld memorial meeting, held on April 20, 1902, said: "In assembling to honor the memory of Governor Altgeld, to profess our faith in his personal worth, and to value what he has said and done, we honor ourselves, for there is no better proof of noble nature than appreciativeness of noble men." This evening we are gathered publicly to pay tribute to the name of Altgeld, because we are convinced that the struggle for what is right and good, even though success is not apparent, is the way of genuine progress. We honor those who labor and suffer for justice's sake, who are strong enough unselfishly to strive to make our democracy more and more real, because there is in us the conviction that

man is capable of achieving what is noble and good and is not hopelessly enchained by passion and pride and the weakness of shameful compromise. The defeatist who has no faith in the best that is in man, the trafficker in human weaknesses, the exploiter who plunders his fellowmen for ugly greed—such men would not be comfortable at this gathering. We are idealists, who dare to dream dreams of a better day, and we are sturdy realists who are willing to try to make these dreams come true. If we admire the noble in Altgeld, it is because we love the noble and are brave enough to seek it. Altgeld is not a museum piece from the pages of our history; his spirit calls to us and lives in us.

The man that we honor tonight was in everything, above all else, a true American. Born in Europe, he came here as a boy and from boyhood loved with an almost romantic love our sublime political ideals. He had very little formal education. The university in which he learned and grew was American life, with its hopes and its constant pioneering to expand western culture. A farmer boy, a soldier, a lawyer, a successful businessman, and a public servant, he was never a scholar, but his keen direct mind did cull from his opportunities and experience wisdom, the wisdom which creates personal greatness. Our country was growing and expanding in his times. The pioneer was not engaged so much in taming the wilderness as in trying to make democracy work as it grew. Altgeld did not have the paralyzing illusion that with the ratification of the Constitution, American ideals suddenly became a full reality. He understood that genuine democracy is a living thing, which constantly must struggle in changing environments and grow and expand. As changes come in our society, there come problems, which must be faced and solved in the light of our fundamental democratic principles. At such times there always will be some who will try in narrowness of mind to lead us away from our fundamental principles and some who will try to interpret them for selfish or group advantages and not for the common good. The hardest thing in our democracy is to plumb its depths and discover how to fit into it a right solution of problems which come with changes in society. It may be said that Altgeld's memory is cherished and honored because he was able to see in the sound principles of genuine democracy a real solution for the problems of his generation.

It was his lot to live at a time when our industry was still in the pioneering stage. Strong men were building our great factories, our businesses, and our system of transportation. Cities were growing. Our population was increasing, particularly by the addition of waves of immigrants, who had come to our shores to find happiness in our free institutions. New problems of human relations in our democracy had appeared. Everybody wanted to solve these problems in an American way. Unfortunately, there was the danger of an industrial feudalism. Some insisted so strongly on the inviolability of the individual, imbedded in our fundamental law, that public good in their minds was identified with an economic condition in which there would be barons and serfs. This was not a deliberate thought in them, but something which grew out of the confusion which had come in trying to Americanize large industry. Others there were who in sheer ignorance of our tradition saw a solution of the problem in the importation of Marxian and revolutionary doctrines. There were contradictions in the minds of many, which endangered the very preservation of our political ideals. The great masses of people longed only to be American freemen. They needed a voice, a voice which would tell them at once the danger of feudalism and the sorry aberrations of un-American revolutionaries. This voice had to point out that safe within our Constitution there was a right way of solving the problems and enriching our political inheritance. Altgeld was that voice. Despite the bitter accusations heaped on him by some of his contemporaries, he had no sympathy with the revolutionaries. He was distinctly a figure in the American culture. He envisioned harmony in our economic life, in which all would remember the high social function of production and work and would unselfishly seek the common good. If at times he was the defender of the weak and the victims of injustice, he never forgot the high social function of the economically strong. He was not a perfect man. In his choice of means to power, he was at times very weak. He was not always right, but particularly when he reached the maturity of his powers, his honesty and sincerity made him really a great man. When he championed seemingly lost causes, he was at his best, and then he revealed a humility and unselfishness and high disinterestedness which we cherish in the memory of him. In his speeches and addresses there is a charming fervidness and a logic which, were it not for his personal appearance and defects in education, might have made him a great orator. The fact in his life which stands out is that he always sought an American solution of American problems. We must not measure his worth by the success which crowned his efforts. In many things he saw clearer and further than his generation. We honor him because in public life he was a noble man, a great American.

In our own day, we face great changes. Something like the beginning of a new era, with the disappearance of an old one, is taking place about us. Problems and problems challenge us. Our great work is to find a solution of these problems without the surrender of our democratic inheritance, and in our day to widen the reaches of our free institutions and enrich the political inheritance of future generations. There are those who will not recognize the changes, or, recognizing them, think that the solution of them is to be found in turning back the pages of history. And there are those who insult us by daring to offer us a new political philosophy. Deep down in our American tradition it is written that government is for the prosperity of all in the common weal. We recognize that there are rights which are above and beyond the rights given in our human law, rights with which the Creator endowed man. These rights are imbedded in a law which the Creator gave, a law which speaks of justice and charity. We cannot be great defenders of our American tradition unless we recognize that immutable law of the Creator—the moral law. Religion must inspire us and help us to understand that the greatness of our country must not be found in mere material things, but in the greatness of its citizens. We need great men, men in whom the noble is refulgent, men who are strong enough to prize virtue above goods, men who are clear-minded enough to think out the solution of our problems in the enrichment of our own American tradition, men who do not forget our past and yet courageously face the changes of the present, men who unselfishly, even at the cost of failure, work for the common good, for a better and greater American democracy. We are honoring the name and the memory of Altgeld, because we want our country to be great in the virtue and fortitude and clear-headedness of its leaders and citizens.

Why Do We Stay in New England?

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. LODGE. Mr. President, in a recent issue of the Boston Herald there were printed excerpts from an address by Mr. Edward Weeks, the editor of the Atlantic Monthly. He set forth in a specific and interesting fashion the many advantages of life in New England, and mentioned by name a number of prominent citizens of New England who had achieved great success in life. I ask unanimous consent that the article be printed in the appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

WHY DO WE STAY IN NEW ENGLAND?—EDWARD WEEKS GIVES HIS ANSWER

(Excerpts from the talk by Edward Weeks, editor of the Atlantic Monthly, at the Advertising Club of Boston luncheon yesterday)

This fall I did some traveling in October. During the 29 days I was on the jump, I delivered 22 lectures and handled many a question period. But when you return home, no one seems to attach quite as much importance to your words, no one seems to listen to you with the same rapt attention, not even your wife. This results in deflation, and in this low period a man is apt to ask himself—why am I here in New England anyway? And why do I stay?

REDISCOVERS CHARM

The dismay—it is simply a puncture of vanity—lasts about 48 hours. Then you begin to rediscover Boston. You begin with fundamentals. You find that Boston appeals to you because this is where your wife lives. Well, you go down to your office, like Admiral Byrd to the Antarctic, through a frozen landscape. But inside your office nothing is frozen; it is warm, loyal, with an unpretentious air of integrity. There are none of the nervous jitters of New York, nor the annual turnover of personnel; we haven't the tension nor the iron smile of Detroit; what we work with here is neither the burly suspicion of the Middle West nor the glad hand of California. Of course, we don't earn the salaries of Hollywood. We live by something else.

When I go to a Boston restaurant, Malatesta's, Joseph's, or Locke Ober's, I go to enjoy the company and the meal. I know I shall be treated as a friend of the house. I shall not be expected to gape at those who are already there at tables near the entrance. If they are sitting at better tables than I get, my reasoning will be that I should have got there earlier, had I some deep interest in the location of my table. I am not going there hoping to see the Prince of Monaco in disguise or the fifth and newest wife of some well-to-do and famous souse. Neither am I likely to be mistaken by my fellow diners for the public relations man who is getting himself on page one in the latest congressional whoop-te-do.

I walk to work of a morning through the prettiest public park in North America; even if I were riding the Cambridge subway I should not need shin guards and a crash helmet. Within 30 miles of Boston are the

sea, the deep woods, and the open country; wild deer, the otter, the striper, trout, and ducks unlimited; the Gloucester wharves, the Marblehead fleet, Chestnut Street in Salem, Walden Pond, and Hugo's lobsters, Ipswich clams—and plenty of Bisodol. Within 10 miles of the statehouse is the best orchestra in the world; the best hospitals for young or old; the great trees planted by Charles Sargent; the hospitality of Beacon Hill; the eagerness of our great public schools, and the leadership of our great universities.

Men from all over the country prefer to make their bid here—Luckman and Robert Frost, Pinanski and Mullins and Marquand, Tom Pappas and Conant and Compton; Bradley Dewey and Charles Francis Adams, and Mike Kelleher, Lloyd Brace, Rabbi Liebman and you and myself.

Why in New England? Because here, accessible to Europe, with an open hand to Canada, here we stand, as a lighthouse to an anxious continent. "Let your light so shine before men," so runs the ancient saying, "that they may see your good works. * * *" In the light of tomorrow we of New England have to balance our thinking against the motors, the ore, the oil of the wealthier States.

FUTURE IS GREAT

New England has been in the business for going on 400 years, and in that time it has learned to live by the long view. It has populated the West with its younger sons, its capital, and now its industries. But I submit that it has retained a very vigorous heart-beat here at home.

Consider for a moment that $6,000,000,000 question which will be decided in Washington in the immediate future. Shall there be civilian or military control of atomic energy? That is part of the question, and behind it is a greater decision; can we develop atomic energy for peacetime use by private industry with the people as the ultimate beneficiary?

The Nation goes slow on an undertaking as big as that, and during the period of transition, while the research goes forward—I mean the research at MIT and the Harvard labs; while the first benefits find their way into medicine—I mean at the MGH, at the Children's, at the Faulkner, at the Peter Bent Brigham Hospital; while the financial readjustments which may affect every phase of our national life are worked out by our great banks—the First National and the Shawmut—and our insurance companies—the John Hancock and the New England Mutual—keep in mind the words of our most conservative Yankee philosopher, the man who wouldn't leave the White House until he had found that other rubber. "Have faith in Massachusetts."

The National Science Foundation

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address on the subject The National Science Foundation, which I delivered before Pi Gamma Mu, national social-science fraternity, at one of the sessions of the annual meeting of the American Political Science Association, at the Hotel Statler, Washington, D. C., December 30, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few years ago, in the extremity of war, there was created on a bare stretch of land in Utah County of my home State, a steel plant more modern than any in Pennsylvania or Alabama, and affectionately known by those who have spent their lives in the industry as the steel maker's dream.

Inside, it was obvious that the steel maker, when he dreams pleasantly, envisages the reduction of fabulous-sized ingots to thin, smooth plates as a consequence of methodic button pressing. It was a technological marvel to watch the man in his great, roving, overhead cage and to witness his industrial exploits without benefit of tools. Relatively there were few men at work. One could speculate on the number of labor gangs it would have required to pound the hot, dense, converted iron blocks into industrial submission. These men who were there, and who did participate, were past masters of a rather complicated process. Their catlike manipulations were abundant testimony to the product of the engineer's unconfused thinking.

It was wartime; the fact that such a plant would cost millions and millions of dollars was of no consequence. The only question was whether we could produce—and we did. Man had found a way to let machinery do his work abundantly.

Such a fine plant was erected dozens of years before it might have been, and I use the borrowed phrase advisedly, in the course of human events.

In other areas men and women of science meanwhile produced other monsters of engineering, some Frankenstein in their potentialities, some not, in a necessary struggle for national life or death.

Everything done was dictated by science and directed by scientific formulae.

Edison, Morse, Bell, Fulton, Franklin, the Wrights, Baldwin—their words were joined with hard studies of those who understood them. Certainly Tennessee Valley Authorities, and Boulder Dam, and Geneva Steel plants may be erected if a nation has science and money.

During the war, while admitting it could throw flame so many feet for so many seconds with its most modern announced device, the Service actually had a flamethrower with a range several times as long, and with longer burning power. It had the incomparable Norden bomb sight. It had a fantastic floating harbor, and it created the "big inch" pipe line and the "red ball" highway. We heard scattered comments about the Bailey bridge long after it had been in use. Portable ground-strips created air fields on partly imaginary land. "Ducks," "water buffaloes" and other inorganic amphibians took to land or water with like relish. Stories of the *Seraph* and other underwater craft replace the standard sagas of the surface sea.

Science was on the loose. The inventor who could not therefore get someone to back him found that if he could get past the National Inventors Council he could have spent on his gadget more money than he could ever see in a pile.

Our enemies were not idle either. Japan was being unscientific when she failed to recognize her secret telegraph code as probably broken, its details within our knowledge so that we could cover her next chessman before it was played, and, too, in many ways her people were more imitative than inventive, yet Japan did well because of her background of dozen of years of consistent technological advance. As for Germany, except for a costly 2-year's withdrawal of public support for research, and except for throwing out of her borders outstanding Jewish scientists, Germany was scientifically superb during most of the war and, had she been able to produce her V-bombs and other articles which military men invariably call "new stuff," might have turned its conclusion in her favor.

And, of course, everyone stimulates his imagination each to its utmost when we consider the atom bomb.

Science—why even the earth tenements of the Pueblo Indians were applied science. Irrigation as practiced on the Nile was the most beautiful scientific application in agricultural history, or at least many of my own neighbors so believe. The seven wonders of the world include the scientific with the natural. Fire, wool, the use of cow's milk—all were scientific discoveries of a marvelous hour. Science has no known alpha. We are not a hundredth of the way to the omega.

Nor shall we, as a nation, come close to real scientific development unless we now take unusual and abundant steps to encourage the development of science and scientists. If we turn men and women back into the darkness and groping of their own initiative we are lost.

In an unorganized community all men are adversaries at the drop of an insult or the birth of a whim. The last frontier now remaining is, curiously enough, the whole world itself, whose simple frontier assets are the United Nations organization, scattered treaties, and some precepts in international law. Roughly speaking, except for these fragments of world unity, we as a Nation are on our own resources and have no more idea how we are going to fare next decade than had some little country of an earlier era, in stark wonderment of Napoleon's next move.

In this state of affairs we have no choice but to be scientifically as nearly perfect as American ingenuity can provide and money can buy such perfection. That we have active competition on a grand scale is a statement almost too obvious to make.

Moreover, looking at the subject from the standpoint of uniformity of education, it must be recalled that the dean of an outstanding college declared recently that in comparison with the student of agriculture, the student engineer had felt frustrated for 35 years because of the numerous and substantial benefits in favor of the former.

Scholarships for scientists provide, of course, the greater essence of the so-called science bill, or bills, rather. The encouragement of the schoolroom and laboratory, without the growing fear of paying the landlord and meeting the grocer for the common necessaries of life, may spell the difference between the United States as a great and proud nation and a second-rate, groveling and perhaps occupied land area. The dean's complaint today registers as the wishful expression of a quiet thinker. Unanswered, the deficiency will gather tongues to sound into Washington as a great sullen roar. Your scientist does not work 30 hours without food in cheap and bare lodgings as in the success stories of a different age. The houses of magic, such as we have and such as they are, have replaced the garret and the starvation diet. To the extent that they are supposed to serve, they are effective. Indeed, the industrial laboratory of a corporation frequently meets the highest expectation of its owners; new and profitable discoveries; inventions and refinements, for the good of the stockholders—with no objection, of course, to a contribution to public welfare, comfort, and progress, as an incident, if it is a source of convenience and profit to the corporation. It is a mistake to regard worthwhile commercial adaptations as general public assets. It is wrong to consider factory technology as a guaranty of national security.

Knowing these premises, and especially interested during the repeated worry over battle outcomes, many Members of Congress and many dozens of scientists, besides the President of the United States, have been organizing their wits and endeavoring to prove their opinions in order to create a National Science Foundation. Great strides were made during the Seventy-ninth Congress, when divergent interests, divergent ideas, and even diverse and divergent committees were got together and held together through the American process of give and take. At that time I was chairman of the then Military Affairs Committee of the Senate. As such I sponsored the final hearings, in which were merged the interests of all Senate committees having shares of interest in the subject matter. The coup was successful to the point of the Senate's agreeing upon a bill.

We were on the march.

In 1947, in spite of the renascence of the committees under the Reorganization Act and in spite of the further reorganization of both Houses owing to the political change, Congress went a step further. When I say that I introduced S. 525, I do so in all modesty, for S. 525 was about as original as the Ten Commandments would be if I were to publish them in the form of a bill. S. 525 was an accumulation of knowledge upon the subject.

In the same way a variation of S. 525 appeared as S. 526 under the sponsorship of Senator H. ALEXANDER SMITH, of New Jersey, and associates. Senator SMITH'S bill was another and certainly not opposite reflection of the accumulated knowledge upon the subject. This time the subject matter was—and is—before the Committee on Labor and Public Welfare, and as I had been chairman of this committee under its old name, and now am its ranking minority member, I feel at home having this legislation where it now is and should be under the groupings offered by the Reorganization Act.

Our committee agreed on features of the Smith bill and the Thomas bill. We reported the compromise onto the calendar as S. 526, the number of Senator SMITH'S bill; and both Senator SMITH and I, and no one else, personally reported the bill and personally signed the report.

Out of this—for want of a better word I shall call nucleus—was molded a bill on which both the House and Senate could and did agree, a bill which went to the President for signature which was not forthcoming for reasons given in a veto message which I shall not attempt to analyze except at some official time and place such as in committee, on the floor of the Senate, or in conference. Suffice it to say that there are those who believe his objections could be overcome by the simple expedient—if Congress is willing—to make the foundation's chief officer more nearly responsible to the President. There are likewise those who believed his message was even more—they call it ominous—far reaching. The President went to the White House from the Senate. In this there should be hope and faith for an understanding of what can be done, practically, toward further overhauling, and wherein the limits of possibility may lie. At any rate to enact a bill which can pass the Senate and House and still be attractive to the Executive is our problem. We shall have undertaken its solution manfully after January 1, 1948.

Very little of the bill would appear to be moot. There seems to be no question but that the final product will provide for medical, mathematical, physical, and engineering research and development, the furtherance of the bilogical sciences, provision for consideration of scientific personnel and education, and the very strong and very greatly emphasized consideration of national defense. These subjects are appropriately arranged into five working divisions, concerning the constitution of which, so far as they go at least, there should be no further controversy.

We may, so far as I can determine, confidently expect that the act as finally passed will authorize the Foundation to: "(1) formulate, develop, and establish a national policy for the promotion of basic research and education in the sciences; (2) initiate and support basic research in the mathematical, physical, medical, biological, engineering, and other sciences, by making contracts or other arrangements—including grants, loans, and other forms of assistance—for the conduct of such basic scientific research; (3) initiate and support scientific research in connection with matters relating to the national defenses by making contracts or other arrangements—including grants, loans, and other forms of assistance—for the conduct of such scientific research; (4) grant scholarships and graduate fellowships in the mathematical, physical, medical, biological, engineering, and other sciences; (5) foster the interchange of scientific information among scientists in the United States and foreign countries; (6) correlate the Foundation's scientific research programs with those undertaken by individuals and by public and private research groups; and (7) establish (a) a special commission on cancer research, (b) a special commission on heart and intravascular diseases, (c) a special commission on poliomyelitis and other degenerative diseases, and (d) such other special commissions as the Foundation may from time to time deem necessary for the purposes of this act."

In carrying out the foregoing an objective of the Foundation is to "strengthen fundamental research and education in the sciences, including the independent research by individuals throughout the United States, including its Territories and possessions, and to avoid undue concentration of such research and education."

It would seem that any residue would and will contain the scholarship and fellowship provision, most likely in the language of the most recently current bill, as follows:

"SCHOLARSHIPS AND GRADUATE FELLOWSHIPS; REGISTER OF SCIENTIFIC PERSONNEL

"SEC. 10. (a) The Foundation is authorized to award, within the limits of funds made available pursuant to section 14, scholarships and graduate fellowships for scientific study or scientific work in the mathematical, physical, medical, biological, engineering, and other sciences at accredited nonprofit American or foreign institutions of higher education, selected by the recipient of such aid, for such periods as the Foundation may determine. Persons shall be selected for such scholarships and fellowships from among citizens of the United States, and such selections shall be made solely on the basis of ability; but in any case in which two or more applicants for scholarships or fellowships, as the case may be, are deemed by the Foundation to be possessed of equal ability and there are not sufficient scholarships or fellowships, as the case may be, available to grant one to each of such applicants, the Foundation shall award the available scholarship or scholarships or fellowship or fellowships to the applicants in such manner as will tend to result in a wide distribution of scholarships and fellowships among the States, Territories, possessions, and the District of Columbia.

"(b) The Foundation shall maintain a register of scientific and technical personnel and in other ways provide a central clearing house for information covering all scientific and technical personnel in the United States and its Territories and possessions. No individual shall be listed in such register without his consent."

Without detailing the patent provisions, let me say that they were submitted to the most microscopic scrutiny, and if and when a bill is passed and signed we may be assured that the patent features in such an act will include substantial encouragement to private discovery and invention, the complete protection of inventor's rights and property interests, enrichment of the Government's own store of science, and, in the public welfare, a greater abundance of public patents and rights, and security of information for our Nation's safety.

It should be stated, or, rather, restated for emphasis, that in the discussion about the veto nothing is intended to imply a negative, reluctant, or captious attitude on the part of the executive branch toward science legislation. It is, of course, a matter of record that the President exercised a considerable degree of leadership in his message to Congress on the subject.

If I have stressed the legislative background perhaps it is because it has been as a legislator that I have lived with the subject and with its aims and ideals through a number of years and have been most active in bringing the Foundation so near to fruition.

I would not willfully withhold full appreciation of the work of others. The efforts of Senators KILGORE, MAGNUSON, and FULBRIGHT certainly might be said at least by these gentlemen to have eclipsed my poor efforts. The House has been active. Scientists themselves have in a creditible manner explored our common problem, and generously they have offered us their solutions. I dare not begin a roster of credit. It would be a long roll; a single omission of a worth-while name would be a mistake of the utmost gravity.

Our abiding hope is in the capacity of men of good will for compromise and the achievement of a unity of purpose.

Henry A. Wallace

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1948

Mr. BARKLEY. Mr. President, on December 31, 1947, and January 2, 3, and 5, 1948, there appeared in the Washington Daily News and various other newspapers throughout the country articles by Mrs. Franklin D. Roosevelt pertaining to the candidacy of Hon. Henry A. Wallace for President of the United States. I ask unanimous consent that the articles may be printed in the Appendix in the order in which they appeared in the newspapers, that each article be captioned as it is captioned in the newspaper, and that the date of each article be shown.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of December 31, 1947]

HENRY WALLACE HAS ALWAYS BEEN POLITICALLY INEPT

(By Eleanor Roosevelt)

HYDE PARK, Tuesday.—So Henry Wallace is really going to head a third party and run for President in 1948. What strange things the desire to be President makes men do.

He has probably forgotten, but I remember his coming to see me in the summer of 1945 in Washington. At that time, I felt very strongly that it would be good for the country if Henry Wallace, whom we all believed in and admired, would leave active politics

and become the leader of the independents of the country. Their vote had increased greatly in the years between 1929 and 1945, but they needed leadership and organization.

They were neither Republicans nor Democrats. They were primarily interested in getting the kind of leadership which would keep them free of economic depressions. And they wanted to continue what had been a peaceful but steady revolutionary movement which had given us, over the years, a greater number of people in the middle-income brackets and fewer people in the millionaire group or in the substandard-income groups.

This had been accomplished in smaller countries like Norway, Sweden, and Denmark, but it was a little more complicated in a country the size of ours and had to come more gradually.

I felt that out of politics Henry Wallace could do a tremendously valuable piece of work to keep both of our political parties on their toes; to make both of them less prone to act for purely political reasons; to make both of them realize that to win any election this independent, liberal vote was essential and must be courted by deeds, not words.

At that time, Henry Wallace told me he believed it was his duty to stay and work in the Democratic Party. I knew then, as I know now, that he was doing what he thought was right. But he never has been a good politician, he never has been able to gauge public opinion, and he never has picked his advisers wisely.

All of these things might have been less important if he had been a disinterested, nonpolitical leader of liberal thought, but as a leader of a third party he will accomplish nothing. He will merely destroy the very things he wishes to achieve. I am sorry that he has listened to people as inept politically as he is himself.

[From the Washington Daily News of January 2, 1948]

WALLACE'S APPROACH LIKE CHAMBERLAIN'S WITH HERR HITLER

(By Eleanor Roosevelt)

HYDE PARK, Thursday.—I read with great care Henry A. Wallace's speech in Chicago Monday. Affirmatively, he stands for "a positive peace program of abundance and security, not scarcity and war. We can prevent depression and war if we only organize for peace in the same comprehensive way we organize for war."

There is no country in the world where the people would not agree they wished to organize for peace and abundance and security. But in this speech Mr. Wallace oversimplified the problems that face us today. If he were in office today and responsible for our policies, he would understand how much more complicated it is actually to carry the responsibility, to try to get at what is the truth of any situation and then convince people of many diverse backgrounds and political beliefs that certain methods will achieve the results which you succeed in making them believe are desirable to achieve.

To begin with, let us take the political situation which a third party faces. No one in this country wants a third party as much as the Communists do. All over the world they are working for confusion because that is the way to create economic chaos and political weakness, and this is their one hope of defeating democracy in the world and proving that communism is the only thing people can turn to.

The American Communists will be the nucleus of Mr. Wallace's third party. I know all the old arguments in favor of working with people who want the same objectives as you do. But I have worked rather more steadily and closely with the representatives of the U. S. S. R. than has Mr. Wallace. I like all those I know and I hope that we can get on with them in a peaceful world, but I know that our only approach is an economic approach.

They do not understand many of the things which we consider essential and they will not until their economy reaches a much higher standard than it has yet reached or will reach for some time. They understand strength, not weakness, and they say many things they know are not true because they think they can make others believe they are true.

We did not oblige the Soviets by any action of ours to take over Estonia, Latvia, and Lithuania, or to attack Finland. Therefore, when Mr. Wallace assumes that by changing certain of our policies until we resemble Mr. Chamberlain, hat in hand, approaching Hitler, we will have the results which he calls "peace and abundance." I am afraid he is doing more wishful thinking than realistic facing of facts.

A totalitarian government, whether it is Fascist or Communist, has certain earmarks. Secret police rule is one of them. Another is benefits to the people, but no freedom. We live, in fact, in a much more complicated world than Mr. Wallace seems to understand, and the issues are so important that tomorrow I will continue my discussion further.

[From the Washington Daily News of January 3, 1948]

WALLACE WOULDN'T BE SO COCKSURE IF HE WERE PRESIDENT

(By Eleanor Roosevelt)

HYDE PARK, Friday.—Henry Wallace says he is in favor of helping Greece and he believes in the humanitarian side of the Marshall plan, but that he would turn the aid program over to the United Nations and that aid should be given without consideration of political beliefs, on a basis of need, with the only strings attached being that nothing be used for preparation for war.

Let's look at that program. Most of the aid for Europe has to come from us or through arrangements which we make with other nations. We have no means for inspection. How would we know that none of the aid we sent was used for war preparation?

We have offered a perfectly fair system for control of atomic energy by the UN and for inspection of all the nations under that plan. The people who have stymied it right along are the Russians. Mr. Wallace would say that is because they know we have the bombs. They also know quite well that we have offered to give them to the UN under the control plan. I do not think we have always been wise or tactful in our approach to the government of the Union of Soviet Socialist Republics, but basically we have been the ones to make the constructive offers and they have been the ones to refuse.

Mr. Wallace's objection, of course, to the present support we are giving Greece is that Great Britain returned the King to Greece with the kind of government Great Britain wanted. Possibly the people were not anxious for that type of government, but the people have had plenty of time and opportunity to express themselves since then, and have done so. Neither Great Britain nor the United States has such great military power in Greece that the Greeks are under any compulsion to have a government of which they do not approve.

The "government" established recently by the guerillas is led by a known Communist. Certainly the Greeks have a right to ask for help in remaining a democratic state, and certainly the steady progress of the U. S. S. R.'s political influence over every state which they have taken over shows that they have every intention of spreading communism wherever they can. Are we to be so naive as to believe that, with such a program well under way, a few gentle words from us will change the U. S. S. R.'s policy?

Foreign Minister Molotov's statement that we had refused at the London conference to allow Germany to rehabilitate itself industrially because we were afraid of Germany becoming a competitor may seem laughable to us, but it is proof of the type of thing that Russian representatives say, knowing full well they are not telling the truth. We feel that Germany should be helped to rebuild along peaceful lines, but we do not want to risk having the military group again take over control.

The U. S. S. R. knows that as well as we do, but she thinks it sounds well to the people of Germany and of Europe to announce that we are retarding Germany recovery out of fear of economic competition.

Oh, Mr. Wallace, if you were President, you would not have such pat sentences to offer us. You would find it far harder to act constructively than you suggest in your speeches.

[From the Washington Daily News of January 5, 1948]

CONCLUSION—WALLACE HAS DONE COUNTRY AND WORLD A DISSERVICE

(By Eleanor Roosevelt)

HYDE PARK, Sunday.—One of the main things that Henry Wallace attacks, namely, universal military training, will come up in the new session of Congress.

Purely military universal service has never been much to my liking, but at the present time I think it is probably one of the most important gestures we can make to convince the U. S. S. R that we mean to remain strong in a military way until some settlement is made within the United Nations which will make it possible for the U. N. to be strong enough to hold even a big nation in check.

Then I would agree that disarmament was justified and much to be desired. Yet I am not sure that even then I would not approve of 1 year of universal service for boys and girls alike. The military part of it I would cut, but I would keep the discipline. I would make it a point to stress physical development and health, and then make the service consist of work of value to the community and the country. And I would tie it in, where possible, with the individual's preparation for his life work.

For years people have searched for a way in which to give the same sense of responsibility and selfless devotion to their country which is called out in time of war. This year of service might well be the substitute that has been looked for. We need to start our lives as citizens with a sense of responsibility to the community.

Later we will be called upon within our communities to do many services and perhaps we will enter fields of public service, but a first year of work for the Nation may well be the first intimation to many youngsters that they have obligations as well as privileges because of their citizenship in a democracy.

I think there is plenty of room in this country for us to fight to improve our democracy. I am frank to say that I was deeply troubled when I read of the machinery to be used by the Loyalty Review Board. We are far from having achieved the rights, and I can understand why Mr. Wallace wants to fight for some changes which are long overdue and without which we cannot feel that if we have a true democracy.

If, in organizing a third party, Mr. Wallace has in mind simply forcing the Democrats to make better nominations and then throwing his third-party strength to those candidates, he may, of course, have a few successes. In addition, if he hopes to force the Democratic candidate for President to come out for more liberal policies, after which he, Mr. Wallace, would bow himself out of the picture, he may have some success there too. But there is no assurance that this is what he intends to do, nor that he will succeed in doing it.

In the last analysis, he may simply make it possible for the Republicans to nominate a complete reactionary and still win. He may find his party repudiated by all liberal Congressmen who will feel that they are being tagged with communism. If he thinks that a complete reactionary 4 years will bring us a saner 4 years afterward, I am afraid he will find that is not the way the pendulum usually swings. Great reaction brings chaos and confusion afterward.

I do not think we have the time to go through reaction to the right and then to the left. It would take too long to reach a normal middle-of-the-road period. We might survive, but the rest of the world would not—and so my conclusion is that Mr. Wallace has done both his own country and the world a great disservice.

Get Together on the Budget

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. LODGE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial entitled "Get Together on the Budget," published in the Worcester (Mass.) Telegram of December 31, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GET TOGETHER ON THE BUDGET

The open season on the Federal budget will soon be here again. It is obvious, even to those uninitiated in the intricacies of Federal finance, that income-tax reductions can only be in direct ratio to the amount actually pruned off the list of Government expenses. To bring about a veto-proof tax-reduction program, it must be the Republican responsibility to cut down Government expenses wherever they can be saved without impairing the national safety. In January the budget trimmers must again go to work. Tax cuts may remain a mirage unless Government expenses are reduced much more than they have been so far.

Senator MILLIKIN, Colorado Republican, apparently seeking Republican agreement on budget slashes, has suggested that the Comptroller General be given power to frame a budget for Congress. The Comptroller General is the traditional watchdog over the Treasury. Under the 1946 Congressional Reorganization Act, Congress is given the responsibility of working out a budget of its own for the Government. The experience of Congress showed, however, the need for effective congressional agreement on what should, or should not, be cut. Such agreement can come about, of course, only by having more information available to Congress.

When Congress convened in January 1947 the Republicans were in control for the first time since 1932. They had made campaign promises to cut expenses and to reduce taxes. They tried to do both. The Republican-controlled Joint Committee on the Budget voted almost at once to chop off $6,000,000,000 from Mr. Truman's $37,500,000,000 budget requests. No sooner was this goal announced than cries of anguish—some justified and some not justified—began to be heard from this department and that department. Some Republican Congressmen joined with the Democrats in resisting cuts for pet departments or services. For instance, the Department of Agriculture was cut some 28 percent, but under protests—many of them from western Senators and Congressmen—several million dollars were restored to its allowance. Representatives from the service establishments all fought, of course, against budget cuts in their departments. Even so, substantial savings were achieved.

A job remains to be done, however. The Truman expenses are still running about four times those of the Roosevelt administration in its peacetime years. With an election year, there may be an unfortunate tendency to play politics with the budget, and to defer savings. In mid-December, for instance, a group of House Republicans who cut funds for western reclamation projects early in 1947 now not only want those cuts restored, but want increased appropriations. It was last May that Governor Warren, of California, said the reclamation cuts might hurt the Republican Party in the West. Both parties will feel the political pressures from now until next November. They may soft-pedal efforts to make any sizeable cut in the Federal pay roll, now running about 2,000,000 persons, as compared to Roosevelt's 887,000 in 1939.

The people want a reduced budget—and reduced taxes. A year ago the Republicans made a beginning to prune those expenses. Considering the fact they had been out of office so long, they did a good job. They should continue that job, however, without falling prey to bloc pressures.

Be a Leader: They're Needed

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able editorial written by Hon. W. D. Jamieson, who was a Member of the Congress from the Eighth District of Iowa 23 years ago.

Mr. Jamieson now lives in Washington, and publishes an interesting weekly paper called the Window Seat, which contains in its January 7, 1948, issue this timely editorial comment on the need of leadership.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BE A LEADER: THEY'RE NEEDED

I write this mainly with the young people in mind—the oldsters are too set to "Do something about it, and do it now!"

Religious workers say they can get 10 or more child converts with the same work and care it takes to get one adult.

But I do want every reader to ponder this statement I am about to make, think of it time after time, and if you pray, then pray over it—and then act. Here it is:

The world desperately needs leaders! you can be one, no matter who or where you are.

I beg of you to think of this, make up your mind you are going to help, and then be a leader. I mean, be a leader in your own community, be a small leader. Don't try to be an Edison, or a Ford, or a Washington, or a Lincoln, or a Wilson, or a Horace Mann, or a Phillips Brooks, or a Bryan, or a Frances Willard, a founder of the WCTU. No; be a little leader.

However, the little leaders often do wondrous things. I think of Jessie Field, a country school teacher in my home country who got the idea of better home making and better farming. The result was she taught it, and from this came the wonderful 4-H clubs which are helping to remake the United States.

The best way to start is to learn this great Bible verse, John 10:10; then live it:

"I am come that they might have life, and that they might have it more abundantly."

Having made up your mind you are going to help other folks and help the world, then pick out one or more of the things you know need to be set right, get somebody else to join you, go at it. Bang! You are a leader. And you can't tell what the end may be.

Ten million such leaders will set the United States and the world going right. Form study and other clubs to find the facts, then move to correct: the world's tens of millions hungry and ill, the fuss between Russia and the United States, our own millions of children out of school, too high prices, not enough production, too much party greed in Congress, 10,000,000 children without religious teaching, the church's main weakness of laymen not working at it, the terrible demon of booze, broken homes, Sunday breaking, monopolies, industry-labor troubles, and on and on.

Be a leader. Yes, you. The world is crying to you. Providence will help you.

Side Show

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Side Show," written by Charles Francis Coe, editor and publisher of the Palm Beach Post-Times, Palm Beach, Fla. This editorial appeared on December 28, 1947.

I wish it were possible to have printed the cartoon which accompanies the editorial, by Enright, likewise entitled "Side Show." This cartoon shows Uncle Sam standing at the crossroads of Constitution Avenue holding the hand of the newborn babe, "1948." Off to the side, with all kinds of noises and sounds to attract the attention of the little fellow, "1948," are such things as Crackpot Alley—buzzards sitting on a sign, No Work—All Play; another sign, Everything for Nothing; another sign, The Great Side Show—Freaks Galore. Mushroom growths of new plans and the 5-year plan with an alarm clock ringing.

The question is, Will Uncle Sam allow the little fellow to be attracted by these crackpot plans, which can never bring anything but sorrow and regret to the American people, or will Uncle Sam properly induce the newborn babe, "1948," to walk straight down Constitution Avenue, which has at the end of it a sign in the words of the great pronouncement, "Government of the people, by the people, for the people, shall not perish from the earth"?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIDESHOW

A babe enters the world. With all the eager, unfounded hope of the traditional

infant, that which appears before its eyes will attract. 1948. Swaddling clothes. Uncle Sam.

It is a combination upon which the eyes of the world center. It is cynosure. Will the eyes of infancy be capitivated by the sideshow? Or will the indulgent old Uncle see his true course and follow that course? History will tell.

Pandemonium circus is vociferous, as it is always vociferous. The barkers of communism assault the ear. The tinsel of exaggerated promises furnish allure to the uninitiate eye. The teachings of democracy are mingled in the din, even as the gold in the alloy.

The alchemists of the ages are concocting a new brew. Nineteen hundred and forty-eight will know but a brief infancy. That will be turbulent. Its youth will be a series of maladjustments in frenzied efforts to avert calamity. Its middle age will be laden with travail. Its deathbed will glow with the lights of triumph, or be obliterated in the depths of night.

Every man who thinks, agrees that these things are so. We have found none unaware of the seemingly insoluble problems ahead. Economically, we balance on the wire stretched taut between prices and wages. Here and abroad. That is not an emotional element. We balance under the umbrella of inflation. A change in the wind of so much as 10 degrees, can imperil the whole structure.

If 1948 takes the wrong road, pandemonium circus will embrace us with all its fraudulent tumult. If we take the right road, it will be because the consciousness of these United States will have roused itself in time.

If the babe drags Uncle Sam onto the byway of illusion, then chaos will engulf civilization. If Uncle Sam guides the babe into the sanctuary of the Constitution, the consecration of devoted citizenship, the proven ground of our way of life, then chaos will be averted.

We have no hesitancy in saying that the twelve-month existence of this babe aborning will write the history of mankind for at least a century. In the accompanying cartoon Mr. Enright depicts Uncle Sam gazing at the babe. It would be less cartoon but more wisdom were he gazing along Constitution Avenue. Too many babes have been leading us. We have led too few babes.

The hour has come when the fibers of our philosophy must meet the tests of time and opposition. That, we admit, is easily said. It is another matter to state how these may be met. We suggest, as we have suggested before, a basic plan for Europe. That plan should be patterned on the building loan.

Building loans are not too highly regarded by many financiers. That alone is concession enough on the score of generosity and good faith. If we do that, we have served amiably and nobly the actual needs. As Europe is rebuilt, we should advance funds to carry on the building. The moment the building stops, the advance of funds should cease.

More: That which has thus far been rebuilt should find a lien impressed, payable to Uncle Sam. Only so can control be maintained. Only so can the fingers of lechery be kept from the dollars advanced.

A survey of assets must support the funds advanced. Those assets must be cultured in the sweat of a working Europe, the fires of a purposeful human hearth, determined to rebuild. By act of Congress on the deathbed of 1947, 1948 is mortgaged. If the covenants of that mortgage are loosely drawn, then we are downright subversive.

We are unresponsive to the call of duty and the dictum of civilization. Into the arms of this babe we have placed burdens beyond the computation of the finite mind. If we fail to stand strong, to plan well, to enforce equitably, then well may we name the babe "malfeasance."

The main tent is our objective. The sideshow is the allure for suckers and saps. And for unknowing infants. Uncle Sam, we urge that you keep such strength at home as will dissipate any ambition to assail you. We urge that you assert this strength abroad, by the dictation of terms upon which your largess will be disbursed for the needs of others.

We deny your right to waste time at the sideshow, that the infantile ear and eye may gaze in wonder at perishable tinsel, raucous and rancid promises. We pray that your feet will guide this infant into the realms of permanent democracy. We pray that you will not be actuated to supine surrender to the plaintive cry of puerility, the temporary satiety of irresponsibility, the devastating denial of your mission in the world.

Harry Truman, you have greatest influence on Uncle Sam. This babe will, on its deathbed, write your obituary for history. See that it writes in luminous letters of patriotic import, not in the blood of warfare induced by a combination of "I don't know" and "I don't dare."

Your forebears dared. Your compatriots dare. Do not misconstrue the meaning of "a little child shall lead them." That is inapplicable to the new year dawning. For this dawning year will test the sinews of our Republic. will spell out the future of the modern world; will establish you as great, or as frustrated, futile, and inadequate.

There are great and determined Americans. Gather this about you. Forget the sideshow.

CHARLES FRANCIS COE.

One Way America Can Help

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement which I prepared, entitled "One Way America Can Help," published in the Deseret News, of Salt Lake City, Utah, December 17, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ONE WAY AMERICA CAN HELP

America must always stand in the minds of the people of the world as a country which, above all other things, guarantees "life, liberty, and the pursuit of happiness."

The Senate of the United States has now voted nearly $600,000,000 interim relief aid to Italy, France, and Austria. This is a prelude to the Marshall plan. All but six Senators present voted this aid, some for one reason, some for another.

I, myself, did not succeed in having inserted in the bill what in my opinion should be its most essential feature. The bill as it stands today is purely a relief bill, carrying food, fuel, fertilizer, and pesticides to a stricken humanity. The way to help any people is to help them to help themselves. This, the bill fails to do.

I have never favored make-work projects for the sake of merely making work. There is so much that needs to be done in this world to make it a better place to live in without making work an end in itself. Economic ills cannot be corrected by breaking all of the rules of economy. Wealth is produced from the earth through the application of labor. It is wealth that is lacking in Europe today.

We should plan conditions today which will make a better world tomorrow. That is the essence of true relief. That is the basis of the full employment declaration uttered at Philadelphia in 1944, when the nations assembled there voted for recommending to the governments of the world that each nation should make full employment a national objective.

Our own country responded to that suggestion by passing the National Employment Act of 1946. This act does a new thing for our Government. It provides for the President's submitting to Congress an economic budget as well as a fiscal one. Private employment, private property, free enterprise, individual initiative, all of those things which make America what she is, are the considerations which enter into the economic budget. One of the hardest-headed economists of the United States asserts that the Full Employment Act of 1946 represents the spirit of 1776 at its best. The hope is that distress, inactivity, loss of wealth, financial panic, and depression can be avoided. The spirit of the Full Employment Act is as much the spirit of 1776 as are the words quoted above, "life, liberty, and the pursuit of happiness."

The thoughtless realists of the world will reply to this by saying you cannot eat "life, liberty, and the pursuit of happiness." My reply to such realism is always the same: You cannot eat religion. You cannot eat morals. You cannot eat a decent philosophy of life. You cannot eat loyalty. I may go on indefinitely. But without these, man remains an earthworm.

For us to ever hold out aid to the rest of the world without always showing the rest of the world what we really stand for is one of America's mistakes. What has made America great can make the rest of the world great. You cannot eat free education. But free education ultimately makes it possible for men to eat. You cannot eat freedom of thought. But freedom of thought leads to invention which, in turn, creates abundance.

Someone long ago said that man cannot live by bread alone. I am wondering if, while man is only free to the extent of his physical limitations, America, like the Church which is founded on the teachings of Jesus, will ever offer to the world anything finer than the two basic idealistic systems represented by the teachings of Jesus and the basic theories of our founding fathers. On second thought, they are not two systems. They are divergent activities springing from the same source.

John C. Cooper Defines the Fundamentals of Air Power

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. LEA. Mr. Speaker, in accordance with the consent granted by the House, I insert in the RECORD excerpts from an address delivered by John C. Cooper, a member of the Institute for Advanced Study at Princeton University. This address was delivered at the Coolidge Auditorium in the Library of Congress on the 7th of January 1948, under the auspices of the Library and the National Air Council. It helps in clearly defining the fundamentals of the aviation problems now confronting this Congress.

Mr. Cooper is recognized as being qualified to discuss these problems in a way well worthy of our consideration. In the course of his remarks Mr. Cooper said:

THE FUNDAMENTALS OF AIR POWER

Today the world is in the midst of one of the great revolutionary periods of history. Institutions, standards, values—the basic foundations of national and international life a generation ago—are changing before our eyes. New forces have emerged gravely affecting our whole political, economic, and social structure. Of these forces, none is more potent than air power.

Our historic political territorial system has been based on the existence of surface boundaries, some natural, some artificial. Man has lived in communities connected or separated one from another by surface conditions. Until air power emerged as a world force, man moved about only on the surface of the earth. Nations traded by land and by sea, built surface armies and navies for their protection, fortified themselves behind rivers and oceans and mountains in fancied isolation and security. But those fine days have passed. Today nations are flying over those same rivers and oceans and mountains. The airspace has become boundless highways for war or for peace, for destruction or for commerce. Which shall it be? That is our problem today.

What do we mean by air power? What are the factors and conditions which govern its existence, its growth, or its decline in this or any other nation? To what extent are these elements of air power within our control? It is vitally important that air power be understood if we are to guard the Nation's future and have any real opportunity to restore lasting peace to this very troubled world.

Air power is the total ability of a nation to fly, to act through the airspace, to use controlled flight, such for instance as the flight of aircraft. Gen. H. H. Arnold, in his last report as commanding general of the United States Army Air Forces, pointed out that air power "is the total aviation activity, civilian and military, commercial and private, potential as well as existing."

This is the first fundamental of air power. From it springs a second fundamental—that the air power is indivisible. Military air force and civil aviation are supported by the same elements of national power. So long as a nation continues to possess these basic elements its potential air power is not impaired, though some uses of its air power may be temporarily limited.

The third fundamental of air power is this: The air power of a nation will continue to exist so long as that nation has first, the political right to fly and to control its own air space, and second, the physical capacity to fly.

The extent of a nation's political right to fly is not a matter of abstract theory, but a very real international question. Since 1919 the nations of the world have recognized that each nation has complete and exclusive sovereignty of the air space over its lands and territorial waters. Also long before 1919 it was recognized that no nation has or could have sovereignty over the high seas, and that the navigation of the high seas was free to all. The doctrine of air-space sovereignty carries with it the right and the power of every nation to control the air space over those parts of the earth's surface under its sovereignty and to admit or exclude any foreign aircraft from that air space. The same doctrine however says in substance that as there can be no national sovereignty of the high seas, every nation has the equal right to fly in the air space over the high seas of the world. That this principle of air space control is of basic importance in any consideration of air power is well illustrated by the fact that the Soviet Union, for example, includes within its sovereign territory about one-sixth of the land surface of the world. It therefore has the complete and exclusive control of an enormous amount of the world's navigable air space. In that air space it has the sole political right to fly while at the same time it enjoys with every other nation equal right to fly in the air space over the oceans that lie between the Soviet territory and such other nations.

AIR PROVISIONS OF VERSAILLES TREATY

Historically the importance of the political elements of air power are best illustrated by the collapse of the air clauses of the Versailles Treaty ending World War I. By that treaty, it was provided in most positive terms that "The Armed Forces of Germany must not include any military or naval air forces." This prohibition was to continue so long as the treaty existed. The intent to disarm Germany in the air was plain, but the method employed was destined for certain failure. The treaty left with Germany, after January 1, 1923, control of German airspace. Civil aviation and aircraft manufacturing were little impeded. The German government used as a bargaining weapon this right to control its airspace and to admit or exclude foreign aircraft. In the end it admitted the aircraft of its former victorious enemies only under an arrangement which resulted in the complete collapse of the controls which were intended to enforce the permanent disappearance of German military air force.

The fundamentals of air power must not be misunderstood again. If we have reached a fixed determination that Germany and Japan must be prevented from rebuilding the air forces which came so close to providing an Axis victory in World War II, then the potential air power of Germany and Japan must be destroyed. To do this, we must provide complete international control of German and Japanese airspace and the right to fly in that airspace. We must also control so far as possible German and Japanese capacity to fly.

CAPACITY TO FLY

The elements of a nation's capacity to fly are of two kinds: first, assuming that it has a right to fly, those which determine its present usable national air power, and, second, those additional elements which measure the potential air power of a nation over a long period. In the first class I would include aeronautical industry, aeronautical facilities, the civil air establishment and the military air establishment. Aeronautical industry (including the aircraft manufacturing industry, engineering and research) furnishes the air fleet and its necessary replacements. Aeronautical facilities (including airports, maintenance, and air navigation aids) provide the physical operating requirements without which the civil and military air establishments would be useless. These elements of a nation's capacity to fly and therefore of its air power have several things in common. They are visible and acquired national assets. Together they will provide the national air transport in its widest sense, whether in peace or in war. If any one of them is deficient, national air power suffers.

The civil air establishment must be sufficient to provide the needs of a nation's air commerce in time of peace and a reserve of aircraft and airmen in time of emergency. The military air establishment must be adequate to maintain the peace and defend the Nation from any oissubke aggressuib. Both aeronautical industry and aeronautical facilities must be adequate to serve the needs of peace and capable of such immediate and practical expansion as any foreseeable emergency may require.

LONG-RANGE AIR POWER

Vital as are these elements of present national air power, there are certain conditions which together with these elements determine the long-range potential air power of a nation. So much has been said and written about the visible elements of air power, the military and civil air establishments, aeronautical industry, and aeronautical facilities, that we have lost sight of those underlying factors which make possible the continued existence of air power over a long period of time. Included in those conditions which affect the potential air power of any nation, I would suggest: (1) Geographic conditions, including among other things location, size, physical conformation, climate, and weather of national territory; (2) Resources, both economic and material; (3) Population, including size, educational level, and adaptability for aeronautics; (4) Industrial development; and (5) Political conditions, including national incentives and government policies.

Consider, for example, the status of France at the date of its liberation. It had neither air fleet, nor aircraft industry, and its air navigation facilities were largely destroyed, but France had regained political control of its own airspace and still had national characteristics which gave it great potential capacity to fly. Its air power still existed. Neither Germany nor Japan has today any of the visible elements of air power, but each of them has still many of the national assets on which were built the air forces of World War II. If the final treaties of peace leave to either of them the control of its own airspace, potential air power will certainly exist.

SIZE AND LOCATION OF A NATION'S TERRITORY

No national asset is more important to air power than the size of a nation's territory. This is particularly true if national territory is included in a single land mass. The larger the national land mass, the more the internal air traffic of the nation is developed, thus building a reserve supply of aircraft usable elsewhere in an emergency, as well as the aircraft maintenance and manufacturing industries needed to support its internal aviation, together with the trained airmen and ground crews, navigation facilities, and airports.

The location of national territory also directly affects its capacity to fly and its air power. Of any two nations, otherwise equal, that nation will have the greater air power which is so located that it can normally reach the larger number of its foreign air objectives with less flying and by more direct routes, particularly if such routes need not cross intermediate foreign territory.

The length and location of a nation's ocean boundaries are therefore of the greatest importance. Over a boundary separating national territory from that of another nation aircraft may fly only when political permission has been obtained. But over boundaries facing the sea a nation has complete freedom or air action and may fly when and where it wishes.

The Territory of the Soviet Union occupies approximately one-sixth of the land surface of the world. In area it is approximately equal to all of North America. The Soviet Union has the longest shorelines in the world. While the thousands of miles of its Arctic shores may be useless as an asset of sea power, they are not useless as an asset of air power. Its aircraft may fly northward across the Arctic toward Greenland and Canada and eastward across the Pacific toward Alaska and continental United States as and when they wish. The geographic air-power potential of the Soviet Union is quite beyond that of any other nation. Aircraft with a range of 5,000 miles, flying from bases within this single great Soviet land mass could reach any point in Europe, any point in Asia, including Japan and the Netherlands East Indies, any point in Alaska, Canada, continental United States, most of Mexico, and any point in Africa as far south as Johannesburg in the Union of South Africa.

The geographic air-power position of Germany was and is excellent. While its comparatively small size necessarily limited its internal flying, its central position at the crossroads of Europe gave it tremendous advantages. These were fully realized in the development of its international civil aviation prior to World War II and in the use against its neighbors of military striking force during World War II.

The geographic air-power position of the United States is unique. Its continental land mass as well as its industrial resources have fostered the development of the greatest existing civil aviation. Its boundaries on the Atlantic Ocean, the Gulf of Mexico, the Pacific Ocean, and the Arctic Ocean and Bering Sea (through Alaska) give it great freedom of action. It is handicapped however by the fact that Alaska and Hawaii (two of its most important geographic air-power factors) are physically disconnected from its mainland mass. Aircraft are quite useless for military or civil purposes unless they can be kept adequately supplied with the necessary fuel and replacement parts. Aircraft located in Alaska or in Hawaii or in any other outlying bases which the United States may maintain suffer from this handicap.

ECONOMIC AND NATURAL RESOURCES

Although geographic conditions are important, they alone do not determine potential air power. Other national factors are directly involved. Not the least of these are the economic and natural resources available for the construction, operation, and maintenance of air fleets, military and civil, together with the necessary airports and other ground facilities. I cannot impress on you too strongly that any nation which must import its completed aircraft or necessary parts and accessories, is almost fatally deficient in potential air power. In time of emergency such importations might be prevented and replacements would cease, with fatal results to the military and civil air establishments.

Almost as important is the status of the raw materials needed to construct aircraft, aircraft engines and parts, as well as the fuel required for their operation. This is one of Great Britain's real air-power handicaps. Practically any kind of material that goes into the construction of its aircraft and all the petroleum products needed for fuel and lubrication in its aircraft engines must be imported from far overseas. In this respect both the Soviet Union and the United States have certain advantages. The petroleum industry of the Soviet Union has certainly expanded, and I am personally inclined to think that it can now rely on its internal sources of supply for aircraft fuel and lubrication without importation. The Soviet Union is, of course, handicapped by very difficult inland transportation conditions in northern and northeastern Siberia. It must be recalled, however, that the great Siberian rivers which flow from south to north are open during part of each year and that the trans-Siberian railway crosses each of these rivers in southern Siberia, thus providing combined rail and water transportation for supplies to the Siberian Arctic coast. Also, with the use of efficient ice breakers the Soviet Union has developed summer seaborne traffic as another source of supply for its Arctic territory.

The metallurgical resources of the Soviet Union are very little known. Within the last few years they have certainly been tremendously developed and the Soviet Union is probably approaching self-sufficiency in the matter of materials needed for the construction as well as the operation of its aircraft.

RAW-MATERIAL POSITION OF UNITED STATES

The raw-material position of the United States has been a matter of serious debate. It is quite impossible to review it at this time. Suffice it to say that in the construction of modern aircraft certain light metals are necessary and also certain scarce metals for the required alloy steels. Last year I made a study of this problem with the result that I found that the plans for the construction of one type of modern high-speed transport aircraft indicated that the materials to be used would be approximately 58 percent aluminum and 34 percent alloy steel. It is my information that the United States is deficient in and must import certain of the metals needed for these alloys. As to our supply of aluminum, without which I do not believe we could maintain an adequate air fleet, I call your attention to the language of a report as to the wartime use of strategic raw materials made by a special Senate committee in 1946. Aluminum is a refined product of what is known as bauxite. The Senate committee said that "the United States never had large resources of bauxite, except in the State of Arkansas. These fields were large enough only for a year or two of production at our maximum rate. We are, therefore, dependent for our supply of bauxite on South America in particular, and to some extent on the Pacific areas. Unless we can develop new industrial methods * * *, the United States will always be dependent in this very basic industry on its ability to import from abroad."

Petroleum products are needed for aircraft fuel and lubrication. Raw rubber is needed for aircraft tires. If the air power of the United States is to be maintained, adequate supplies of these basic materials are absolutely necessary. The United States has been in the past the greatest producer of petroleum. Whether we have already arrived at the time or whether we are approaching the time when we must depend on importation of petroleum products is a subject of wide debate. As to rubber, we certainly must rely on the imported raw product unless we maintain our capacity for synthetic production developed during the war.

Maintenance of air power for the future requires the most careful consideration as to the sources from which the United States will obtain the needed raw materials, metals, fuel, rubber, and all of the other products required for the construction and operation of aircraft. To the extent that stock piling may be necessary, it must not be neglected. To the extent that the manufacture of synthetic products will be required, we will forget them at our peril.

Manpower

But the construction, operation, and maintenance of aircraft involves more than material. It also requires manpower. The population characteristics of any nation will affect its present and, even more so, its future air power. Aviation calls for young men and women. Particularly in the operation of aircraft youth is a major factor, and to some extent this is also true in the manufacturing and maintenance processes. The educational level of the population is also a matter of importance in considering air-power problems, for no other industry requires higher over-all technical skill than does aviation, whether it be manufacturing, operation, or maintenance.

On the other hand, a nation which has a very large number of youth from which to pick may have real advantages even though the educational level and technical skill of its inhabitants might be below that of another nation of fewer inhabitants. If we would compare the future air-power potential of the great nations of the world, I would call your attention to these provocative figures. In the last prewar census there were approximately 170,000,000 people in the Soviet Union. Of these it was estimated that 36 percent or approximately 61,000,000 were then of 15 years of age or under. At approximately the same time there were about 190,000,000 people in the English-speaking nations, comprising the United States, Great Britain, Canada, and Australia. But of this 190,000,000, a little less than 25 percent or about 46,500,000 were 15 years of age and under. The Soviet Union lost heavily during World War II. Since 1939, however, additional territory has been added to the union and it has been estimated that its present population may be about 200,000,000 with a normal increase of about 2,800,000 per year. From these figures it appears that the Soviet Union has a very large percentage of young men and women, and that either now or in the very near future the number of Soviet youth may be twice that, age for age, of the youth of the United States, Great Britain, Canada, and Australia combined. May I suggest that these questions of population cannot be overlooked in assessing world air power problems.

Aeronautical industry

Air power, of course, requires more than materials and men. The whole complicated economic structure of a nation, and its technological ability, is also involved. Aeronautical industry in being at any particular time is one of the vital factors of usable air power. Even more important as an element of potential air power is the national ability to maintain that industry and to continue its technical advance, and to be able in an emergency to increase many times its output capacity.

THE ATTITUDE OF THE GOVERNMENT

Of the long-range factors which may control the growth or decline of national air power, none however is more important than the attitude of the government which has the responsibility of directing a nation's activity. Perhaps little can be done about the territorial status of a nation or the numbers of its population or the natural resources within its borders. These factors are more or less fixed and out of our control. But otherwise the attitude of a government may be decisive. A nation may have every other element of air power but still lag behind if its government has no real urge to insure its future development. The attitude and actions of government will fully determine the size of our military air establishment, and greatly affect the efficiency of our civil air establishment, our aeronautical industry and facilities—hence our air power in being. The same attitude may also determine our ability to take advantage of those national conditions which aid our long-range potential air power as well as to improve those conditions, such as the waste of natural resources, which threaten our future.

But government alone cannot be responsible. We ended World War II with the greatest military and civil air establishments then in existence, the finest aeronautical industry and world-wide aeronautical facilities. Our air power in being, military and civil, was then unassailable. Our potential capacity to fly is, in my judgment, unequaled even today. To maintain this leadership and realize these potentials is the problem of our people, our industry, and our Government. Planning for the future is a most complex matter, and in no field is it more complex than it is when dealing with air power.

Air power is today the most dynamic force in the life of nations. Properly used it can be the means to better understanding among the people of the world. Improperly used it can be a threat to the general security even in time of peace. If war comes again air power can transport the armed forces and missiles fated to destroy our civilization. I submit to you that we cannot afford to ignore the lessons of history. We must realize that air power is the ability of a nation to fly; that air power is indivisible, used at times

for civil air transport and at times for military striking force; and that air power will continue to exist as long as a nation has the political right to fly and to control its own airspace, and as long as it vigorously and consciously maintains its capacity to fly. These are the fundamentals of air power.

Jesse Jones and RFC

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Houston Post of December 28, 1947:

JESSE JONES AND RFC

In the happy hunting days which went on for congressional investigating committees, from the beginning of the Roosevelt administration in 1933 to the end of the war in 1945, the boys on Capitol Hill gave the RFC a wide berth.

Its activities were too well known; its unique record of making money, instead of throwing it away, too well established; and the popular understanding of how well it had done its job was too apparent for it to offer any juicy bits for those who were seeking to get their names on the front pages of the Nation's newspapers.

But since that time, with the great bulk of the RFC's splendid work for the country accomplished, some of the committeemen, who have had lean lickings in public attention, have made furtive forays after the agency.

The General Accounting Office led off with a vague, and patently ridiculous charge that billions were unaccounted for. There has never been an iota of material on which to base such a charge. The most the average reader can make out of the accusations is that the RFC and the GAO did not keep their books in exactly the same manner.

Last summer, the House Banking Committee took a little flyer at the RFC, but it didn't last many days. Now, another House committee has scheduled hearings for January.

One of the best tests of any organization, of course, is in men it turns out.

The record of the "graduates" of the Reconstruction Finance Corporation has been a notable one. One of these "graduates" is now the Secretary of the Treasury; another is president of the New York Stock Exchange.

Still another former staff member of the RFC is now an associate justice of the United States Supreme Court.

Many of the country's biggest banks are headed by former employees of the RFC. Synthetic rubber companies and other great industries, manufacturing a wide variety of products, have called on the RFC to furnish their executives. Other RFC men have gone ahead in the law and in various types of finance.

Only recently, at a dinner in New York, hundreds of alumni of the RFC met to pay honor to their long-time chief, Jesse Jones, of Houston.

At that meeting, there was offered a world of testimony about the RFC. Among those who were heard from were three men, who are in best position of any to know what the agency was set up for, what it accomplished, and how well it did its work.

Those witnesses were:

Former Vice President John N. Garner, who was Speaker of the House in 1932 and piloted the RFC bill, sought by the Republicans, through a House which was controlled by the Democrats.

Former President Herbert C. Hoover, who sought the legislation creating the RFC; who signed the bill, and who appointed the first board, including Jesse Jones.

President Harry S. Truman, who headed for many years the Senate War Investigating Committee which had before it all the "dirt" which could accumulate in Washington, and who, since he became President in April of 1945, has been the Chief Executive of the Nation, and, as such, sees the operations of such boards as the RFC.

All paid unstinted praise to the organization and to Mr. Jones who headed it for so long.

Hear what Mr. Garner had to say in a telegram:

"I understand his former associates are honoring Jesse Jones tonight. He richly deserves any honor, and the entire RFC organization is entitled to the thanks of the country for a fine job in a dark hour of our national history.

"It was my opportunity to serve in Washington for 38 years, or one-fourth of the history of the Republic from its founding until the time I left Washington. I had an opportunity to observe the work of many administrative officers in that time and I place Jesse Jones at the top of all of them."

From Herbert Hoover, delivered in person:

"It was toward the end of my administration that we undertook to meet the financial disasters of the depression by a new method in government. We created the RFC so that business could be helped to recovery. It was a sound business program and the results proved to be very sound.

"If the RFC did not actually save the economy of the country, it came awfully close to doing so.

"In making appointments to the board, it was my pleasure to name Jesse Jones as one of the original members. It was Jesse Jones and the men around him who built the RFC into such a great institution and made it a fabulous success.

"I take great pride in my 15 years of friendship with this man of an opposite political party.

"But Jesse Jones never let politics enter into his service to his country or his personal friendships.

"His concept of public service constitutes the mark of a great American."

And the President of the United States, in a special message:

"I understand that the alumni of the Reconstruction Finance Corporation are giving a testimonial dinner to the Honorable Jesse H. Jones this evening.

"I wish you would express to Mr. Jones and those gathered at the dinner my compliments on the inspiring part that the RFC played in the rescue and stimulation of business during the depression years, and on its magnificent role in the development of production and the accumulation of critical and strategic supplies for the defense and war programs.

"It is fitting that those associated with Mr. Jones during those significant periods now do honor to their great leader, a tribute in which I heartily join."

These men were in a position to know what went on in Washington. They have stated their views on the work of the RFC.

Any congressional committee really wanting to get at the actual facts, and not simply to throw a harpoon, might begin its investigation by calling them.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include herein a petition received from my friends at Holland, Lucas County, Ohio, asking the Eightieth Congress to establish a system of military training as recommended by the President's advisory commission.

I know Mrs. Doris Woggon, the lady who has circulated this petition and know her to be a very alert lady, a good citizen, and always active in worth-while enterprises not only for her community but interested in the Nation's welfare as well.

The petition follows:

PETITION

To HOMER A. RAMEY:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Mrs. Doris Woggon, Mrs. Otto Dose, Mrs. Milo Downs, Mrs. George Cunningham, Mrs. Emma E. Thorp, Mrs. William Kurtz, Mrs. Ernest Blauvelt, Mrs. Orlando Rowell, Mrs. John Groh, Mrs. Richard Witte, Mrs. Gale Buerk, Mrs. C. W. Fisher, Mrs. Allan B. Linn, Mrs. R. E. Gandlander, Mrs. Dorothy Hess, all of Waterville, Ohio; and Mrs. Albert Kiefer, of Perrysburg, Ohio.

Problems Facing the Congress

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the radio remarks of the senior Senator from Alabama [Mr. HILL] on Friday evening, January 2, 1948, at which time several distinguished leaders of the Democratic Party participated in a Nation-wide broadcast, discussing the critical problems which face the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We Alabama Democrats look with confidence to the re-election of President Truman in November and we know that Alabama will once again lead the victory parade.

Chairman MCGRATH, Senator BARKLEY, Senator GREEN, Senator MAGNUSON, and Congresswoman NORTON have reminded us of how President Truman and the Democratic

Party have fought for a strong and expanding economy at home and a workable peace for all mankind.

They have reminded us of the Republican attacks on the farm program—soil conservation, reclamation, and farmers' cooperatives—on the school-lunch program, the REA, TVA, on the Fair Labor Standards Act with its protection and benefits for millions of unorganized and white-collar workers, on rent control and the housing program, on the program for the encouragement and protection of small business and independent and locally owned business.

The Republicans have had no program except to block the Democrats. Their only bill has been a tax bill to salve the rich and soak the poor. For years the Republicans have been bankrupt in ideas and in default in leadership.

When President Truman called Congress into special session on November 17, he told the truth as to the grave danger of inflation and ever-increasing prices, and urged a program of 10 specific points. The Republicans refused to accept the program and brought in a bill that does practically nothing to meet the situation but that cripples the antitrust laws and extends the grip of big business on our economic system.

Prices continue to go higher, unit sales of goods and merchandise steadily decline, the pinch of living cost is felt more and more and millions of American families are forced into the red to get bread and sustenance.

The American people know that today's mounting prices imperil our entire economic system and that inflation carries the threat of a chaotic bust which would plunge the United States into a depression vastly deeper and more lasting than the Hoover depression. They know that such a depresssion would drag down the rest of the world with America and would end our hopes for world peace. The people know how the Republican leaders—TAFT, WHERRY, MARTIN, WOLCOTT—struck down the Democratic safeguards against inflation and its danger. They know how the Republicans carp and criticize but refuse to act to curb inflation and put an end to its threat. The Republicans have been weighed in the balance and found wanting.

The American people will make answer in November by reelecting President Truman and giving him a Democratic Congress that will support and sustain him in keeping America strong and building the peace of the world.

Democratic Nation-Wide Radio Rally, January 2, 1948—Comments by Democratic Leaders and Typical Citizens Discussing Critical Issues Facing the Congress

---

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 7, 1948

Mr. HILL. Mr. President, on Friday evening, January 2, five distinguished leaders of the Democratic Party participated in a Nation-wide broadcast over the facilities of the Mutual Broadcasting System in a discussion of the critical problems which face the Congress during this session. In this radio rally, typical citizens in various parts of the country joined with those leaders in telling how they were affected by the problems which face the Congress.

The leaders of the Democratic Party who took part in this broadcast were the Senator from Kentucky [Mr. BARKLEY], the Senator from Rhode Island [Mr. GREEN], the chairman of the Democratic National Committee, the junior Senator from Rhode Island [Mr. MCGRATH], the Senator from Washington [Mr. MAGNUSON], and the Congresswoman from New Jersey, Hon. MARY T. NORTON.

I ask unanimous consent that the full text of the Democratic radio rally be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

DEMOCRATIC RADIO RALLY, MUTUAL BROADCASTING SYSTEM, FRIDAY, JANUARY 2, 1948, WASHINGTON, D. C.

THOSE PARTICIPATING

From Paris, France: Hon. ALBEN W. BARKLEY, minority leader, United States Senate.

From Washington, D. C.: Hon. THEODORE F. GREEN, United States Senator from Rhode Island; Hon. WARREN G. MAGNUSON, United States Senator from Washington; Hon. MARY T. NORTON, Congresswoman from New Jersey.

From Los Angeles, Calif.: Senator J. HOWARD MCGRATH, chairman of the Democratic National Committee.

Typical citizens in Cleveland, Chicago, and Omaha will broadcast their views on the issues discussed in Washington.

In the final 3 minutes of the program local Democratic leaders spoke over the Mutual stations carrying the program.

ANNOUNCER. The Democratic Party is on the air.

The following half hour has been made available by the Mutual Broadcasting System to the Democratic National Committee as a public service. Issues which will be decided in the session of Congress which convenes on Monday will be discussed by party leaders and plain citizens broadcasting from various parts of the country and from Europe. Senator J. HOWARD MCGRATH, chairman of the Democratic National Committee, will be the first speaker. From Los Angeles, Senator MCGRATH.

Senator MCGRATH. Good evening, fellow citizens, as we start this critical year, we in America along with men of good will the world over seek one thing more than anything else—a lasting and just peace. Peace is in every heart, in every prayer, and it is a subject of great anxiety in the souls of all of us, for we know that lasting peace is not yet within our grasp—in fact, there is grave danger that it may not be possible in our time.

We in the United States—members of both political parties—have kindled a new flame of hope in the freedom-loving nations overseas through our proposal for what has been called the Marshall plan, a program of European economic recovery.

It will come before the Congress this month. Is it vital? What do the people of Europe think about it? What can it accomplish? Senator ALBEN W. BARKLEY, Senate Democratic leader, is in Paris, France, tonight, and he will give you the on-the-spot answers to these questions.

(Program switches to Paris.)

Senator BARKLEY. I am happy to join in this program though compelled to do so from Paris on account of my absence from home.

In the few moments at my disposal I shall try to emphasize the importance of the economic recovery and political stability of Europe.

No one who has not seen the vast devastation which the war wrought throughout Europe can fully understand the magnitude of the recovery task. This devastation was not only physical. It was economic, political, moral, and social. As a result there has been a great uprooting of humanity, and the failure to agree on peace treaties, to restore actual peace, has complicated the task of anchoring the people and their institutions to a solid pier of hope and reconstruction.

This hope is indispensable. It requires faith in the justice and stability of government. It requires the financial aid necessary for a long-term program designed to enable the nations accepting it to get on their own feet and go forward on their own steam.

That is what the Marshall plan is designed to accomplish. Without it the prospects of European recovery are dim to the vanishing point, and the hope of political and social stability will vanish with the failure of European economic recovery.

America's vital interests are deeply concerned with this whole project. We cannot afford merely to nibble at the bit. We must sink our teeth into it, however unpleasant the taste. The Marshall plan contemplates a 4-year program of aid and recovery. It makes it possible to work out arrangements in advance with a view to the formation of a well-considered and well-rounded approach to the problem. A shorter commitment would make this impossible and would involve the risk of making what we do totally futile and ineffective.

If we are to undertake it, let us do it well. Our own welfare and the peace of the world require it. It will be an investment in world security which will return large and comforting dividends, and will be infinitely cheaper in dollars to the American people than another war which might see the destruction of civilization itself.

Congress is to tackle this problem immediately upon reassembly. It will undertake to gather all the facts, because both it and the American people are entitled to the facts. I feel confident that when the American people know the facts and recognize the opportunity and the duty, to themselves and to the world, our country will not fail in this hour of crisis and of leadership.

ANNOUNCER. And now we turn to domestic problems—problems which members of both parties agree are closely tied in with foreign relations. Congresswoman [MARY NORTON] talks from Washington, D. C., on high prices. Mrs. NORTON.

Mrs. NORTON. Good evening, ladies and gentlemen, I am not only a Member of Congress, I am also a housewife, and have personal knowledge of the problem of every housewife in America. I know something must be done to bring food prices down or a great number of America's children will suffer from malnutrition. This is an individual problem for each and everyone of us and the question in your mind and mine is what we are going to do about it. Well, the President tried to do something about the high cost of living in his message to Congress on November 17, but the Republican Congress was not interested in reducing inflation.

I charge the Republicans choked price controls to death before supply had a chance to catch up with demand. Their slogan was "end price controls and prices will find their level." Time has proved how wrong they were.

Prices have literally soared since the Republicans and the National Association of Manufacturers succeeded in killing price controls. And, they are still soaring.

For example, just in the 6 weeks during which Republican Congressmen stalled over the President's anti-inflation controls before they finally voted, too little and too late to attack soaring prices, the cost of living took a substantial jump.

Butter in Washington went up from 88 cents to $1.05 a pound. In Pittsburgh men's shoes went up just in 6 weeks from an average of $8.72 a pair to $9.38 a pair.

These are typical. But worse yet, wholesale prices which give us an indication of future retail prices, show even more trouble ahead.

During the week ending December 20 wholesale prices averaged seven-tenths of 1 percent higher than the week before. This rise was just in 1 week and it was a new postwar record.

And on that date, wholesale prices were at their highest peak since May 1920 just before the sharp recession which followed the last war—the recession we are trying to avoid after this war. These facts do not seem to alarm the Republicans.

They know that swollen profits and high prices will bring a depression but they are not willing, nor will the National Association of Manufacturers permit them, to do anything to stop it. The session of Congress starting Tuesday will determine whether greed or stupidity caused the Republicans to kill price controls. As I have said, there are now before Congress proposals submitted by President Truman which will curb our inflationary spiral. The Republicans refused to enact these proposals into law at the special session. Instead of cooperating with the President in this great crisis they deliberately passed a half-way bill which will not curb inflation. I regret to say that the Republican controlled Congress stands convicted of deliberately voting for inflation in sponsoring a weak bill in their effort to blame the President who must administer their unworkable program. This definitely is playing politics with human misery.

The Democrats will support the President and would if in control of Congress do whatever is necessary to bring down the cost of living but unfortunately for the working people of America the great tragedy is that the Democrats are not now in control of Congress.

In Cleveland, Ohio, a typical housewife is waiting to tell her story:

Mrs. WILLIAM AULT. I am Mrs. William Ault, of 698 Eddy Road, Cleveland. My husband makes about $50 a week. We have three children, 6, 9 and 11 years old. During the war, with rationing and price control, we got our fair share of food at prices we could afford. Now that there is no rationing and price control, we cannot afford to eat as well as we did during the war. You can get all you want if you have the money, but we can't afford much at today's high prices—butter at 93 cents a pound for example. I don't want luxuries, but I do want decent food and clothing for my children. I want to know why the Republican Congress doesn't take the steps necessary to give me relief from high prices. If the Republicans don't act, I'm afraid we'll have another depression and folks like me will be even worse off than we are now.

ANNOUNCER. Back in Washington Senator MAGNUSON speaks to you on problems of the West.

Senator MAGNUSON. Thank you.

We are faced here in America with the necessity of giving freely of our resources so as to preserve the peace of the world.

Yet certain Republican leaders in Congress have taken the unrealistic view that we can give of our food and resources as we are asked and at the same time cut down on the reclamation of the lands of the West that are now arid and nonproductive.

Some Eastern Republicans who seek to keep the West as a sort of colonial empire for their own exploitation forget that power for industry is vital in the West to create even greater industrial capacity.

Where would the country be in the race for atomic power if we did not today have the great public power projects that have given us the industrial head start that is necessary for atomic production?

They forget, too, that the entire economy of the Nation is based on a 6-inch layer of top soil extending across the country. They forget this and slice the funds vital to soil conservation.

They forget that the American farmer does not yet know all the answers for controlling of our rivers, for the conservation of the rich croplands that are menaced by erosion. They slash the funds for the scientific study of methods to meet these problems.

They attack the farm cooperatives that have helped make our farm owners economically self-sufficient and to improve their production and methods of distribution.

They refuse to accept the tenet that farmers need to partake of the benefits of electric power—that rural electrification is vital to increased productivity. Great steps were taken toward expanding the REA in America during the last 15 years, yet in great areas of the West and Midwest there are thousands of farms that have no electricity.

In my State of Washington, for instance, there were on last July 1 some 4,500 farms without electric power; in Minnesota, 71,000; in Iowa, nearly 57,000; and in Wyoming over 5,000. This is typical.

The Federal Power Commission said recently, "The national situation with respect to the supply of electric power is serious." Yet in the face of this, the Eightieth Congress in the first session lopped $25,000,000 off the President's request for funds.

This is the sort of penny-wise and pound-foolish philosophy these Republicans have taken in their approach to the problems that involve our national resources—not in the West and Midwest alone—but all over the country.

Soil conservation is a subject close to every farmer's economic life. It is a fact that conservation, according to figures released by the Soil Conservation Service, means about $4.90 per acre more for the average farmer in increased production.

Think what that means in increased food for a distressed world.

Since 1933 we have spent $480,000,000 to conserve soil. Yet during the same period we have lost $14,000,000,000 by erosion. During the war and even yet we used and are using our soil resources faster than we are replenishing them.

It seems obvious we need more expenditures for soil conservation since they are more than self-supporting; not the senseless cuts the Republicans give us.

Yet the Republicans have trimmed requests for soil conservation by more than 10 percent. Our national resources are vital to all of us, but especially to farmers. Let me introduce a typical farmer, who will speak to you from Omaha, Nebr.

Mr. PETER PARKERT. I am Peter Parkert, dirt farmer from Hooper, Nebr. Thanks to aids given us by Democratic administrations, Nebraska farmers have increased average production of wheat from 50,000,000 bushels in the Hoover era to 90,000,000 in 1947, and midwestern farmers increased corn yields from two and a half to more than three billion bushels. In the same period our cattle herds increased greatly. Prices have advanced from 25-cent wheat and 2-cent hogs to their present heights. Now the GOP would destroy our gains. If the cheap Republican philosophy prevails, you can look for return of the Dust Bowl. Development of our great rivers will be abandoned. Farmers' cooperatives will be scuttled. For these reasons farmers will vote Democratic in November.

ANNOUNCER. And now Senator GREEN in Washington.

Senator GREEN. Why should we fear talk about communism here in America. It promises material gains in return for surrender of civil liberties, but our American system of free enterprise has made us the strongest and richest country in the world.

Communism has spread the fastest where there has been a class split. For example, where the owner of a factory has had too much profit and the worker too little wages. In our country the owner of the factory has lived well, but so has the worker. In America the man who helps to build a car can also own one.

Yet today this system of ours is dangerously out of balance. Soaring prices are robbing many people of a fair share of our national production. If this continues, we must face a crippling depression. That would be a failure of our capitalistic system to which the Communists might well point.

Only recently has the Republican Party shown any appreciation of this danger, and then only in applying superficial treatments.

America has reached its highest level of production and, what is more important, the fairest sharing of it under a Democratic administration. Why? Because Democrats realize that our human resources are the bedrock basis of our national wealth, and that to continue to grow stronger as a nation we must continue to grow stronger as individuals.

This basic truth seems to escape the Republican Party, but it does not escape the Democratic Party.

On the one hand American people are better housed than any other; but on the other hand millions of Americans are not decently housed.

American people are in general healthier than those in the rest of the world; but the war revealed that millions of American youth were unfit to serve their country.

America has a high standard of public education, but it is still out of reach of many.

The average citizen has more security than he had, yet millions are without any form of old-age security.

The Republican Party does not think these problems are important.

The Democratic Party says they are very important. We say that our free enterprise system depends upon our solving them and that the Government must act to solve them.

Consider the Nation's health. The Democratic Party believes that we must make sure that all people get adequate medical care so that all can contribute to the Nation's production. That is why the Democratic Party supports national health insurance, while the Republican Party wants only a medical dole for the poor.

Bad housing breeds insecurity and unrest, disease and crime. All these are expensive and hamper our production. The Democratic Party proposes that the Government solve our housing problem but the Republican Party gives only lip service. It is true that individual Republicans indorse housing measures but the party itself does nothing.

With education it is the same. Lip service and inaction.

Similarly with expanded social security and a higher minimum wage. Some lip service, but nothing is done.

It all adds up to a record of Republican blindness to the fact that human values are the keystone of American strength and wealth.

The free enterprise system cannot succeed fettered by the Republican philosophy that the men who operate small businesses or who work in a factory or on the farm or in the mine need only be kept alive to go on producing indefinitely.

President Truman has proposed positive, workable programs to meet the problems I have cited. They will be before the Republican controlled Congress in this session.

But the Republican leadership is not likely to think them important enough to carry through to success.

My fellow Americans—what do you think?

In Chicago three typical citizens are ready to give you their answer to that question.

Mr. ERNEST SIPPLE. I am Ernest Sipple, 4745 North Rockwell Street, Service Office, Marine Corps League.

Senator GREEN said that the Republican Party gives only lip service to the housing

problem, but I think that possibly a better name for it would be slip service. They certainly slipped up on their chance to do something for veterans, who are generally harder hit by the housing shortage than any other category of our citizens. They could have passed the Taft-Ellender-Wagner bill, but intentionally or not, they slipped on that one. They had a chance to give veterans preference in buying materials, but they slipped there, too.

Under present prices—Republican prices—very few veterans can afford to build homes. Let's hope, for the sake not only of veterans but of all the unhoused, that something is done to solve this problem in the new Congress.

Mr. ALBERT TOWERS. I am Albert Towers, 7514 Rhodes Avenue, a member of the United Steelworkers, CIO.

Ever since the last elections I've been thinking of that Republican slogan, "Haven't you had enough?" That was so full of the promise of better times for all of us. What we've experienced is just another example of how different actual performance can be from promises. By now I'm sure every workingman has had enough of the Taft-Hartley law, to say nothing of the Republican prices. To my way of thinking there's only one remedy—it's up to organized workers to register and vote against those who have demonstrated they would throw labor for new losses if given new power in 1948.

A CHICAGO SCHOOL TEACHER. As a school teacher, a Chicago school teacher, I know that the members of my profession all over the Nation will be watching the new session of Congress with unprecedented interest. Most teachers, I feel, are convinced that the Republican-controlled Congress overlooked the opportunity of a lifetime in the last session when they did nothing about President Truman's proposals for expanded educational program. One result has been that teachers, to whom we have traditionally entrusted the training of our citizens of tomorrow, are leaving their poorly paid profession and I think it is safe to say that many of them will not go back until something is done at the Federal level to improve our educational system.

ANNOUNCER. Again from Los Angeles, Senator J. HOWARD MCGRATH.

Senator MCGRATH. The protection of the human resources of the American people is vital.

The development and conservation of our great natural resources is equally important.

The Republican Congress, as you have heard, has not seen fit to protect these vital assets.

But what about our political resources?

The Republican Congress cannot be blamed for the failure of the American people to use and protect the most priceless assets of all—the ballot.

Part-time citizenship and rocking-chair voters are not the answer to the problems of our present-day world. The American citizen—the free voter—cannot close his eyes to the world of reality. He is a part of that world and his well-being is affected by political action whether he wills it or not.

Thinking men and women will recognize the truth of this premise.

Yet, thinking men and women have failed in the United States to use their franchise. They have failed to vote.

There are, according to the Bureau of the Census, some 91,000,000 persons who are qualified to vote in this country. In 1946 little more than one-third of these qualified voters went to the polls.

The Republicans, with a tightly organized core of voting party members, cast some 20,000,000 votes. With two-ninths of the qualified voters of the Nation they were able to take control of the Congress.

A tightly organized minority thus has given the Republicans the majority control of the Eightieth Congress. This majority of the minority has failed to act on vital problems in the first session of the Eightieth Congress. They failed to act adequately again in the recent session. If they can, they will defer action on vital matters in the coming session.

How serious such deferment can be has been illustrated by plain-speaking citizens on this broadcast. You have heard workingmen and farmers, housewives, and professional women tell how they are affected by the problems which Republicans in Congress have refused to face.

All of us must understand that the only compelling voice left is the voice of the American citizen manifested through the ballot box. We must realize that the ultimate master is the voting citizens.

This ability to take part in the affairs of the Nation depends on the use of the ballot. It is imperative that all of us understand that.

Nonvoting citizens who think nothing can happen here should be reminded that atomic bombs, when they drop, fall on voters and nonvoters alike. They don't just pick out a favored few.

The problems of our time are the problems of all our citizens.

Secretary Marshall said recently that foreign policy has entered every home and taken its place at every dinner table.

Never were more prophetic words spoken. Every citizen must realize his responsibility. He must register and vote. He must see that his neighbor registers and votes.

The good health of our citizens is important.

The good health of our economy is important.

But our political good health is just as important as either.

Regardless of which party wins elections, we do not enjoy political good health unless those of us who are entitled to vote actually go to the polls and do so.

That way, and that way only, can we have a truly representative government.

And I am confident that the people want to go forward through the progressive legislative steps we have discussed tonight and that we will do so only through government that represents the will of all eligible voters.

These problems tie in closely with each of you as individuals and with the activities of the Democratic Party in your city, county, and State.

It is the party workers in the wards and precincts who see to it that their neighbors understand the issues and that they register so that they can record their opinions in the polling booths.

You local Democratic leaders are the ones who will join with you in these activities.

And now, a local Democratic leader from your own town or county will talk to you over the station to which you are listening.

(At this point the program was switched to local stations for participation by local leaders.)

Trading in Grain Futures

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 12, 1948

Mr. BALL. Mr. President, I ask unanimous consent that there be printed in the RECORD an article entitled "Grain Trading Cuts Your Bread Bill," by Harry A. Bullis, from the Washington Post of Sunday, January 11. Mr. Bullis is chairman of the board of General Mills, Inc. The article deals with the function of the futures market on the grain and milling trade in the United States.

Along with this article I ask that there be printed an editorial entitled "Trading in Futures," which appeared in the same paper.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 11, 1948]

HEDGING REDUCES PROCESSOR'S RISKS—GRAIN TRADING CUTS YOUR BREAD BILL

(By Harry A. Bullis)

(Mr. Bullis is chairman of the board of General Mills, Inc. The importance of General Mills as a grain trader is indicated by the fact that in its last fiscal year, ended May 31, 1947, the corporation paid $311,953,057 to farmers and other suppliers. That is 84 cents out of every sales dollar, on sales totaling $370,932,427.)

The grain futures markets are like any other markets—a place where people go to sell their products and where others go to buy them. The only difference is that in one market the goods are actually displayed and the purchaser buys them and takes them away. The futures market operates by contracts between the seller and purchaser to deliver the product at some agreed future date. It is a meeting place where the transactions record the forces of supply and the prices that prevail therein.

To these markets go producers, processors, exporters, importers, elevator operators, commission houses, grain merchandisers, consumers, and actual handlers of the commodities, and equally—as in any other market—those who attempt to wager their judgment against the future prices for purposes of gain. These are commonly known as speculators.

The vast proportion of commodities passing through these futures markets go directly or indirectly into the hands of processors, or those who perform services in connection therewith. These for the most part rely upon a charge for the service they perform, rather than on any changes in the value of the products. To this end they attempt to minimize the risks involved in any possible price changes by what is known as the process of "hedging."

Briefly stated, hedging is merely the method of protecting a purchase by the immediate sale of the product either in its original or processed form.

For example, a processor buys a volume of wheat for delivery to him on a certain date, and immediately sells an equivalent amount of flour to be delivered by some future date. Or, if he wants to insure a supply of wheat for the future, he may purchase wheat and store it in his elevator, at the same time selling an equivalent amount for delivery at some future date, relying upon the differences in price to pay for the cost of carrying, insurance, and servicing.

In considering these futures markets, one must fully understand that production of agricultural products is seasonal, but consumption is continuous. At harvest time there is a great flood of the commodity coming into the market, far more than the consumption at that time. By hedging, one may buy freely without risk and without price interest, and thus absorb the flow of the commodity which would otherwise be accumulated without buyers, unduly depressing the price.

A SENSITIVE REGISTER

The grain futures markets perform their very important economic function in three ways:

1. They provide a highly sensitive price-recording mechanism wherein the forces of

supply and demand can be promptly registered. With the futures markets in existence, no individual or group of individuals, even including the United States Government, can artificially control the price level. They may affect it temporarily, or they may hasten a trend; but prices cannot be kept high or low with the futures market in existence solely as a result of futures trading. Supply and demand ultimately set the level. Any individual who feels that the price level is either too high or too low at that particular moment may buy or sell, depending upon his opinion.

With the grain futures markets in existence, any changes in the supply or demand picture can be reflected in change of price level. In a free economy it is highly desirable that such changes in the supply and demand picture be recorded promptly, as an increased price level tends to increase production and curtail consumption, and a lower price level tends to do just the reverse. The earlier the price-level changes are established and recorded, the quicker our economy sets to work to counteract these changes.

The present situation is a good case in point. Last year's total grain production in the United States was approximately 800,000,000 bushels less than was consumed and exported during the previous crop year. In order to make our reduced supplies go around, it was necessary to sharply curtail the use of grain in some category. The way it could best be reduced was in the animal feeding category. With our highly sensitive futures systems, prices rapidly rose to a level wherein grain feeding to animals was sharply curtailed.

It was very important to the national economy that this scarcity of grain be immediately recognized, and that the counteracting grain saving commence at the earliest possible date. Had we not had such price-recording machinery, which quickly and accurately reflected supply and demand, it is almost certain that we would have wasted grain through excessive animal feeding and the Nation would have discovered the shortage of grain for human food after it was too late for corrective measures to be effective.

INVALUABLE PRICE TAGS

2. The second important economic function of the grain futures markets is to establish grain values and publicize those values for all to see. With this system it is possible for both the producer and consumer to observe not only the value of the different kinds of grain, but also the value of grain for immediate delivery versus grain for deferred delivery or the same grain for delivery in the following crop year. Likewise, these futures markets record the differential in value of one grain versus another, or the differential in value of grains in various locations. The important thing is that every segment of our population can know exactly what the price of grain is at any given moment and can observe the results of changes in the supply and demand picture.

To the producer this is very valuable information. The extreme importance of grain futures quotations to the farmers of the Nation is dramatically evidenced by the fact that every radio station in the Farm Belt must carry grain quotations regularly as a part of its farm service.

In the marketing of his grain the farmer is able to observe the market reports in the public press, to select his own time for marketing, and to establish price before date of shipment. If he elects to market his grain in his local market he can, by again observing the futures markets, establish exactly the cost of using one or more middleman's services in the marketing of his grain. Neither of these features is available to the producer of commodities not traded in on futures exchanges.

PRICE RISK MINIMIZED

3. Probably the most important function performed by the futures market is that these markets provide a means and a system whereby risk of ownership may be largely eliminated by those who wish to avoid such risk, and these risks passed on to those who are willing to assume them.

As the greater part of each year's wheat production is marketed during the first 3 months after harvest, and the demand is dependent upon the buyer's attitude, wheat must be accumulated by processors, exporters, and others in anticipation of a later demand. The buying and accumulation of wheat in excess of immediate sale exposes the owners to changes in market prices. To avoid such hazard, the same processors, exporters, and merchants turn to hedging in the futures markets.

The sole and vital use which my company makes of the grain futures market is for this purpose of hedging to minimize the price risk. This is of real value, not only in contributing to the stability of our company's operations, but in making it possible to sell our products at a lower cost to the consumer than we could if we had to make provisions for potential losses due to price fluctuations. thereby narrowing the spread between the producer and the consumer to a very small conversion cost.

It is a well-publicized fact that in order to protect our national economy we must have a carry-over of grain from one year to the next. In the case of wheat this carry-over, for safety's sake, should always be at least 200,000,000 to 250,000,000 bushels, and at times a carry-over of 500,000,000 bushels may be faced. Here again someone must assume the risk of ownership of this vast quantity of wheat carry-over from one year to the next.

If we did not have the mechanism by which the risk of ownership could be readily transferred from producer, processor, and consumer to those willing to assume this risk, the value of wheat would be subject to extremely wide fluctuations. Prices would be very depressed whenever producer selling exceeded consumptive buying, and the prices would rise very sharply whenever consumptive buying exceeded producer marketing.

SPECULATOR'S FUNCTION

The public, and particularly the producer, should know that the minute grain has been produced and harvested, a risk of ownership exists, and that it is to the advantage of all that a means is provided for transferring this risk to the shoulders of those who are willing to assume it. The speculator, therefore, does perform a true economic function. He absorbs this risk of ownership, which must be borne by someone. Whenever producer selling and consumptive buying are out of balance, he is the balance wheel which prevents violently fluctuating markets.

Under our present system the producer may, if he wishes, retain the risk of ownership by withholding his produce from the market at harvest time, and marketing it gradually throughout the season or late in the crop year. However, with the futures market in existence, he may elect to market his entire crop at harvest time and avoid completely any risk of ownership from that date forward and without unduly depressing the market in so doing. The speculator assumes the risk and will suffer any loss if values decline as the crop year progresses. Likewise he does and should benefit from any enhancement of price following the date of his assumption of this risk.

The flour miller, grain merchant, or cereal processor may, if he wishes, buy an entire year's supply of grain at harvest time, thereby assuming the market risk of such ownership. In most instances, however, he considers himself simply a processor or merchandiser and plans to earn his profit as processor or merchant. It is of great benefit to him and to the consumers who purchase his product that he can pass this risk of ownership on to others. This is known as "hedging" against market fluctuations.

FORM OF INSURANCE

When attacks are made on the futures exchanges, the reader or listener should bear in mind that this risk of ownership becomes a fact the minute the commodity is produced, and that this risk remains in existence until the date of consumption. The risk is real, and someone must carry it.

In this important function the futures market can be compared favorably with the fire-insurance company. The owner of the property must assume great risk of loss by fire. Through our fire-insurance companies he is able to avoid such risk, placing it in turn on those who are willing to assume it.

As we can all recall, whenever grain prices are high as the result of heavy demand versus supply, attention is focused on the futures markets as the cause of high prices. Likewise, when grain prices are low as the result of heavy supply and poor demand, the futures markets are given as the reason for depressing the prices. Actually, the futures markets act for a more stable price and a more realistic price based upon the law of supply and demand than would be possible if the futures markets did not exist.

The public, in my opinion, should regard the grain-futures markets as machinery which records grain values at various points and in future months, and in so doing eliminates an element of risk which otherwise would add to the cost, and consequently to the price, of the grain products offered for sale to the consumer throughout the Nation.

TRADING IN FUTURES

The drive against speculation in the grain futures markets has undoubtedly caused many people to believe that the organized commodity markets are the haunts of gamblers whose operations ought to be suppressed in the public interest. As previously stated, we think that, for reasons of policy, Federal employees should not engage in speculative operations of this sort. And, of course, Government officials in a position to obtain inside information regarding Government grain-buying plans are guilty of a betrayal of trust if they take advantage of their knowledge to feather their own nests. But, so far as private citizens are concerned, speculative transactions in the futures markets are legitimate operations serving a highly useful purpose, as pointed out by Harry A. Bullis, president of General Mills, in an article published today on page 1 of this section.

Mr. Bullis explains in nontechnical language the important services performed by grain futures markets as sensitive recorders of changing conditions of supply and demand. His own company makes use of the futures market for hedging purposes, thereby minimizing risks of loss from changes in grain prices. As a result the company is able to sell its products at prices below those that would be charged if it were not protected from price fluctuations. In brief, hedging—made possible by the existence of organized grain futures markets—cuts your bread bill, as Mr. Bullis says, instead of increasing it.

Speculators on the organized grain exchanges, as distinguished from hedgers, are an essential part of the country's distributive mechanism. For their buying and selling give the futures markets the necessary balance and liquidity without which they could not offer merchants or processors of grain the necessary facilities for insuring themselves against price risks. Of course, there are times when speculative activity becomes excessive and tends to aggravate short-term fluctuations in prices. But, generally speaking, prices in the futures markets register changing factors affecting supply and

demand; they are not long-run determinants of prices. The speculator who assumes the risks of ownership of commodities, the prices of which are constantly fluctuating, is, as Mr. Bullis states, performing a "true economic function" in absorbing this "risk of ownership, which must be borne by someone." Why that is so will be apparent to the readers of Mr. Bullis' instructive article.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include herein a petition received from my friends at Holland, Lucas County, Ohio, asking the Eightieth Congress to establish a system of military training as recommended by the President's advisory commission.

I know Mr. Simmons, the gentleman who circulated the petition, very well and am most pleased to state that he is one of our most outstanding citizens, as well as one of my closest personal friends.

The petition follows:

PETITION

HOMER RAMEY,
United States Congressman:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

A. E. Simmons, Irene Knighton, Ira V. Knighton, Edwin E. Holman, Vileda Holman, George Holman, Jr., Mrs. M. W. Reid, John C. McFellin, James Delaney, William H. Y. Slaymaker, Holland, Ohio; Raymond Babich, Toledo, Ohio; Roy C. Wood, Holland, Ohio; Charles Crim, Maumee, Ohio; Albert E. Lormer, Dallas N. Barnes, Charles A. Hartman, Donald E. Brown, Alvin Hamberry, Mrs. W. H. Slaymaker, Mrs. A. E. Lormer, Holland, Ohio; Mrs. Charles Crim, Maumee, Ohio; Mrs. Alice Barnes, Mrs. Charles Hartman, Holland Ohio; Mrs. Carl M. Barnes, Carl M. Barnes, Toledo, Ohio; Mrs. Roy Wood, Scott Wood, Mrs. Lucille McFellin, Mrs. Latis Knighton, Rex W. Vesey, Mrs. W. N. Heeter, Mrs. Rex Vesey, Edward Berendt, Mrs. Edward Berendt, Mrs. C. R. Vesey, Donald Williams, C. R. Vesey, Holland, Ohio.

Mr. Truman's Platform

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. WHERRY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Mr. Truman's Platform," from the Omaha World-Herald of January 8, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S PLATFORM

The President's message to Congress yesterday was only incidentally a report on the state of the Union. It was primarily a report on Harry Truman's candidacy and a bland, undisguised, plea for votes next November.

In this, his platform for 1948, Mr. Truman gives notice that his celebrated "swing to the right" is now a closed chapter. That was all very well for the early, callow days of his administration, but now an election is impending and he returns to the time-tested techniques, the vote-buying techniques, of the New Deal.

Spend and spend. Elect and elect.

As had been forecast, the President places his greatest emphasis on more social services, wider social security.

Unemployment compensation, he says, should be increased. Likewise old-age benefits. Likewise survivors' benefits. Then there is the matter of health. "Our ultimate aim must be a comprehensive insurance system to protect all our people equally against insecurity and ill-health." As for education, "the Federal Government has a responsibility for providing financial aid to meet this [school] crisis."

Security, health, and education, from the cradle to the grave, provided by benevolent old Uncle Sam.

At a cost of how many billions? The President does not at this time face that question. Sufficient to the campaign the promises thereof.

Spend and spend.

But let it not be implied that President Truman ignores economic issues. He discusses them in extenso and in terms of magnificent self-contradiction.

For example:

"We are today far short of the industrial capacity we need for a growing future. At least $50,000,000,000 should be invested by industry to improve and expand our productive facilities over the next few years."

And how does he propose to help industry to set aside this huge sum for expansion? By slapping a whopping tax increase on corporations. An increase of three and two-tenths billions a year.

Corporate profits last year, he says, reached an all-time high of $17,000,000,000. Probably he is right about that. Wages also reached an all-time high. So did the cost of living. All were inflated out of reason because everybody was using a 50-cent dollar.

And now, at a time when fifty billions are needed for reinvestment in industry in order to increase productivity, the President proposes an added tax on industry of three and two-tenths billions. This would be given back to the taxpayers at the rate of $40 per head—thus increasing spending power, increasing the demand for goods which underfinanced industry cannot produce.

On one point the President is adamant. There must be no over-all tax reduction. No decrease in the cost of Government. Not "until inflation has been stopped."

As a matter of cold fact, as every economist knows, high taxes are a major cause of the high cost of living. The American people last year paid out more money for taxes than for food. High taxes are a part of the exorbitant price of beefsteak and potatoes, overshoes and underpants, magazines and prayer books. If the Government in Washington, by economy, could bring about a substantial reduction in its total tax levy, the dollar would gain in value and the cost of living would decline.

If that were to come about, every American would be more secure, better able to take care of his own health and provide for the education of his children.

But any such sensible attack on the basic problems of inflation and security has no appeal for Candidate Truman. To his mind, apparently, no cure for the ills of the people and the Republic can be adequate unless it is made in Washington, managed by the bureaucracy and paid for by New Deal taxes.

Space limitations forbid a detailed examination of all sections of President Truman's platform in these columns.

But the careful reader will find that the President's feet are back on the path of the New Deal. The path that leads to more and more Government do-goodism, higher and higher Government costs, stronger and stronger Government authority—always at the expense of the individual citizen and his liberties.

The Hendersons and the Bowleses and the Wallaces are gone from Washington but their philosophy—economic and political—lingers on, given voice now by the man from Missouri.

Thus one side of the campaign of 1948 has been staked out and occupied. Whether the other side—the side of the self-sufficient American who loves freedom—will be taken and resolutely advocated by the Republican Party and its candidate, that remains to be seen.

Economic Problems of the Netherlands in the Postwar Period

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Some Economic Problems of the Netherlands in the Postwar Period, delivered recently by the commercial counselor of the Netherlands Embassy before the Women's National Democratic Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The title I have given to this address seems deceptive, since it is hardly possible nowadays to speak of the economic ills of one particular country, or even of a particular group of countries. We can see the proof of it right here in Washington. Secretary of State Marshall's now famous Harvard address has developed far beyond its original goal—aid to Europe. Within Europe it has stirred up the question of relations between eastern and western Europe; of the future of Germany, especially the level to which its industry is to be allowed to develop without impairing the security of its neighbors; and here on this side of the Atlantic it has been felt that aid to Europe could affect the economy of this country. Aid to Europe has opened discussions on the whole field of United States economy; it has made this Nation aware of the potentialities and also of the limits of its resources; it has stirred up anew the question of prices and of price controls. But also other areas besides the United States and western Europe were to enter the picture. Latin America and Canada, with their large surplus of foodstuffs, are prospective suppliers under a general recovery plan. Furthermore, those vast raw-material-producing areas in southeastern Asia which contributed to such a large extent to the welfare of Europe should be mentioned. When I finally remind you of the large reconstruc-

tion needs of China, you will realize how at this moment the economy of the whole world is at stake, and how the economic problems of most of the world are now focused on Washington.

Nevertheless, tempting as it may be to discuss all of these subjects, I must somehow come to my subject and tell you something of the economic problems now facing my country. When Holland was liberated in the spring of 1945, 8 months after Belgium and France, it was stripped of practically everything which makes human life possible. I am not exaggerating when I tell you that the food packages dropped from Allied airplanes were literally lifesavers for the population of the large cities. Had the occupation lasted only a few more weeks, mass starvation would have taken place. Factories were stripped of their machinery, bridges were destroyed, railway tracks had been removed, and transportation equipment was carried away.

As a result of 2½ years of extremely hard work, coupled with generous help from wartime Allies, Holland was able to heal some of the worst scars left by the war. Once more food supplies are adequate if not plentiful. Transportation is improving rapidly; numerous bridges, so many of which were destroyed, have been replaced; most of the railway tracks have been laid anew; trains are on schedule although many of them necessarily are using obsolete equipment. However, it would be grossly incorrect to conclude from these apparent improvements that Holland is on its feet again and could, without further outside help, gradually regain its prewar prosperity. The most one can say is that Holland is now beyond the first postwar relief stage. And even in saying this I must strike a cautious note. The economic level which has now been reached, owing to the strenuous efforts of the whole population, is very precarious; reserves are so thin that each set-back—for instance, a drop in world food supplies—would immediately affect the consumer. The drought which struck western Europe this summer has resulted in a more or less serious reduction in a number of basic food rations in the Netherlands. The same thing happened in other western European countries, which illustrates the permanent danger of the food situation in western Europe.

If I say that even what I would like to call the relief stage in the Netherlands is hardly overcome, how much more serious is the long-term economic outlook of the courty. Let me be very clear about this. With modern technical means, with the great reservoir of good will which always exists at the end of a great catastrophe, it is not too difficult to repair the worst damages caused by such a catastrophe and to restore the first essentials of life. But it is quite another problem to put a country back on its feet again, especially a country which suffered what the Netherlands had to endure. Besides that, exactly what do we mean by putting a country back on its feet? Do we mean thereby restoring the same conditions under which it used to live in prewar days? Such action, even if it were possible, would prove to be rather unrealistic because it would simply ignore the quite substantial changes in the economic relationships among the various countries which were brought about by the war. When you read the report of the Committee of European Economic Cooperation, the committee of 16 European countries which worked all through last summer in Paris to state their economic difficulties, you will see that the main part of their report is a vast production drive aiming at targets which are well above the prewar level. This is a realistic approach. When one has lost out, the way to overcome this loss is to work harder. But in order to work harder, one needs food, clothing, tools, raw materials, and a roof over one's head. This is really the gist of the Paris report.

I can make clear to you what this really implies by indicating the way the Netherlands has to adapt itself to changed world conditions. The Netherlands is one of the most densely populated countries in the world. If in prewar days it had managed to attain a degree of welfare for its population, which was not far below American standards, this was due to its extensive trade relations with the rest of the world. The Netherlands could feed, house, and provide a living for its dense population—in a country poor in raw materials—only by building up an extensive source of income, apart from its exports which never were sufficient to pay for its imports. This was done by rendering services to other countries, such as foreign investments, shipping, and insurance. Investments in the Netherlands East Indies before the war amounted to $1,600,000,000. These investments made it possible for the Netherlands Indies to become an important supplier of foodstuffs and raw materials for the whole world. It was through this category of services that the Netherlands was able to finance its large trading deficit with the United States.

In speaking about trading deficits, let us first have a look into the problem of the dollar shortage which is so widely discussed nowadays. There are some economists in this country who deny the existence of a dollar shortage. Their reasoning is rather simple. They have calculated that there are now far more dollars held by noncitizens of the United States than there were before the war. So they say that there are sufficient dollars in the world to buy American goods and that there is no need for this country to extend any foreign help. I would like for these economists to spend a winter in any of the countries which are involved in the European recovery program. I am sure that on their return to the United States next spring they would have become aware of the reality of the dollar shortage. They would have observed it in the daily meals, in the cold homes they would have visited, in the clothes people are wearing, and in hundreds of other items of the people's daily lives. If they had, during their stay in the Netherlands, wished to exchange a hotel room for a house or an apartment they would have discovered—even if they were lucky enough to have found a place—that they would have had to share it with others; the blessing of a private home is a luxury. The dollar shortage prevents the building of sufficient homes to make up for the large-scale destruction of houses during the war.

These, however, are only the outward signs. But let me make a point of it right away that the people in these countries do not expect and do not wish other more fortunate nations to feed and clothe them. What they do expect is that within a reasonable time they will be able once more to be self-sufficient; that is to say, to be able to pay for wha they need with their exports and their services. Now they are not able to do so, and their last resources are being used to keep life going, at the expense of their future. If the help they have been receiving since the end of the war were to be withheld from them, the standard of living they have been trying to rebuild would all at once be pitched to low levels and hunger and misery would once more enter every home.

There is in reality a very serious shortage of dollars because of the simple fact that the dollar is the ticket, so to say, with which most of the goods Europe needs for its recovery are to be procured. Many of these goods in prewar days could be procured nearer by in Europe—in Germany, in France, in eastern Europe, in the United Kingdom.

Take coal for example: before the war Europe produced sufficient coal for its own needs. Now, in order to have a minimum return of its vitally needed industries, not to speak of coal for domestic heating purposes, Europe yearly has to import half a billion dollars' worth of American coal. I can assure you that this is sheer necessity because nobody in his right senses would think of using his scanty financial reserves for the haul over the ocean of American coal and pay freight, which amounts to 150 percent of the price of the coal. One only does such a thing when there is no other means of obtaining sufficient coal.

A few figures on the Netherlands balance of trade will also show you the implications of the dollar shortage. Before the war one-fifth of our imports had to be paid for in dollars; for the year 1947 this proportion is twice as high, 40 percent. The total value of our imports this year is three times as high as it was in 1938. This means that we are spending on our current trading account six times as many dollars as we did before the war. On the contrary, our dollar receipts still are far below our prewar dollar inflow. Besides that, for the time being there is not the cushioning effect of very substantial exports of foodstuffs and raw materials from the Netherlands East Indies to the dollar area. These figures apply to the Netherlands. When we make the same calculation for other European countries, we shall, with a few exceptions, arrive at similar results. The dollar shortage at the moment remains a very serious and real problem for European nations.

Another factor which weighs heavily on the problems of recovery of the European nations is the situation in Germany and the allied policy in that country. The German problem has been complicated in many ways, and it is a fallacy to say that restoring Germany economically is synonymous with restoring her war potential. No European, and especially no European who has experienced the horrors of the Nazi occupation of his country, will wish to see the revival of a Germany capable of waging wars of aggression. But no European will wish for a continuation of the present chaos in Germany. Apart from the very real dangers of the economic prostration of from 60 to 70 million Germans in the heart of Europe, the crippling of Germany's industrial production greatly affects the economic recovery of its neighbors and aggravates their plight.

Let us study a few figures. A moment ago I mentioned coal. In 1938 western Germany (the Bizone) produced 206,000,000 tons of coal, a large share of which was exported and which was of vital importance to the steel industry in France, Belgium, and Luxemburg. In 1947 production is estimated to amount to 133,000,000 tons, a difference of 73,000,000 tons, which is almost double the present yearly exports of coal from this country to Europe. This clearly shows that even taking into account the substantial coal shipments from the United States, the coal situation in Europe remains extremely critical.

Steel production gives an even more marked contrast. Production of crude steel in the Bizone in 1938 amounted to 17.6 million tons. This year it will be not more than 2.8 million tons. You will remember that under the Potsdam declaration Germany was allowed a steel capacity of 5.8 million tons. Recently this figure, under the revised level of industry plan, was increased to 10,000,000 tons which was equal to German steel production in 1936 before the great Nazi rearmament boom set in. When you look at present production, however, you will see that it is still far below the Potsdam figure and that German steel exports, which would accelerate European recovery is at present out of the question.

To the Netherlands the economic fate of Germany is of the greatest importance. Twenty-five percent of the Netherlands prewar imports came from Germany. These consisted mainly of manufactured articles, machines, and machine tools. Most of these goods, which on account of wartime destruction and the necessary expansion of the

Netherlands industry must be imported in greatly increased quantities, are no longer to be purchased in Germany and we are compelled to come to this market thereby increasing our dollar deficit.

On the export side, the picture is equally dismal. Germany before the war bought 16 percent of our exports. This market is almost completely lost because the military authorities have to cut down on imports. The reason for this policy is obvious. On the other hand, it seems anomalous in these days of food shortage to leave the Netherlands with unsalable surplus of vegetables which would help to make up for the deficiency in the German diet. But the real importance of Germany to our economy was our geographical position on the mouth of the Rhine River, that great artery of water traffic which leads right into central Europe. The ports of Rotterdam and Amsterdam are natural inlets and outlets, and are important commercial links between central Europe and the world overseas. When one considers these great ports, the cruel bombardment to which the Germans subjected Rotterdam in the May days of 1940 and the almost scientific method in which they wrecked port installations in Rotterdam and Amsterdam in 1944 and 1945, they gain special significance. The Netherlands ports before the war gained their ascendancy only in heavy competition with the German ports of Hamburg and Bremen. This competition from the German side had to take into its stride artificial devices such as special railway rates between Hamburg and Bremen and numerous places in central Europe. We had hoped that the military defeat of Germany would have ended the preferential position of Hamburg and Bremen, and that it would have restored Rotterdam and Amsterdam to the place to which their geographical positions and their past records would have entitled them. It is quite a disillusionment, however, to see the bizonal administration in Germany channel all overseas traffic to Germany through the ports of Hamburg and Bremen. Financial reasons are again called upon to motivate this policy. This may be so, but on the other hand, the use of the ports of Rotterdam and Amsterdam for this purpose would have been of enormous benefit in the strenuous struggle for recovery the Netherlands are waging. Restoration of Rotterdam's and Amsterdam's earning capacity would greatly diminish the dependency of the Netherlands on American aid.

The Netherlands Government is following with a keen eye the proceedings which are taking place in the drafting of a peace treaty with Germany. In January of this year the Netherlands Government submitted a memorandum to the Big Four giving its views on Allied policy with regard to Germany. In this memorandum the Netherlands Government states as its principal aim, relative to the German problem, "the creation of adequate guarantee to ensure peace and security, and the creation of the prerequisites for the recovery of the national economy and the recovery of the prosperity of Germany insofar as this is essential to European and world prosperity." It is felt throughout the Netherlands that its economic relations with Germany, as a result of its geographical position, have always been so close; that the Netherlands has such a long-standing experience in dealing with Germans; that they, as well as other countries neighboring Germany, feel they are entitled to a large degree in helping to draft the future status of Germany. Germany's importance for European recovery was recognized in the report of the Committee of European Economic Cooperation in these words: "For the purpose of drawing up a European balance sheet of resources and requirements, it is indispensable to take account of Germany since that economy has been, in the past, and by the nature of things will remain, closely tied up with the economic system of other European countries."

But let us now leave the German scene and turn to a more general aspect of European aid. I believe the core of the whole problem of aid to Europe to be the question whether the proposed aid will serve its purpose, and whether the countries now applying for such aid will thereby, after a number of years, really succeed in becoming self-sufficient.

The answer to this question, to a great extent, lies in Europe itself. There is no use denying that the line which runs from Stettin in the north to Trieste in the south, separating the west of Europe from the rest of the continent, is in itself an economic monstrosity. Take only the fact that Europe's bread basket in the east is no longer available to the densely populated western Europe. It is the American taxpayer who has to make up for a part of this loss by having to pay almost $1,000,000,000 a year for feeding the population of the Bizone. Furthermore, the collieries in Silesia now wholly in Polish territory, used to supply many a European country with coal. This flow to the west has now become a thin trickle.

The Paris Committee of European Economic Cooperation, in various places of its report, makes full allowance of this fact and stresses the importance of the reopening of the source of supplies from eastern to western Europe.

A second problem in connection with the efficacy of American aid to Europe is the question of economic cooperation among the European countries. The recovery program of the Paris Committee is based inter alia on the development of economic cooperation between the participating countries. Now I know that Americans feel very strongly about this point and that they are apt to belittle the obstacles which exist in welding together the economies of a number of national units, each with their own language, their historical traditions, their ways of living, and last but not least with their own bureaucracies. It is clear that all of these very real obstacles cannot be overcome within a few months, even with the best possible intentions.

In the Netherlands the need for such action is keenly felt. During the war in 1944 the Netherlands Government, then in exile in London, concluded a treaty with the Belgian Government-in-exile whereby both Governments pledged themselves to submit a bill to their Parliaments after the liberation of their respective countries establishing a customs union between the Netherlands and the Belgo-Luxemburg Economic Union. This bold plan inaugurated in wartime London found a warm reception in both countries. The work involved in bringing this idea into effect, however, proved to be an enormous task. A new common tariff had to be elaborated which would apply to the three countries. This task has now been accomplished, and as from January 1, 1948, the new tariff will be in force. As from the same date, the customs barrier between the Netherlands and Belgium will be eliminated. But this is only the first step in the audacious program of the Benelux. The program when completed envisages a complete economic union eliminating all trade barriers between its partners, such as excise duties, quota regulations, and foreign-exchange restrictions. This means a complete merger of the economies of the Benelux countries. It is needless to point out that this ultimate aim cannot be accomplished overnight. A number of mixed committees with representatives from the Netherlands, Belgium, and Luxemburg are continually working on the various aspects of the program. Very close contacts among the business interests have to take place. The countries of the Benelux are aware that they are giving up a part of their sovereignty in their proposed merger. For instance, under a cooperation of this kind it is no longer possible to work out plans for the establishment of a new industry in one of the countries without consulting the other Benelux countries and without estimating the economic effect of such a new industry on the economy of the whole Benelux territory.

At the recent Paris conference I believe that the Benelux had a favorable press. A study group was set up which was required to examine the question of further customs unions on the Benelux model. European countries would greatly benefit from further steps in coordinating their economies and thereby rationalize their overseas requirements and enhance their chances for speedy self-sufficiency. But such steps, even when vital, must take their time. Customs, habits, methods of work, even prejudices have to be overcome while a great amount of work of a difficult technical nature is to be done. It took the Benelux countries exactly 3 years to reach the first stage of their program. How much longer will it take to do the same thing for a large number of very diverse European countries?

Secretary Marshall in his Harvard address clearly indicated that the responsibility for the restoration of Europe could lie only with the Europeans. This view is shared in my country.

The Netherlands was badly struck in this war, not only in the European mainland but also in the territories in southeast Asia. The Netherlands history shows many a dark hour, but every period of darkness in our country has been followed by a revival of the strength of the Netherlands people. The war had terrific effects on the economic life but there is one thing that no enemy has been able to take away from our people and that is their capacity and their will to work. Holland is buzzing with work, as I have been able to witness during my two visits there in the course of this year. Every time you see Holland, improvements have been made. Each time more war scars have disappeared. Life is simple, but sufficient. No one will object to simpler ways of life, which, simple as they may be, are a great contrast to the horrible experiences of the Nazi occupation.

However, as I told you before, this level is extremely precarious and far from what it should be, and the resources of foreign exchange are dwindling away rapidly. Without further help all of the efforts which have been exerted would be jeopardized. The whole purpose of the Marshall plan is to prevent this from happening in Europe.

Repeating what I pointed out in the beginning, it is hardly possible today to speak of the economic ills of one particular country. People in many countries in the world are becoming aware of these things. Daily the facts are appealing to the consciousness of mankind and inciting them to use their best efforts in overcoming the present economic disease. I believe this growing awareness to be an advantage.

The task and the responsibility of the Congress of the United States is an enormous one. The importance of its decision on the European-recovery program is far greater than the billions it may appropriate for European aid. Its views may set the course of a freely organized economy in Europe for the next decade. But the responsibility of European statesmen, businessmen, and workers is just as great, maybe greater. It is up to them and to their mutual cooperation that American aid can be made effective. It is up to them to create that feeling which will make Americans say—to paraphrase an expression recently used by a distinguished American—"Europe is a good risk."

God Bless America

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by the former Chaplain of the Senate, Dr. Frederick Brown Harris, which appeared in yesterday's Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT—GOD BLESS AMERICA—SOME OF THE THINGS ABOUT THIS COUNTRY THAT ITS CRITICS FORGET WHEN THEY EMPHASIZE OUR FAILINGS

(By the Reverend Frederick Brown Harris, D. D., Litt. D.)

Our majestic Capitol, with the Eightieth Congress in momentous session under its white dome, is in full view and hearing of a fear-haunted world. What American does not find in his heart the sound of a great amen to the prayer of a distinguished citizen, who said, "Every time I gaze on the illumined dome I offer the prayer: 'God make me worthy of America at its best' "?

It is easy to see America at its worst. In these days of the whirlwind and the earthquake, there are small groups of misguided and misinformed people who owe everything to this dear land of the free, but who seem to have nothing but jeers for the gold of America and cheers for the dross of alien systems. They condemn almost everything under the Stars and Stripes and condone, and even approve almost everything drenched in the blood and tears of cruel regimentation abroad. In one hand every such person holds pink glasses and in the other a magnifying lens. Whenever they gaze abroad they put on the rose spectacles of praise; whenever they look at their own land they use for their appraisal the magnifying glass of disdain. Just as it is possible to miss the face of Cromwell because of the wart, so these critics scarcely can see the benign face of Uncle Sam because of defects.

To be sure the most ominous loss, to a person or a nation, is the faculty of self-criticism. As Americans we keenly must be conscious of our national failure in practicing the democracy which is our proud creed. We never must be oblivious to our racial prejudice, our glamorous paganism, our blatant irreligion. Always, with searching of heart must we repeat the prayer, "America, America, God mend thine every flaw." But there is more to America than flaws.

God bless America, for the free speech which allows even ungrateful citizens of this privileged land to utter bitter anathemas, for which they immediately would be liquidated in the lands they speak of with such fervent approbation. While some are blaming America for dividing Europe into two warring camps, when that decision was made by another power which vetoed the grand design that America desired, we say: God bless America for the most unselfish and humanitarian gesture recorded in history. And, while this pink-glasses group charges America with imperialism in threatening the sovereignty of other nations and, in the next breath, extolls the system which has crushed more national sovereignties by sheer power than have ever before been turned into puppets, we say again: God bless America!

With the greatest physical might in her hands that any single nation ever has controlled, yet manifesting such scrupulous regard for the national rights of even the amallest and weakest nation on her borders (even when her own national security may be involved), she promptly gives up her bases in a tiny country which asks her to vacate. When America, with the fearful power of the atomic bomb in her hands, offers, in a spirit of internationalism no other nation ever has manifested, to share the dread secret even with those plotting against her own life, some of our own citizens blindly charge her with threatening the power that stubbornly refuses her generous overtures. But, God bless America, for this supreme witness of her belief in the United Nations.

There are those who cry to high heaven over one life in America taken by a lawless mob defying our national laws and our national sentiment, but who are silent about millions kept from their homelands, dying like flies, or toiling under a taskmaster's whip. God bless America, whose leaders in both political parties plainly see that there is a vast difference between cooperation and capitulation—abject appeasement of a system whose theories of the universe, of man, and of ethics are the exact opposite of those principles which are the foundation of America, is the way to the final loss of our own liberties.

God bless America, as in the fear of God and in the name of all humanity she stands before the whole world for the dignity of the individual and the invincible creed that the state is made for man, and not man for the state.

God bless America, because her spires are symbols of a church which is the conscience of the state, and not the slave of the state.

God bless America, because, as Lincoln declared, she is "the last best hope of earth."

Mikolajczyk Tells of Russian Plans

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, I hope that the fate of the message given us by Mikolajczyk shall not be that of the warnings of Cassandra.

The Milwaukee Sentinel is printing his story on conditions in Poland, installments of which I herewith submit:

MIKOLAJCZYK BARES RUSS PLANS TO SEIZE EUROPE IN HOURS—BRITAIN TO BE NEUTRAL, UNITED STATES UNPREPARED, REDS REASON

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment II)

Communism, linked with Russian military might, is a fantastic machinery which, having been set in motion in Poland and elsewhere in eastern Europe, now must roll on with the relentlessness of a Juggernaut.

Let me tell you of the fervor of one Russian colonel who outlined Russia's master plan to me several months ago in Warsaw.

"You must believe this," he said. "Nothing can stop us. We have profited from the mistakes of previous would-be conquerors and we cannot conceivably make the same blunders.

"France and Italy may be a bit difficult for a time, but we have good men working there and, in time, they will achieve our purpose in those countries.

"But even if they do not," he shrugged, "we have the military might to advance across Europe to the water at a speed which is unknown to students of modern warfare. I do not speak of days, I speak of hours."

I asked him what the Red Army thought England would be doing during this conquest of the Continent. He laughed, without mirth.

"England will be neutral in the war," he said. "They know we have made tremendous development in the rockets we recovered in Germany. They know, too, what suffering they underwent when hit by the undeveloped rockets the Germans used against them. They know they cannot survive if they protest."

"And the United States?" I pressed him.

"Oh, we'll offer them a negotiated peace and probably they'll turn it down and declare war. But what does that matter? We will hold the beaches of the entire Continent. America is unprepared, so the declaration of war will be useless for a long time—while they build back their forces and devise means of transporting men and armor all the way to the Continent without the aid of an offshore base, such as England and Ireland were in World War II.

"In the meantime, we can consolidate our gains."

But that is in the future—how distant I cannot predict. If you want to know what Russia is doing today, in pursuit of its master plan, you need look no further than Poland.

For here is the test case. Here is the sampling of democracy's boiling point—just as the Japanese bombing of the American gunboat *Panay* was the sampling for Pearl Harbor.

All of these depredations I will deal with at length in subsequent articles. My point now is simply to touch certain high spots, sound a warning to all lovers of freedom in the world, reveal the galling tragedy of a people who sacrificed 5,265,800 dead in World War II and yet would have considered that almost a bargain if we had been granted even the most elemental of postwar promises.

In the name of humanity I will certainly make no appeal in these articles for a military war on Russia. We need no further proof that war is the worst and least effective means of settling disputes.

A World War III would not only be a most terrible calamity to my people and my country but a blow from which civilization itself could hardly recover.

IT CAN BE AVERTED

I believe World War III's military phase can be averted, despite the fact that the prime aggressor, first with the acceptance of the British and American Governments, and since that time with a ringing scorn for both those powers, has made enormous gains.

It would have been comparatively simple for me to die in Poland. Had I remained a few more days, I would have been stripped of my immunity as a member of the Polish Parliament, tried by a military court for preaching and practicing the only kind of democracy which peace-loving people know, and shot.

This would have been the culmination of 2½ years of ever-tightening pressure on me which began the day I returned to Warsaw in 1945.

It would have been the final act of a series of intimidations of me and the party I head which began with my arrival at the airport outside Warsaw, when Boleslaw Beirut, the old-line Communist who has been imposed on Poland as its so-called President, ordered me to address the hopeful thousands on hand with a salutation that was even less humane than comrades, and I turned my

back on him and said instead, "My sisters and brothers."

GLAD HE'S ALIVE

It would have climaxed the murders of 104 Peasant Party leaders and the cynical confiscation and destruction of the party's various headquarters. It would have been the apparent coup de grace administered to the last articulate democratic political body, bearing the undisputed support of a majority of the people, left in Poland.

The latest news I have had from Poland is that the people are saying they are glad that I am still alive. They say I would have become a symbol, but a very dead one.

They say they prefer me as a living Pole, a living hope.

So I escaped, by methods which I will deal with later. I reached the haven of Britain, and now the United States—to tell the whole world my story.

MIKOLAJCZYK TELLS HOW RUSS HAMPERED FLIGHT FROM NAZIS

(Installment III)

It may perhaps help the reader understand what is happening in Poland today if he first understands what happened to me during those tragic days of disorder leading up to and following the declaration of World War II.

Europe is a land of intense nationalistic feeling, and I readily shared that trait. My father, one of 16 children born on a small farm in western Poland, had given up the soil to work in the coal mines of western Germany. We remained Poles at heart.

I was born in western Germany, returned to the farm with my mother when I was 7 and at 16 took a job as a laborer in a sugar factory.

In 1918 I joined the Falcon organization, a group of independence-minded Poles, in their uprising against the Kaiser. In 1920 I fought as a private in the Polish forces that turned back the advancing Bolsheviks. I was wounded.

So, before my 20th birthday, I had been a private in what amount to two wars for the freedom of my country. And when the second war was done and Poland's sovereignty established beyond doubt, I returned to our family farm near Poznan and worked there, increasing our holdings to 12 acres.

And I went back to school, got interested in various agricultural, cooperative, and political clubs in my area and joined the Polish Peasant Party. I was attracted to it because of its liberal, democratic platform and because it represented the hopes and ideals of a majority of the Polish people.

Today, under Communist domination, for a Pole to espouse those same hopes and ideals is tantamount to inviting the Russian-trained security police to crack down with penalties that range from confiscation of one's property to death.

By 1924 I was secretary of the district headquarters of the Peasant Party, editor of a farmer's weekly, a contributor to newspapers and magazines which are now banned, organizer and first president of the Association of Polish Youth of Western Poland, founder and instructor in the Peasant University at Nielazkow, and active in self-government, agriculture, and cooperative organization.

I ran for Parliament in 1930 on the Peasant Party ticket and was elected from the Gniezno area.

Pilsudski and Beck had seized control of the Polish Government, changed the constitution which he had patterned after that of the United States. Pilsudski exiled the leader of my party, Wincenty Witos, and the pressure on me stepped up when I became acting chairman. I vigorously opposed Pilsudski because of his appeasement of Nazi Germany.

HITLER PLAN OBVIOUS

From the moment he took office it was obvious Hitler planned to attack Poland. He had said as much in Mein Kampf and one had only to speak to average German youths to know their receptivity toward the approaching war.

"You're fooling yourself," I told one German with whom I had grown up. "Hitler's a Socialist, or says he is. You were always a conservative. How can you support him?"

"Political parties mean nothing anymore," he replied, as if surprised I did not know such an obvious fact. "Germany has had three great leaders who transcended party politics, Frederick the Great, the Kaiser Wilhelm, and now the greatest of them all, Der Fuehrer. Providence ordained him to make us the herrenvolk. Under his leadership we will rule the world."

FULL OF ECSTASY

Another young German, full of ecstasy for Hitler, told me of the wonderful economic gains Germany had made under him.

"We have no more unemployment," he said, "Hitler has put the nation to work, building guns, tanks, planes * * *"

"For what?" I asked him.

"To relieve unemployment, of course."

"But how will these things be used?" I inquired, and, in his bewildered way, he said what countless other Germans must have been saying.

"When we have a sufficiency, Der Fuehrer will know what to do."

MUST STAND BY ARMY

He did. He attacked us. Shortly before the blow fell, I spoke, as chairman of the Western Poland Farmer's Association, to a group of 15,000 farmers and agricultural authorities and told them that in the perilous days to come we must stand by our army.

As a result, the government offered me a post as coordinator of food during the war to to come. But I had made my speech and meant it. I joined the army on August 27, 1939, once again as a private.

Poland was felled as if struck by lightning, as, indeed, it was. The disorder was beyond belief. I had urged that the people permit the panzers to roll through, and thus remain behind the advancing Nazi lines in ever-increasing numbers, and continue the fight.

JAMMED ALL ROADS

Instead, millions of Poles were ordered to flee in the face of the approaching Germans. They jammed all roads and were slaughtered by strafing German planes. The Army could not possibly maneuver.

It was a bitter shambles. It is a sickening feeling to see one's country plunged into utter defeat through blind unpreparedness.

One dim hope remained as the German tanks forged on against us—our defending forces sometimes made up of youths bravely but pathetically throwing bottles of benzine at the steel monsters.

That hope centered around Russia. Poland had a solemn-sounding nonaggression pact with Moscow. Perhaps we could flee into the U. S. S. R. Perhaps, even, Russia might come to our aid.

Then on September 17, as our map unit—now depleted by casualties—retreated toward the southeast, our commander turned from his radio with a look I shall never forget.

"This is the worst," he cried. "Russia has put the knife in our back. The Red Army is now entering eastern Poland to help the Germans."

With 4,000 other remnants of the Polish Army, I walked into Hungary, then still neutral, and was interned. I had never been able to reach my family.

The defeat of Poland lay on me like a fever, and a part of that malady was the anger at the callous, pitiless manner in which Russia, our friend by pact, had kicked us while we were prostrate.

Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Economists' National Committee on Monetary Policy, New York, N. Y.:

RECOMMENDATIONS OF 53 MEMBERS ON HOW TO COMBAT INFLATION IN THE UNITED STATES

The Economists' National Committee on Monetary Policy pointed out at its inception in 1933, and at various times since, that the stage was being set by a variety of governmental monetary and spending policies for what is commonly called inflation—more specifically, a relatively rapid depreciation in the purchasing power of our dollar in terms of goods and services.

Now that these policies, combined with those related to the expansion in note and deposit currency and other economic distortions that occurred during the war, are revealing some of their logical consequences, there is considerable concern, in Government circles as well as outside, as to what should be done to arrest or to minimize what is now being widely recognized as an unhealthy trend of events in our economy. Once so many seeds of inflation have been sown and cultivated with such persistency, in peacetime as well as in war, the problems of arresting or counteracting the consequences sometimes become exceedingly difficult and complicated. Sometimes the consequent forces become so strong that they tend to run their natural course to their unfortunate end despite efforts to counteract them.

It was because of the world's experiences with results flowing from the employment of inflationary procedures that members of this committee, from time to time, have protested and issued warnings against the pursuit of a course, when not required by the necessities of war, that opened the way for, and invited, consequences that might be seriously harmful, if not disastrous, to our economy.

There is, apparently, no easy way to arrest the inflationary tide now running with so much force in this country. The attack on it requires action on a variety of fronts since its causes are numerous.

We, the undersigned, members of the Economists' National Committee on Monetary Policy, recommend the following:

1. A radical reduction in Government expenditures; in particular, abandonment of all public-work projects except those of an emergency nature.
2. A reduction in taxes.
3. A reduction in the Federal debt.
4. A return to a gold-coin monetary standard, and a revision of our monetary laws, in order to return to the people of the United States greater control over the Government's use and abuse of the public purse and to reverse the pronounced trend in this country toward a governmentally managed economy.
5. An increase in production, productive effort, and efficiency of all productive agents.
6. Abandonment of make-work, featherbedding, and other devices for collecting pay for work not done.
7. The maintenance of relatively low inventories and the avoidance of hoarding by business enterprises.
8. The retention by business enterprises of a large percentage of earnings for improvement and expansion of their businesses, and a revision of our tax laws to permit such retention without penalty.

9. The cautious use of credit, and an increase, where possible, of margins of safety against extensions of credit.

10. That sellers make special efforts to maintain the lowest possible prices consistent with a low margin of profit as a means of forestalling a possible large price decline and severe liquidation.

11. Reduction in tariffs and other restrictions to trade, domestic and foreign.

12. A recognition on the part of our Federal Government that it cannot buy large amounts of already relatively scarce supplies and at the same time not contribute to high or higher prices.

13. Abandonment of Federal subsidies except where matters of national protection—in air, army, and naval forces—are involved, and also repeal of price-parity and price-maintenance laws.

14. That the Government not confuse symptoms with causes and that it not attempt to control symptoms since such controls tend to conceal causes, distort the economic picture, and perpetuate, accentuate, and foster new, economic maladjustments.

15. That people not buy what they do not need and that they not borrow to buy things they can do without.

16. That the apparent tendency to loan too freely and too much to foreign countries be sharply curbed.

17. That interest rates be permitted to find their natural levels.

18. That the Board of Governors of the Federal Reserve System give greater attention to the type of administration of our monetary and credit structure that should foster more harmonious relationships in the various segments of our economy.

We're Preparing for the Wrong War

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 8, 1948

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. Alexander P. de Seversky from Look for December 9, 1947:

WE'RE PREPARING FOR THE WRONG WAR

(By Maj. Alexander P. de Seversky)

(In an article for Look, December 17, 1940, Major de Seversky wrote: "American air power must be built to deliver knockout blows at great distances * * *. Not one nation has yet made full use of real air strength. Victory will go to the one that does." Result: Military experts scoffed. A year later, in Look, October 7, 1941, de Seversky wrote: "The Army continues to treat aviation as one more auxiliary to its services * * *. This is not air power—it is merely a miscellany of airplanes hitched to older, slower services. * * * The first [thing to do] is to wrest our military aviation from the control of the older services and merge it in one separate and unified Air Force." Result: The high command categorically rejected the idea of an autonomous air force as impractical. In Look, July 13, 1943, Walt Disney's dramatization of Major de Seversky's Victory Through Air Power repeated the aviator's call for air power. Result: Stategic air bombing at last got off to a slow start. During this entire period, military diehards, unable to rebut his arguments, accused de Seversky of doing a disservice to the war effort. But by VJ-day, the world finally was able to see what air power could do if given half a chance. And last February, de Seversky was awarded the Medal for Merit with a Presidential citation crediting his appeals to the public with an inestimable contribution to the final victory. Four months later, he received the International Harmon trophy. The award cited his work to prove the principles of long-range escort fighters and said their application helped to guarantee victory. Still more recently, as he had long advocated, the Air Forces at last became an independent, unified service. But real air power is still not a reality. In this article, Major de Seversky describes what we must do—while we still have time.)

The world is in turmoil. While we strive earnestly for peace, we dare not ignore the possibility of war. Certainly, a weak America would invite aggression, a strong America would discourage it.

If war does come, will we be ready for it? Not unless we have a clear prevision of how it will be fought and prepare accordingly. Not unless we concentrate our wealth and effort on the decisive weapons, instead of spreading them thin, indiscriminately, over all weapons.

In the victorious phase of the last war, we pulled an intellectual surprise in the form of strategic air power; long-range aviation striking at the industrial sources of the enemy's strength. Germany and Japan were not ready to use or to defend themselves against that kind of aerial potential.

But today every nation capable of engaging in modern warfare is thoroughly aware of the meaning of such real air power. The nation must, in simple common sense, channel its major resources into air forces.

The hope of another such surprise must be dismissed. Moreover, despite vastly increased aircraft speed, penetration to the heart of the enemy country will be more difficult and more costly than ever before. Defensive potentials are being rapidly raised through electronic detection, proximity fuzes, ground-to-air rockets, and other kinds of devices.

A future war will, therefore, resolve from the outset into a contest for right-of-way in the air ocean. The side that first achieves freedom of aerial navigation over the enemy country, while denying that freedom over its own country, will be in a position to win. It will then be able to deliver atom bombs and other destruction, while eliminating the enemy's ability to do so.

AIR POWER SHOULD COME FIRST

Unless we can attain control of the skies, all other military forces will be useless. They will never come into play. That being the case, we must immediately divert the major portion of our national resources to building unmatched air power in being.

In the last war we faced a fateful choice—and a golden opportunity—when we lost our fleet on December 7, 1941. We could have elected to put all we had into building true strategic long-range air power. In that case we could have attained complete control of the air all over the globe and defeated Germany and Japan by our own strength, without dependence on allies other than Britain. At the end of the war we would have had the decisive voice in organizing an enduring democratic peace.

Unhappily some of our leaders could not envision the possibilities of air power. They knew only the "true and tried weapons." They were obsessed by the inherited idea that war had to end on the ground, on the field of face-to-face battle.

Instead of building invincible long-range air power, capable of bypassing the enemy surface forces, we proceeded to rebuild the fleet to carry armies to battlefields all over the world. In this way we chained ourselves to the surface struggle, in which manpower was decisive. Since we lacked adequate manpower for victory, we proceeded to build Russia into the greatest land power on earth. Theoretically, this was to save American lives; in actuality, we created a

Frankenstein monster which now jeopardizes millions of our lives.

LONG-RANGE BOMBING FEASIBLE IN 1943

As an aeronautical engineer, I stated then, and repeat now, that we could have built the necessary long-range air power for all-out use by 1943. We needed only to tackle that task on the same scale, and with the same concentration of effort, that we brought to bear on developing the atom bomb.

In 1939 I consulted most of our leading aircraft designers and manufacturers. I can attest that industry was prepared to build aircraft at that time which, by 1943, could have flown directly from Alaska or Newfoundland to Asia and Europe, respectively; which could have deposited ten times the bomb load which was delivered in Flying Fortresses and Liberators on Germany.

In other words, had we decided that air power is the backbone of modern strategy, we could have dropped on Germany in 1943—not in 1944 or 1945—not 1,600,000 tons of explosives but 50,000,000 tons! Even laymen today concede that Germany would have collapsed under that weight of bombardment long before we mobilized the necessary forces for surface invasion—and without need to draw the Red armies into eastern and central Europe.

Against Japan we could have used strategic air power—the method that doomed that country when finally we did resort to it—years earlier. The bloody island-to-island ordeal from Guadalcanal to the Marianas would have been avoided.

WE WERE BLIND TO AIR POWER

But, alas, we ignored the new strategic possibilities. Aeronautical science was ready. Industry was ready. It was not a technological failure but a failure of strategic imagination-strategic astigmatism in high places.

We planned the most amateurish war on record, breaking every basic strategic principle. For instance, we undertook to build the biggest Army, the biggest Navy, the biggest Air Force, the biggest everything at the same time. In trying to be strong everywhere, we failed to attain maximum strength in any of the component forces. Yet we got away with it. Why? Simply because we were so terrifically strong and wealthy that we could afford the luxury of major errors and fantastic waste. Like a heavyweight in the ring with an infant, we could make any mistake and score a knockout—even by accident. We just smothered the enemy under the weight of our matériel downpour.

In another war, we may not be able to afford such luxury. In terms of manpower and natural resources, we may be the "little Nation," fighting a big nation—perhaps the whole Eurasian Continent. We cannot risk the profligate methods of the past. We have to determine which force is decisive and concentrate on it to assure a favorable decision. Little David pitted against Goliath, we will have to score a strategic bull's-eye.

Anything short of that may spell calamity.

Yet at this moment, we are again building in all directions at once, dividing appropriations fairly among all forces and weapons without deference to the kind of war we shall have to fight.

Let us visualize the next war. We know that World War I was a war of position, with two opposing forces in trenches shooting it out to a decision. World War II was a war of movement over the face of the whole planet.

WE FACE ANOTHER WAR OF POSITION

World War III will again be a war of position, only on a global scale. The two adversaries on respective sides of the earth will be like two fortresses possessing artillery that can strike at any part of the opposing fortress. They will shoot it out to a decision.

On one side of the globe is Eurasia, on the other America, with the Arctic area as the no man's land in between. Tactically, of course, there will be lots of movement, primarily in the air. But strategically the adversaries will be stationary, pinned to their positions.

The "walls" of these fortresses locked in a clinch will be their defensive air power; the ramrod that will seek to penetrate the walls will be the opposing striking air power. Our No. 1 job is to build the ramrod—the striking air force—capable of breaking through and destroying the air walls of the enemy fortress.

This, moreover, will not be merely a prelude to invasion. It will be the supreme goal in itself. I am entirely convinced that there will be no need for military invasion. The victor may decide to occupy and hold the conquered area for economic or other reasons—but invasion as a component of total military victory will be a thing of the past.

Even in the last war we did not have to occupy Germany and Japan from a purely military standpoint. After we assumed control of the air we could have bombed those nations into a pulp, destroying the last vestiges of their industrial civilization and leaving them to dig out of the debris for the next two or three generations.

OCCUPATION WILL BE UNNECESSARY

Occupation made sense in the past, when the enemy's means to wage war could not be finally eliminated without the entry of a victorious army. Today, when total demolition can be obtained from the skies, the concept has lost its validity.

The real reason for occupation, however, was political. Three ideologies—fascism, communism and democracy—were involved in the last war. After fascism was destroyed, the question that emerged was which of the remaining ideologies would dominate in the defeated areas. Occupation, both by the Russians and the democracies, was not a military necessity but a political race to stake out spheres of influence.

But in the foreseeable future, the world will be divided, geographically and politically, only into two warring ideologies. Whichever side wins, there will be no third party ready to take over the conquered regions ideologically. That is why the next war will end with total destruction of the foe, without need for military occupation.

Of course, if war should come tomorrow, before either side has forged longe-range weapons, we will have merely a continuation of the methods of World War II. In that case, I can see no likelihood of either side scoring a final decision. The best we can expect is a stalemate, with attrition working against us. We would be obliged to try to contain the enemy, fighting for time to build the indispensable long-range striking air force, which alone can bring us total victory. This transitory struggle would resolve itself into the two-fortress image I have projected.

Three to five years hence, the siege "artillery" will be represented by long-range bombers and escort planes. They will be of somewhat different military characteristics than those in the last war. Later, they may be replaced by robot planes, and still later by rockets. But the nature of the "artillery" will not alter the strategic equation. We will still have two fixed fortresses shooting it out.

OUTLYING BASES WON'T HELP

A decision will not be scored until long-range artillery is brought into play because under modern conditions, war cannot be waged to a finish from outlying bases. No country can absorb the losses involved in such an attempt.

No nation now has enough aircraft to strike in force across oceans and across the Pole—but their average range is long enough to prevent an enemy from holding bases anywhere within their striking radius.

In justifying distant bases, some experts insist that if you are closer to the target you need less fuel and can therefore carry more explosives. This slight tactical advantage, however, will be offset by big strategic disadvantages.

In commercial aviation, to cite an analogy, a lot more passengers could be carried if a lot of stops were made for frequent refueling. Yet over-all efficiency makes nonstop transcontinental flights more desirable. Similar over-all considerations rule out intermediary bases.

In order to gain the marginal tactical advantage of bases nearer to the enemy, we have to spend enormous amounts of our national resources for naval and land power to hold and supply and defend those stepping stones. That cost is ludicrously out of proportion to the benefits the bases offer—even if we could hold them.

During the last war, we used overseas bases because we had no alternative; owing to backward strategic thinking, air power of the necessary range for direct operations had not been prepared. And because we fought from advance bases, we had to provide colossal naval forces to clear the oceans of submarines; to transport and supply the armies that occupied and serviced the advance points. We had to provide almost incalculable surface forces of every kind to seize outlying bases and aircraft to shield that vast deployment of surface forces.

EUROPEAN BASES PROVED COSTLY

I had occasion to compare our action against Europe from European bases as against direct action across the Atlantic. I had to figure out the labor and material that went into naval and land forces necessitated by warfare based on distant points. Obviously, the investment was immense.

What would have happened if only a fraction of that investment had been put into long-range air power; and if we had mounted our bombing offensive directly from, let us say, Newfoundland? We might have deposited on Germany several times as much explosive for one-tenth of the cost of the same attack from close-up bases. What is more, the lives invested in fighting for and defending such bases would have been saved.

The only overseas base that can still be an asset to us is the British Isles, not only because they are separated from the Continent by a body of water but because they have the industrial power to generate their own fighting machine. England is capable of producing and maintaining an air force in being comparable to our own in size and quality. It will be an ally for our own aerial potential in the vtial struggle for control of the skies.

BASES NEED FULL AIR SUPPORT

Suppose the enemy had a powerful base on Bermuda. How long would it survive? Could it conceivably be provided with air power superior to what we could hurl against it from our mainland? Yet some of our military men seriously plan for such operations in reverse; they are already dumping our wealth into invasion forces to implement such fantastic and foredoomed plans.

It is possible to prescribe a definite rule: Outlying bases intended for decisive action should be so located that any air attack against them will involve for the enemy the risk of joining in a major air battle to be fought to a conclusion. In other words, these bases, whether fixed or floating, such as aircraft carriers, must be subject to protection by our entire air force in being. Unless a base can muster such total defense, it will be flattened out instantly by the opposing air force.

I come now to the atom bomb. Despite the hysteria churned up on the subject, the atom bomb does not alter the strategic relationships I have outlined.

The American people must grasp the fact that it is not a new military force, in the sense that the Army, the Navy, and the Air Force are military forces. It is another explosive—immensely, horribly destructive, but before it can be instrumental in attaining a

decision, it has to be delivered, like any other explosive, by one or a combination of military forces to the right target at the right time.

Let it be understood that I do not underestimate the atom bomb. It is every bit as potent and terrifying as generally described. I have seen it in action and I have seen its effects, so I know.

But I am discussing the atom bomb in cold terms of military science. I am convinced that the tactical values ascribed to it are all out of proportion. There has been too much loose talk, scare talk, and exaggeration. In letting the mere existence or possession of atom bombs distort the large strategic picture, we are in danger of generating a false sense of security on the one hand, a false sense of defeatist despair on the other. Another danger of exaggeration is that it may tempt us to mount a premature offensive with all of its tragic consequences.

ATOM BOMES HAVE A LIMIT

We hear talk of a bomb so terrific that it could destroy nations, or the entire planet, at one blow. If that comes true, some scientist, we may be sure, will explode it just for the hell of it, to prove his point. In that case, the problem of national defense would certainly be simplified.

But, unfortunately, we are still dealing with bombs of finite, rather than infinite, capacity. Hence, the science of war making has not been canceled out. We must continue to give thought to strategy and the complex military machine to carry out strategy.

To think of the atom bomb as an apocalyptic force is a bit premature. The bomb may double or quadruple its capacity. But for the predictable future, there will still be a practical limit to its size. There will be a point at which further expansion of explosion in one missile becomes wasteful. For a long time the atom bomb will necessarily be of limited capacity, able to destroy a specific target and requiring control of the medium through which it is delivered.

After I had studied aerial destruction in Europe for 5 months, the Secretary of War asked me to make a similar survey in Japan. Accordingly, I put in 2 months in that country studying the results of our bombardment of Japanese targets. I spent several days in Hiroshima and Nagasaki. Later, after I returned from Japan, the Secretary of War sent me as his representative to Bikini for the bomb tests there.

Judging by what I saw in Hiroshima and Nagasaki, no single bomb of the type dropped there—or two, or three—will, in my opinion, be able to destroy a large concrete and steel city like New York or Chicago. Atomic scientists who insist that a single bomb will automatically wipe out any major modern city are venturing beyond their depth. With the courage of their military innocence, they calculate the number of stock-piled bombs needed to destroy the key cities of this or that county, as equal to the number of cities. Their assumption, of course, is that the score of hits will be 100 percent, that the winds will blow in the right direction and other ideal conditions will prevail, as in a Bikini-type laboratory test.

Suppose we had operated against Japan or Germany on the basis of such simple arithmetic. We knew, let us say, that Germany had 82 major targets that had to be destroyed to cripple its capacity to wage war. Suppose that we had provided exactly the number of bombs theoretically needed to do the job, and no more. This, mind you, before the issue of control of the air had been decided.

Nothing more absurd could be imagined. People forget that even in target practice the average score is about 50 percent, and that under battle conditions the score seldom exceeds 3 percent.

The real novelty of the atom bomb, aside from its greater power, is its three-in-one character. It produces blast; it is an incendiary through flash-heat; and it is poisonous through its radioactivity. Against the poison factor, there is as yet no defense except mass: 6 feet of concrete or several inches of lead.

PRINCIPLES OF WAR ARE UNCHANGED

Again, at the risk of being charged with underestimating radioactivity, we should recognize that it does not change the basic principles of war. After all, what is the difference between a square mile of industrial area made untenable through being reduced to rubble by old-fashioned bombs, with people buried alive under the ruins, and the same square now roped off, due to radioactive contamination, with people dying in hospitals?

If the enemy should succeed in capturing control of the air over the United States, our atomic stock pile will not do us the slightest bit of good. Once the foe enjoys freedom of navigation over our country, he will proceed to demolish us at his own leisure—with atom bombs or with old-fashioned TNT or, for that matter, with sacks of potatoes, if they are heavy enough. As for the stock pile of atomic bombs, under those circumstances, we might just as well use them for pins in a bowling alley.

My point is that the atomic bomb is a most powerful weapon, but only in the hands of a country that is prepared to conquer the air ocean. Scientifically, atomic energy is, indeed, a revolutionary development. But it does not at this stage revolutionize the strategy based on long-range air power.

ATOM STOCK PILES NEED PLANES

After Bikini, one of our military columnists stated that the relative military strength of nations hereafter would be measured by their relative stock piles of atom bombs. Militarily speaking, that is sheer nonsense. The relative strength of nations will depend on superior means of delivery of these bombs—and that means air power.

Those who claim that there never will be any defense against the atom bomb, in my opinion, confess their intellectual bankruptcy. Such people are selling science down the river. Throughout my 30-year career as an engineer, I have observed that as soon as a statement is made that something cannot be done—it is done. Atomic energy itself is bound to produce the necessary antidote against the use of the atomic bomb.

The notion that the very threat of atomic attack will frighten an enemy into surrender is a dangerous fallacy. New weapons of destruction have always prompted extravagant claims that there could be no defense against them. Invariably, of course, some antidote emerged to curb the new weapon at least to the point where it could not by itself impede a nation's capacity for making war.

Before World War II, extreme claims were made for bombing and poison gas. It was said the poison gas from the skies would result in ghost cities and even ghost nations; also that such attacks would have the advantage of destroying people instead of things; and that an attack of that kind on a capital city alone would bring panic and precipitate immediate surrender.

Yet we saw no use of gas in the last war. This was not because of humane scruples, but because attack against human beings, who are mobile and intelligent, is infinitely less effective than attack against inert things. We saw bombs rain down on nations for years without producing panic and immediate collapse of morale.

The fact is that the human animal—when ideologically inspired—can take an immense amount of punishment. Once people are engulfed in war, regardless of the weapons used, it is not fear, horror or misery which makes them collapse but the actual elimination of the physical industrial means to make war.

Those who believe that war in the atom age will be short—a matter of days or even hours—are sure to be disillusioned. True, the atomic explosive is many times more powerful than its predecessors. But to destroy war-making capacity in order to cripple a nation will require many times greater effort and time because of improved defensive techniques.

Nor will the victory be "cheap," as some suppose. Because one plane dropping one bomb was able to destroy a flimsy, highly inflammable and unprepared Hiroshima, it does not mean that the same will hold true in the future. Air being the main arena of action, not thousands but millions of people will be involved in the decisive air battles of tomorrow, in the skies and on the ground. The drain on our resources will be even greater than in former wars.

Control of the air is the first indispensable condition of victory. We do not merely need planes to carry bombs, but planes capable of fighting their way through the opponent's defenses. As long as we use piloted aircraft—jet or even rocket-driven—it means combat for command of the air and electronic domination.

PUSH-BUTTON WAR IS REMOTE

Only with the advent of long-range, supersonic robot rockets will it become possible to talk of penetration without combat. The push-button warfare with its transcontinental and transoceanic rockets is still very far off. At the present stage, a rocket that theoretically could be fired from our mainland against a target several thousand miles away would have to weigh 400,000 tons, or the equivalent of eight battleships. To be effective, a great rate of fire would have to be sustained. Imagine firing "billion-dollar bullets" every second or so. We would exhaust our total resources in a few minutes.

Until new materials and fuels are developed, therefore, guided missiles and rockets will be merely an adjunct of air power, in the sense that the torpedo is an adjunct of sea power.

Having put these weapons in their practical place, let us see how we can implement long-range air strategy with piloted aircraft. Right now, we are on the verge of getting aviation through the speed of sound. It is likely that in a short time jet-propelled aircraft will fly at 1,200 or even 2,000 miles an hour.

Beyond such speeds, we shall run into problems of heat generated by fraction. The VX2, for example, at its top speed heated up to 600 degrees centigrade. Even at 2,000 miles an hour, we must therefore expect temperatures that the human organism cannot endure. This may prove to be the limiting factor, for the time being anyhow, on speed in piloted aircraft.

In any case, such speeds will not affect basic strtegy. For the crew under combat conditions there is no difference between a 6-hour flight from London to Berlin and a 6-hour flight from Chicago to the Urals. They will still have 6 hours of fighting to overcome hazards and obstacles: attack by enemy aircraft, antiaircraft fire including proximity fuses, all sorts of ground-to-air rockets and guided missiles.

That means that the bomber of the future, carrying an atomic warhead, must be shielded by escort planes. These planes may take entirely new forms, but they will remain indispensable. Escort tactics will be different but basic principles will remain unchanged. As long as piloted air planes are used—as they must be in any war in the foreseeable future—we can expect no revolution in the basic strategy I have indicated. To let the power and the horror of the newest explosive distort our vision is to court disaster.

WE KNOW OUR POSSIBLE ENEMY

Our strategic picture today is clearer than ever before—because, if a new war comes, we

know the direction from which the war can come and the tasks it will set us. In the last war, we had to build weapons for universal application anywhere on the globe; that imposed design compromises for which we paid in reduced efficiency. In the next war, we know in advance the precise terrain and targets. We can design for combat under predictable conditions, against specific targets with a greater efficiency.

It would be suicidal to accept battle on the surface of the earth, where we shall, in the nature of the case, be hopelessly outnumbered. Our strategy for the future must be one that circumvents the potential enemy's manpower. Nor must we stake victory on untenable distant bases, fixed or floating, for reasons I have already indicated.

We can guarantee victory only through superior creative imagination; not through fantasy but through clear, practical vision of the nature of future war making as affected by the direction of technological progress.

Intensive research is imperative, particularly in the field of aerodynamics and electronics. Only in this way can we provide ingenious weapons to meet the new conditions—and gear now for unbeatable air power able to strike at the heart of the enemy's industrial set-up directly from our own mainland, bypassing the opponent's massed strength on the surface.

We are in an ideal position for clear thinking, clear planning, and the creation of appropriate weapons. Those weapons should be built with just one vital purpose: to give us undisputed domination of the entire air ocean.

Let us begin to build these weapons now. Let us not squander our limited resources on obsolete strategies and on weapons which will never be taken off the shelves. In war to come, even wealthy America cannot afford to disperse its strength. We can always count on the valor and spirit of sacrifice of our fighting men—but that alone may not be enough to turn the scales of victory.

City Manager for Washington?

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me, I am very glad to have this opportunity of inserting in the RECORD, copy of an article written by me entitled "City Manager for Washington," which appeared in the National Municipal Review for December 1947.

This article sketches the development of the municipal government here in Washington since the Civil War and explains in a thumb-nail fashion the results of the study of the Subcommittee on Home Rule and Reorganization of the District of Columbia. I hope the Members of the House will take the opportunity to read this article because it will aid in their understanding of the home rule bill when it reaches the floor.

The study of this problem has been a most interesting and constructive education and I venture to think that an opportunity has at long last arrived for the Congress to do something constructive for the government of the capital city of the Nation.

The article follows:

CITY MANAGER FOR WASHINGTON?—CONGRESSIONAL COMMITTEE FINDS GOVERNMENT OF CAPITAL CITY A HOPELESS HODGEPODGE; SUGGESTS COUNCIL-MANAGER PLAN

(By. JAMES C. AUCHINCLOSS)

We like to think of the city of Washington these days as the center of world democracy—the capital of the democratic world—for the free peoples of the earth are looking to the United States and its Capital City for spiritual and material sustenance in these critical times. But how many of them know, and how many Americans realize, that the people of Washington live in a state of political peonage and that its charter dates back almost unchanged to 1874?

Today the city of Washington has almost 900,000 residents. More people live there than in 13 States of the Union. They pay millions in taxes, are exceptionally literate, and have all the earmarks of an advanced culture. But, believe it or not, they have no representation in Congress and elect none of their local officials.

In the Capital City of the world's greatest democracy you might expect to find a model system of local self-government. But if you examine it, as I have done, as chairman of a congressional investigating committee, you will find a patchwork set-up that looks like a political Donnybrook Fair. The present government of Washington, set up in 1874 as a temporary arrangement, has continued down to the present time by a process of drift and neglect, not in pursuance of any governmental principle or deliberate desire to deprive its residents of home rule.

Washington has not always been voteless and voiceless, nor did the founding fathers contemplate that it would be. James Madison, who had been a delegate to the constitutional convention and later served in the first four Congresses, informed the people in the Federalist that the inhabitants of the Federal District "will have had their voice in the election of the government which is to exercise authority over them." And he went on to say that "a municipal legislature for local purposes, derived from their own suffrages, will, of course, be allowed them."

These expectations were soon fulfilled. After shifting its site several times, the Federal Government moved to the District of Columbia in 1800. Two years later Congress granted Washington a municipal charter with a mayor appointed by the President and a city council elected by the people. Georgetown and Alexandria were municipal corporations when the district was created and they continued to operate as such. From 1812 to 1820 the council was permitted to elect the mayor. And from 1820 to 1871 the people were allowed to elect the mayor as well as the members of the council.

Meanwhile, Washington was beginning to grow up from its infant beginning. The Civil War and reconstruction periods swelled its population to 131,700 in 1871. But as the seat of the National Government the city was a sight to behold with its muddy streets, its open sewers, stinking swamps and sordid slums. The growing District was desperately in need of public improvements and social services which its weak and divided local governments were poorly equipped to provide.

TERRITORIAL GOVERNMENT CREATED

Preoccupied at the time with the tasks of reconstruction, Congress was glad to delegate the work of rehabilitating the Capital City to local hands. By an act of February 21, 1871, Congress created a territorial form of government for the District, consisting of a governor, a board of public works, and a legislative assembly. The governor and the board of public works were appointed by the President and the legislative assembly was elected in part by the people. The assembly consisted of two houses: a council of 11 members appointed by the President to represent the National interest and a house of delegates with 25 members elected each year by the people. In addition, the people were permitted to send a speaking but nonvoting delegate to the House of Representatives as Alaska and Hawaii do today.

Under this new regime, the old city charters were abolished and the towns within the District were merged into a unified city of Washington. Alexandria, and the Virginia segment of the 10-mile square had been receded to that State back in 1846. The governor was the central figure in the territorial regime. He administered the various departments, controlled the city jobs, and could veto acts of the legislative assembly, subject to overriding votes by a two-thirds majority. Congress retained power to veto the acts of either the governor or the legislative assembly. There were also independent boards of health, education, and law enforcement. Under this setup the people of the District had a voice in the house of delegates and a spokesman in the House of Representatives, but Governor Shepherd was the real boss of the town.

With great speed and energy Governor Shepherd launched an ambitious public-works program which soon transformed the face of the Capital City. But his reckless expenditures shocked the taxpayers and Congress liquidated the Shepherd regime in 1874. In its place Congress created a temporary district commission to carry on the necessary municipal functions until a new government could be established. Some of the powers that had been exercised by the governor and the board of public works went to the new commissioners and Congress itself took over most of the functions of the legislative assembly. All suffrage rights were suspended. This makeshift system lasted until July 1, 1878, when with a few minor changes it was made permanent.

During the 70 years since 1878 Washington has grown to be a great city with almost a million inhabitants. It is one of the most beautiful capital cities in the world. In outward appearance it is the fitting Capital of a Nation now at the pinnacle of its power and prestige. But it is still governed by the antiquated charter of 1878.

HODGEPODGE OF AGENCIES

A committee of the House of Representatives of which I am chairman has just completed an exhaustive study of Washington's hodgepodge government. We find it is incredibly complicated, confused, and cumbersome. From a mere handful of agencies in 1878 it has grown like Topsy, until today there are about 125 major units of government rendering services in the District, of which 48 are Federal and 77 District agencies. And there are as many more sub-units.

Federal, State, county, and municipal functions are scattered among a host of governmental agencies without rhyme or reason. Authority over District affairs is divided among many independent boards and commissions. A dozen agencies share the ordinance-making power and executive authority is likewise hopelessly splintered.

At the top of this crazy-quilt setup is a board of three Commissioners, who exercise a split and ineffectual supervision of local affairs. None of the local officials is elected. Members of the Board and other key posts are appointed by the President and are often used to pay political debts. Training and experience in municipal administration are not the criteria of appointment. Vacancies in local judicial and administrative posts are often left unfilled for long periods by a busy President preoccupied with larger affairs, and outsiders are frequently selected for these places to the neglect and disappointment of local talent.

The administrative branch has developed haphazardly over the years. New agencies have been created from time to time as the

need for the performance of new functions has arisen. As a result, the administrative structure of the District government consists of a conglomeration of bureaus, boards, commissions, and offices in large part independent of each other and collectively conforming to no consistent principle of organization. For many years the inevitable result has been confusion, duplication, overlapping of organization and functions, conflicts of jurisdiction, and unnecessary cost.

At the present time, for example, five governmental agencies in Washington are charged with police protection, three with recreation, two with water supply, two with road building, and two with the care of trees. Nor is there any unified personnel system for local employees.

As one local newspaper editor has put it, "the city could well adopt the nine-headed Hydra slain by Hercules as its symbol."

Intertwined with this tangled network of local agencies are more than two score Federal agencies which operate in the District and render services to it, such as the district courts and the United States Employment Service. At the hearings held by the District Investigating Committee last July it took Federal officials 4 days and 120 printed pages to explain the intricate relationships of their agencies and services to the District. And it took a huge, three-dimensional colored chart to display in understandable form the complex structure and interrelationships of the District government.

BUDGET BUREAU TOO

One of the numerous Federal agencies involved in this curious tangle is the Bureau of the Budget. This Bureau, which is in the executive office of the President, intervenes between the District Commissioners and the Congress. All local legislative proposals and appropriation estimates must pass its censorship before Congress can see them, even though the Bureau may know little of local conditions and needs. The city fathers must get a green light from the Budget Bureau before they can communicate with their city council or submit the local budget to the Appropriations Committees of Congress.

Madison's early assurance of a locally elected municipal legislature has remained unrealized since 1874. In place of government by consent of the governed, Congress has chosen for 73 years to sit as a city council for the disfranchised people of Washington. Each session much legislation dealing with District affairs is introduced in both Houses and referred to the District of Columbia committees. These committees often find it difficult to muster a quorum for consideration of such municipal matters, since members are naturally more interested in the affairs of their own congressional districts.

The House Committee on the District of Columbia, of which I have been a member for 5 years, has 25 members; the Senate District Committee has 13 members. Assignments to the District committees are unpopular and are often given to newcomers. Nine members of the House District Committee today are first-term members and two are second-termers. All the members but one of the Senate District Committee are freshman Senators, including the chairman, Senator BUCK.

Congressmen are reluctant to serve on the District Committee because it has often proved to be a political graveyard. They are more interested in national and international affairs than in enacting local ordinances for the capital city.

DISTRICT LEGISLATION

Look at the petty chicken feed which the District committees are asked to consider. Among the bills during the first session of the Eightieth Congress were measures to rehabilitate alcoholics, prohibit mixed boxing bouts, regulate barbers' hours of work, destroy starlings, save daylight time, regulate embalmers, and serve straws in Washington restaurants. It took acts of Congress to change the name of Conduit Road to MacArthur Boulevard and remove a couple of ancient posts in front of the White House. It is absurd that Congress should have to deal with such petty matters when great issues of peace and reconstruction are pressing for decision.

Consider the legislative hurdles that even a trivial district bill must surmount before it becomes the law of the land. First it is assigned to one of the six subcommittees which divide the labor of screening District legislation. (If the bill originated in one of the city departments, it has to run the gauntlet of the Board of Commissioners and the Budget Bureau before it can even be introduced in the House of Representatives.) After subcommittee consideration, possible hearings, and favorable action, the bill is reported to the full House District Committee. If the full committee approves it, the bill is then reported to the House, where it may come up for consideration on the second or fourth Monday of the month, which days are reserved under a House rule for consideration of District of Columbia matters. Few Members of the House are likely to be present on the floor on District Day, so that if the bill is approved it may be by a comparatively small minority of all the Members. The House approved the District appropriation bill for 1944 with only 28 out of 435 Members voting.

Having passed the House, all the steps described above must then be repeated in the Senate. If the Senate and House disagree about the bill, it is sent to a conference committee which will try to compose the difference, and whose report must go back to both Houses for their approval. Having finally passed both Houses, unless it has meanwhile gotten lost in the shuffle, our bill then goes to the President for his signature. Thus, there are at least eight stages in the ordeal that District legislation must go through before it can become effective.

In actual practice, under these circumstances, the affairs of the District of Columbia are controlled by congressional minorities; a large part of the work is done by committee staff aids; Congress as a whole is ignorant of and indifferent to District problems; and a Member's vote on District legislation often depends on the sentiments of the folks back home rather than upon the views of the voteless residents and taxpayers of the District. Small wonder, then, that relations between Congress and the Capital community are sometimes hostile and that the needs of the city of Washington are neglected. Congress at best is a clumsy city council. It should be relieved of the task of managing the city's routine business. I agree with the La Follette-Monroney committee that "the Nation cannot afford the luxury of having its national legislative body and the District committees in both the House and Senate perform the duties of a city council for the District of Columbia."

SOLVING THE PROBLEM

The solution of Washington's dilemma is an easy and simple one. It calls for no act of political heroism, no profound intellectual feat. All Congress need do is grant Washington a modern city charter. During recent decades great advances have been made in governmental organization and administration, particularly at the local level. In the early years of this century the commission type of city government enjoyed great popularity, but has been eclipsed in the last 30 years by the more effective managerial type of city government which had its inception in Staunton, Va., in 1908, and has since been adopted by 800 American cities. Eighty-one cities adopted council-manager government during 1946.

I believe that the council-manager plan, with suitable modifications to meet the peculiar conditions of our National Capital, is the answer to Washington's dilemma. This plan applies to city government the business-manager principle which has been successfully employed for many years by private corporations. The essential and admirable feature of the manager plan is the separation of the function of legislation from those of administration without a separation of powers, coupled with a concentration of administrative responsibility in the hands of one man under the control of the council.

It is interesting to recall in this connection that Mr. Richard S. Childs, chairman of the National Municipal League's council, who produced the city manager plan by uniting the commission plan and the Staunton plan, shares its paternity with the Father of our Country. In a letter to Benjamin Stoddert in 1792, George Washington said in part:

"It has always been my opinion, and still is so, that the administration of the affairs of the Federal City ought to be under the immediate direction of a judicious and skillful superintendent * * * one in whom is united knowledge of men and things, industry, integrity, impartiality, and firmness; and that this person should reside on the spot."

After a full month of hearings and an intensive nonpartisan study, my committee is recommending to Congress adoption of a new organic act for the government of the District of Columbia. Our plan proposes a representative local government chosen by the qualified electors of the District, responsible for providing all essential governmental services to the community, subject to the will of Congress. The plan also provides a streamlined efficient governmental structure for the District with clear distinctions drawn between areas of Federal and District responsibility.

COUNCIL-MANAGER PROVIDED

The new charter would provide the council-manager form of government. All powers of local government would be vested in an elected District council, including the power to tax and spend. The government would be organized into eleven departments along functional lines, with each function concentrated in one department instead of being splintered among several agencies. Financial affairs would be completely divorced from those of the National Government. Federal functions would be performed by Federal agencies and local functions by local agencies. The line of responsibility for the conduct of the District government would run straight from the voters to the District council, chosen at large in nonpartisan elections, to the District manager and the department heads. Federal employees with voting residences in the States would be allowed to vote in District council elections without jeopardizing their tax or employment status.

Under our plan the government of the District of Columbia would, of course, remain subject to ultimate control by Congress because of its constitutional authority over the seat of the National Government.

Under the proposed new charter Congress would have ample means of protecting the Federal interest in the District of Columbia. It could repeal or amend the charter at any time or veto legislation passed by the District council. A joint congressional committee would be set up to maintain continuous surveillance of district affairs. Local legislation on a par with that enacted by State legislatures would lie over for 30 days, subject to congressional veto, before becoming effective.

At a time when the United States is striving to make the world safe for democracy again, let us not forget that there are some major gaps in the democratic landscape at home, particularly in the Nation's Capital. The people of Washington want local home rule, not statehood. Our plan would give them a chance to solve their own problems. It would also relieve Congress of a work load it should not have to bear. We cannot expect Washington to remain a politically depressed

area, on the one hand, and capital of the democratic world, on the other. At present, it is a standing invitation to hostile propaganda. Congress has an enviable opportunity to create here a model local government. I hope it will seize this opportunity now and restore democracy and efficiency to the Capital City of our country.

Tribute to Confederate Veterans of the War Between the States

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable John H. Pinson, a representative in the Alabama State Legislature, from Sumter County, Ala. The speech was delivered on the floor of the Alabama House of Representatives on June 13, 1947, and is an eloquent tribute to the few remaining veterans who fought in the cause of the South during the War Between the States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Speaker, 86 years ago scenes were different here at the State capitol of Alabama.

Downstairs in the governor's chair sat Andrew B. Moore of Perry County. Where you sit, Mr. Speaker, William M. Brooks of Perry County presided over the Secession Convention; and where I stand, stood Montgomery's own, matchless, eloquent William L. Yancey, delivering the report of the committee of 13 which withdrew Alabama from the union of States. On the flagpole above the capitol building floated the Stars and Bars of the Confederacy, made by Mrs. Napoleon Lovett, of Marion, Ala., and raised for the first time on March 4, 1861, by Miss Letty Tyler, granddaughter of United States President John Tyler. From the Tennessee Valley of north Alabama, came the bugle call of fighting Joe Wheeler, answered by the cannon of Admiral Raphael Semmes in Mobile Bay. Alabama was on the march, girding to defend herself against the foe.

When a boy, down in the Black Belt of Alabama, I have often heard the Negro cotton pickers singing their "Swing Low, Sweet Chariot," and "Old Black Joe," and it was sweet music. In late years, I have stood in the stadium at Tuscaloosa and heard Alabama's million dollar band play our alma mater, with tears in my eyes. In a mood for sports, I have gone to Louisville, Ky., out to Churchill Downs to see the Kentucky Derby, and stood in the old wooden grandstand, as the band played "My Old Kentucky Home," with a sob in my throat. I have sat in the diamond horseshoe at the Metropolitan Opera House in New York City and heard Enrico Caruso sing the aria from Aida, and all the magnificence and grandeur of the dead and bygone civilization of Egypt and the Nile would pass in review before my mind's eye. I have stood in the coliseum at the Tomb of the Unknown Soldier at Arlington, the ancestral home of Gen. Robert E. Lee, and listened with rapt attention as the Navy band played our national anthem, and was proud that I was an American citizen, but I think the sweetest music I have ever heard has been right here in Montgomery, when one of our bands struck up the old marching song of the Confederacy, Dixie, the words of which were first sung here and written on the walls of an old theater in downtown Montgomery.

Of the mighty army which went forth to defend our State in the 1860's, only four of the grey clad heroes remain alive today. In 1943 when I introduced a bill in the State senate to increase the Confederate soldier's pension from $65 to $100 a month, and their widows from $30 to $40 a month, there were 26 of these veterans living. Twenty-two have died since then. This bill will increase the pension for these four old veterans to $150 per month, and to their widows $50 instead of $40. You do not have to worry about the money to finance this bill. The Alabama Legislature, with foresight and patriotism, 48 years ago, in 1899, earmarked one mill of the State ad valorem tax for the use of Confederate veterans and their widows. This tax now amounts to over $1,000,000 annually. It takes only about $85,000 increase to provide for the increase called for in this bill. Only one-third, or less of this earmarked money goes to the support of the Confederate veterans and their widows. The balance, amounting to about $800,000, we graciously turn over the department of public welfare for old-age assistance.

Then let us pass this bill quickly, without a dissenting vote, and send it forthwith, without engrossment, to the senate, that they may pass it. Then place it on the desk of Jim Folsom, that it may be the No. 1 bill signed by the Governor. In doing this, we will not only care for these old veterans but will honor ourselves.

I move the passage of the bill.

The High-School Graduate Faces the Atomic Future

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. PEPPER. Mr. President, on the 18th of December I delivered a commencement speech at a rural school called Turkey Creek School, in Hillsborough County, Fla. On that occasion I heard a valedictory address by a young member of the graduating class, James D. Danley. I said then, and I say now, that the address he delivered at that time would have done credit to any honorable Member of this body. So I ask leave to have incorporated in the Appendix of the RECORD the address delivered on that occasion by this young man, and I commend it to the attention of my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Atomic energy, molecular composition, fission—these are five of the most important and closely related words in use in the world today.

On August 6, 1945, the United States made known a new field of scientific research by dropping a bomb on Hiroshima, a strongpoint in the Japanese defense. That, ladies and gentlemen, was no ordinary bomb. The decision to use it was one of the gravest ever made by our Government. It was understood that this bomb could do untold damage by radioactivity and would completely wreck Hiroshima, sparing no one or no thing. This, then, was the now dreaded atomic bomb. The effects of such a bomb have never yet been fully told, even through the tests on Bikini Atoll.

Now, we are faced with the problem of what to do with the atomic secrets. The futility of trying to withhold such important secrets is readily seen, because it would be only a matter of months, or should I say weeks, before every single solitary nation on earth would know the secret of the atomic bomb. Scientists say there is no efficient defense against the atom bomb; therefore, it is evident that atomic energy must be used only toward peaceful purposes.

To approach any world peace organization without an appreciation by the leaders of our country of the power of this new weapon would be unrealistic. No system of control heretofore considered would be adequate to control this menace. Both inside any particular country, and between the nations of the world, the control of this weapon would involve such thoroughgoing rights of inspection and internal controls as we have never heretofore contemplated.

On the other hand, if the problem of the proper use of atomic energy can be solved we would have the opportunity of bringing the world into a pattern in which peace and our civilization can be saved.

Professor A. M. Low, one of the world's most distinguished scientists, predicts that in the year 2000 A. D. an airplane with a top speed of less than 3,000 miles per hour will be considered out of date. Even now, jet-propelled planes are so fast that pilots have to use explosives when they wish to parachute. It is said anonymously that already planes have secretly been clocked at 1,200 miles per hour.

The family auto, if there is such a thing, will be equally at home on land, on sea, or in the air.

Speed will eradicate space. Clothes will be so cheap they will be discarded after a few wearings. I might add that Professor Low did not base these predictions on imagination, but upon thought and reason. He made a prediction in 1898 that in 1948 we would have a petroleum-driven vehicle that would travel on land at a speed of 125 miles per hour. Today, ladies and gentlemen, do we not have such a machine? Indeed, we have.

The high-school graduate in years to come, must be trained to meet the situations that will be brought about by such drastic changes. He will see much activity in the world, higher speed, greater distance, less time—all will cry out for greater physical strength. In order to have a good body and a sound mind, a graduate in the future must have better food, more and greater disease protection, body care, exercise, and, last but not least, plenty of recreation. He must be able to relax and forget his personal business worries.

Minds as well as bodies, not attuned to the greater stress and strain, may crack under the extreme pressure to which they may be subjected.

A high-school student need not be a bookworm to survive in an atomic world. The main courses to be taught a high-school student of the future will train him: First, to preserve peace at any cost because peace is essential. If there is not peace, then in all probability the world will end. Next, to be open-minded to any advancement, no matter how small, which requires mental growth. Small minds, minds that may have been exposed to education but untouched by it, will be unable to grasp the significance of atomic portents.

The high-school student 25 years hence will have no use for such high-school courses as accounting and secretarial work because this will be accomplished by machines which transfer the spoken word directly to paper without any mistakes whatsoever. Math will be important only to those who make the machines which do the computing. Science,

technology, vocational training, will be the watchword.

Democratic education must attain its cardinal objective for the atomic era, and that cardinal objective is peace.

As former Secretary of War, Henry L. Stimson, has said, "The bombs dropped on Hiroshima and Nagasaki ended a war. They also made it wholly clear that we must never have another war. This is a lesson men and leaders everywhere must learn, and I believe that when they learn it, they will find a way to lasting peace. There is no other choice."

In order that schools may contribute to survival in a technological society, teachers in service must share with youth and adults in developing a program of community education concerning such imperative issues as the control and use of atomic energy, world government, and the development of a means of cooperative actions for the solution of problems.

Will atomic energy bring a millenium of cheap power, supplanting oil and coal? Will a protein-deficient world eat cheap beefsteaks made from yeast? Will our descendants have everlasting teeth from drinking water containing fluorine? Can the high school graduate overcome the power of atomic energy, or will it eventually destroy him and his world? It need not. Man, with the help and blessing of his God, can rise above his human weaknesses and hold this thing that he has found as a torch to light the world.

Everett Dirksen's Announcement

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid editorial which appeared in the January 4, 1948, issue of the Peoria Journal-Star.

The title of the editorial, "EVERETT DIRKSEN'S Announcement," was with reference to his decision to retire from the House of Representatives as Representative in Congress from the Sixteenth Illinois District at the conclusion of his present term. Representative DIRKSEN is completing his eighth consecutive term in the House of Representatives, during which time he has performed many outstanding and valuable services, not only to his district, which included the city of Peoria, Ill., but to the Nation as a whole.

The news that Representative DIRKSEN will not, after his present term, continue to serve his district in the Congress of the United States for "compelling personal reasons," was received with deep and obvious regret by every Member of the congressional delegation from the State of Illinois, as well as by every other Member of the United States Congress.

I have known Mr. DIRKSEN for many years, not only as a Member of Congress, but prior to that time. It is with regret and shock that I have learned of his decision. I have always regarded him as a trusted friend and a sincere colleague. His absence from the Halls of Congress will be sorely noted.

I believe the editorial from the Peoria Journal-Star best epitomizes the opinion that his colleagues, friends, and supporters hold for Mr. DIRKSEN.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Representative EVERETT M. DIRKSEN's announcement yesterday that he will not be a candidate for reelection to Congress is the most surprising political news in a long time for Peoria. "Compelling personal reasons," Mr. DIRKSEN said, made it advisable for him to reach this decision.

Mr. DIRKSEN has served brilliantly in Congress these last 15 years, and his withdrawal will be a severe loss to the Sixteenth Illinois District. He has not only kept in close touch with his constituents but has won for himself an enviable position in the national scene. He is also known abroad, having twice crossed the Atlantic on tours connected with fact-finding for Congress and also having toured South America on a similar mission.

Mr. DIRKSEN is rated the ablest speaker in the House of Representatives and among the best informed men in Washington. National publications several times have featured him and his work as representing the best congressional traditions.

He has also proven to be a potent force for the Republican Party in the national arena. He was called upon for numerous speeches on radio networks and in different States in the 1944 Presidential campaign, and was at one time near being nominated as Republican candidate for Vice President in the 1944 convention.

With Mr. DIRKSEN's withdrawal, his constituents of this district, who have come to rely heavily upon his representing their interests in the National Capital, will lose the benefits of his experience, his wealth of information, and his prestige in Congress. We do not doubt that his decision was a difficult one and that nothing but compelling reasons could have swung the balance as they did. But in his announcement he says that he is "interrupting" his career of public service, indicating that at some time he may again offer his services as Representative in Washington. We trust that the future will make it possible for Mr. DIRKSEN to return to the career which is interrupted at such a promising time.

An Open Letter to Henry Wallace

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. TEAGUE. Mr. Speaker, we have heard a great deal of discussion during the past 2 weeks on Henry Wallace's speech accepting leadership of a third party during the coming Presidential campaign. It would be difficult to determine what good purpose he attempts to achieve when his contradictory statements are studied. However, I believe the result of his activities will be confusion among Americans over our foreign policy and our national security program unless we can clearly show that Henry Wallace is being used as a tool for an ism which is not Americanism.

Under leave to extend my remarks in the RECORD, I wish to include an open letter to Henry Wallace written by Mr. Henry Gorrell, editor and publisher of the Veterans Report, which appears in the December 1947 issue of that newspaper:

AN OPEN LETTER TO HENRY WALLACE

MY DEAR MR. WALLACE: The International Communists have recently jailed Rumania's "Henry Wallace," one Jules Maniu, and they've hanged Nikola Petkov, who was as liberal as they make them.

Even more recently, Moscow ordered the dissolution of the only remaining liberal party in their sector of Germany—the Christian Democrats—and it probably will be some time before we learn just how many of its leaders have been jailed, hanged, or shot.

It's a dangerous game you are playing, Mr. Wallace, this game of "peace at any price," and of appeasement of the dictators. In case your memory fails you, it is a game that has been played—and lost—by men of the Western World also—men of equal stature to yours; men who were respected and trusted by the masses they represented. Remember Chamberlain, the "umbrella man" of 1939? He tried his appeasement theory out on Hitler and Mussolini. The result was nearly fatal to Britain and France, and to civilization as we have known it.

We regret your candidacy for President of the United States on a third-party ticket, Mr. Wallace, for your platform of peace, prosperity, no war, and no depression will have great appeal to a great number of Americans who are harassed by rising prices and haunted by the fear that another war lies ahead.

We'd be for you if we felt that your International formula was workable, Mr. Wallace. But, honestly, we believe that if you continue denouncing America's foreign policy and universal military training you will only weaken your own country and hasten the day when Communists here will have gathered sufficient strength to put you in jail—or worse—also.

Yes, Mr. Wallace, you'll gather up a lot of votes, for, as you say, we Americans are a peace-loving people, and our hearts have a habit of swelling with genuine good will toward all mankind.

But what about Maniu and Petkov? Perhaps you never knew them?

Well, Mr. Wallace, I knew them, for in 1940 I was a correspondent in the Balkans.

Take Maniu, of Rumania. Like you, Mr. Wallace, Maniu loved his country and his people. He was a man of the soil; a real democrat, and a bitter enemy of Hitlerite methods. When I last saw him in Bucharest, Maniu was challenging General Antonescu and his green-shirted Nazi gangsters to do their worst. I thought sure the Rumanian Nazi Party—the Iron Guard—would murder him, but it seems the Germans decided against it, on the grounds that there were too many other liberals in Rumania who might stab their troops in the back.

Came the German retreat toward the end of the war, and Maniu greeted the advancing Russian Army eagerly. You see, the Russians had signed agreements at Yalta and Potsdam; agreements under which they pretended to subscribe to the principle that people of all nations should have the right to choose the form of government under which they will live.

In the months and years that followed, Yalta and Potsdam agreements were forgotten by the Soviet Union. Sure, the Russians gave Maniu's National Peasant Party a free hand in Rumania—for a while. They needed him to keep the spark of democracy kindled in Rumania until they were sure of themselves. Then, they pounced. Maniu was denounced for an alleged conspiracy to overthrow the Rumanian Government—Communist controlled—by force and violence. His followers, all good liberals, were clapped in jail and denied trials. Maniu himself was tried and sentenced to prison.

Our State Department protested, but in vain. Big hearted, simple, peace-loving Maniu now languishes in a Rumanian prison. He is an old man, and probably will

die there. The Russians used him until they no longer needed him. Then just because he had many followers in Rumania, he became a danger to the Rumanian communistic movement and was branded a traitor to his country—a traitor, mind you, because he was alleged to have had repeated conferences in Bucharest with the American Minister and military attaché.

Maniu's trial was a judicial travesty. It closely followed a set pattern for all political trials staged by Communist regimes in the Balkans, whose obvious purpose is to eliminate every vestige of democratic opposition.

If you think you still prefer Russian "liberalism" to the international approach of the leaders of our two parties—the President, Secretary Marshall, Senators Vandenberg and Taft—whom you claim are guilty of an evil conspiracy and are making common cause with the "Wall Street-military team," perhaps Petkov's trial may be of interest.

Petkov played an active and leading role in the establishment of a coalition government in September 1944 following overthrow of the Bulgarian Nazi regime. He was arrested on charges of conspiracy against the government on June 8, 1947. Although he was a member of parliament with a large following, they hanged Petkov recently against the strong protests of all the Allied Governments. You see, Petkov was a little too liberal for the Communists, who don't want any one man to swing too much weight within his own country. If he won't take orders from Moscow's Politbureau, its curtains for him. Petkov, like you, thought eventually the Russians could be brought around to their way of thinking.

No, Mr. Wallace, we aren't dealing with Russia in these times. We are dealing with an international communistic movement which has no regard for the rights of the common man.

O. K., you've clearly stated that you are no Communist, and that you don't like communism. But the Communists in this country like you, Mr. Wallace, simply because they can use you and your idealistic talk now to soothe us all into complacency.

It's not only your own country's interests that you are harming by your preachings, Mr. Wallace, but also those few countries in Europe that are making an honest effort to preserve their democratic ideals; ideals handed down by their forefathers to yours and mine.

Beware, Mr. Wallace, that by your preachings you do not split America into two camps; that you do not disillusion your own people and cause the eventual loss of their liberties, also.

That you are a good American, we do not question. Nor do we doubt your sincerity. But do you honestly think that labor unions can survive if you spur them on into sabotaging the capitalistic system? Destroy the capitalistic system in this contry, and you are only aiding and abetting economic and political chaos. This in turn, would only lead to communism over here. And the Communists have no use for labor unions. They don't have any real labor unions in Soviet Russia, or Roumania, or Bulgaria.

Don't forget Petkov and Maniu, Mr. Wallace, for you are the Petkov, the Maniu, of the United States. This is a tribute to your sincerity and your idealism, but if like Petkov and Maniu you inadvertently help the Communists to get a grip on your country, you and other liberals will be the first to suffer.

We don't think you will be successful enough to do this, Mr. Wallace, but imagine for a moment that your America had become a Communist-run nation. People would go to jail. That is the way opponents are handled in Communist countries. But many of our politicians would adjust and accept the inevitable. That's why the first man to hang in Communist America would be — — yes, you are right, it would be you Mr. Wallace.

Sincerely yours,

HENRY GORRELL.

America: The Proof of Freedom

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include the following editorial reprinted in the Minneapolis Argus on Friday, November 21, 1947:

The following thought-provoking editorial is reprinted from the Champ, publication of the employees of the Champion Motor Co., an east Minneapolis industry employing approximately 400 people:

"AMERICA: THE PROOF OF FREEDOM

"Peculiar as it may seem, when things are going good and peace is supposed to surround the world, some people are not satisfied. They do not realize or appreciate the freedom, the fellowship, the benefits, the comforts, and beauty of their own country. Perhaps this condition exists because other forms of government are misunderstood and the propaganda misleading in facts.

"American industry is operated nowadays with the welfare of the worker always in mind. Working conditions have never been so satisfactory to the average worker in history. New factories, modern machinery, pleasant working hours, plant athletic activities, Christmas bonuses, and other factors contribute to make the American method of working the best in the entire world.

"An impressive piece of copy recently appeared in an advertisement of the Warner & Swasey Co., Cleveland, Ohio, makers of machine tools, which depicts the reason why residents of foreign countries want to come to America where freedom is the key to peacefulness. The copy follows:

" 'Millions of men and women, in every country in Europe and Asia, would sell their souls for the chance to live in the freedom of America. They have experienced workers' governments, socialism, government ownership, communism, fascism, governments "run for the people," countries where the land and wealth are confiscated and given to the people. They have experienced all these so-called utopias, and they are frantic to leave them and come to America with its competitive system, its corporations, its opportunity for the man willing to work hard.

" 'There people aren't schoolroom theorists; they know from bitter galling experience that life, liberty, enough to eat, and the right to pursue happiness are possible only under the American method of private capital investment in the tools of production, which over the years steadily increases real wages—the American system where every man is responsible for his own welfare and too proud to let a government assume that responsibility for him.

" 'Too much of that American system has been whittled away these past years. We'd better get it back before it's too late, for if the American system is destroyed there will be no country we could look to with longing. "Liberty and the pursuit of happiness" would be a mockery.'

"Yes, fellow workers, the freedom, liberty, and happiness of our great country depend upon us. Loyalty to our present system will warrant a life of contentment in a country where every individual who desires to work can share the wealth and abundance of opportunities found at every turn in the road. From city parks to nature's playground, it's yours to enjoy. Let us fight for this freedom to continue—for America leads the way to a better form of government for the people.

"CAL JOHNSON,
"Public Relations Director,
"Champion Motors Co."

A New Director for Voice of America Program

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. DURHAM. Mr. Speaker, under leave to extend remarks in the RECORD, I include the following editorial which appeared in the Durham Morning Herald, Durham, N. C., regarding the appointment of Mr. George V. Allen:

A NEW DIRECTOR FOR VOICE OF AMERICA PROGRAM

The strengthening of the Voice of America is another move in the buttressing of the attack of democracy on totalitarian government. It is believed that this program properly implemented will disseminate the truth to peoples abroad and let them know actually what is going on around the world.

It has been generally accepted that Secretary of State Marshall has made a splendid choice in the selection of George V. Allen to handle this rejuvenated function of the State Department. His choice pleases Durham. That is certain.

Mr. Allen is a native of this city, and a former member of the news staff of this newspaper. The pride in him is reasonable and well founded. During his 1 year and a half as Ambassador to Iran, Mr. Allen has substantiated a reputation acquired in nearly a score of years in diplomatic service.

During these years he has served as special adviser to Presidents and secretaries and has accompanied them to the several conferences in which most of the postwar Balkan problems were uppermost. When he went to Iran it was with some misgivings on the part of close observers. He was young and lacked experience of many diplomats, and the situation in Iran was ranked as "hot." Now these same observers are saying that George Allen has worked miracles. It is a fact that he has almost singlehandedly turned Iran from a sizzling diplomatic problem into one of relative calm.

George Allen knows how much the public will want, and how much the public will accept. He knows the thinking processes of Europeans and Asiatic. He has had evidence of the confidence in which he is held to the extent that in all details he is a worthy successor to William Benton. He goes to his new job as Assistant Secretary of State (subject now only to Senate confirmation) with another big job ahead, but it is one that he may be expected to fill with satisfaction to all.

Communism

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. DAVIS of Georgia. Mr. Speaker, on January 11 and 12 the Georgia Department of the American Legion, through its Americanism committee, held in Atlanta a 2-day seminar on the subject of communism.

It was my privilege to address this patriotic group on the first day of its sessions, as follows:

Mr. Chairman, distinguished guests, and members of the American Legion, for many years the American Legion and its members have been aware of the fact that communism is a real and dangerous enemy to our Government and to our people.

The average guileless, honest, friendly American can hardly believe that there exists in the world a conspiracy so cruel, so terrible, so cunning, and so determined to crush out liberty and destroy freedom and decency from every corner of the earth. More than 20 years ago the American Legion began to work at the task of convincing the American people that communism is the mortal enemy of most things which are dear and precious to us. At the beginning it was a thankless task. For a long time patriotic, honest truthful, informed members of the Legion, who were moved by purest principles of patriotism, were subjected to vicious attacks and smear campaigns. They were called warmongers and Red baiters. They were subjected to ridicule and falsehood, and were made victims of cunning attacks which have finally come to be recognized as weapons used by the Communists against decent, patriotic Americans who have the ability to recognize communism and the courage to fight it.

It was my privilege in 1937 and 1938 to serve 2 years as State chairman of the Legion's Americanism committee for the Department of Georgia, the position which is now so ably filled by our present chairman, Hon. J. Walter LeCraw. Mr. LeCraw during those years was a member of the State committee on Americanism. He is a tireless worker and possesses that tenacity which is necessary to successfully carry on the important work of this committee. You are to be congratulated on having the assistance of two such forceful and earnest young Legionnaires as Tom Bobo and Bill VanHook, who went to Washington and attended the seminar there, and who are bringing back to this seminar here important knowledge of Communist activities which they acquired.

Although it has been a long and at times a seemingly hopeless fight, America and the world are belatedly recognizing communism for the menace that it is and are seeing it now in its true colors. I congratulate the Department of Georgia of the Legion for the active part which it is taking in carrying to the people of Georgia the truth about communism. Communism during the last 25 years has cruelly, ruthlessly, and without the slightest compunction, murdered millions of people in many sections of the earth. It has starved, actually starved, millions of men, women, and children through a deliberate, planned program of starvation. It has placed other millions of men, women, and children in actual slavery. It has cruelly separated husbands from wives and parents from children. It has destroyed virtue and debauched womanhood. It has attacked religion and has taught men, women, and children to embrace and commit the vilest crimes imaginable.

One of the greatest obstacles in fighting communism is the fact that its vileness, its cruelty, and its treachery are so shocking and unbelievable, that a normal, decent person finds it next to impossible to believe that such a thing in fact does exist, until positive, inescapable proof is forcefully brought to his attention.

Communists have long been aware of this reluctance on the part of the American people to believe the truth about communism, and they have made the most of this reluctance in promoting communism and in fighting its enemies.

One of the favorite methods of attack used by Communists is that of using smear terms, such as "witch hunt," "Red baiter," "warmonger," and similar terms which are calculated to discredit and ridicule any person who is effectively fighting communism.

The use of these tactics by Communists is illustrated by the testimony of a former Communist, Louis F. Budenz, who testified under oath on November 22, 1946, in Washington before the House Committee on Un-American Activities about the activities of the Communist Party, as follows:

"I do think it is time, from my experience, to raise the little iron curtain in the United States.

"What is the little iron curtain: It is the refusal in many quarters to permit a frank discussion of what the Communist Party actually is. Anyone who endeavors to tell the truth about the Communist Party is greeted with shouts of "witch hunt," "Red baiter," and things of that character.

"I claim that the honest, normal American citizen has a right to know the facts without this effort to put down a curtain upon the activities of the Communist Party."

By using this method, Communists have been able to nullify and destroy the work of many patriotic Americans who have fought communism in the past.

To be able to effectively fight communism, there are certain facts that we must know, and one of these is that it is a serious mistake to ever believe anything a Communist says.

Our willingness in the past to believe that Communists will tell the truth, has cost the world millions of lives of men, women, and children cruelly murdered by Communists, the downfall of many representative governments, and the substitution of Communist dictatorships for those governments, and insofar as the Amercian people are concerned, communism has already cost us billions of dollars, and we are at this very moment called upon by the head of our Government, President Truman, and by our Secretary of State, General Marshall, to dig into our pockets and spend the additional sum of $17,000,000,000 for the sole purpose of stopping the spread of communism throughout the world.

What does this mean to you and to me? It means that if this money is spent under what we call the Marshall plan—this tremendous sum of money, $17,000,000,000—if it could be prorated among the population of the United States, would cost each man, woman, and child $121.42, or, for the average family of 4, the cost would be $485.68. Furthermore, the food, goods, and materials to be sent from this country to the European countries where this money will be spent will cause still greater scarcities of such items in the United States, and will be a direct cause of more price increases, which the American people will have to pay, for the necessities of life.

It is, therefore, easy to see that communism, instead of being something that we can evade, ignore, or laugh off, has reached the point where it has become one of the most important things in our daily lives. It has become a subject which can no longer be ignored. It has spread throughout the world to such a point that it has now become the duty of every American to learn the truth about communism, and to join forces with the President of the United States, the Secretary of State, Congress, and our citizens in fighting this menace to life, liberty, and freedom, which at this moment threatens the entire world.

That we may be able to successfully fight communism, it is imperative that we know and recognize three facts about it. These are:

1. It is the avowed purpose of communism to conquer and rule the world.

2. No Communist is worthy of belief, and a Communist will tell the truth only when it suits his purpose to do so.

3. Communism is not a weak, poverty-stricken, or destitute thing. On the contrary, through its campaign of murder, concentration camps, slavery, and revolution, it has taken over the governments of close to a dozen countries in eastern Europe, and has brought under its control more than 100,000,000 persons there, and is making strenuous efforts to assume control of the governments and people of France, Italy, Greece, and China.

If the Communists could be successful in taking control over these last-mentioned governments, it is extremely likely that the Soviet Union, with that great concentration of power and strength, would then turn its full force upon the United States as its principal target.

Again I quote from the testimony of Louis F. Budenz, who for years was a member of the Communist Party in the United States, but who says that he saw the light and renounced the Communist Party. While testifying under oath on November 22, 1946, Budenz was asked this question:

"Question. Before you go on further, you made a statement just a few minutes ago that 'this is directed against the United States.' Do you mean directed toward the overthrow of the Government?

"Answer, I mean that the Soviet Government has now revealed through my experience in discussion within the Communist Party the fact that it is engaged in a war of nerves against the United States on a general pattern similar to that carried on by Hitler's Germany, but within its own variation, and that this war of nerves will go to the point of military conflict. That is, according to the design of the Soviet Government, it can go to the point of military conflict. At any rate, it is a war of nerves designed to undermine the Government of the United States."

That testimony is found on page 5 of Budenz' testimony before the House Committee on Un-American Activities.

On page 25 of his testimony the following statement which had previously been made to the same committee by William Z. Foster, head of the Communist Party in the United States was read to Budenz:

"When a Communist heads the Government of the United States—and that day will come just as surely as the sun rises—that Government will not be a capitalistic government, but a soviet government, and behind that government will stand the Red Army to enforce the dictatorship of the proletariat."

Budenz was asked if that statement does not express the policies of the Communist Party, and he answered:

"That expresses the present policy of the Soviet Union, veneered over with the appearance of working in the United Nations, but using the United Nations as a sounding board to discredit and belittle the United States and the American Nation."

Budenz also testified, as is found on that same page 25, that the above statement also expresses the policies of the Communist Party of the United States as they now exist.

For your seminar here today, I am quoting you sworn testimony of people who are in position to know the truth about Communists, and who have answered specific questions concerning the aims of communism, and the methods of attaining them.

I call your attention to the testimony of a prominent American citizen, who has held many positions of trust and honor in the American Government, namely Hon. William C. Bullitt. In order that you may know the responsibility and background of Mr. Bullitt, he was Special Assistant to the Secretary of State of the United States in 1933; was a member of the American delegation to the International Economic and Monetary Conference in London in 1933; was Ambassador to the Soviet Union from 1933 until 1936; was Ambassador to France from 1936 to 1940; was personal representative of the President of the United States with the rank of Ambassador for all countries in 1941 and 1942 and was Special Assistant to the Secretary of the Navy thereafter for approximately a year and a half.

Because of Mr. Bullitt's actual residence in Russia, and because of his long and varied experience in our State Department, he is as well qualified as any American to give facts concerning communism. On page 2 of Mr. Bullitt's testimony before the House Committee on Un-American Activities he said this:

"The basis of Communist action in the world, whether in the United States or any other country, is the Communist creed, which is a belief that there will be no peace on earth until all the nations of the world are Communist. This is a very genuine belief which is held by a large number of people, and in the furtherance of that belief they have developed a doctrine that the end justifies the means, and that any means, even the most foul, are justifiable in order to achieve this domination of the world by communism."

Mr. Bullitt then quotes as a part of the Communist doctrine a statement from Lenin, from his collected works, volume 24, page 122, Russian edition, as follows:

"We are living not merely in a state but in a system of states; and it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

On page 3 of his testimony Mr. Bullitt says that Lenin's book contains this statement:

"It is necessary to use any ruse, cunning, unlawful method, evasion, concealment of truth."

Mr. Bullitt was questioned about the untruthfulness of Communists. I quote these questions and his answers from page 18 of his testimony:

"Question. Now, you spoke about prosecuting these fellows. You know that no Communist will tell the truth, if it suits him to prevaricate, do you not?

"Answer. Yes; that is quite true.

"Question. No oath will bind a Communist, will it?

"Answer. No.

"Question. None whatever?

"Answer. No.

"Question. Nothing they will find will bind them, will it?

"Answer. No."

I wanted to bring with me today enough copies of Mr. Bullitt's testimony on March 24, 1947, before the House Committee on Un-American Activities, to be able to give each one of you a copy of his testimony. It is so complete, and so revealing, that its contents ought to be brought to the attention of every American. I have distributed all the copies of Mr. Bullitt's testimony which I have been able to obtain. But I want to give you some of the important facts, which he brought to the attention of Congress, and I quote you the following statements from page 3 of his testimony:

"The doctrine that war is inevitable between the Soviet Union and the states which the Communists call bourgeois and imperialist, which includes the United States of America—indeed, all States which are not Communist—grows from the fact that what the Communists intend is the conquest of the earth for communism. It is entirely clear and one may find it in writing after writing, and there is not much point in my quoting further excerpts."

"The present situation in the world is the following: The Soviet Government, in the furtherance of its intention to control the earth for communism, has annexed Estonia, Latvia, Lithunia, and a large portion of Poland, a portion of Finland, a portion of Rumania, and has established absolute control, through puppet governments, over the whole of Poland, the whole of Bulgaria, the whole of Rumania, Yugoslavia, and Albania, and it is closing its iron fist steadily on Finland, on Hungary, on Czechoslovakia. It also controls fully the Red Army zones in Germany and Austria. Thus, the Soviet Government has brought under its control more than 100,000,000 persons in eastern Europe."

"In addition, through its fifth columns—and its fifth columns are like the Nazi fifth columns, since the truth is that communism is Red fascism and uses fifth columns just the way Hitler used them, only much more effectively. Hitler was never able to build up in the countries which he intended to conquer parties or fifth columns having anything like the strength of the Communist parties which have been built up by the Soviet Union. Using these Communist parties as fifth columns, Stalin is threatening the independence of the remainder of Europe.

"The Communist Party in France, for example, is extremely important. It is, in fact, the largest party today in the French Parliament. But there are so many other parties in the French Parliament that, although the Communist Party is the largest party, it only has 28 percent of the seats in the French Chamber of Deputies. Nevertheless, it has acquired control of the French CGT, which is the one big trade union of the whole country, and it can pull a general strike in France whenever it may choose. Since France has not yet recovered from the war and has a very difficult economic situation to deal with, the threat of a general strike is an appalling one."

On page 4 of his testimony, Mr. Bullitt said that in spite of the fact that 72 percent of the French Parliament is anti-Communist, there is a very good chance that the Communists through a general strike and revolutionary activity may be able to take over France. That statement was made on March 24, 1947, and French communistic activity in France in the last few weeks has demonstrated how accurate Mr. Bullitt's prediction was.

On page 5 of his testimony Mr. Bullitt states that murder is carried on on a very large scale by the Communists—that individual assassinations are not very often used by the Communist Party, but that murder on an extremely large scale is very frequently used and is a regular piece of the mechanism of establishing their authority.

He then states as his opinion on page 5:

"That, I think, confronts us with a very practical question of what to do under the present circumstances. The United States, without question, today is in danger, as President Truman very clearly brought out in his statement asking for support for Greece and Turkey. He said that the national security of the United States was involved. I believe those were his exact words. Perhaps I have not quoted him correctly, but that was the sense of some of his words. The safety of the United States is involved because the gradual taking over of countries, the gradual taking over of areas, while possible future victims are lulled into a false sense of security, is the essence of the Soviet tactics, just as it was the essence of Hitler's tactics."

In considering the danger of communism to the United States, one of the first questions which arises in our minds is, How many members of the Communist Party are there actually in the United States? I want to leave Mr. Bullitt's testimony for the moment as a source of information, and look to the statement of another great American, J. Edgar Hoover, head of the Federal Bureau of Investigation. Mr. Hoover made a speech before the annual convention of the American Legion at San Francisco on September 30, 1946, dealing with communism. In that speech, membership in the Communist Party in the United States was referred to by Mr. Hoover as being claimed at 100,000. In referring to the number of members of the Communist Party in this country, Mr. Hoover said:

"The fact that the Communist Party in the United States claims some 100,000 members has lulled many Americans into a feeling of false complacency. I would not be concerned if we were only dealing with only 100,000 Communists. The Communists themselves boast that for every party member there are 10 others ready to do the party's work. These include their satellites, their fellow travelers, and their so-called progressive and phony liberal allies. They have maneuvered themselves into positions where a few Communists control the destinies of hundreds who are either willing to be led, or have been duped into obeying the dictates of others."

Let us consider what it means to the United States if there are 100,000 actual members of the Communist Party in this country today, and 100,000 is the figure used by Mr. Hoover.

The official publication issued by our Government in 1947, entitled "Communism in Action" says on page 97:

"When the Bolsheviks seized power in Russia in 1917, there were only 200,000 members, and the party has remained small, although with a heavy turn-over of membership following the periodic purges."

This official booklet gives the membership of the Communist Party in Russia in 1921, 4 years after the revolution, as 650,000 members, and in 1941 as being only 2,515,481.

It is, therefore, seen that great numbers are not at all necessary to render the Communist Party effective. In fact, the Communist Party purged its membership in Russia in 1939 down to the low figure of only 1,588,000. Yet the Communist Party was not weakened in Russia as a result of this purge. On the contrary, the party seems to have been strengthened, not only in Russia, but throughout the world.

Let us not be lulled into a sense of security because of the relatively small number of members of the Communist Party in the United States.

Those who are members are active and zealous, and the party is constantly engaged in increasing its membership, and in teaching those who are members how to achieve the goals and purposes of the party, which are revolution and seizure of power.

I want to quote you some actual sworn testimony given to the House Committee on Un-American Activities on February 6, 1946, which will show you how the Communist Party of Soviet Russia has reached its long arm down into the State of Georgia, in Walton County, and took a man to Soviet Russia, and schooled him for a year and 4 months in communistic and revolutionary activities.

The following testimony was given by William O'Dell Nowell, colored, who was born in Walton County, Georgia, in 1904. He was

formerly a member of the Communist Party, and later renounced it and gave valuable testimony concerning communistic activity. The following questions and answers are quoted from his testimony on pages 14, 15, 21, 22, 24, 26, 27, and 28:

"Question. What position did you hold in the Communist Party?

"Answer. I was a member of the district-buro, district secretariat, organizer of the American Negro Labor Congress, and director of education; that is, education propaganda. That constitutes about the most of it.

"Question. In connection with your Communist Party activities, were you ever sent to the Soviet Union?

"Answer. I was sent the first time in 1929. In 1931 I returned as a student to Moscow.

"Question. You first went in 1929?

"Answer. Yes.

"Question. Then you returned to the United States?

"Answer. Yes, sir.

"Question. Then you returned again in 1931?

"Answer. That is right.

"Question. As a student?

"Answer. Yes.

"Question. A student of what school?

"Answer. International Lenin School.

"Question. Where is the International Lenin School located?

"Answer. In Moscow.

"Question. Is it connected in any way with the Communist International or the Comintern?

"Answer. It is a school of the Communist International.

"Question. What is a student taught, generally, at the Comintern?

"Answer. Academic subjects with philosophy; of course, Marxism and Leninism; Marx economics; history of the labor movement; party organization; history of the Communist International; conspiracy; sabotage; and then quite some detail with regard to conspiracy. It includes building barricades, wrecking trains——

"Question. Wrecking trains, did you say?

"Answer. Yes. Seizing the essential facilities of a city, its water, lighting. On instructions, how to capture a city, we were told how to seize the most vital means of communications, transportation, lighting, water supply, and so on; food; and, of course, the Army, the armed forces; any arms, if any arms were stored; then, code, of course, transmission of messages; street fighting.

"Question. Were you given a course at that school in espionage technique?

"Answer. Yes. That was a part of the course on conspiracy.

"Question. How many separate times did you go to Russia during the time you were a member of the party?

"Answer. Twice. The first time in 1929. The second time in 1931.

"Question. How long did you stay on each occasion?

"Answer. On the first occasion I was there only a month, just as a delegate. On the second occasion I was there a year and 4 months.

"Question. A year and 4 months?

"Answer. Yes.

"Question. Who defrayed your expenses on these two separate trips?

"Answer. The central committee, local district committee, contributed toward the first trip. The second trip was financed by the central committee of the party.

"Question. In Moscow?

"Answer. No; in New York.

"Question. Any part of your expenses on either trip financed from the Comintern in Moscow?

"Answer. Well, of course, the Comintern was furnishing all of the means, I suppose, but—as a matter of fact, I know—but it is credited to the central committee.

"Question. What I was trying to find out is just how did you get the funds while in Moscow; just by what avenue did you receive the funds?

"Answer. We were paid by the Comintern while studying. We were given 50 rubles a month, dormitory and board.

"Question. I believe you said you were born in Georgia?

"Answer. The State of Georgia.

"Question. Where?

"Answer. The county seat is Monroe. It is down below Atlanta about 40 miles.

"Question. Were you in Detroit at the time of the riots?

"Answer. Yes; I was.

"Question. Did the Communists stir that riot up, or help to stir it up?

"Answer. I think in large part it was due to Communist agitation.

"Question. How large a school was that in Moscow?

"Answer. We had students from about 18 countries, 18 or 20 countries, I think about 2,000 students all told.

"Question. Two thousand students; and how long a course was it?

"Answer. Well, 1-, 2-, and 3-year courses.

"Question. One-, two-, and three-year courses?

"Answer. Yes. Of course, those were year-round courses. You did quite a lot of work, approximately 2 years in 1 year.

"Question. Is it fair to state that many of the students in that school at that time with you are now leading Communists in the various nations in the world?

"Answer. Yes, sir.

"Question. Do they have any type of similar school here in America?

"Answer. Yes. Our local schools were fashioned after the Lenin school; the school that I organized in Detroit in 1933 was fashioned after the school there. We had another one in New York, and one in Chicago, and quite a few smaller schools throughout the country.

"Question. What was the name of the school in Detroit?

"Answer. Detroit Workers School.

"Question. What was the name of the school in Chicago?

"Answer. Chicago Workers School. Originally I believe they called it the Douglas School.

"Question. What is the name?

"Answer. Frederick Douglas. I am not sure of that. I know they changed the name. It was formerly the Chicago Workers School, but they named it after some well-known liberalist or something.

"Question. Isn't it the policy of the Communist Party to maintain in all large cities a so-called workers school, Mr. Nowell?

"Answer. Yes.

"Question. That has been the policy, Mr. Chairman. They carry that out at the present time. I am just asking for information as to the type of school. Did you have a special building, a meeting hall, for the students to assemble in?

"Answer. Yes, we had an auditorium. Part of the building was set apart for meetings.

"Question. I mean did you have the entire building?

"Answer. We leased the building there in Detroit, rented it, and used the entire building for the school.

"Question. Do you know whether or not there are any funds set up to subsidize the agents or subagents of the comintern in the educational institutions of America?

"Answer. That is kept quite secret. Of course, it is well known to us that the whole of the party work was subsidized in Moscow. I don't state I could definitely prove that, but it was understood by the party functionaires that the whole party was subsidized.

"Question. They would subsidize instructors that would teach their doctrines; is that correct?

"Answer. That was part of the reason for sending us to Moscow. We were paid to study there and placed in charge of some form of education when we returned, at the expense of the party.

"Question. Did they teach you a technique for stirring up racial trouble in this country? You spoke of the riot in Detroit. Did they teach a technique for stirring up racial trouble around the country?

"Answer. Well, the technique employed naturally did that. They didn't say, 'Start race trouble,' but naturally, the methods they used, the way they went about doing things, often created racial antagonism and led to bad results. The general idea, the general teaching, was to bring about unity of all labor and equal rights, and all that sort of thing, but the aggressiveness and often the very vulgar manner in which the policy was carried out produced the opposite result, racial antagonism, rather than a way to social harmony."

An American can hardly conceive of the horrible conditions which exist in any country dominated by communism. I want to give you a few more sentences of the testimony of former Ambassador William C. Bullitt about life in Russia. On pages 12 and 13 of his testimony of March 24, 1947 he says:

"In the first place, life in Russia is lived under the constant fear of the knock of the secret police on the door in the middle of the night. No man when he goes to bed, and no woman, knows that in the middle of the night the secret police aren't going to arrive—and then comes disappearance. Then comes either death in a cellar with a shot in the neck or deportation to one of the forced labor camps. We do not know exactly how many men and women are in those forced labor camps today, but there is extremely reliable testimony that there are more than 10,000,000 human slaves today in those forced labor camps working under the NKVD in the Soviet Union at this time.

"It is worse than at the worst moment of Negro slavery. There were never so many slaves as there are today in the Soviet Union actually working in slavery.

"That being the basis for life, whether you have more or less makes very little difference, because you can't call your soul your own; you are scared every minute."

On page 16 and 17 of his testimony, he tells the tragic story of the planned and systematic starvation of three to five million Ukrainians, and the forcing into slavery of some 10,000,000 people. Here is his testimony about those horrible things:

"Question. In 1933, I think it was, they had a crop failure in the Ukraine, Do you remember that?

"Answer. I do; very well.

"Question. And the people of the Ukraine are among the best people in Russia?

"Answer. Yes.

"Question. And they went down and took everything away from them and starved five or six million of the best people in Russia to death, in their own homes; that is correct, isn't it?

"Answer. Mr. Congressman, it was, in one way, even worse than that. They set the grain quotas higher than the total grain crop. They then took the entire grain crop, but because there wasn't more, to come up to quota, the man was a criminal, and, therefore, he was treated as a criminal, in addition to being starved, and his wife and children as well.

"Question. Yes.

"Answer. They managed to dispose, by systematically organized starvation, they managed to dispose of some three to five million Ukrainians.

"Question. The people in the Ukraine are among the best people in Europe.

"Answer. That is right.

"Question. Yet they went in there and took everything they made and starved, you say, five or six million of them to death?

"Answer. Three to five million.

"Question. Men, women, and children starved to death, eating, in their frantic misery, the bodies of their own children, of their own families; that is correct, isn't it?

"Answer. I am extremely sorry to say that I actually have two photographs of a father and mother and the skeleton of the child they had eaten, which were taken down there in the Ukraine.

"Question. Yes; that is what I am trying to bring out.

"Answer. I still have two photographs of that. There is nothing more horrible.

"Question. You spoke awhile ago of there being 10,000,000 people in concentration camps.

"Answer. I should say at least.

"Question. You said that they were infinitely worse off than the slaves were in the Southern States.

"Answer. What I said was this, sir, that there were more slaves today in the Soviet Union than there ever were at the height of slavery, not merely in the Southern States, but in the world."

In the short time I have to talk to you today I can only give you a sketchy picture of the horror, the misery, and the unspeakable human degradation which comes to people unfortunate enough to live under communistic rule.

In these critical days the country looks to the American Legion, as it did in the years following the First World War, to be one of the great forces to keep America safe and strong, and to preserve her institutions. One of the necessary steps is to eliminate communism and Communists from our Government and country.

I commend and congratulate you for taking part in the campaign to spread information concerning communism.

I urge you to continue your efforts to acquaint our people with the truth about this menace to our institutions of freedom.

I invite you to call upon me for any testimony, pamphlets, booklets, and documents dealing with communism which are available in Washington. I will take pleasure in sending you from time to time all of such documents as may be in print and available.

One Hundred and One Displaced Persons Versus 60,000,000 Employed

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid and timely article submitted by Mr. William E. Zipp, vice president of the Ceco Steel Products Corp., of Chicago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

In a strange new land they stood—these displaced persons. Silent men with grim tasks ahead worked purposefully and with little thought of the fatigue that racked their weary bodies. They were building a new community—their community.

Women, hollow-eyed, their white drawn faces mirroring pain, went about setting their humble homes in order. On every side was hunger, privation—the plight of desperate people. "A picture of Europe, 1948?" you ask.

No, a picture of America, 1620.

For here, 101 displaced Pilgrims—men, women, and children of the new America—freedom-loving people all, were beginning a new way of life. They were meeting critical shortages and overcoming them—shortages of all the things that make for decent living—food, clothing, shelter; shortages that relatively were the greatest our Nation has ever known.

There was a 100-percent shortage of almost everything on that day, 328 years ago, when their storm-battered ship nosed into the quieter waters of rock-studded coastal bays. Yes, a shortage of everything except courage—a belief in the dignity of man—a passionate desire on the part of each to live as he liked.

Perhaps it was the strong driving force of the urge to be free men that enabled them to solve the critical shortages of their day. For, you see, no one could pass a law providing new homes or schools, nor were there any homes here ready for them to occupy.

So, with bare hands and primitive tools, they individually dug from the earth and cut from the forests their own homes and schools. Ceaselessly and endlessly they worked at their simple tasks, struggling for necessities, looking ahead, not behind, building a heritage for millions of Americans to come.

Are we less courageous than they?

Is war-scarred Europe more destitute than they were?

Is there less hope in our time than theirs?

Are our shortages more acute than 100 percent?

There is a simple answer to those questions and to the problems they pose. It is a word. A short word, without glamour, but a virile word of dynamic force—a word that in its simplicity might be overlooked, but a word so powerful as to be virtually magic.

It isn't a new word to Ceco thinking, for in January 1947 we said this word was the key to better times—to security for all.

May we say it again?

It is "work"—a four-letter word for continuing prosperity, for preserving freedom in America, and for providing hope throughout the world. As we said before, everyone must work more, produce more—management and labor.

Suppose we look at the simple mathematics of the problem. There just aren't enough homes, schools, hospitals, roads to satisfy the needs of all—not enough steel, automobiles, freight cars, food for America and the rest of the world. How can more of these scarce things be made available sooner, and at lower prices?

We, like you, have heard many so-called cure-alls. Some say too many have too much money; they bid against each other for scarce things and thus keep prices ever moving upward, so taxes must be raised, not lowered—must be kept high to draw off excess money. Credit must be curtailed so buying will be slowed down. Or prices must be regulated and goods rationed.

Others say don't buy unless your needs are desperate, quit eating certain foods certain days, don't build now; don't, don't, don't, verboten. It all has a familiar ring somehow. It's a creed of hopelessness—of negation.

Let's hear a new voice in America, raised high in a mighty crescendo, drowning out those voices of fear. Yes, a new voice of hope, which will say in clear, unmistakable tones of triumph—"Let's do something, yes, let's trade do for don't."

We of Ceco believe the American way to solve the problem of shortages and high prices is one of action, one of doing, of making more things, not buying less of what we have, of increasing prosperity, not dividing misery. And prosperity comes from making a lot for all, not dividing a little with all.

Look at it this way. There are some 60,000,000 adults—men and women—employed in the Nation today, making things for the more than 140,000,000 Americans and the many, many millions in all the other countries of the world. Now we can't increase our 60,000,000 employed to any great degree very fast. They just about represent today's manpower capacity—but, if everyone of those 60,000,000 executives, managers, labor, white collar people, all of America's working force, produced more individually, things would become more plentiful and prices would be reduced.

It's basically that simple.

Yes, we 60,000,000 Americans must work more, produce more, instead of less, and that goes for Europe and every other part of the world. Everywhere, we must increase man-hour output, bricklayers must lay more bricks, architects create more buildings, miners dig more coal, farmers raise more produce, stenographers write more letters, managers do more managing, and this must go clear back through the entire economy from raw materials to manufactured products.

Then, and only then, will scarce things be plentiful, will money stop bidding up prices, will inflation be halted and a sound basis be established for the security of all, both labor and capital.

Given a freer rein this past year the building industry made real progress in cutting down building shortages. For example, twice as many homes were completed in 1947 as compared to 1946, plant expansion is getting closer to demand. Ceco salutes construction men for the job they are doing.

We like to feel that in some measure we have been helpful in this progress. Here are some of the things we have done to help the building industry in 1947.

Our production in 1947 nearly absorbed manufacturing capacity, which was doubled in 1946. New fabricating plants were erected in Hillside, N. J., and Houston, Tex. Personnel in plants, offices, and sales force increased more than 50 percent. More than 100 improvements were effected in our products. More than one-third of our new products developed since the war were put in production.

But what about the future?

Today, as was true a year ago, the building industry faces an imposing demand for all types of construction. People want more homes, schools, roads, and will get them if an unhampered building industry is permitted to provide them—could get them at lower prices, too, if all would work to produce more, not less.

We of Ceco believe in America's future, in its ability to meet the challenge of world leadership—for after all a way of life that has given Americans more of the good things of earth than any other people anywhere doesn't have to be proven—it is proven, it is working.

As for the building industry, Ceco has confidence we can count on our architects, engineers, contractors, builders, and industry labor to provide the structural needs of our Nation. To this end the industry—America—can count on Ceco.

Communist Control of United Public Workers of America, CIO, Exposed

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. BUSBEY. Mr. Speaker, Local 471, United Cafeteria and Restaurant Work-

ers' Union, CIO, which called its members out on strike, is an affiliate of the United Public Workers of America, CIO. The union officials complain that the Government Services, Inc., which manages the cafeterias, will not bargain with the union.

The Labor-Management Relations Act of 1947 provides that all officers of the union must sign an affidavit that they are not members of the Communist Party, and do not subscribe to its principles. The officers of the UPWA-CIO have refused to sign such an affidavit. By not complying with the law the officers of the union have taken from the members their right to collective bargaining before the National Labor Relations Board.

These officers have openly boasted of their desire and intention to cripple food service to 80,000 employees, thus causing grave inconvenience for these employees and the Government agencies that employ them. This is fully in line with the international Communist tactics of creating chaos wherever possible. It is the same pattern of agitation and activities of the UPWA in the Panama Canal Zone described in a very enlightening article in the November 1946 issue of Plain Talk magazine.

In order that the public will know the record of the officers who are depriving the members of their rights given them by virtue of the law, I am inserting at this point a report of the United Public Workers, CIO, and its affiliates. This report was compiled by qualified experts at the request of Government Services, Inc., a quasi-official, nonprofit organization, directed by Government officials who serve without pay, and it is my understanding copies of it have been furnished to members of the President's Cabinet and various other officials of the Government.

The report follows:

REPORT ON THE UNITED PUBLIC WORKERS-CIO AND ITS AFFILIATES

Despite the repeated claims of the United Public Workers-CIO that it engaged in the betterment of employment conditions of workers, this organization cannot be considered as a genuine labor union. It is rather a political front, organized to promote the ideology and the goals of the pro-Communist movement in the United States. It is participating in the Communist-sponsored drive to embarrass our Government and to disrupt the services of organizations in any way connected with the Government.

The intensified agitations of the UPW-CIO take on particular significance in light of the fact that Washington has been made the principal target of the Communist Party. Events in the Capital of the greatest Nation in the world are played under the intense international spotlight. Their perversion to the Communist cause will provide first-rate fuel for the propaganda machine of the Kremlin. The pages of the Daily Worker, official organ of the Communist Party, show beyond doubt the effective propaganda use which is being made of the activities of the UPW-CIO and its leadership.

That the United Public Workers-CIO and its principal officers are subservient to the Communist Party line is recognized almost unanimously, both in and outside of the labor movement, in Government, in Congress, and by the responsible press. Even a brief list of charges against the CIO will support this statement:

The Washington Daily News has branded UPW-CIO a "left-wing, Communist-infested organization" and "the kind of an outfit that holds that Russia, with its totalitarian, Communist government, can do no wrong."

The Washington Times-Herald called the union "left-wing" and "fellow-traveling."

The Washington Post charged that it "has had an extreme left-wing label pinned on it" and is following a "pro-Soviet, anti-American" policy.

The Evening Star made the charge that the organization is a "decidedly Communist union."

The New York World-Telegram said that UPW-CIO is "Communist dominated."

Business Week classes the union as a "member of the so-called 'red bloc' of the CIO" which "follows the Communist Party line."

The American Magazine has referred to the union's policy as "both anti-American and pro-Russian."

Plain Talk magazine stated that UPW-CIO has a "flagrant pro-Soviet record * * * unsurpassed among the labor unions of America."

The Veterans of Foreign Wars urged at their twenty-eighth annual district encampment that the UPW-CIO be listed by the Attorney General as a subversive organization because of its "adherence to the Communist Party line."

Edward E. Rhatigan, former welfare commissioner of the city of New York, expressed his certainty that "the United Public Workers have pursued a Communist Party line."

President William Green, of the AFL, declared that UPW-CIO officials "owed their allegiance to another government," meaning, of course, the Soviet Union.

The noted American historian, Prof. Arthur M. Schlesinger, Jr., lists the UPW-CIO among those CIO groups that "can be relied upon to follow the (Communist) party line with fidelity."

These accusations are supported by the history of the United Public Workers-CIO, and its predecessors, as well as the personal records of most of its major officers. UPW-CIO was created by the merger of two Communist-controlled unions of Government employees, the United Federal Workers-CIO and the State, County, and Municipal Workers-CIO.

THE STATE, COUNTY, AND MUNICIPAL WORKERS-CIO

SCMWA-CIO was founded in 1937, under the leadership of well-known fellow travelers, and almost immediately won the reputation of being under the firm control of Communists. The Civil Service Forum, a recognized publication in the field, referred to the SCMWA-CIO as "the fifth column in civil service." After a thorough investigation, a member of a California State legislative committee reached the conclusion that "the so-called SCMWA is not really a union, just a racket, a Communist-controlled racket."

When the Communist-controlled Teachers Union of New York was thrown out of the American Federation of Labor, it affiliated itself with the SCMW-CIO. It is interesting to note that Nancy Reed, discharged from the New York State Labor Department as a Communist was the SCMW-CIO delegate to the Havana National Congress of Workers in 1939. When her ouster was made public, the union not only defended her, but actually asked for the removal of the official who conducted the investigation of her Communist connection.

SCMW-CIO has faithfully followed all the twists and turns of the Communist Party line. During the early period of Nazi aggression, it participated in the so-called stop Hitler movement. As soon as Hitler and Stalin signed their infamous 1939 agreement, the union reversed itself and became a champion in peace activities, demanding that the United States "stay out." Peace commissions were formed among local unions, and innumerable resolutions against involvement in the war were passed. SCMW-CIO worked closely with such Communist peace fronts as the American Peace Mobilization and boasted of sending 150 delegates to the Chicago Peace Mobilization of 1940.

With the German invasion of the Soviet Union, the State, County, and Municipal Workers-CIO, whipped up a veritable fury for our entry into the war and for full support to the Red army.

In the 1943 elections, six prominent New York members of SCMW supported the election to the city council of Peter V. Cacchione and Benjamin J. Davis, Jr., official candidates of the Communist Party. These same candidates were endorsed 2 years later by "500 officers and shop stewards of the SCMWA."

THE UNITED FEDERAL WORKERS-CIO

The pro-Communist history of the United Federal Workers, CIO, bears a striking parallel to its sister organization, the SCMWA-CIO. UFW-CIO was established in 1937, as the outgrowth of a Communist-led split in the American Federation of Government Employees-AFL.

Before the Stalin-Hitler agreement of 1939, the union demanded aid for the victims of Nazi aggression and for a world-wide fight against "Fascist aggression" as laid down by the Communist Party. As soon as the Nazis and Soviets reached agreement on the division of the spoils, UFW-CIO followed the party line in opposing American participation in the war and demanding an embargo on all shipments of arms to the nations that later became our allies. Union publications went all out against expenditures for the national defense—expenditures that might have saved thousands of American lives—the Selective Service System, and other measures designed to gird America for the attack that finally came on December 7, 1941. Communist-led strikes in vital defense industries received the full support of this organization of Government employees. UFW-CIO even came to the defense of Earl Browder, then national chairman of the Communist Party, who was sent to prison for passport fraud.

The organization also came to the aid of subversive Federal employees who were fired during this period and enlisted the support of prominent Communist fronts to their defense. The Federal Record, official UFW-CIO publication, showed a picture of the union president with Helen Miller, who was ousted from the Labor Department.

After June 22, 1941, when the Germans began their invasion of the Soviet Union, UFW-CIO joined in the Communist-inspired war cry, eventually demanding the opening of a second front, passage of the teen-age draft, declaration of war on little Finland, and a diplomatic break with Spain. Each of these demands conformed to the current line of the Communist Party.

During its period of existence, the United Federal Workers-CIO has cooperated with numerous Communist-dominated and front organizations, including the Workers' Alliance, Consumers' Union, Labor Research Association, Washington Bookshop, Washington Friends of Spanish Democracy, and the Washington Peace Mobilization. Congressman FRED E. BUSBEY, of Illinois, characterized the UFW-CIO as follows:

"Although the United Federal Workers of America claims that it is a bona fide union seeking to advance the interests of Federal workers, it is actually an organization which has as its primary purpose the advancement of the policies and organizations supported by the Communist Party."

FORMATION OF THE UNITED PUBLIC WORKERS-CIO

The United Federal Workers-CIO and the State, County, and Municipal Workers-CIO met concurrently in Atlantic City during April 1946. On the 23d, they voted to merge into a new union, and on the following day the first joint meeting was held under the vigilant eyes of the Communist Party. The

nature of the meeting and of its principal participants was exposed in the report of Jerry Kluttz, of the Washington Post.

"George Morris of The Daily Worker, official Communist party organ, and another New York reporter came into the convention hall at the Hotel Chelsea. Abram Flaxer, SCMWA president who was later elected president of UPWA, told them what he had told me earlier—that nothing newsy was on the schedule.

"Morris, however, told Flaxer that he was concerned over the sharp criticism directed at the Russian foreign policy by Emil Rieve, president of CIO's textile workers and a leader of the right wing in the CIO. * * *

"This had made Morris most unhappy, and he frankly told Flaxer that he needed a story from the public workers to offset Rieve's speech. Finally, The Daily Worker correspondent suggested to Flaxer that he 'pull out the foreign policy resolution and get it passed'. (Obviously, Morris knew what it proposed or he wouldn't have made the suggestion.)

"Flaxer returned to the platform and took over the gavel. It was only a matter of minutes before the foreign policy resolution was called up for action."

The resolution which was called up by Flaxer conformed clearly to the official line of the Communist Party. It represented an abject surrender to the interests of the Soviet Union and an open denunciation of the United States of America.

The UPW-CIO charged that the demobilization of American troops following the war "is being deliberately delayed" by "powerful influences" with "imperialist ambitions" which are trying to "drive a wedge between the peoples" of the United Nations. This clause coincided with the propaganda demands of the Soviet Union that United States armed forces be withdrawn from all countries and with the Communist-instigated soldier "strikes" aimed at American military operations.

UPW-CIO insisted that "an Anglo-American" bloc had been formed in the UN to "isolate the Soviet Union." The trumped-up charge that the western democracies are trying to isolate the Soviets is the line followed by Gromyko and Vishinsky in their hysterical outbursts against this country.

A handful of delegates rallied against the Communist-inspired foreign-policy resolution. They attempted to modify the demand for the withdrawal of American and British troops by including a provision that Soviet troops be withdrawn from "friendly countries." They were snowed under in an avalanche of party-line oratory and the overwhelming "no" note of the convention.

The New York Times reported that the supporters of the Communist-line resolution "said Russia had not been guilty of any act that could be deemed hostile * * * but that 'powerful interests' in the United States and England had stooped to every type of trick to stir disunity and provoke war * * *." Henry Beitcher, left-wing head of the Washington CIO Council, parried questions regarding the foreign policy stand of the new organization by the lame assertion that "Russia has already promised to withdraw her troops * * *. It would be silly to include it."

Although delegates showed unflinching confidence in the Communist dictator of the Soviet Union, only 2 days earlier they made a violent attack on the Congress and President of the United States "for carrying out a program of aggressive imperialism." The remaining program adopted by the UPW-CIO also conformed to the Communist Party line in all its essential features. A demand was made for the repeal of the Hatch Act, which wisely forbids civil servants to engage in politics. Resolutions supporting the Soviet-sponsored drive to break diplomatic relations with Spain and to expel the Argentine Republic from the United Nations were passed.

When news of the convention reached Washington, the UPW-CIO received the condemnation of almost all responsible observers. In a strongly worded statement, President Harry B. Mitchell, of the Civil Service Commission, denounced the union for "throwing an utterly uncalled-for proverbial red flag in the face of the American public." He bluntly informed the union that—

"There is no question but that evidence that individuals participated in the drafting of such resolutions or actively supported the adoption of such resolutions would be considered as relevant evidence in determining whether or not a person was following the Communist Party line."

"We should like," said the Washington Post, "to call attention to what appears to have been a successful effort by our Stalinist friends to gain complete control of the new United Public Workers of America, and to exploit it in the interests of the Communist Party line."

John H. Cline, of the Evening Star, wrote on May 5: "Here is an organization which has deliberately chosen to identify itself with the policy line espoused by Communist spokesmen which are openly hostile to the policy of our own Government. * * * The important point is that a union of its complexion has no place in this Government. And responsible Government officials * * * should be the first to denounce it."

In an editorial entitled "Federal Party Line," the Star declared that when a "union of Federal employees attacks the employer's foreign policies and uses as its text a theme which could have been lifted bodily from the Communist Daily Worker, it is time to ask whether the employer should sanction or in any way recognize such a union."

STRIKES AND SLOW-DOWNS

It is an almost universally recognized principle that government must remain immune from strikes. A strike against government is a strike against the people, endangering their safety, their welfare, and perhaps their sovereignty. This principle has been repeatedly violated in fact and in spirit by the UPW-CIO, as well as its predecessors.

At the 1946 convention, the union adopted a constitution which laid down a full-fledged procedure under which a strike might be called against the Government. President Truman, at his press conference following the convention, denounced the assertion that a union had any right to strike against the United States, pointing out that in such an event government would cease to exist. Congress was forced to enact legislation which unequivocally outlawed membership of government employees in any organization "that asserts the right to strike against the Government of the United States." In order to circumvent the act, the international executive board of the union adopted a resolution which gave up the right to instigate strikes against the Government. Before the end of the year, the United Public Workers-CIO endorsed, however, the Communist Party's drive in New York to legalize strikes against the Government, and during the early months of 1947 the union led the fight against outlawing strikes against the State of New York.

The tenuous nature of the UPW-CIO no-strike policy is shown by the strikes staged against the Government Services, Inc., a quasi-official, nonprofit corporation managing cafeterias in Federal Government buildings. In September 1947 the union distributed mimeographed flyers to employees of the Veterans' Administration, promoting what officials interpreted as a "slow-down."

RACE AGITATION

One of the principal activities of the Communist Party is to instigate race agitation and to promote prejudice and disturbances among minority groups as part of the program of breaking down the American political fabric. In this endeavor, the United Public Workers-CIO has been a faithful follower. The Daily Worker has repeatedly published inflammatory, but unfounded, statements of UPW-CIO units, designed to give the impression that minorities were deliberately persecuted by the Government and by all those who did not follow the union's line. On a number of occasions, these misrepresentations have been exposed. For example, the Washington Daily News, reported late in 1946 that a UPW-CIO "complaint of alleged discrimination against Negroes and Jews in the New York City Weather Bureau office has backfired with a nasty bang. Officials say a thorough investigation showed the charge completely unjustified—and they do mean 'completely.' Also it turned up some unpleasant stuff on the records of the two chief complainants."

In 1947, union officials attempted to accuse one of the leading Washington government reporters, one who had been in the forefront of the fight against Communist control of UPW-CIO, of anti-Semitism. This charge was branded as completely unfounded by other newspapermen. Perhaps the low point of distortion was reached in September 1947 when David Cohen, international representative, made the fantastic claim that the Federal loyalty program would be used to dismiss Negro employees of the Government and to replace them with whites.

During the current dispute of UPW-CIO with Government Services, Inc., mimeographed letters are being mailed out to obscure the refusal of the union to disavow communism, as required under the Labor-Management Relations Act of 1947, by making oblique references to racial prejudice. A letter dated December 11, 1947, refers to the anti-Communist affidavits as "so-called 'purity' affidavits." In Communist lingo the term "purity" invariably refers to race prejudice.

SECESSION FROM UPW-CIO

As a result of the Communist road followed by the UPW-CIO leadership, a number of local and affiliated groups have withdrawn. Among the seceding groups are postal unions in Detroit, Pittsburgh, Chicago, Duluth, and Kansas City.

UPW-CIO'S COMMUNIST FRONT CONNECTIONS

The numerous Communist fronts with which the predecessor unions have been connected have already been listed. In its brief period of existence, UPW-CIO has endorsed the notorious Communist front National Negro Congress. Attempts have been made by some union leaders, with the so-called "Win-the-Peace Conference" staged by the Communist Party in Washington, to beat the propaganda drums for the Soviet Union.

The New York district UPW-CIO announced its support of the left-wing American Labor Party ticket. Communist literature is frequently distributed at UPW-CIO meetings, and UPW-CIO literature has been distributed at sessions of the Communist fronts.

PERSONNEL OF UPW-CIO

Nearly every leader and officer of the United Public Workers-CIO has a long record of Communist affiliations. Their undisputed control of the union must necessarily solidify the conviction that the organization is part of the Communist front network in this country. The principal officers are Abram Flaxer, president; Eleanor Nelson, secretary-treasurer; Robert Weinstein, director of organization.

Abram Flaxer

Abram Flaxer was born in Vilna, Russia, on September 12, 1904. He has been active in the Communist movement for more than a decade. According to the House Special Committee on Un-American Activities, Flaxer's allegiance to the Communist Party "is indisputably established by his presence at closed meetings of the party, by the statements of those who have been closely asso-

ciated with him in the labor movement, by his complete loyalty to the party line throughout its various changes, by his defense of Communists and Communist fronts."

Flaxer was at one time active as an official of the New York local of the American Federation of Government Employees A. F. of L. According to the testimony of John P. Frey, head of the AFL Metal Trades Department, Flaxer was known as a Communist. In 1936 Flaxer joined the Communist-controlled Workers' Alliance in a request for a parade permit. The project had the complete endorsement of the Young Communist League.

When the State, County, and Municipal Workers was founded in 1937, Flaxer became president, a post which he held until the 1946 merger, when he became president of the United Public Workers CIO.

Before the signing of the Hitler-Stalin pact, Flaxer called for collective security and support for nations fighting fascism. He changed his tune as soon as Germany and the Soviet Union agreed on the conquest of Europe. During the so-called defense period, Flaxer, therefore, opposed aid to Britain and France, opposed United States participation in the war, and supported strikes despite the critical defense needs of the United States. He became a leading spirit in the Communist-front American Peace Mobilization, which agitated against military service, lend-lease, convoying of British ships, and other activities vital to the security of the Nation.

When Hitler invaded Russia, Flaxer made another sudden turn with the Communist line and began to advocate revision of our Neutrality Act and active participation in the "struggle that the Red Army, the people of the Soviet Union, are conducting."

With the end of the war, Flaxer and his organization again followed the Communists in demanding American withdrawals from our defense outposts, appeasement of the Soviet Union, and the adoption of a Communist-inspired program at home. When these efforts failed, he supported the charges that this country was engaged in imperialist moves against the faultless Soviet Union.

During the spring of 1946 the Atlanta local of UPW-CIO asked in a letter that Flaxer make a public statement in answer to the numerous statements in the press "that you were a Communist." It is significant that Abram Flaxer did not take the opportunity to make a denial.

Abram Flaxer has been affiliated with at least 30 Communist-front organizations, and this evidence can be found in the records of the House Committee on Un-American Activities. The New York World-Telegram recently reported that it had documentary evidence to prove that Abram Flaxer is a member of the Communist Party. Among the Red front organizations with which Flaxer has been affiliated are the following: Committee on Election Rights, 1940, Prestes Defense Committee, Schappes Defense Committee, Joint Committee for Trade Union Rights, Committee for Defense of Public Education, Reichstag Fire Trial Anniversary Committee, Open Letter Defending Harry Bridges, National Federation for Constitutional Liberties, American Committee for Protection of Foreign Born, American Committee to Save Refugees, United American Spanish Aid Committee, Nonpartisan Committee for the Reelection of Congressman VITO MARCANTONIO, National Negro Congress, Social Work Today (pro-Communist magazine), Public Use of Arts Committee, and National Council of American-Soviet Friendship.

Eleanor Nelson, secretary-treasurer

Eleanor Nelson, like Abram Flaxer, has shown complete submission to the Communist Party line. Her story, as well as that of most UPW-CIO leaders, is almost a monotonous repetition of the Communist Party program over the past decade.

During the early part of the war she was connected with the American League for Peace and Democracy, which stood for "collective security against the Fascist aggressors." She spoke at a Washington meeting, together with the internationally known Communist writer, Anna Louise Strong, urging repeal of the Neutrality Act, boycotts, and other measures designed to injure the Axis powers. Nelson ended her drive for "collective security" as soon as Hitler and Stalin signed their pact. After the German invasion she again supported an aggressive anti-Axis foreign policy.

Eleanor Nelson was secretary-treasurer of the United Federal Workers-CIO and member of the CIO executive committee. She has fought tenaciously against all attempts to oust subversive workers from the Government. She has been connected with a number of Communist fronts, including the National Negro Congress, and was speaker at a Washington meeting supported by the Washing Committee to Aid Spanish Democracy and the Communist Party.

Robert Weinstein, director of organization

Robert Weinstein has a record of Communist affiliation and was an instructor at the (Communist) Jefferson School in New York.

DISMISSALS OF UPW-CIO MEMBERS FOR DISLOYALTY

A large number of UPW-CIO members and officers have been discharged from the Government Service for being Communists or pro-Communists. Perhaps the most celebrated case is the firing of the five top officers of UPW-CIO at the Aberdeen Proving Ground "in the interests of national security". The five were: Harry Spector, president; Rheabel Mendelsohn, secretary; Phil Weiss, chairman of the organizing committee; Irving Spector, chairman of the grievance committee; and Abraham Kotelchuck, chairman of the legislative and educational committee.

The union immediately undertook an all-out campaign to the defense and possible reinstatement of the discharged employees, making unfounded charges that the War Department had launched a "union-busting" campaign because it dismissed employees whose loyalty to the United States was questionable.

Late in 1946, the Labor Department undertook ouster proceedings against a number of Communists in the agency, several of whom were members of UPW-CIO. Similarly, among the employees fired last fall from the Central Intelligence Group a large part were UPW-CIO members. Morton Friedman, whose dismissal on loyalty grounds was upheld by the Supreme Court of the United States, was a member of the UPW-CIO, and the organization exerted heavy pressure on his behalf.

In Birmingham Malcolm Dobbs was dismissed from his post on the CIO Council for Communist activities. He, too, was a member of UPW-CIO.

FIGHT AGAINST THE LOYALTY PROGRAM

It is not surprising, under the circumstances, that the officers of the United Public Workers-CIO have been in the forefront of the fight against the loyalty program of the United States Government. Many of them would not be qualified to hold Government jobs because of their Communist affiliations. Some have actually been thrown out of the Government for this reason.

The attitude of UPW-CIO is in sharp contrast to the position of the legitimate Government unions, which have gone on record as unequivocally supporting the removal of Communists and other disloyal elements from the Government. In fact, some of these unions have even urged a strengthening of the loyalty procedure in the secure knowledge that their membership was safe from the Communist taint.

The campaign against the loyalty program undertaken by both the Communist Party and the UPW-CIO is too extensive to report fully. It has manifested itself in the form of trumped-up charges that the Government is "union busting," indulging in race prejudice, or is violating civil rights. The union has resorted to heavy financial expenditures in the drive to prevent the firing of Communists from the Government and has purchased extensive advertising space in the left-wing New York newspaper, PM.

The real reasons behind the desperate campaign of the United Public Workers-CIO were perhaps best expressed by James B. Burns, president of the American Federation of Government Employees-AFL, when he declared:

"Government employees whose interests are fundamentally American need have no fear of any investigative effort growing out of this program. Their record is one of achievement in service and the organizations to which they belong are devoted to upholding our national character. On the other hand, Government employees who are members of organizations or groups that carry out the dictates of foreign purveyors of disunity have every reason to worry. They fear the truth. It is well nigh impossible for them to hide their affiliation with groups which work only in the shadows against the very fundamentals of our democracy. It will be impossible for them to continue the pretext of being loyal Government employees."

LOCAL 471, UNITED CAFETERIA AND RESTAURANT WORKERS, AN AFFILIATE OF UPW-CIO

Like its parent organization, local 471 of the United Cafeteria and Restaurant Workers has followed the Communist Party line.

During the period of the Hitler-Stalin pact, UCRW and its leaders sponsored public meetings designed to impede United States defense preparations.

On May 1, 1940, a May Day meeting arranged as a benefit for local 471 and under the chairmanship of its business agent, denounced the administration for its "war drive." It should be pointed out that May Day is the principal holiday of the Communist Party.

On May Day, 1941, leaders of local 471 again participated in anti-war, anti-imperialistic demonstrations.

After the invasion of the Soviet Union, local 471 suddenly found itself supporting the war and on October 12, 1942, sponsored a "Second Front Now" rally. Speakers at the affair included such fellow travelers and pro-Reds as Clayton Powell, Jr., of New York; Reid Robinson, of the Communist-controlled CIO Mine, Mill, and Smelter Workers; and Russ Nixon, of the Communist-dominated United Electrical Workers. Many members of the Communist Party were present.

Since the end of the war, local 471 leaders have continued to integrate their activities with the party line. Two of the leading officers of the union have been closely identified with Communist-front activities. They are Richard A. Bancroft, president; Oliver T. Palmer, business agent.

Richard A. Bancroft

Bancroft was a radical student at Howard University. He was national president of the American Student Union, a Communist organization among students.

On January 26, 1941, Bancroft attended a meeting of the Communist-organized American Youth Congress. The meeting laid plans to recruit speakers to spread the party line. On May Day, 1941, he took part in a Communist-sponsored anti-war tirade, accusing the "capitalists" of attempting to drag the United States into war.

As soon as Germany invaded Russia, Bancroft changed his political outlook and by October 12, 1942, he was joining in the Communist-sponsored call for a second front.

After the war, Bancroft became a leader in the United Negro and Allied Veterans, Communist front among Negro veterans.

He was a speaker on July 29, 1946, at a protest meeting of the Red-front National Negro Congress and at another NNC meeting 2 days later.

On August 5, 1946, Bancroft appeared as speaker on Fascism at a meeting of another well-known Communist front, the Southern Conference for Human Welfare. In 1947 he sponsored a community rally with several other known pro-Communists. The Communist smear sheet "In Fact" was distributed at the meetings.

Oliver T. Palmer

The record of Palmer is closely parallel to that of Bancroft. He joined in the anti-Fascist cry after the invasion of Russia, joining an "Action Conference" which included many fellow travelers.

He was a speaker at the National Negro Council Rally on July 29, 1946, as an officer of that Communist-dominated group. Among his fellow participants were such notorious pro-Communists as Max Yergan.

Mr. Speaker, from the foregoing report one can easily understand why the officers of the UPWA have refused to sign non-Communist affidavits.

I am sure the patriotism and loyalty of the members of the UPWA and Local 471 will equal that of any group in the United States, and my only object in making this report public is to expose the type of people who have gained control of this union. The members of the UPWA should start immediately to remove all officers of their organization who are not loyal to our country.

I have confidence that the motives of members of Local 471 are only activated by a sincere desire to improve their working conditions and increase their wages to take care of the increased cost of living. The rights and privileges to bargain collectively to gain their objective should not be denied them by officers who follow the Communist Party line.

Lee J. Noftzger—Praiseworthy Activities of the Veterans of Foreign Wars in Assisting Widows Upon the Loss of Their Husbands

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I take this opportunity to pay tribute to one who rendered outstanding and devoted service to his country, both as a soldier under arms in time of war and as a public servant of his government in time of peace. At the same time, I wish to call attention to the splendid, humanitarian service tendered this man's widow by the Veterans of Foreign Wars of the United States last week when she brought her husband's remains to the Nation's Capital for interment in Arlington National Cemetery.

Lee J. Noftzger passed away at Mercy Hospital, in Denver, Colo., on New Year's Day in the fifty-ninth year of his life. He left his widow, Mrs. Norma Noftzger, of Denver; a son, Richard L. Noftzger, of Ainsworth, Nebr.; his mother, Mrs. Thomas A. Noftzger, of Portland, Oreg., and a sister, Miss Millicent Noftzger, also of Portland.

At the time of his death, Lee Noftzger had for some time past served his country faithfully and diligently as a civil engineer with the Bureau of Reclamation, Department of the Interior. Prior to this, during the second world war of his lifetime and on the second occasion wherein he answered his country's call to service, Lee Noftzger gave some of the latter years of his life to notable work with the War Relocation Authority at Rivers, Ariz., and Topaz, Utah.

Enlisting at Fort Riley, Kans., on August 17, 1917, Lee Noftzger saw considerable combat service overseas during World War I and was in the thick of the battle of the Argonne as a member of the One Hundred and Tenth Engineers, Thirty-fifth Division. He was honorably discharged from the Army on April 2, 1919.

Lee Noftzger was a Mason and belonged to the American Society of Civil Engineers and the Society of American Military Engineers. He was active in affairs of Francis Brown Lowry Post, Veterans of Foreign Wars of the United States, and Leyden-Chiles-Wickersham Post, American Legion, of Denver. It was his wish to find a final resting place in Arlington National Cemetery, across the river from Washington. His widow was without assistance in her time of sorrow in her desire to facilitate the granting of her husband's wish, being without relatives in Denver. In this emergency, the officers of Francis Brown Lowry Post stepped into the breach, making all arrangements for Mrs. Noftzger's passage to Washington and the forwarding of her husband's remains. Upon her arrival here, she was met at the train by Mr. Harry T. Chapin, chaplain of the District of Columbia Honor Guard of the VFW. Mr. Chapin made every detail of Mrs. Noftzger's sad mission entirely devoid of inconvenience.

I want also to commend the Office of the Quartermaster General, Department of the Army, for the very impressive ceremony provided by this branch of the service at the graveside in Arlington. The flag ceremony, the tributes of the firing squad and bugler and the message of the Army chaplain are indeed treasured last memories for Mrs. Noftzger and all the others who are given this token of their country's appreciation of service to its ideals.

Needed Antitrust Program for Congress

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include herein an address which I delivered before the annual convention of the American Economic Association on Tuesday, December 30, 1947, at Chicago. In this address I attempt to outline the present status of our antitrust program and the legislation needed to carry on an effective program.

The address is as follows:

NEEDED CHANGES IN ANTITRUST LEGISLATION

Mr. Chairman, I feel that it is a great honor to be invited to address this gathering. I hope you will forgive me if my address is phrased more in terms of legal concepts than economic ideas, since my training has been that of a lawyer rather than that of an economist. However, I cannot say that I have fully escaped the influence of economists, since one of my friends in college days was Dr. Walton C. Hamilton, who occupies a sort of hybrid position as an economic lawyer or legal economist. Moreover, as a Member of Congress, I have had the opportunity to listen to the testimony of numerous economists, whom, I might add, generally offer the more carefully phrased, lucid, and sensible testimony presented before congressional committees.

In this paper, I wish, first of all, to state the fundamental reasons behind by belief in antitrust. Far from sharing the belief that trust-busting is "futile," I believe not only that it can be made effective but that it is the most desirable of the few basic courses of economic action available to us at the present time.

ALTERNATIVES TO ANTITRUST

As long-range alternatives to antitrust,[1] I know of only four basic approaches—the status quo, socialization, regulation, and deficit financing. To my way of thinking, the first two are not really alternatives at all. Allowing the status quo to continue merely means that we allow our economic destinies to be governed by the managers and directors of a few large corporate organizations. This alternative implicitly assumes a sort of blind faith that these corporate managers, in determining price, production, and other economic policies, will be guided by considerations that reflect the public interest. Although an increasing number of large corporations have, in fact, shown some evidence of concern with the public interest, I know of no reason why these corporate managers should be immune from Lord Action's well-known dictum that "power corrupts and absolute power corrupts absolutely."

As far as the second alternative is concerned, it is a waste of time even to talk about the socialization of industry. Not only is the whole idea of socialization repugnant to the political convictions of the American people, but there is little, if any, tangible evidence to support the contention that socialism would be efficient or workable as an economic system.

In my opinion, the third alternative—the regulation of industry—would probably never be advocated by a member of this organization who had ever been a Member of Congress. It is not difficult for me to imagine the buffeting and pounding to which the average Congressman would be subjected by the industries to be controlled. If any attempt were made to impose long-range controls over prices, production, wages, and so forth, over many of the Nation's basic in-

[1] I wish to emphasize here the words "long range." In the short-range emergency situation which now confronts the country, antitrust is obviously incapable of meeting the drastic problems raised by the acute shortages of grains, livestock, and similar items. Consequently a few short-range specific controls must be put into effect if we are to avoid sky-rocketing inflation and a resultant inevitable economic collapse.

dustries we know that it would not be tolerated. This would stifle the spirit of initiative which has made our country great. This has been the typical history of most attempts at regulation, and there is no reason to assume that it would not prevail in the future as it has in the past.

DEFICIT FINANCING

This leaves as an alternative to antitrust only Government spending, which, I believe, boils down to deficit financing. The question may be raised, of course, as to why the necessary funds over a long-range period could not be raised by taxation. The answer to that lies in a basic political paradox. It is only in prosperous times that taxation would yield sufficient funds to support an extensive public-works program; yet during prosperity, public spending is not needed, and since the need would not exist, taxes for this purpose would not be imposed. If anyone has any doubts concerning the reluctance of legislators to provide a governmental surplus in times of prosperity, let him examine the record of the Eightieth Congress.[2] In contrast, during a depression when public works really are required, taxation, within any conceivable, realistic bounds, would not yield the necessary revenue, especially when some $5,000,000,000 of the tax payments would have to be used to pay the interest on the national debt and an additional large sum would have to be used for national defense and other fixed purposes. Even if we were to grant the desirability of deficit spending during depressions, we must recognize the improbability of such deficits being made up by surpluses provided in prosperity. Hence, it would appear that the public-spending approach, as a long-range course of action, inevitably implies deficit financing—a fact which many of its supporters refuse to acknowledge. It may come to pass that at some future date the American people and their representatives in Congress will come to accept deficit financing as the basic long-range approach, or at least change their minds concerning the desirability of creating large surpluses during periods of prosperity, but I seriously doubt it.

By briefly discussing these other possible approaches I do not wish to convey the impression that my belief in antitrust rests only upon the greater disadvantages of its alternatives. In addition to this factor, which incidentally if of compelling importance to anyone who must take a daily stand on all manner of related and unrelated issues, my belief in antitrust rests upon positive and affirmative economic, sociological, and political considerations.

PRICES LOWER WHEN COMPETITION EXISTS

When I went to college I was taught that, in the long run, prices tend to be lower and production greater under competition than under monopoly. Perhaps there have been new discoveries in the field of economics which would tend to invalidate this basic maxim. But from all that I have observed from the vantage point of the House Small Business Committee and the House Judiciary Committee, this rule seems to be even more applicable today than ever before. For example, at a time when profits are exceeding all-time highs, when demand is the greatest in history, we are confronted with the anamolous situation that certain monopolistic industries refuse to expand their capacity. I wish to ask you economists whether or not such a situation could exist in a competitive industry.

A second economic reason behind my belief in antitrust consists of what Dr. Blair, in his paper, which he was good enough to lend me back in Washington, refers to as the "decentralizing technics." The thesis advanced by Dr. Blair that technology is now moving more in the direction of smaller rather than larger-scale operations certainly derives support from numerous instances which I personally have observed in my own region, the Tennessee Valley. Aided by low-cost electric power (which Dr. Blair lists as a major decentralizing technique), many relatively small enterprises have become established in the valley and have been successful in their competition with much larger enterprises.

The sociological basis for my belief in antitrust is my conviction that standards of human welfare tend to be higher in communities which are characterized by the existence of a large number of independently owned and operated enterprises than in comparable communities in which most of the economic activity is carried on by a few large plants owned by distant and outside interests. In this connection, I want to call your attention to a very provocative little study made by the Smaller War Plants Corporation, and printed by the Senate Small Business Committee, on Small Business and Civic Welfare, which compared the levels of civic welfare in three pairs of communities. One member of each pair was a small business community in which most of the economic activity was carried on by a large number of relatively small business enterprises. The other member was a typical big business community in which most of the employment and production was centered in a few giant absentee-owned plants.

By nearly all of the many sociological tests employed, the levels of civic welfare were found to be higher in the small business than the big business communities. This finding for industrial communities was substantiated for agricultural communities in a report prepared by the Department of Agriculture which was also issued by the Senate Small Business Committee.

POLITICAL BASIS FOR ANTITRUST PROGRAM

Finally, my belief in antitrust rests upon a fundamental political basis. Is there not some real merit in the argument that a great concentration of industry would inevitably lead to some type of collectivistic state in which our democratic liberties and political rights would cease to exist? There may be those who are convinced that some type of state control is inevitable and are willing to take their chances that this top control will be exercised benevolently and in the public interest. I, myself, would prefer not to take that chance. Certainly the pages of recent history lend little comfort to those who would stake their hopes on a wise, humane, and judicious exercise of a great centralization of political and economic power.

To summarize, my belief in antitrust as the most desirable program for economic progress is based upon (1) the serious and sometimes overwhelming disadvantages of its possible alternatives; (2) the economic considerations, (a) that in the long run prices tend to be lower and production greater under competition than under monopoly and (b) that modern technology is now tending more in the direction of smaller scale than larger scale operation; (3) the sociological consideration that levels of civic welfare appear to be higher in small business than in big business communities; and (4) the political consideration that the centralization of economic power will inevitably lead to the centralization of political power, which in turn will endanger if not destroy our democratic institutions.

After having thus set forth the bases for my belief in the desirability of a vigorous antitrust program, I shall now suggest certain changes in the law which are needed in order to make the antitrust program effective, since it certainly has not been particularly effective up to the present time. The specific points which I wish to suggest fall under the following general objectives:

1. Provide adequate appropriations.
2. Eliminate conspiracies.
3. Halt the growth of concentration.
4. Reduce existing concentration.
5. Remove the financial control over industry.
6. Use the economic fact-finding power of the Federal Trade Commission Act.

PROVIDE ADEQUATE APPROPRIATIONS

It has become more or less of an accepted tradition in speaking about the requirements for an effective antitrust program to begin one's remarks with an invocation for appropriations—a tradition which has become well established and one which I see no reason to change. Actually, the facts concerning appropriations for the antitrust agencies are even worse than most of you have probably been led to believe. As chairman of the Monopoly Subcommittee of the House Small Business Committee during the last session of Congress I had an opportunity to make a fairly thorough investigation of this whole subject of appropriations, the results of which are printed in the staff report of this subcommittee (which, unfortunately, is now out of print).[3]

Rather than take up your time with a detailed exposition of the findings of that report, I would like to call your attention to just a few simple figures—the requests made by the antitrust agencies to the Bureau of the Budget, the amounts approved by the Bureau of the Budget for submission to Congress, and the amounts actually appropriated by Congress. During the 10-year period, 1938–47, the requests by the Federal Trade Commission to the Bureau of the Budget averaged $3,101,019 a year; the amount approved by the Bureau of the Budget for presentation to Congress averaged $2,328,727; and the amount appropriated by Congress averaged $2,193,597. During the period 1939–47 the requests by the Antitrust Division of the Department of Justice to the Bureau of the Budget averaged $1,986,077; the amount approved for submission to Congress by the Budget Bureau averaged $1,517,472; and the amount actually appropriated by Congress averaged $1,634,517—actually more than the amount approved by the Budget Bureau. To quote the report:

"Two facts stand out: (1) With the exception of the 1947 appropriation, Congress in each of the 10 years gave the Federal Trade Commission practically the amount approved by the Budget Bureau. Therefore, as far as the Federal Trade Commission's budget for the last 10 years is concerned, the Budget Bureau must be held, in the first instance, responsible for that agency's limited appropriation. (2) The Budget Bureau made very substantial reductions in the amounts originally requested by the Federal Trade Commission."

The report went on to state that:

"The Budget Bureau always musters good reasons for cutting an agency's appropriation. The consistent cuts by the Budget Bureau indicate more clearly than any amount of words either (a) lack of awareness of the importance of antitrust activity to the maintenance of the competitive-enterprise economy, or (b) a belief that the Federal Trade Commission's activities were not sufficiently significant to the antitrust program to warrant additional funds. If the latter was the reason, it is no answer to slash the agency's budget. Instead, the Budget Bureau should undertake, as the Executive's general manager, to bring about the administrative

[3] 79th Cong., staff report to the Monopoly Subcommittee of the House Small Business Committee, United States versus Economic Concentration and Monopoly, 1946.

improvements necessary to enable the Commission to properly carry out its functions." (P. 30.)

In regard to the Antitrust Division, the report stated:

"Here again, as in the case of the Federal Trade Commission, one finds that when sharp cuts are made they are made by the Budget Bureau. As a matter of fact, in 4 of the 9 years reported on, Congress appropriated more money to the Antitrust Division than has been approved by the Budget Bureau." (P. 51.)

It may surprise you to know (a) that the total amount received by the Federal Trade Commission and the Antitrust Division combined is less than the appropriation for the Securities and Exchange Commission whose functions, of course, are much more limited and restricted than those of the antitrust agencies; (b) that the annual appropriations for the two antitrust agencies combined would have been sufficient to carry on the war effort for a period of about 30 minutes; and (c) that the Federal Trade Commission has now the overwhelming total of eight economists, as does the Antitrust Division, to survey the entire economy, prepare economic reports for Congress, discover the areas of possible monopolistic practices, determine the relative significance and economic importance of the multitude of possible infractions of the law, develop economic data required on individual antitrust actions, and survey the results, from an economic point of view, of the effectiveness of the agencies' actions, for, as the monopoly subcommittee report pointed out: "There is oftentimes a great difference between a legal victory and an economic victory." [4]

IMPORTANCE OF ENOUGH FUNDS

The fundamental importance of appropriations to any antitrust program cannot be overstressed. Year in and year out the Congress has added to the number of existing antitrust laws, particularly those administered by the Federal Trade Commission. Yet funds have not been provided to carry on these increased responsibilities. As a result, the Federal Trade Commission has been forced to spread its regular appropriations over a wider and wider number of functions, thereby making it impossible for the Commission to do an effective job on any one of the laws under its administration. There is, I believe, no purpose in continuing this practice of increasing the number of statutes to be enforced, if the means of enforcing them are not also provided.

Up until this last month I was truly fearful that the Sherman Act, the Clayton Act, and the Federal Trade Commission Act would come to suffer the same fate that has already befallen other antitrust provisions of law, such as the State antitrust laws (many of which are not enforced at all), or, to take a more striking example, the Panama Canal Act of March 4, 1913, which contains a surprising provision that no vessel owned or operated by a concern that is doing business in violation of the antitrust laws shall be permitted to enter and pass through the Panama Canal. Monopolies are thus condemned to the ardous, time-consuming trip around the Horn, while competitive firms are given the definite advantage of some 9,000 miles.

To the best of my knowledge, this provision of law, which certainly indicates that Congress has tried to be imaginative in dealing with the monopoly problem, has never been enforced.

However, we now have some basis for hoping that the Nation's other antitrust laws will not go the way of the Panama Canal Act of 1913. For the first time in many years the Budget Bureau has approved a substantial increase in the amounts requested of Congress for the Federal Trade Commission and the Antitrust Division. The amounts requested for the next fiscal year are $3,802,000 for the Commission and $3,250,000 for the Antitrust Division, as compared with actual appropriations for the current fiscal year of $2,900,120 and $2,150,000, respectively. What Congress will do to these requests may prove to be an entirely different story. But at least it appears that the Budget Bureau has finally roused itself from that comfortable lethargy into which it has always fallen whenever the subject of antitrust enforcement has been raised. Of course, there is still a long way to go. The former economics adviser to the Federal Trade Commission has stated: "An annual appropriation of $150,000,000 for the Antitrust Division of the Department of Justice and $100,000,000 for the Federal Trade Commission will not be too large if monopoly is to be driven out of business." [5] Although I do not know what the actual figures should be, I do know that they should be much higher than the present estimates, but at least we take hope from the fact that at long last the Budget Bureau seems to be moving in the right direction.

ELIMINATE CONSPIRACIES

The law is clearer and more definitive on the question of conspiracies than on any other aspect of the antitrust laws, owing largely to the resolute and uncompromising stand taken by the Supreme Court against monopoly by conspiracy. The Court has been particularly assiduous in dealing with conspiracies to fix prices. When independent competitors get together and enter into an agreement, arrangement, or understanding to fix the price of goods which they sell or purchase, they are violating the antitrust laws, without any "ifs, ands, or buts." As Dr. Milton Handler has pointed out:

"It matters not whether the prices are set by combinations of sellers or buyers, whether prices are raised, lowered, or maintained at existing levels, whether the prices are reasonable or unreasonable, whether the agreement fixed minimum or maximum prices, or whether price structures are tampered with by direct agreement or by any other means. Nor are the motives or intentions of the members of the combination material. It is of no moment that they may in good faith have regarded such an agreement as essential to their economic salvation. Nor would evidence be admissible, if such could ever be produced, that in practice the agreement resulted in demonstrable social and economic benefits to all those in or dependent upon the industry in which the combination operates. The fact that the agreement fixes or maintains prices is conclusive of its illegality." [6]

The Court has been equally hostile to conspiracies aimed at the control of output. Although, strangely enough, only a handful of cases involving this practice have gone to the Supreme Court, the few available decisions indicate that it is just as illegal for producers to conspire to control output as to fix prices.[7]

Likewise, the Court has frowned upon any sharing of the market through such means as allocating fixed percentages of the available business to each producer, dividing sales territories on a geographical basis, allotting customers to each seller, distributing business through a common sales agency which apportions orders, imposes production quotas on its members, or engages in similar activities. "Recognizing the dangers implicit in these arrangements, the Supreme Court has held that agreements and arrangements for sharing markets are illegal under the Sherman Act." [8]

HEAVIER PENALTIES NEEDED

Despite the clarity of the judicial decisions on this general subject of conspiracy, there are a number of ways in which the present laws could be made more effective. One of the most important steps to be taken is to make the punishment fit the crime. At the present time the maximum penalty by way of fine for violation of the antitrust laws is $5,000. In the words of the Temporary National Economic Committee:

"This amount is clearly inadequate as a deterrent to businessmen or to groups of businessmen whose incomes are in the millions, and the committee therefore recommends that the maximum limit for fines be raised to at least $50,000, leaving discretion with the court to assess the penalty according to the means and circumstances of the defendant and according to the extent to which it has profited by the violation of the act." [9]

I have, however, a different type of suggestion to offer in regard to this question of penalties. I would suggest that a systematic method of determining penalties be developed and incorporated in legislation based on the following criteria:

(a) That this system of penalties should apply only to cases involving restraint of trade (i. e., antitrust actions);

(b) That the fine should be retroactive to the date on which it was found that the violation has been initiated and should be continuous on a daily basis from that time until the final determination of the case; and

(c) That in determining the penalty a fixed ration should be followed between the size of the company, as measured by its invested capital, and the amount of the fine.

In essence, this system would be based on two perfectly logical principles: that the illegal activity should be punishable during the entire period of its existence, and that the amount of the penalty should vary directly in accordance with the size of the company. Such a system would, I believe, do much to improve the appreciation and interest in the antitrust laws by many of our large corporations which today have only a nodding acquaintanceship with these "charters of economic freedom."

As an additional step to strengthen the law against conspiracies, I would concur in the recommendation of the Temporary National Economic Committee (which was also unanimous) "that the Federal Trade Commission Act be amended to provide that on request of the Attorney General, the Commission, or any member thereof, may hear evidence and make findings of fact and conclusions of law in any pending antitrust proceeding. These findings should be made advisory to the Federal court under whose jurisdiction the case is pending, and that court should be in a position either to pass finally on the Commission's findings and conclusions, refer the report back for additional information, or hear further testimony itself." [10]

The purpose of this provision, of course, would be that of speeding up the progress of antitrust cases initiated by the Attorney General by having them heard before a tribunal which has had long experience in matters relating to the antitrust laws. Any proposal such as this which would accelerate the slow progress of the antitrust cases through the labrynths of the courts should receive the unhesitating support of everyone who is interested in making the antitrust program effective.

GIVE FTC ORDERS MORE FINALITY

Finally, I wish to endorse a recommendation of the Federal Trade Commission itself, which it has made for many years, that its

orders under the Clayton Act be given the same degree of finality and the same sanctions that its orders now have under the Federal Trade Commission Act. Cease and desist orders issued under the Clayton Act can now be enforced only by first obtaining court affirmance and a court decree commanding obedience to the order, and then following this with a contempt proceeding if the decree is disobeyed. In contrast, as a result of the Wheeler-Lea amendment, the Commission's orders under the Federal Trade Commission Act now become final within 60 days unless judicial review is initiated, and violations of any final order are subject to a specified money penalty, recoverable by civil penalty suit. In the words of the Commission's Annual Report of 1946: "There appear to be no substantial reasons why orders under both acts should not have the same status as to finality and as to penalties for violation." (P. 12).

HALT THE INCREASE IN ECONOMIC CONCENTRATION

While the Court has interpreted the provisions of the antitrust laws relating to conspiracies in a reasonably explicit and enforceable manner, the provisions relating to mergers and corporate consolidations have been so interpreted as to make them practically useless and unenforceable. Although in the opinion of many of the Supreme Court's own members, the Sherman Act was originally intended not only to prevent conspiracies but also to halt the unchecked growth of giant corporations, these members, unfortunately, have not been in a position to make the law, but only to issue ringing dissents.

Obviously, the same economic ends can be achieved through the power of giant corporations as through conspiracies. If, for example, prices are set by an ill-informed conspiracy of independent businessmen who have held letters which should never have been written, minutes which should never have been kept, and records which should long ago have been burned, the outcome of the case is fairly clear. The law has been violated and the evildoers will be punished. But if prices are set at the same level and under the same economic conditions by a giant corporation, the firm will not run afoul of the law, even though its prices are followed by the remainder of the industry out of instinct, respect, or appreciation of its economic power.

The ability of corporations to do, through mergers and consolidations, that which they are prohibited from doing in concert with other independent firms obviously makes a mockery of the law against conspiracies. Indeed, as the Federal Trade Commission has stated:

"The antitrust laws (Sherman Act and Federal Trade Commission Act) condemn attempts to control the market by means of mutual understanding or agreement among competitors, but if the same objective is achieved through the purchase of physical properties, it is lawful in the absence of monopoly and the antitrust agencies are powerless to act. In other words, the weaker, less effective cooperative methods of eliminating competition are prohibited, but the permanent and more effective method of consolidated ownership under a single management is permissible. Moreover, the more effective is the enforcement of the law against collusion among competitors, the greater is their incentive to achieve the same ends through purchase, consolidation, and merger." [11]

Nearly two decades ago, Drs. Dexter Keezer and Stacy May summarized the prevailing economic opinion, which is undoubtedly even more widespread today: "Almost every student of modern economic affairs is convinced that a concern which dominates an industry, without rivals of comparable size, is able to determine, in large measure, the policies of an industry without resorting to compulsive tactics." Yet, they pointed out, "Judicial interpretation of the antitrust laws has had the effect of legalizing almost any degree of concentration of economic power if certain legal formalities are observed." [12]

THE RULE OF REASON

In gradually developing what is flatteringly termed the "rule of reason," the Court came to adopt four basic standards to determine the legality or illegality of mergers and consolidations, namely:

1. The intent to monopolize.
2. Predatory practices.
3. The existence of power to exclude competitors or fix prices.
4. The effect on potential competition.

As may be seen merely from their listing, the first, third, and fourth are the ultimate in the hypothetical and thus the unenforceable, while the second has tended to become an anachronism in the modern world of big business. On the question of intent to monopolize, who can determine intent, particularly in well-informed and sophisticated corporations? How is an antitrust agency to find out what is in the back of the minds of those who promote consolidations? And of even greater importance, how is the attempt to be proved since the accused is presumed to be innocent until proved guilty? Why does a big company buy up a large number of small firms? Is it because of an intent to monopolize? The answers have become a matter of automatic reflex. The companies are bought up merely in order to improve their efficiency, or to keep them from going bankrupt, or to provide employment, or to resurrect an old broken-down plant, or to serve some other laudatory economic objective. By injecting this question of intent, the Court has made the art of mind reading—a practice which is prohibited in many States—the primary consideration in deciding whether or not a merger or consolidation should be halted. As Dr. Hamilton has observed, "To isolate from the complex of impulses playing upon a host of persons a particular motive, or to make one impulse to action dominant and the others recessive, is to indulge sheer fiction." [13]

Along with the question of the intent to monopolize, the Court, in cases against consolidations and mergers, has placed greatest emphasis on the existence of predatory practices. Such practices as the exclusion of competitors, discrimination, cutting prices below costs aimed at forcing competitors out of business, artificial restrains on potential competition, and the general abuse of power are some of the practices to which the Court has objected, and which, incidentally, have given rise to the ethically interesting but economically irrelevant distinction between good and bad trusts. The trouble with the injection of these practices into such cases lies in the consummate ease with which they can be avoided by any large corporation which has already achieved dominant size and power. Predatory practices are vestiges of the free-booting days of old whose use is no longer required by entrenched corporate giants and whose adoption today would be considered an unforgiveable blunder by any reputable corporation lawyer.

Perhaps the most ephemeral of all of the standards adopted by the Court is the question of whether or not the corporation has the power to exclude competitors or fix prices. Unfortunately, though understandably, the Court has not seen fit to answer the critical question of just how the existence of this power is to be determined. Is it to be inferred that when a corporation achieves a certain degree of control over an industry—say, 60 percent or more of its production—it then possesses the power to exclude competitors or fix prices? If the Court were to adopt some such measurable standard—a remote possibility—it would be doing what it has refused to do in defining a monopoly.

Similarly, the effect on potential competition requires an inquiry into the motives behind the businessmen who do not go into a particular industry. There are literally thousands of possible reasons why businessmen do not go into an industry, only one of which would be the power of the combine. The isolation of this one factor from all of the others is another one of those exercises in mind-reading imposed by the Court.

In the United States Steel case, the Court gave verbal expression to the nullification of the law which inevitably resulted from the use of these standards when it first uttered the celebrated dictum that, "The law does not make size an offense, or the existence of unexerted power an offense." [14]

As if it were not sufficiently explicit, the Court in 1927 left no room for doubt by stating in the International Harvester case that "The law * * * does not make the mere size of a corporation, however impressive, or the existence of an unexerted power on its part, an offense, when unaccompanied by unlawful conduct in the exercise of its power." [15] In a dissenting opinion to the International Harvester case, Justice Day, who was joined by two other members of the Court, objected in indignant sarcasm to this sanctification of size:

"From the earliest decisions of this Court it has declared that it was the effective power of such organization to control and restrain competition and freedom of trade that Congress intended to limit and control. That the exercise of the power may be withheld, or exerted with forbearing benevolence, does not place such combinations beyond the authority of the statute which was intended to prohibit their formation, and when formed to deprive them of the power unlawfully obtained." [16]

Although in the aluminum case the judicial interpretation of the Sherman Act in regard to consolidations and mergers has retreated slightly, though very slightly, as will be discussed below, the law of the land still apparently sanctions an extreme and almost complete monopoly of an industry if it is unaccompanied by what the Court chooses to regard as unlawful practices.

The Sherman Act was not only law directed against mergers and consolidations which has been undermined by the Supreme Court. Its passage was followed some two and a half decades later by the enactment in 1914 of the Clayton Act, as well as the Federal Trade Commission Act. Section 7 of the Clayton Act gave to the Federal Trade Commission the power to prevent the acquisition by one company of the stock of another company, if the result of the acquisition would be to substantially lessen competition or tend to create a monopoly.

The purpose of this section was to halt the growth of trusts and monopolies. The decision of the Supreme Court in the Northern Securities case in 1904, and in the Standard Oil and Tobacco cases in 1911 had apparently established the principle that the Government already was armed with the power to break up existing monopolies. The problem, as Congress saw it at the time, was how to prevent the formation of monopoly, how to nip it in the bud. In section 7 of the Clayton Act, Congress thought that it had the answer.

But, as events later proved, it thought erroneously; it had not reckoned with the legal profession. The bill had hardly become law

before the great legal minds of the country were busily at work trying to discover a loophole in this new and potentially forbidding measure. And, before long, they had hit upon the answer. Instead of buying up merely the stock of a competitor, why not purchase its assets—that is, its physical plant, inventories, and everything else? While the law was very specific in prohibiting the purchase of stock, it said nothing about assets.

THE LOOPHOLE IN SECTION 7 OF CLAYTON ACT

Shortly after the end of World War I, corporations began to take advantage of this loophole. If they purchased assets entirely, and did not bother at all with any transaction involving stock, they were obviously free from any action by the Federal Trade Commission. However, in some cases, acquisitions of assets were not feasible unless the stock could be purchased first, and this raised a problem. If a firm went through this "double play," buying up the stock first and then using the stock to obtain the assets, was it not violating the law?

The Federal Trade Commission thought so. The law certainly did not specify that those who broke its provisions could gain immunity from its penalties by subsequently purchasing something else, such as assets. Yet in a 5-to-4 decision, with Justices Brandeis, Taft, Holmes, and Stone dissenting, the Court held in 1926 that where a corporation had gone through this "double play" the Commission was powerless to take effective action.[17] Specifically, the Court held that the Commission's only authority in cases of this kind was to order a divestiture of the stock of the acquired corporation—which, of course, had been automatically made valueless by the transfer of assets. The Court, in effect, said that the Commission was quite free to use the power which Congress had conferred upon it, as long as it confined the use of that power to ordering the divestiture of pieces of paper which happened to be worthless.

As a result of these decisions, plus an additional decision in the Arrow-Hart and Hegeman case which further widened the loophole, the Commission was completely deprived of power to halt acquisitions of stock when they are followed by acquisitions of assets. Today, when the Commission takes action to halt the acquisition of stock, it usually finds that, before it can enter its order, the acquiring company has bought up the assets; thus removing the case from the Commission's jurisdiction.

A typical instance of the futility of attempting to enforce section 7 is the case of the Consolidated Grocers Corp. Through a number of stock acquisitions in competing corporations, Consolidated Grocers had become in 1945 the largest wholesale grocery in the country with assets of $20,000,000 and annual sales of $100,000,000. It occupied a leading position in the wholesale grocery trade in numerous important trade areas, including Chicago, Baltimore, and Canton, Ohio. Since its acquisitions took the form of the purchase of stock, the Commission issued a complaint in 1946, charging a violation of section 7. But while the case was in the very process of being tried, the corporation acquired the assets of its subsidiary concerns which it had previously controlled only through stock ownership and dissolved the subsidiaries. The Commission had no alternative but to dismiss the case, which it did in February 1947. It is this situation which recently led the Commission to complain bitterly that, "* * * when the Commission tries to prevent acquisitions which take the form of purchases of stock, it usually finds that it is chasing a vanishing will-o'-the-wisp." [18]

The present impotence of the law raises the question as to why Congress, in granting the Commission power to prevent purchases of stock, did not also give it the power to move against acquisitions of assets. Inasmuch as purchases of assets are more binding and lasting, and thus more destructive to competition, this omission seems particularly paradoxical. The answer lies in the fact that at the time when Congress enacted the Clayton Act, most acquisitions took the form of stock purchases. By comparison, acquisitions of assets were almost unknown.

ECONOMIC BACKGROUND OF CLAYTON ACT

The economic background behind the passage of the Clayton Act in 1914 was the great merger movement which began at the very end of the nineteenth century and extended through 1907. During this period, which witnessed the birth of such huge consolidations at the United States Steel Corp., most mergers were effected through the purchase of stock. There were solid reasons behind this predominance of stock acquisitions. In the first place, it is much easier to purchase stock than assets. This is especially true in the case of holding companies, which mushroomed during this early merger movement, since the holding company can readily exchange some of its shares for the stock of the company to be absorbed. And, in the second place, stock acquisitions are peculiarly suitable in any era which is characterized by the flotation of enormous amounts of watered stock. The prevailing method of promoters in bringing together these huge consolidations was to form a great holding company, which would then issue under its own name vast amounts of stock. Part of the stock so issued would be used to pay off the owners of the separate companies absorbed in the consolidation. The greater the amount of watered stock, the easier was it to absorb companies through the medium of stock transfers.

That acquisitions of stock were indeed the customary and prevailing method of absorbing competitors was forcibly brought out by Justice Stone in his dissenting opinion in the Arrow-Hart and Hegeman case. He said that corporate mergers were "commonly" effected through stock acquisitions, that "only in rare instances" would a merger be successful without advance acquisition of working-stock control, that such control was "the normal first step toward consolidation," that it was by that process most consolidations had been brought about, that this was "the first and usual step" and that the statute therefore reached the evil of corporate mergers "in its most unsual form by forbidding the first step." [19]

The plain fact of the matter is that Congress simply did not foresee—nor could it reasonably be expected to foresee—the loophole implicit in the possibility of acquisitions of assets. It took action against the customary and prevalent form of mergers. Its intent was quite clear. It wanted to stop the growth of monopoly. In a report dated July 22, 1914, which accompanied the Clayton Act, the Senate Judiciary Committee said:

"Broadly stated, the bill, in its treatment of unlawful restraints and monopolies, seeks to prohibit and make unlawful certain trade practices which, as a rule, singly and in themselves, are not covered by the act of July 2, 1890 (the Sherman Act), or other existing antitrust acts, and thus, by making these practices illegal, to arrest the creation of trusts, conspiracies, and monopolies in their incipiency and before consummation."[20]

It is difficult to conceive of a more explicit expression of intent. Yet the Court, as in the case of the provisions of the Sherman Act relating to mergers and consolidations, nullified the law, and the extreme length to which the Court went in nullifying the law—holding, in effect, that a violation was perfectly legal, if followed by the acquisition of something not mentioned in the law—clearly reveals the one consistent element in the Court's treatment of the antitrust laws—its refusal to take effective action against the fundamental problem of size and power.

The remedy needed for section 7

For several years Senator O'MAHONEY and I have regularly introduced into the Congress bills designed to plug this outstanding loophole in the law and give to the Federal Trade Commission the same power to prevent acquisitions of assets as it now has in regard to acquisitions of stock. It may interest you to know that twice—that is, in both the Seventy-ninth (Democratic) and the Eightieth (Republican) Congresses—a bill designed to accomplish this objective has been approved by a subcommittee of the House Judiciary Committee; twice it has been approved by the full House Judiciary Committee; and twice it has been pigeonholed by the Rules Committee. On both occasions the reason given by the Rules Committee was the absence of time owing to an early adjournment of Congress. It is certainly to be hoped that at this meeting of Congress the Rules Committee will not be able to use this excuse and will permit the elected Representatives of the people to debate and vote on this bill.

The bill before the House at the present time is known as H. R. 3736. In report No. 596, dated June 17, 1947, by Representative JOHN W. GWYNNE (Republican) of Iowa, the majority of the Judiciary Committee stated:

"The history of legislation previously adopted to prevent monopoly, the great increase in recent years of competition-destroying mergers, the damage to small business, the blighting of opportunity for our young people—all cry out for the enactment of legislation to stop the rising tide of monopoly."

The report concludes with these words:

"In adopting the Sherman Act and later the Clayton Act, the Congress, without partisan division, gave expression to a virtually unanimous demand that our competitive economic system be protected against those forces of monopoly which would destroy it. The platforms of both major political parties have consistently carried planks approving the course thus charted. Both President Hoover and the later President Roosevelt recommended tightening up of the Sherman and Clayton Acts. President Truman has specifically recommended this amendment to the Clayton Act."

It is my personal conviction, if the Rules Committee ever permits this bill to come on the floor, that it will be passed by the House of Representatives, that it will be passed by the Senate, that it will be signed by the President, and that it will thus become the law of the land.

REDUCE EXISTING CONCENTRATION

It should be realized, of course, that this pending bill is designed to deal only with future mergers and acquisitions. It does not provide the antitrust agencies with any additional means of reducing the existing high levels of concentration. Although the importance of providing a check upon future mergers and acquisitions can hardly be exaggerated, especially in view of the current

merger movement, yet it must be recognized that in many industries concentration has already reached such high levels that effective price competition has practically disappeared. In such industries a few large corporations have already attained such size and power that, without buying up a single additional firm, they are in a position to determine the industry's price and production policies and to control the market generally. How, then, is this problem of existing concentration to be met?

Before advancing any particular recommendation, it might be well first to make a brief review of the major problems that stand in the way of an effective program of "divorce, divestiture, and dissolution," as the Department of Justice terms it, or "divorce, divestiture, and disillusionment," as one rather cynical lawyer of the Department has termed it. First, there is the problem of the judicial interpretation of the law in regard to cases of this type; and, second, there is the administrative problem of developing new procedures which would enable such cases to be really effective in terms of economic results and to move with reasonable rapidity, without sacrificing the fundamental legal rights of the parties involved.

Of course, all of the legal decisions, as mentioned above, which nullify the effectiveness of the Sherman Act as a means of halting mergers and acquisitions, also nullify the effectiveness of that law as a means of reducing existing concentration.

There has, however, been a new legal development on this question of existing concentration in the form of the decision in the Aluminum case. The Supreme Court withdrew itself from that case on the grounds that several of its members had been officials of the Department of Justice at the time that the case was in process, and a decision was therefore rendered by a special court of last resort, headed by Justice Learned Hand. The court introduced the novel doctrine that 90 percent control of an industry was per se a violation of the Sherman Act, and that the existence of unlawful practices was not necessary to prove a violation of the law.

Actually, it happened that the Aluminum Co. of America was found guilty of such a practice. It had exercised an illegal price squeeze on its nonintegrated competitors, forcing them to pay a relatively high price for the raw ingot which they had to buy from the Aluminum Co., and then holding its own price on the competitive product, aluminum sheets, at a relatively low level. But the existence of such practices was incidental; 90 percent control was too much. Size and power, standing by themselves, were held illegal.

There are, however, important qualifications to even this modest departure from the old doctrine. In the first place, the idea that 90 percent control is in itself illegal was a ruling of a special court and has not been endorsed by the Supreme Court.[21]

In the second place, the special court itself qualified the new doctrine by holding that it was doubtful that 64 percent would be enough to constitute an unlawful monopoly and that 33 percent is certainly not enough.[22] In the International Harvester case, the Supreme Court had ruled that 64 percent was definitely not enough.

It is difficult, indeed, to derive much encouragement from the Aluminum decision, since its actual application to American industry would have little effect upon competitive conditions. If the 90-percent rule were to be adopted, it would not affect more than a handful of American industries. In 1937 there were only 21 important products (those with an annual value of over $10,000,000) in which the largest four producers accounted for 90 percent or more of the total output. Consequently, there are probably fewer than half a dozen important products in which the largest single firm accounts for more than 90 percent of the output.

If the Supreme Court were to recede to the 64 percent doubtful point—an unlikely possibility—the scope of possible action would, of course, be materially increased.[23] However, such a ruling would still permit an entire industry to be divided between only two firms, one controlling 63 percent and the other holding the remaining 37 percent. To cite a specific example, if the 64-percent point were adopted, there would be no definite legal bar in the steel industry to a merger of the eight concerns next in size to United States Steel into one company, which would represent 63 percent of the industry, and which, coupled with United States Steel's one-third, would put some 96 percent of the industry into the hands of two corporations.

Hence the most liberal interpretation which could possibly be placed on the Aluminum decision would still be subject to the criticism of former Assistant Attorney General Berge that the Sherman Act has merely set up the "domination of the few as a substitute for the domination of the one."

The second problem concerning the dissolution program, that of administrative procedures, is nearly as formidable as the question of judicial interpretation. From this point of view alone, the process of "unscrambling the eggs" is not an easy one. What standards are the antitrust agencies to utilize in determining such questions as: Whether or not a specific corporation should be dissolved; how many units should it be divided into; what should be the size and character of the resultant units; who should be permitted to own them; what measures should be adopted to prevent the resulting units from coalescing together in some community of interests (as took place following the formal dissolution of the anthracite coal mining companies from the railroads); how are the fundamental economic considerations of efficiency and competitive results to receive their due and proper importance in what is formally a legal procedure? In regard to this last question we must not forget the immortal words of the Supreme Court in resisting the arguments of Mr. Brandeis that the old tobacco trust be split into a greater number of units:

"This whole line of argument deals with the economics of the tobacco business. No doubt the novel problem presented to this Court is connected with questions of economics as well as with questions of law. But, this is a court of law, not a Commerce Commission, and the legal side of the proposition would seem to be the controlling one." [24]

I do not know the answers to these and many other related questions. I only know, first, that the problem of existing size must be dealt with; second, that even under the most favorable interpretation of the Aluminum decision, the existing law does not provide an adequate means of achieving this objective; and third, that the administrative problems involved in the program are of no small amount.

I know that my friend, Mr. Raymond, believes that he has the practical answer in the form of his limitist proposal which would impose some arbitrary limitation on the size of corporations, such as a general limitation that no firm with over 10,000 employees should have more than one shipping point. While this is, indeed, an interesting proposal, my offhand reaction is that it is too arbitrary and inflexible both from an economic and a political point of view.

Since I do not have the answers to these legal and administrative questions, and since the Temporary National Economic Committee did not go into this question of breaking up existing size, I propose that the old Temporary National Economic Committee be reconstituted and directed to obtain expert information and advice on this subject; and, on the basis of such information, to develop a new program of dissolution, to be accompanied by reports to the Congress and recommendations for specific legislation.

LESSEN THE FINANCIAL CONTROL OVER INDUSTRY

The matter of the financial control over industry is another one of those very broad problems, similar to that of reducing existing concentration, which requires more intensive analysis and study before I would care to advance any specific legislative proposal.

It will be recalled that the old National Resources Committee, after a study of intercorporate ties such as stock ownership, interlocking directorates, common affiliations with investment bankers, intangible personal relationships, and so forth, came to the conclusion th there were eight more or less clearly defined financial interest groups in the country; that these eight controlled 106 of the 250 largest nonfinancial and banking corporations; and that the assets of these 106 "controlled" corporations represented approximately 29 percent of all nonfinancial and banking assets.

Of course, as a lawyer, I am in no position to pass upon the accuracy of these estimates, but I think that everyone must recognize the existence of a definite financial control over important segments of American industry. You may recall that in his message to the Congress recommending the establishment of the Temporary National Economic Committee,[25] President Roosevelt stated:

"Close financial control, through interlocking spheres of influence over channels of investment and through the use of financial devices like holding companies and strategic minority interests, creates close control of the business policies of enterprises which masquerade as independent units.

"That heavy hand of integrated financial and management control lies upon large and strategic areas of American industry. * * *

"But modern efficient mass production is not furthered by a central control which destroys competition between industrial plants each capable of efficient mass production while operating as separate units. Industrial efficiency does not have to mean industrial empire building.

"And industrial empire building, unfortunately, has evolved into banker control of industry. We oppose that.

"Such control does not offer safety for the investing public. Investment judgment requires the disinterested appraisal of other

[21] It is true that in the recent Tobacco case the Supreme Court stated that it welcomed the opportunity to endorse certain statements the Aluminum case opinion. But the statements that were endorsed were to the effect that a monopoly cannot be disassociated from its power, that its power cannot be disassociated from its exercise, and that if 90 percent of the ingot producers had combined it would have constituted an unlawful monopoly. (328 U. S. 813–814.)

[22] 148 F. (2d) 416, 424.

[23] The TNEC found that of 1807 census products, there were only 97 of which the leading producer accounted for over 65 percent of the Nation's output (and they represented only 5.3 percent of the total number and 2.3 percent of the total value of all products surveyed); the leading producer accounted for over 60 percent of the output of only 152 products (only 8.1 percent of the total number and 3.3 percent of the total value). (Cf. TNEC Monograph No. 27, The Structure of Industry, p. 292.)

[24] 191 Fed. Rept. 376.

[25] S. Doc. No. 173, 75th Cong., 3d sess.

people's management. It becomes blurred and distorted if it is combined with the conflicting duty of controlling the management it is supposed to judge.

"Interlocking financial controls have taken from American business much of its traditional virility, independence, adaptability, and daring—without compensating advantages. They have not given the stability they promised."

I might suggest that on this problem of financial control some committee could begin its work by devising appropriate amendments to section 8 of the Clayton Act, which as you may recall, prohibits the same person from being a director in two or more competing corporations. However, the law is riddled with loopholes which make it largely ineffective. In the first place, a firm can evade its provisions by placing on the board of a competing concern not one of its own directors, but rather one of its officers or employees; the law applies only to interlocking directors, not to interlocking officers or employees. In the second place, an investment or banking firm, which is prevented by the law from placing the same men on the boards of two or more competing companies, can achieve the identical control by placing one of its men on the board of one company and another on the board of its competitor. Finally, the law applies only to competing concerns; for example, interlocking directorates between a supplying company and an end-product manufacturer, or between firms in different industries (even though closely related), or between a manufacturer and a distributor are thus perfectly legal. Like section 7 of the Clayton Act, section 8 is thus characterized by both a laudatory intent and the existence of devastating loopholes which can and should be plugged.

USE THE ECONOMIC FACT-FINDING POWERS OF THE FEDERAL TRADE COMMISSION

Finally, I wish to call your attention to a provision of law which already exists, which requires no legislative changes, and which could become an extraordinarily effective measure in the public interest. I am speaking of section 6 of the Federal Trade Commission Act, which grants to the Commission far-reaching powers for the purpose of conducting economic investigations. The only thing required to make this law effective is appropriations.

The origin of this section has an exceedingly interesting story. After passing the Sherman Act in 1890, the Congress gradually became aware of the existence in many lines of industry of large corporations, which through their mere size and power, implemented by such specific practices as price leadership, could control the market without resorting to conspiracy or collusion or illegal activities of any kind.

Therefore Congress, convinced of the "curative power of publicity," felt that, at the very least, the people and their representatives in Congress should be informed of the economic practices and behavior of these large corporations—their prices, costs, profits, economic power, business practices, etc. With this thought in mind, Congress on February 14, 1903, established the Bureau of Corporations with power and authority "* * * to make * * * diligent investigation into the organization, conduct, and management of the business of any corporation, joint stock company, or corporate combination engaged in commerce." When the Federal Trade Commission was established in 1914, these fact-finding powers were enlarged and transferred to the new agency. It was under this section that the Commission has conducted its economic investigations which not only have resulted in new and improved legislation but also have acted as an important restraining influence upon the policies and activities of many of the Nation's largest corporations.

It is indeed a tragedy, considering its proven usefulness, that this highly useful function has been permitted to atrophy over the years. As early as 1927 Prof. William Z. Ripley, of Harvard, regretfully commented upon the "innocuous desuetude" of section 6 which he termed as a "stone dead letter." Urging a vigorous use of the fact-finding powers, Professor Ripley stated:

"This statute (the FTC Act) contains in section 6 a positive delegation of authority to this body which is entirely adequate to the performance of the service so greatly needed at the present time * * *. The record of debate upon the subject makes it clear that Congress intended this work to constitute one of its chief activities * * * here then we have plainly indicated the most obvious, the simplest, the most effective remedy of all * * *. No legislation is necessary. There is nothing revolutionary about it—nothing paternalistic * * *. Let the word go forth that the Federal Trade Commission is henceforward to address itself vigorously to the matter of adequate and intelligent corporate publicity, and, taken in conjunction with the help of agencies already at work, the thing is as good as done." [20]

At one time the Economics Division of the Federal Trade Commission numbered over 600 persons with over 200 economists and other professional employees. At the present time, as I have indicated above, it is down to the staggering sum of 8 economists, who, in addition to carrying out these broad powers of section 6, must also prepare all of the economic material required in the Commission's legal cases. I think it is about time that we resurrect this important provision of law which Professor Ripley termed "the most effective remedy of all."

AIDS TO SMALL BUSINESS

Before summarizing my specific recommendations for changes in legislation, I wish to mention briefly a number of additional points which I do not have time to discuss at length. It is my personal opinion that an effective antitrust program represents only one side of the penny. The other side consists of certain types of affirmative assistance which should be made available to small business, particularly financial aid and industrial research. In regard to the former, I would like to see the RFC greatly accelerate its program of loans to small business; in regard to the latter, I would like to see Congress pass some bill, such as that proposed by Senator FULBRIGHT, designed to bring to small business the benefits of modern science and technology.

In addition, there are other problems, particularly patents and cartels which are of such extraordinary complexity that I am unable to discuss them adequately within the time limits available to me. Also, I am withholding comment on the basing point system for the reason that this whole subject is now before the Supreme Court in the form of the Federal Trade Commission's case against the Cement Institute.

In conclusion, the recommendations which I wish to offer as needed changes in antitrust legislation, may be summarized as follows:

SUMMARY

1. In order to provide adequate appropriations:

(a) Awaken the Budget Bureau.

(b) Stimulate the interest of Congress.

(c) Make known to the people the critical importance of the monopoly problem.

2. In order to eliminate conspiracies:

(a) Increase the penalties for violation of the antitrust laws.

(b) Permit the Federal Trade Commission to serve as a master of chancery in antitrust cases at the request of the Attorney General.

(c) Give to the Commission's orders under the Clayton Act the same degree of finality and the same sanctions which they have now under the Federal Trade Commission Act.

3. In order to halt the growth of concentration:

(a) Pass legislation designed to plug the loophole in section 7 of the Clayton Act and thus give to the Federal Trade Commission the same power to prevent acquisitions of assets as it now has in regard to acquisitions of stock.

4. In order to reduce existing concentration:

(a) Reconstitute the old Temporary National Economic Committee and direct it to make an intensive study of the legal and administrative problems involved, and present to the Congress specific recommendations for legislation.

5. In order to remove the financial control over industry:

(a) Send up daily prayers that the Department of Justice will win its present suit agaisnt the investment banking companies.

(b) Plug the loopholes in section 8 of the Clayton Act against interlocking directorates.

(c) Direct the proposed reconstituted TNEC to make an intensive study of the extent and significance of financial control over industry and propose specific recommendations for legislation.

6. In order to use the economic fact-finding power of the Federal Trade Commission Act:

(a) Provide adequate appropriations and personnel to the Federal Trade Commission.

An Open Letter

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AN OPEN LETTER

To Mr. BASIL O'CONNOR,
President, the American National Red Cross.

DEAR MR. O'CONNOR: We received your terse note stating that unless the officers and directors tendered their resignations within 30 days the Van Wert charter would be revoked. If we thought for a moment that our resignations would advance the objectives of Red Cross, locally or nationally, you would receive them by return post, but, frankly, Mr. O'Connor, we cannot reconcile ourselves to resigning a trust for doing that which we believed, and still believe, is for the best interests of the Red Cross.

The Van Wert story is short—perhaps of little consequence—but in principle it certainly bears a second look. The sin was deliberate. After the war we rejoined our local Community Chest. Although the right to make independent drives in event of disaster or other emergency was reserved, the Red Cross membership was explained, membership cards were to be issued, and our quota was more than raised; yet, as such affiliation is not in keeping with the theories of the board of governors, our chapter is to be cast into outer darkness.

To presume to challenge this policy may be more of a bray than a voice from the wilderness, but to us, this action seems so arbitrary, so unreasonable and so out of keeping with tradition, that if continued as a

national policy, it eventually will reflect on the motives and the very integrity of the Red Cross movement. We find it difficult indeed, to believe that such theory long will continue as an edict or mandate of the board, to be practiced without reason, judgment, or exception.

No one questions the functions of the Red Cross to promptly and adequately meet its responsibilities in the emergency of war or disaster. It is the obligation which is set apart to us in the field of charitable endeavor. An independent action and solicitation in such instances goes without saying, and such policy should be definite and firm, but surely there should be an exception in those usual and ordinary years in peacetime, in which the maintenance of membership and an adequate budget is our chief concern.

We are familiar with your arguments supporting the policy of independent financing, but again we are unable to follow you. It is true that personal contact with each contributor or member is much to be desired, but that is true of any charitable or philanthropic endeavor. While all of us have an intense interest in the Red Cross, is it your duty, or ours, to place it primary and above all other worth-while and important endeavors, and refuse to cooperate or associate with them? To us, such an attitude hardly is compatible with our charter or the eternal fitness of things. It senses of smugness, of a self-contained and rather arrogant satisfaction growing out of our established position, patriotic appeal, and financial assurance.

No, Mr. O'Connor, we should not become obsessed with one idea to the distress of all others. There is a time and place for Red Cross services, and a time and place for other services. Should you or we, or one of our dear ones suddenly require surgical attention, then we will be glad, indeed, that someone has taken the same interest in some hospital that you and we have taken in Red Cross.

Nor are we able to accept your postulate that joint fund raising necessarily involves control over our objectives and operations, and that if accepted in one community we are obliged to accept it in every community. We are not convinced that the trustees of any community chest, or that of any company which contracts with its employees to deduct Red Cross memberships, has the inclination, desire, or even the thought of assuming any control or supervision over our activities. The function of Red Cross is so well known, so firmly established, that it almost is a tradition.

As to the acceptance of joint financing in one community making it obligatory in all others, we think that should be a matter for the local men and women who make up the chapters to decide. They can better weigh and determine a local situation, the leadership, the public opinion, and the advantage of cooperating with a chest. What may be advisable one year may not be the next and what may be expedient for Portland, Maine, may not be expedient for Portland, Oreg.

In all modesty, Mr. O'Connor, we submit that local chapters may well be entrusted to use their good judgment in each instance. Should quotas not be raised, or independent emergency drives discouraged, or an attitude of restriction or supervision become evident, or the chapter otherwise function improperly, then and only then need the national office become concerned.

The suspension of a local chapter is not a matter to be taken lightly. As anyone from "main street" well knows, the matter is town talk and the conclusions not always are friendly to the national office. Contention in any charitable endeavor does not improve its standing in that community, and if such incidents are numerous—it becomes a national problem.

While we may be censored in raising this issue, we justify our action in the hope that it will correct a practice and modify a policy which we believe will impair the Red Cross endeavor. To not cooperate with the national office is to be criticized, but to "Mary lamb" a policy while serving on your chapter, and then in disgust, refuse reelection and to no longer serve—is quite another matter. We have heard of many instances of this kind, and of the two evils, we chose the former.

While we have the highest respect for the opinions of the governors and of your good self, yet in your antagonism to federated financing, it seems to us that your philosophy resolves into "everybody being out of step but me." With so many thinking men and women at variance with your philosophy, do you not think that your conclusions should be urged modestly, and the rod applied sparingly?

The community chest idea originated in Cleveland some 30 years ago, and without fanfare, propaganda, or program, has grown and developed throughout the land into a national institution, supported by the press and radio, and accepted by nearly everyone as the "Time to do his or her bit" and "To give his or her mite." Like Topsy, it just grew—typically American, and growing out of our inherent propensity to do things efficiently.

Another criticism of your policy, and perhaps a basic one, is its total lack of consideration for the wishes, preferences, or inclinations of the contributors. In your zeal to make Red Cross first and foremost, have you not forgotten the little man that makes Red Cross possible? If he should like to give a pink check for his contribution, he resents being told that it must be a blue check, and that we want it later instead of now. After all, the people who give the money should have some say as to the manner in which they give it.

It is possible that we may look at the situation more objectively than yourself. While we actually raise the money, we do not have the salary or the duties that go with your office, but in all other respects, we are as much interested in Red Cross as yourself, and may our motives be taken for granted.

We hope that at the spring meeting the board will reconsider and modify its policy as to joint fund raising; that in peacetime years, and when the right to make independent drives is reserved, the Red Cross membership emphasized, and quotas maintained, local chapters, at their discretion, may cooperate with employers and community chests in the raising of funds.

To this end we are sending copies of this letter to the governors, chapters, and others interested in this policy.

Yours very truly,

THE OFFICERS AND DIRECTORS, VAN WERT COUNTY CHAPTER, THE AMERICAN NATIONAL RED CROSS.

The Jewish Agency for Palestine

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. KLEIN. Mr. Speaker, under permission granted I am inserting in the RECORD the statement of the Jewish Agency for Palestine which was published in the New York Times of Sunday, January 11; an editorial from the New York Herald Tribune of Monday, January 12, entitled "Explosives for Palestine"; and a news story from PM for January 12.

I am inserting these articles in order to keep the record straight. There has been a great deal of misinformation and misinterpretation in regard to shipment of supplies to the new government of Jewish Palestine. I think it is important that we have the facts available to form calm and reasoned judgments in the matter.

Text of the Times story, including the formal statement of the Jewish Agency, follows:

"LEGAL" BUYING OF MUNITIONS ADMITTED BY JEWISH AGENCY—NEW PALESTINE STATE NEEDS ARMS TO FIGHT OFF ARAB ATTACKS, SPOKESMAN DECLARES—BUYER OF M-3 EXPLAINS DEAL

After its name had been brought before the Federal Bureau of Investigation in connection with the quantity of M-3 explosive found near Asbury Park, N. J., last Thursday, the Jewish Agency for Palestine declared through a spokesman here last night that it believed the material to be legally purchased and awaiting legitimate shipment.

A statement on behalf of the agency, which has offices at 16 East Sixty-sixth Street, said that it had made dollar credits available for the purchase of surplus war materials, under the authorization of the United Nations plan for raising and equipping militia.

Earlier, a witness gave the FBI the names of "several Palestinians" in connection with the Asbury Park explosives, and had understood that they were being legally bought for shipment to the Near East.

The witness, Leonard M. Weisman, 32-year-old businessman, said he acted as an adviser to the Foundry Associates, Inc., 41 East Fifty-second Street. He added that he understood the persons for whom he acted to be representatives of the Jewish Agency.

"I told them," he added, "that I did not want any of these goods to be shipped to Irgun or the Stern gang, as I do not approve of terrorist activities, but I said I would be happy to get such goods for Haganah or the Jewish Agency."

Mr. Weisman said that on returning at 2 a. m. yesterday from a business trip to Norfolk, he called the FBI and, at his invitation, it sent two agents to see him at his home, 311 Hawthorne Terrace, Mount Vernon. There later in the day he said he had told the Government operatives the following story:

Two days before partition of Palestine was voted by the United Nations on December 5 some Palestinians—Mr. Weisman said he had disclosed their identities to the FBI but was told not to make the names public—approached him to act as their agent in the purchase of equipment, including explosives, from the War Assets Administration. This equipment was to go to the Jews in Palestine "in the event the British withdrew suddenly and left the Jews unprotected and undefended."

"I am in sympathy with the Zionist movement," Mr. Weisman related, "and I told them I would be very glad to help, but I warned them I would not participate in any illegal shipment of such supplies under Federal Government regulations.

"They proved to me that they represented the Jewish Agency for Palestine and they furnished proof that the agency had set up funds in the United States 'of not more than $750,000' for this purpose.

"They wanted, in addition to explosives, canvas tents, shelters, hospital equipment, and supplies. We finally made arrangements for the purchase of about 200 tons of M-3 demolition blocks at $90 a ton and I went with them to the Seneca Ordnance Depot of

the War Assets Administration at Romulus, N. Y. We bought the explosives, as advertised in the newspapers as being good for export."

ASSERTS TRUCKING WAS LEGAL

Mr. Weisman said the check was for a sum slightly less than $18,000—he could not remember the precise amount—and that it was drawn by Foundry Associates, Inc.

"We bought legally and had it transported by trucks properly licensed to carry explosives," he declared. "In fact the Romulus depot released the shipment only after proper certification of such licensing."

This did not quite tally with what was happening to the drivers of three truck loads of the M–3 who were being arraigned before Police Justice Ernest E. Schirmer at Saugerties. Professing ignorance of the fact that they were carrying 69 tons of the explosive, part of the 200 tons purchased by Mr. Weisman, they were held in $2,500 bail each for transporting explosives without proper identifying markings on their trucks and having no flares on them.

In addition the drivers were fined for minor traffic law violations. Martin J. Jablonski, of New York, was fined $50 for driving an unregistered vehicle. Bruno Olszowy, of Garfield, N. J., was fined $10 for failing to note an address change on his chauffeur's license; and Stanley T. Golenia, of Clifton, N. J., was assessed $10 for having no flares in his truck and not having a photograph on his chauffeur's license.

TRUCKS HELD UNDER GUARD

State troopers said the trucks bore "explosives" signs only 1¾ inches high, while the State law requires signs at least 6 inches high on front, rear, and both sides of vehicles carrying explosives.

The trucks remained under guard at an undisclosed place near Kingston. Inspector Edwin McGrath of the Bureau of Mines, Tunnels, and Exposives of the State labor department arrived at the Lake Katrine police barracks to take charge of the cargo. State Industrial Commissioner Edward Corsi said it would be stored in an approved magazine in the Calinans Quarry, outside of Kingston.

At the same time Mr. Corsi, in a statement issued at his office in New York, took to task the War Assets Administration for allegedly not complying with State regulations. If the Federal agency, which Friday put an embargo on all surplus war explosives, had voluntarily complied with State regulations, Mr. Corsi declared, "the illegal traffic in explosives would have been averted."

Mr. Corsi said that State regulations required buyers of explosives to obtain an owner's and possessor's license, and that dealers must record every sale.

"Our department then makes an immediate check of all large purchases," he said. "Obviously, if the War Assets Administration had voluntarily compiled with State regulations required of private dealers this illegal traffic in explosives would certainly have been averted."

Mr. Corsi said that his department, in cooperation with State police, was conducting a State-wide search to determine whether other caches of explosives from the same source were being stored illegally under unsafe conditions.

JEWISH AGENCY STATEMENT

The statement on behalf of the Jewish Agency, made by a spokesman follows:

"The Jewish people of Palestine are in desperate need of arms for their defense. The ex-Mufti, of Jerusalem, who collaborated with Hitler in the destruction of 6,000,000 Jews in Europe, has now called the Arab world to arms to carry on his work of massacre and extermination. Through his connections with the Arab League and the Arab states, the Mufti has the facilities to acquire arms and munitions for aggression and invasion.

"The Jewish Agency for Palestine has the responsibilities of a state about to be born. It must protect the lives and homes of the 700,000 men, women, and children of Palestine. The United Nations decision made no provision for an international force but did provide for a Jewish militia to defend the Jewish state and to maintain public security.

"It therefore devolves upon the responsible defense forces of the Jewish community of Palestine to rush preparations in a race against time in view of the threatened Arab aggression in defiance of the United Nations decision and the announced early withdrawal of British troops.

"Accordingly, steps were taken to arrange for the legitimate purchase of war-surplus matériel and equipment. To facilitate these purchases the Jewish Agency made dollar credits available. The materials found near Asbury Park on Thursday were to the best of our knowledge legally procured to await legitimate shipment with the understanding that all such purchases and their transportation were in full conformity with American law. We are proud to give our aid to the embattled Jews of Palestine. We trust that material urgent for their defense may soon be shipped to them legally, and with God's help reach them in time to meet their grave emergency."

Mr. Weisman in his story denied that the 200 tons he purchased had any connection whatever with the shipment of what is now believed to be nearly 100,000 pounds of TNT found when a crate broke on the American export liner *Executor* a week ago.

Letterheads of the Foundry Associates were found yesterday in a warehouse of Charles Lowy at Asbury Park. In a farmhouse nearby and on trucks an estimated 59 tons of the M–3 had been recovered Thursday night and early Friday morning.

The address listed for the Foundry Associates was 41 East Forty-second Street. That is the address also of a number of Zionist organizations and of Mr. Weisman's three business concerns. He said that he was president of the Paragon Design & Development Corp., an engineering concern; the Materials Redistribution Corp., which exports heavy industrial machinery to South America; and the Pratt Steamship Lines, which operates a freight service between New York and South American ports.

Mr. Weisman, who is married and lives in a colonial three-story house, told a little about himself. He is a member of the Zionist Organization of America but has never visited Palestine. He was born in Pittsburgh and attended Carnegie Institute of Technology, but was not graduated. He has developed his three business concerns, he said, in the last 6 years.

"I am not ashamed of my participation in any part of this matter," Mr. Weisman said. "I believe that the United States, in aiding and leading the United Nations partition vote, indicated its stand sufficiently to make me feel that, first as an American and second as a Jew, I could do nothing improper in legally placing in the hands of the official Jewish Agency in Palestine the means of protecting the lives of Palestine- Jews against marauding Arabs armed with British weapons.

"Historically, no American condemns De Valera in his securing from the United States the means to free Ireland from British tyranny. Our own American freedom was obtained through the aid of Lafayette, who placed arms in the hands of American colonists."

Mr. Weisman, referring to the visit of the FBI agents, said that "they went away satisfied that I am an honest young man."

Despite statements by informed sources that 71 or 73 tons of the 200-ton demolition block purchase were unaccounted for and were probably on the high seas, Mr. Weisman insisted that none of the shipment was missing.

Saying that it was difficult to make contact with his associates over the week end, Mr. Weisman promised that by 11:30 a. m. tomorrow at his office he would be in a position to account for every pound of the stuff.

Lt. Col. Robert R. Judson, commanding officer of the Seneca depot, insisted that the entire consignment was accounted for. Colnel Judson said that the Army, after the freeze order of the War Assets Administration, refused to deliver the last 64 tons of the explosive which he termed "composition C." "It is composed," he said, "of 90 percent TNT and half again as devastating. Before the embargo six truckloads of the explosive had been removed from the arsenal at various times," he said.

"Composition C," Colonel Judson said, "does not detonate readily but has to be touched off with a fuse or firing cap." He said that neither was shipped from the Seneca depot with the explosives.

OTHER CACHES HELD PROBABLE

Monmouth County Prosecutor J. Victor Carton expressed the belief that the consignment found in the farmhouse near Asbury Park was a local project and said he had learned that other local campaigns had yielded caches of arms and munitions. He said he believed there were undiscovered caches of munitions in the country ready for shipment to Palestine. He did not explain the ground for his belief.

Mr. Carton recommended that the War Assets Administration review all large sales of munitions to determine to what use they were being put. Inquiries in Washington brought no indication that WAA would make public a list of large purchasers of TNT or other explosives.

Mr. Speaker, following is the text of the editorial from the New York Herald-Tribune, expressing the point of view of a great libertarian Republican daily, and showing a sympathetic understanding of the Palestinian position:

EXPLOSIVES FOR PALESTINE

The statement by the Jewish Agency, formally accepting responsibility for the purchase of 200 tons of M–3 demolition explosives from the War Assets Administration for ultimate shipment to Palestine, clarifies some aspects of this mysterious subject. At the same time, it raises a great many more questions than it answers.

Neither the agency nor Mr. Leonard M. Weisman, who assisted in arranging the purchase, admits to any knowledge whatever about the 50 tons of war-surplus TNT accidentally discovered as they were being loaded on the cargo liner *Executor* under the criminal disguise of machinery. This was not only a patently illegal but an outrageous business, imperiling the ship and the lives of every one in the communities through which the explosives were handled. It is impossible to countenance this kind of thing, no matter what may be the pressures in Palestine; and if the Jewish Agency can furnish no information the Federal Bureau of Investigation will have to get it. And the War Assets Administration will need something more than its sudden interdiction on further delivery of explosives to exculpate itself of the suspicion of gross carelessness in allowing these dangerous tools to be sold off for concealed or unknown purposes.

All this is easy to see. Nothing could do the Zionist cause more damage in this country than the existence of clandestine gunrunning operations illegally shipping arms to Palestine. What is not so easy to see is the proper policy for the United States Government. The State Department has placed an embargo on all arms shipments to the Middle East. This is a simple but more than a little

Pharisaical solution. It cannot overcome the fact that the Palestinian Arabs are getting not only arms but armed men from the neighboring Arab states, that the British are not successful in maintaining order now and are about to evacuate, and that if Jewish Palestine is to achieve and maintain the independence which this country officially advocates its people will have to get arms from somewhere.

It is conventional to regard arms as in themselves immoral; Mr. Henry Wallace, for example, has been very vocal in condemning "programs which give guns to people when they want plows." This overlooks the fact that when a man really needs a gun he wants it more passionately than he could ever want a plow; and the lengths to which the Zionist interests are going in the effort to get explosives here might lead even Mr. Wallace to some second thoughts on the importance of arms in the contemporary world.

Clearly, the question of arming or recognizing Haganah seems in the first instance one for the United Nations Palestine Commission. But the United States cannot simply wash its hands of a matter in which it is so deeply involved. Everyone so far, has shirked the question of security and defense for the proposed Jewish state, yet in the harsh world of today it is obviously the fundamental question in the whole Palestine problem; and if the other nations will not themselves fight for the Jewish state then they must clearly afford to it the means of fighting for and defending itself.

Mr. Speaker, the following news story by I. F. Stone from PM indicates still another point of view:

JOKERS IN THE PALESTINE ARMS EMBARGO

(By I. F. Stone)

WASHINGTON.—The arms embargo imposed on the Middle East by the State Department has more jokers than a diplomat has alibis. These jokers may cost the Jewish community of Palestine dearly, and put the American Government in the position of helping to destroy the partition scheme for which it voted at Lake Success.

The first and obvious joker is that this embargo, Pontius Pilate style, smugly washes its hands of the whole affair, placing attacker and attacked in the same category, denying aid to both. It refuses arms to Arabs fighting the U. N. decision—and to Jews defending themselves against those Arabs.

This is neutrality, Spanish Civil War style, an encouragement to the forces of lawlessness and disorder. It ill comports with the high moral tone the Truman administration is taking in foreign affairs. A man who stood by, while a bandit beat a victim, could hardly qualify for a Carnegie Medal on the ground that he had righteously refrained from helping either.

MORE SERIOUS LOOPHOLE

But if this were the only joker in the embargo, it could be dismissed with wry reflections on the hypocrisy of a policy that purports to uphold the U. N., but turns its back when a U. N. decision is attacked.

A more serious loophole is the fact that while imposing an embargo on both the attacking Arabs and the attacked Jews, the United States is supplying arms to Turkey and Iran. The embargo applies neither to these countries nor to Pakistan, which is becoming one of the pet states of American-Asiatic policy. Yet all three of these Moslem countries voted against the Palestine decision at the U. N., and there is nothing to stop them from passing American arms on to the Arabs.

BRITISH POLICY

The third loophole lies in British policy. When the British want American help, they act as if they would not blow their noses out of tune with Washington. But when the Americans want British help in return, as the President well knows in his 2 years of effort to get 100,000 Jewish DP's into Palestine, the connection seems to go dead at the London end.

To impose an embargo from Washington without a similar embargo order from London, as the State Department did, was to leave open the main Arab source of arms supply while shutting off the only source from which the Jews could hope to obtain arms.

The British have not only imposed no embargo, but have just renewed their military alliance with Iraq, an alliance under which they provide the arms for the Iraquian Army and police. The British have shown no readiness to stop supplying arms to Iraq, Transjordan, Syria, or Egypt. Attacks on Palestine are being organized from all four.

In addition, only a few days ago Britain, despite her shortage of dollars, made a $25,000,000 loan to Egypt, a loan in dollars, not pounds sterling. These dollars are in effect supplied by the United States through the Anglo-American loan, and Egypt can use the dollars to buy arms in Argentina or Spain, both of which have arms to sell and need dollars. Franco, worried over unrest in Moslem north Africa, would like better relations with the Arab League.

AS IN SPAIN

Thus the American neutrality embargo is working out much as neutrality did in Spain. The embargo imposed by the western powers helped to keep the republic pinned to the mat, while Franco with Axis help beat it into submission.

In this case the American Government, by the embargo, is shutting off supplies to Jewish Palestine while the Arabs, with the aid of Britain and perhaps American arms obtained indirectly through Turkey, Iran, or Pakistan, can go on with their attack on the Jews and on the U. N. decision.

Is this, perhaps, the State Department's purpose? Does the White House realize what is going on? Does it approve?

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. GEORGE W. SARBACHER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. SARBACHER. Mr. Speaker, today I have introduced a bill to increase the disability, death compensation, and pension rates of World Wars I and II veterans, including increased benefits for widows, orphans, and dependent parents of deceased veterans of World Wars I and II. I feel that this legislation is vitally needed at this time, not only with the aspect of increased costs of living, but to bring about a fair adjustment in the over-all structure of disability, death compensation, and pension rates.

This legislation coincides with the mandate of the New York national convention of the American Legion, August 28–31, 1947.

Resolution 162 of the American Legion convention brought forth the following mandate:

Whereas the cost of living has increased to such an extent, and that compensation and pensions of veterans, widows, children, and parents have not been increased to meet these conditions, thus causing hardships and needs in many cases: Therefore be it

Resolved, That this convention request that our national legislative committee introduce legislation to help remedy these conditions, at the next session of the Congress to be held in Washington, D. C.

For the benefit of the membership of the House, I am enclosing an analysis of this bill which I believe will show clearly the desired changes, and effects.

ANALYSIS OF A BILL TO INCREASE WORLD WARS I AND II DISABILITY AND DEATH COMPENSATION AND PENSION RATES

Section 1 proposes a 15-percent increase of wartime rates of compensation payable to World Wars I and II veterans for service-connected disability. These are the rates allowed in those cases in which disabilities are incurred as the result of armed conflict; while engaged in extra hazardous service, including service under conditions simulating war; or, while the United States is engaged in war.

The increase will include statutory awards and allowances as well as basic rates.

Present rates range from $11.04 to $360 for directly service-connected disability. The rates are reduced 25 percent in cases service connected by statutory presumption.

Providing for payment in dollars, as is done in this section of this bill, will simplify awards and eliminate much administrative detail.

Section 2, to increase wartime service-connected death compensation rates payable to surviving widows, children, and dependent parents of deceased veterans of World Wars I or II. It is also provided that these shall be the rates allowed if the deaths of such veterans establish entitlement of these dependents to benefits under section 31, Public Law 141, Seventy-third Congress, approved March 28, 1934 (38 U. S. C. 501a)—result of training, hospitalization, or medical or surgical treatment; section 12, Public Law 866, Seventy-sixth Congress, approved October 17, 1940 (38 U. S. C. 501a–1)—result of examination; and, paragraph 4, part VII, Veterans Regulation 1 (a), as added by Public Law 16, Seventy-eighth Congress, approved March 24, 1943 (38 U. S. C., ch. 12)—result of pursuit of vocational rehabilitation course.

	Present	Proposed
Widow, no child	$60.00	$75
Widow, 1 child	78.00	115
Each additional child (subject to apportionment regulations)	15.60	20
No widow, 1 child	30.00	50
No widow, 2 children (equally divided)	45.60	70
Each additional child (total equally divided)	12.00	20
Dependent mother or father	54.00	75
Dependent mother and father, each	30.00	40

Section 3 proposes a 25-percent increase in pension payable to World War I or II veterans permanently and totally disabled from non-service-connected disability, namely, from $60 to $75 and from, in specified cases, $72 to $90.

Section 4 increases the pension payable to widows and children for non-service-connected deaths of World War I or II veterans.

	Present	Proposed
Widow, no child	$42.00	$55
Widow, 1 child	54.00	70
Each additional child	6.00	10
No widow, 1 child	21.60	35
No widow, 2 children (equally divided)	32.40	50
No widow, 3 children (equally divided)	43.20	65
Each additional child (total equally divided)	4.80	10

Section 5: Establishment of the first day of the month succeeding enactment date as the effective date of the new rates will eliminate the vast amount of work that would be needed to figure awards with rate change made within a calendar month.

Presently the pension award of $60 for permanent and total non-service-connected disability is 43 percent of the compensation award of $138. For total service-connected disability; proposed award of $75 pension is 47 percent of the $159 compensation rate. The $60 death compensation paid a widow is 43 percent of the $138 total disability compensation awarded a veteran; the proposed $75 death compensation rate is 47 percent of the proposed $159 total disability compensation award. The present $42 death pension award to a widow is 70 percent of the $60 death compensation rate; proposed $55 death pension rate is 73 percent of the proposed $75 death compensation award.

I sincerely hope that the Congress will see fit to enact this much needed legislation as soon as possible.

The Truth About Poland's Eastern Boundary

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. MacKINNON. Mr. Speaker, the borders of Poland were the immediate cause of World War II. We all supposed when the United Nations won the war that the Polish boundaries would recognize the historical rights and needs of the Polish people. Consequently, it is very discouraging to notice the lack of proper attention by our Government to this problem, particularly with respect to Poland's eastern boundary with the Soviet Union.

Under leave to extend my remarks, I include herewith a statement from the New York Journal-American of January 7, by Charles Rozmarek, an outstanding Polish American leader who is president of the Polish American Congress, representing 6,000,000 Americans of Polish descent, wherein he sets forth very clearly the true facts with respect to Poland's eastern boundary:

THE TRUTH ABOUT THE POLISH BOUNDARY DISPUTE AT YALTA

(By Charles Rozmarek, president, Polish American Congress, Inc.)

(The following statement dealing with the Yalta Conference discussions of Poland's boundaries was prepared by Charles Rozmarek, president of the Polish American Congress, Inc., representing 6,000,000 Americans of Polish descent. Mr. Rozmarek explains some of the underlying facts concerning the border discussions which he declares were not revealed in former Secretary of State James F. Byrnes' book, Speaking Frankly.)

In one of the installments of Mr. Byrnes' Speaking Frankly, printed in the Hearst papers and dealing with the Polish boundary dispute at the Yalta Conference, there were opinions and statements which do not correspond to historical facts and documents. Stalin presented his claims to Polish territories by cleverly distoring the truth. Now, the American public should be given the true facts underlying the situation.

According to Mr. Byrnes, President Roosevelt "felt that Poland's eastern boundary should generally follow the so-called Curzon Line," but he still held "that it would be desirable to adjust the southern end of the line so that the city of Lwow and at least a portion of the oil fields should be inside Polish territory."

Stalin opposed those endeavors. He is quoted by Mr. Byrnes as saying:

"The Curzon line is the line of Curzon and Clemenceau. * * * Lenin was not in agreement with the Curzon line. * * * Now some people want that we should be less Russian than Curzon was and Clemenceau was. You would drive us into shame. * * *"

Stalin here made it appear that Clemenceau and Curzon were speaking of a Polish-Russian frontier. As a matter of fact, that was neither Clemenceau's nor Curzon's meaning or wording. As is evident from Mr. Byrnes' story, nobody at the time exposed the fact that Stalin was distorting and falsifying Clemenceau's declaration of December 8, 1919, as well as Curzon's note to the Soviet Government of July 11, 1920.

The Clemenceau declaration expressed and contained the decision of the Supreme Council of the Versailles Peace Conference. The declaration text makes it entirely clear that Clemenceau and his American and British partners in the Supreme Council, in establishing the line of Polish administration (the so-called Clemenceau line):

1. Had no intention of tracing and actually did not trace a Polish-Russian boundary;

2. Distinctly recognized the rights of Poland to claim further territories situated to the east of the Clemenceau line;

3. Did not touch or decide anything regarding the former Austrian territory (i. e, Galicia, where Lwow and the oil fields were situated), since the Supreme Council expressly referred to "territories of the former Russian Empire."

The so-called Curzon line was proposed by Britain to the Soviet Government merely as an armistice line between the Polish and the Red Armies at a moment when the Bolshevists threatened to crush Poland and to gain control of central Europe. The future boundary between Poland and Russia was to be established at a peace conference, anticipated by the same British proposal.

It should be remembered also that this very line was rejected by the Soviet Government, in an official note of July 17, 1920, as unjust and unfavorable to Poland. In the same note the Soviet Government expressed its intention to grant Poland more territory in the east than was offered by the British Curzon Line proposal. The Soviet Government also branded the British proposal as "an intrigue of reactionary Russian emigrees in Paris" who intended to diminish Poland's territory.

At Yalta, however, Stalin did not mention any of these facts. In effect, he himself demanded a line like that proposed by "reactionary Russian emigrees." Unfortunately, once more his method of distortion triumphed.

The British armistice line proposal in 1920 provided that "in eastern Galicia each army will stand on the line which they occupy at the date of the signature of the armistice." At the peak of its advance into Poland, the Red Army never captured Lwow and the oil fields never were east of the so-called Curzon line.

The British note to the Soviet Government also contained an error which—in a proper and fair atmosphere—would not be open to misinterpretation. A description of the Clemenceau line was included in the Curzon note. The error consisted in adding to the Clemenceau line an extension through former Austrian territory (Galicia), which left Lwow and the oil fields to the east. This delimitation, however, actually referred to another Galician subject of discussion and was not intended for inclusion in Curzon's note to the Soviet Government.

By inclusion of this careless and incorrect description of the Clemenceau line, the Curzon note proposed two conflicting lines in Galicia, Poland. Stalin, in presenting his case at Yalta, naturally chose to demand the erroneous one simply because it was advantageous for him; it granted him Lwow and the oil fields.

Furthermore, it gave him the chance to bargain on a new compromise line in case Roosevelt and Churchill exposed the error in the Curzon note, but nobody exposed it.

In newspapers and even in encyclopedias descriptions of the Curzon line include this error. The mistake never was rectified before 1944, as the whole Curzon proposition was discarded after its rejection by the Soviet Government. Not until January 1944 was it exhumed by the Soviet Commissariat for foreign affairs.

These are the facts about the Clemenceau line and the so-called Curzon line which the American public should know to evaluate Mr. Byrnes' revelations of the Yalta Polish boundary debate. These facts were known to Roosevelt and Churchill, but were not used to oppose Stalin's claims at Yalta.

The People of the Tennessee Valley Support TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. KEFAUVER. Mr. Speaker, the success of the Tennessee Valley Authority is the most notable achievement on the domestic front of our Nation in recent years. The TVA has proven to be a great benefit not only to the people of the Valley but to the Nation. Under leave to extend my remarks, I include an article by Mr. Alfred Mynders, of the Chattanooga Times of December 31, 1947,

and an editorial of the Chattanooga Times of January 1, 1948.

[From the Chattanooga Times of December 31, 1947]

NEXT TO THE NEWS

(By Alfred Mynders)

Chairman REVERCOMB, of the Senate Public Works Committee, tells the Times that "a thorough investigation into the program of the Tennessee Valley Authority at which all interested forces will be given an opportunity to be heard" will be started by his committee soon after the Eightieth Congress convenes on January 6.

Chairman DONDERO of the House Public Works Committee says that an inquiry will be started there.

Distributors and users of TVA power in the great Tennessee Valley are thus facing another spiritual whipping in the next Congress. It is always open season for the TVA in congressional halls.

Twice have congressional committees gone over the TVA with a microscope and on each occasion the TVA was given a clean bill.

Has anything new transpired since those other thorough investigations? Not a thing. The TVA is still operating under the law of Congress, the TVA Act.

There will be a rehashing of old charges which have been disproved, there will be a parade of the new propaganda retailing old rumors. The TVA has not changed, but the climate of Washington has.

Senator MCKELLAR kept the fight against TVA going for 5 years until at last enemies of any public power project which is conducted for the people seemed to gain the ascendancy in Washington. Now, the threat is to the future of the Tennessee Valley Authority as an independent and successful experiment.

Chairman REVERCOMB says that some amendments to the TVA act are certain to come out of the hearing. But he at least is not as violent as Chairman DONDERO, who went off half-cocked with a lot of bombast which shows that he knows very little about TVA or, at least, chooses not to give the facts.

If the Senate hearing is going to be thorough and if it is going to decide a definite policy toward TVA in the future, then let it come. Let's get all the facts and let's determine once and for all whether the dominant political party in Congress intends to destroy, or at least to cripple, a development which has meant so much to the people of the South and which meant so much in the winning of the war.

Does the dominant party intend to go back whole hog to the exploitation of power resources in order to pile up dividends and to pyramid profits to be siphoned into the big financial centers of the East?

Are any of the power lobby dupes so dense that they imagine that this country will revert to the form of exploitation practiced by the Insull empire?

We might as well know the answer to those questions before the November elections rather than to have those answers explode in our faces after those elections. The United States is not going to go Socialistic, but neither is it going to go plutocratic, if the people can help it.

Possibly there will be no more accurate test of the intentions of the party now controlling Congress than in its attitude towards the Tennessee Valley Authority. This may become a national issue because we can tell the real intentions of the majority party through the manner in which it tries to turn back the clock in the Tennessee Valley.

As for Tennessee itself, in the face of this threat to the TVA whose power is the lifeblood of industry and commerce in the volunteer State, surely in the next senatorial election every man must stand up and be counted.

The people of this State are tired of being kicked around on this TVA matter. They will not favor a man for the Senate who claims to be for TVA now, but who consistently voted with Senator MCKELLAR in keeping the old sores open. One cannot believe the people will vote for the Crump machine, which at least was passive if it did not indeed dictate Senator MCKELLAR'S efforts to tear down the TVA.

But above all, if there is going to be a third investigation of TVA, let it give both sides; let it decide once and for all if the TVA is well operated or not; if it is unfair to any taxpayer; if it is best operated under its regional manner or by constant meddling from Congress—let all of these questions be settled and let us see just how far Congress would be willing to wreck the economy of a great region and to tear down a development which has aroused the admiration of the whole world, in order to appease what is sometimes called free enterprise, but what, to the private power lobby, means free exploitation.

[From the Chattanooga Times of January 1, 1948]

THESE THINGS, TOO

The fourteenth annual report of the Tennessee Valley Authority, just sent to the President, shows that the average domestic consumer of electricity in the Tennessee Valley region uses 60 percent more electricity in his home and pays 16 percent less for it than the average residential consumer in the United States.

But we hope that Congress in studying the report will notice some of the developments of TVA which do not bear on electric power. It is shown, for instance, that the TVA reservoir system in 1947 reduced what would have been the sixth largest flood in Chattanooga in 100 years by nearly 13 feet and averted $7,500,000 in flood damage.

Since the TVA's first reservoir, Norris, went into operation in 1936, about $21,500,000 in flood damage has been averted at Chattanooga.

Little notice is given in Washington to the TVA's great health program, but this annual report shows that of 13,705 blood films taken from residents along TVA lake shores, only 21 showed evidence of malaria infection, an incidence of 0.15 percent compared with 10 percent in 1938 when the first survey was made.

On soil improvement it is shown that in the Tennessee Valley, during the years from 1934 to 1944, more than a million acres of the valley's 11,000,000 acres of agricultural land was shifted from row crops to close-growing grain and pasture crops and more than a million acres had been terraced.

The report shows that not only are the great lakes of the South a fisherman's paradise for sport, but commercial fishermen, last year, obtained $300,000 in gross income from the sale of nongame fish. And musseling operations accounted for about $500,000 of income to the region.

The TVA is helping to preserve our forests. In cooperation with State foresters, the TVA, in 1947, set up nine new large forest-management demonstrations on 55,000 acres. Fire protection, which TVA encourages in cooperation with State and local forestry organizations, has been extended to 6,000,000 acres in the valley.

These are just a few of the ways the TVA is benefiting the valley aside from the power development. We hope that Congress will get the over-all picture.

American Citizens Appeal for Relief in Germany

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. HAVENNER. Mr. Speaker, a letter addressed to the House of Representatives by Mr. F. C. Mensing, national secretary of the Federation of American Citizens of German Descent in the United States of America, Inc., has been referred to me by the Clerk of the House as the Representative of the congressional district in which Mr. Mensing resides. Attached to this letter were copies of six resolutions, dealing with problems in Germany, which are stated to have been unanimously adopted on November 30, 1947, at the national convention of this federation held in Los Angeles, Calif.

Resolution No. 1 appeals to the Congress to appropriate $250,000,000 for the relief of starving people in Germany, and requests that this money be used for food and clothing only.

Resolution No. 2 urges the enactment of legislation to reduce the present postal service rate for gift parcels to Germany from 14 cents per pound to 5 cents per pound.

Resolution No. 3 states that the United States Military Government in Germany has transferred the custody of more than 500,000 German war prisoners to France and England, and requests the return of these German war prisoners to the homeland.

Resolution No. 4 appeals to the Congress of the United States to stop the demolition and dismantling of industrial factories in Germany which are essential to the sustenance of the German people.

Resolution No. 5 urges the Congress to establish a democratic and Christian peace in Germany in the near future.

Resolution No. 6 appeals to the Congress to enact legislation for the admission into the United States of 200,000 displaced German people, and German orphans for the next 5 years.

The New Challenge to a Free Economy

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. REEVES. Mr. Speaker, at the request of some of my constituents, and under leave previously granted, I include in these remarks the text of an address which I delivered on January 8, 1948, at the installation dinner of the Southern

States Industrial Council in New Orleans, La.:

THE NEW CHALLENGE TO A FREE ECONOMY

It is axiomatic that free government and a free economy are completely dependent upon each other. They are mutually related and reciprocal. Each is indispensable to the other. Neither can exist without the other. In the generation which has passed since the close of World War I that principle has been repeatedly illustrated. When free government is destroyed the economic life of the people becomes subservient to the state. When a free economy collapses, or signally fails in its obligation to maintain a reasonably stable prosperity, fear and want drive nations blindly to discard their liberty and seek the specious refuge of authoritarianism.

The lesson is clear. How well we in the United States have learned it is a question yet to be answered.

Ours is a capitalist economy. In recent years skillful propagandists have attempted to discredit capitalism as a sinister form of exploitation. This, of course, is the typical Communist interpretation. True capitalism is the framework of any free economy. Webster gives us an excellent definition of capitalism:

"An economic system in which the production and distribution of wealth, the employment and reward of human labor, and the extension, organization, and operation of the system itself are entrusted to and effected by private enterprise and control under competitive conditions."

What more could be said in defining a "free economy"—a term of more popular connotation than the much-maligned "capitalism"?

The existence and survival of a free economy are always challenged by the aftermath of war, as well as by extreme fluctuations of prosperity and depression, inflation, and deflation, in the economic cycle. Its historic task—not yet well performed—has been to cushion and avoid, if may be, the periodic shocks in the cycle which bring poverty and desperation to great masses of people. But in critical times of want and insecurity the trend is always away from a free economy and toward a "captive" economy of an unvarying pattern—absolute governmental control over the economic system and over the economic life of the individual, and the elimination of all competition in business. These are the familiar characteristics of authoritarianism.

The highly organized and determined assault upon the free American economy during the last 15 years has followed the typical pattern. It is clearly outlined in public declarations of men and women who have been officials of the present national administration and its predecessors since 1933. They show without question a grim purposefulness to undermine and destroy the economic system of this country. Let me recall some of them to you.

Paul Porter, who as late as 1943 was head of the Shipping Division of the War Labor Board, and who subsequently headed the late and unlamented Office of Price Administration, helped write a tax plan for the Socialist Party of America in 1934. It said, in part:

"All natural resources of the United States, such as minerals, forests, and waterpower sites, all banks, insurance companies, and public utilities, and all basic industries such as mining and the manufacture of steel, automobiles, and textiles, shall be public property. * * * All owners of stocks, bonds, mortgages, land, buildings, or equipment affected shall be required to surrender them in return for Commonwealth bonds."

Dr. Adolph A. Berle, until very recently an Assistant Secretary of State, told the Temporary National Economic Committee in 1939:

"Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government ultimately will control and own those activities. * * * Over a period of years the Government will gradually come to own most of the productive plants of the United States."

Dr. A. Alvin Hansen, professor of political science at Harvard University, adviser to the Federal Reserve Board and consultant to the National Resources Planning Board, was quoted in the Chicago Journal of Commerce on June 27, 1942, as saying:

"Congress will surrender to the administration the power to tax, keeping to itself the right only to establish broad limits within which the administration may move. Congress will appropriate huge sums of money, surrender its power of directing when and how the money shall be spent. Other extraordinary powers, such as, for instance, to effect wholesale social reforms, will be delegated to the administration, which will retain most, if not all, of the extraordinary wartime powers."

Mr. Paul Blanshard has been an economic analyst and consultant in the Foreign Service Division of the State Department at a per diem compensation of $33 per day. His plan for the economic life of the United States was set out in one of his books, as follows:

"Socialists propose to supplant the competitive planning of capitalism with a highly centralized planned economy. Our aim is frankly international and not narrowly patriotic. * * * If we gained the control of the American Government we would probably begin with a complete revision of the national governmental system. We would write an amendment to the Constitution giving the Federal Government the right to regulate all private business and to enter into any business which it deemed proper, or we would abolish the Constitution altogether."

In Philadelphia, on April 15, 1932, he told the Academy of Arts and Sciences:

"Having once captured the Government and shelved the Supreme Court, we Socialists would nationalize as many large industries as we could chew. We would do it peacefully, if possible, and we would do it otherwise if necessary."

The same authoritarian philosophy expressed by these Government officials still dominates the administration as the President demands that Congress give him the power to use "police state" methods to control prices and the other symptoms of inflation. And it is only a short step from economic dictatorship to political dictatorship.

Since the close of hostilities in World War II our tasks of reconversion and readjustment to peacetime production have been virtually completed. Today we are deep into the second postwar phase. It is at best a difficult period of striving to establish reasonable relations between supply and demand. It is complicated by special problems such as monetary inflation and extraordinary programs for export and foreign relief. No nation in history has faced a like situation. No economic system, free or authoritarian, has had more exacting demands made upon it. Near-demoralization at home and outright chaos abroad make this a time of grave danger for our still free economy. A serious depression might well undermine and destroy it. Continued confiscatory taxation threatens to smother it. Labor-management disputes and industrial unrest tend to sabotage it. The national administration is frankly hostile and its policy is far more consistent with socialism and nationalization of basic industry than it is with the preservation and strengthening of a free economy.

Can a free economy survive in the United States in this unequal battle against both economic and political forces? The answer to that question depends entirely upon whether government and industry and labor adopt more constructive policies and cooperate with intelligence and determination to preserve it.

The course which the Federal Government is to follow has become a major political issue. It is always unfortunate for the country when a great economic crisis and a great political crisis coincide. It is nothing less than dangerous when they coincide in an election year. But that is the situation which we face in 1948. And it is just as well that we meet it and deal with it.

If we are to solve the menacing problems of inflation and meet the challenge to maintain either economic or political freedom in the United States, it seems to me that our national policy must be changed in at least four important respects. I would like to discuss each of these changes briefly.

The first is restoration of the integrity of the currency.

Almost every diagnosis of our inflationary ills reiterates the fact that there is too much money in circulation for the volume of goods produced, with the result that prices are forced progressively higher. The remedy usually suggested is a substantial increase in production with a view to satisfying demand and restoring competitive conditions. But the fact is that price levels have continued to rise in spite of the great advances in production during recent months; and it seems obvious that high prices are brought about by factors other and more powerful than the disparity between supply and demand. For that reason alone, the arbitrary power demanded by the President to fix price ceilings and control distribution through rationing could not effectively deal with the underlying causes of inflation. Unfortunately, our people do not realize that high prices are the result of inflation, and not its cause. The demand for price and rationing controls is simply an effort to exploit the popular misconception in this regard.

Inflation is a rank economic growth. It cannot be eradicated by cutting or trimming. It must be rooted out, and its roots are deep.

As long ago as 1915 the seeds of inflation were planted in the United States. In that year Congress authorized what then appeared to be, and perhaps was, an innocuous monetary step. It permitted the Government to deposit its own bonds with the banking system as a basis for expanded credit and the issuance of new money.

But a major step in the devaluation of the currency was taken in 1933. You well remember the period. It was back at the other end, the deflation, or depression end, of the economic cycle. Rexford Tugwell and Co. were about to "make America over." The administration was proposing to restore prosperity and relieve distress in the United States by sleight-of-hand tricks and by secret plays called by the quarterback. In May of that year the first of a series of rubber stamp Congresses was persuaded that more than anything else the country needed a little rubber in the currency, to make it more elastic. As one newspaper headline put it in my own city, Congress was eager to inflate. And they did, fantastic as it sounds in these days of skyrocketing prices. It looked like a good idea at the time, and few of them remembered that anything you keep on inflating is very likely to burst.

Steamrollering the strenuous objections of the little group that wanted to be honest with the people in money matters the House passed the so-called Thomas inflation amendment by a vote of almost 4-to-1. By its terms the Federal Reserve banks were authorized to buy $3,000,000,000 of Government bonds and issue $3,000,000,000 of new currency—Federal Reserve notes. As one of the sponsors of the measure said, it gave the President "the right to give this country any measure of inflation which, in his judgment, he thinks it needs." More than that,

it authorized the President to fix the weight of the gold dollar, provided only that he could not cut it by more than one-half.

I have listened recently to many of my colleagues across the aisle in the House complain bitterly about inflation, and demand that something be done about it, quickly. Some of them have been there a long time, but their memories must be short. Fifteen years ago they were hot for inflation. Their remarks made in the House in those days would make interesting, if somewhat embarrassing, reading for them today. One of them said, in those rollicking early days of the New Deal:

"This [proposed] expansion of the currency will bring back commodity prices. It will benefit, and not injure, the wage earners. * * * Every salaried man and woman in America, from the President down, is having his salary rapidly reduced at present because of this depression, and it is going to be further reduced, if not wiped out, unless this [currency] expansion program is put into effect."

And here is a classic voiced by another congressional advocate of cheap money:

"Since we have recently suffered from drastic deflationary steps by the adoption of the economy bill, the closing of so many banks, reduction of purchasing power of the people generally, it is necessary that inflationary measures be enacted. * * * No nation has ever got out of a depression without inflation. * * * If quantity of credit is desirable, quantity of money is also desirable."

The gentlemen who voiced these sentiments are still in the House, and frequently denounce the Republican Party roundly for not doing something about inflation. What is more, some of you are pretty well acquainted with them. There are many instances of similar statements, but all of them are in accord with the views of the Congressman who made the amazing statement that—and I quote again:

"If any one thing was ever needed in the opinion of the American people, it is the inflation of currency to meet the increased purchasing value of the dollar."

Yes; he voted for the bill, too.

We must give them credit for doing a thorough job of inflation while they were about it. They bred a new species of blue-feathered buzzard which became such a Nation-wide pest that I understand that this organization originated as a hunting society to exterminate it. In addition to fixing price floors, they adopted a policy of artificial scarcity—of restricting production by manufacturers and farmers and destroying surpluses. And as recently as only a year ago the administration was still at it—pouring kerosene over $90,000,000 worth of potatoes, and plowing them under for fertilizer, while most of the world was starving to death.

The inflation of our currency has increased tremendously in the last several years. By way of comparison, at the peak of high prices following the First World War, on October 31, 1920, we had $6,700,000,000 of currency in circulation, amounting to $53 per capita. But by October 31 of 1947 the total currency in circulation amounted to $29,000,000,000, or about $198 per capita. This tremendous increase alone was enough to precipitate an unhealthy inflation. But six-sevenths of all outstanding currency was Federal Reserve notes, which amounted and still amount to more than $24,000,000,000. An alarming proportion of all outstanding Federal Reserve notes and of banking credit extended by the Federal Reserve System is backed by nothing more substantial than the Government's promise to pay in some form, some day, reinforced by an aggressive policy on the part of the Government to support above par the market price of its own securities. It is particularly significant that during the last week of December 1947, when the Government bond market broke following lowering of the support price, the Federal Reserve System purchased almost a billion dollars in Government securities in 3 days. The immediate effect was to increase reserves on which commercial banks can make additional loans. It was, in other words, a step which sharply expanded available commercial credit and the money supply at exactly the wrong time—when both the administration and the Congress were striving to curtail it.

Here is the germ of our inflation. And here is the threat of ruinous, runaway inflation if it is not curbed. Sooner or later—and gradually, we hope—a readjustment is inevitable. But until the total amount of currency in circulation is reduced by retiring a substantial proportion of the billions now outstanding in Federal Reserve notes, and until the practice of expanding commercial credit on the strength of Government securities is curtailed, price levels will remain on a high plateau. Our economy is a good deal more sensitive to deflation than it is to inflation, and the process of restoring the dollar to its true value and correct volume and of contracting bank credit will have to be as slow and cautious as the process of inflation was speedy and reckless.

Actually there is no way to check the expansion of credit or to retire Federal Reserve notes except by retiring Government securities held by the Reserve banks. This is the painful problem of reducing the national debt. I do not see how we can justify further postponement of debt reduction for this purpose, if for no other. Following World War I a debt-retirement program on a minimum annual basis was successfully undertaken. The inauguration of a similar program, however modest, following World War II would of itself tend to restrain the expansion of commercial credit. It is a responsibility which we must assume immediately.

I venture to predict that in the current session of Congress the entire problem of our banking and monetary system will receive special consideration. An increase in the gold reserve requirements is very probable. There will be a strong policy toward tightening bank credit and reversing the downward trend of interest rates. It is my conviction that a free economy cannot thrive in an atmosphere of cheap money and loose credit, especially when both are subject to manipulation.

The second step which seems essential to guarantee an economy which is both stable and free is the adoption of a sound internal fiscal policy for the Federal Government. It is estimated that for the coming year the President will ask appropriations exceeding $40,000,000,000, more than two and one-half billions in excess of the record peacetime budget submitted last year. And that is only the beginning.

In addition, the Federal Works Agency proposes to spend $5,000,000,000 per year for 15 years on public works.

The three armed services have already prepared budget estimates which, if approved, will cost $25,000,000,000 per year for national defense commencing in the early 1950's.

A special study of the economic development of the South contains a recommendation that over $27,000,000,000 be spent for that purpose.

Expenditures proposed under the Marshall plan average $4,000,000,000 annually for the next 4 years.

The Federal Government is expected to lay out $11,000,000,000 for new school buildings all over the country.

These are typical proposals. All of them are current, all are seriously urged, and there are many more like them.

In the often-repeated words of our Pennsylvania colleague, BOB RICH, "Where are we going to get the money?"

Don't be deceived by the propaganda that the costs of government are coming down. At the present time the contrary is true. The trend of Government expenditures is up, and the possibility of a peacetime budget of $50,000,000,000 a year or more within the next several years is not mere idle talk. It will be a grim actuality unless there is a sharp reversal of the present spending policies of the Federal Government.

We are still maintaining a thousand agencies and two million civilian employees to carry on the work of the Federal Government. I have discussed the personnel problem with officials of various offices and bureaus in Washington and elsewhere and every one of them has complained that he is understaffed. The fact of the matter is that all proper functions of the Federal Government could be satisfactorily performed with several hundred thousand fewer employees. And the sooner the reduction is made, the sooner the tremendous burden of Government can be reduced, and the sooner the several hundred thousand persons can be returned to productive employment.

Obviously, we need a great many fewer Federal employees, and they ought to be better paid. Perhaps if we adopted a policy of increasing the salaries of all remaining Federal employees by 5 percent for every 100,000 removed from the pay rolls, we would receive some cooperation from them instead of the bitter, last-ditch resistance to economy which opposed us in nearly every agency last year.

But economy cannot depend on pay-roll reductions alone. The mounting cost of fixed and unavoidable items in the national budget will compel us to curtail or discontinue appropriations for some of the services, aids, and subsidies now provided to special groups. This is neither a pleasant nor a popular task, but it is a necessary one. Fiscal stability has become a sine qua non. With the aid of the newly created Commission on Reorganization of the Executive Branch of the Government a really intelligent and constructive approach to this difficult problem can be instituted a year hence.

The third of the four essentials to which I referred is tax revision and reduction. So far as tax revision is concerned, there are few either in or out of the Government who will question the need for correcting the manifest inequities which have arisen under the Federal tax laws. There is perhaps none of you who does not immediately think of the existing unjust discrimination against citizens of community-property States under the estate-tax laws as amended in 1942, and the equally unjust discrimination against citizens of the non-community-property States under the income-tax laws. Many, if not most, of you are keenly aware of the need for abolishing the double taxation of corporate earnings and for making other changes in the Internal Revenue Code.

But for the purposes of this discussion my interest tonight is in the reduction of Federal income taxes. More than 2 years following the war surtax rates remain at the confiscatory levels reached in wartime, with no reduction except the straight 5-percent discount authorized in 1946. Yet in 1948 the President reaffirms the view that there must be no reduction in personal income taxes. I do not agree with him.

Persons in all income brackets are entitled to substantial relief from the burdensome tax rates which have been in effect since before the war. Those in the lowest brackets are entitled to the greatest relief. There can be no argument about that. In addition to increasing take-home pay, tax reduction would tend to reduce retail prices because income taxes are an integral and measurable part of every selling price.

But substantial tax relief is necessary for middle bracket and larger incomes because of the special function they perform in our

economic system. It is from these groups that the vast majority of new venture and investment capital originates. So long as we maintain a free capitalistic economy we shall depend on this source for new investment funds.

There is an alternative, of course; we could tax them to death, turn to the Government for all new financing, nationalize our basic industries and then look around for some free country to borrow money from—the way England has done. That is exactly the way Dr. Adolph Berle, late of the State Department, whom I quoted a few minutes ago, would have us do it.

Almost everyone realizes and agrees that for the time being incentive has been destroyed by the continuance of confiscatory income-tax rates and that only substantial tax relief will revive it. I well remember the words of one of my distinguished colleagues on the subject. He said:

"If you tax a man 20 percent of what he earns on Monday, 40 percent of what he earns on Tuesday, and 60 percent of what he earns on Wednesday, and you are going to tax him 80 percent of what he earns on Thursday, and 100 percent of what he earns on Friday, he won't work on Thursday and Friday."

A Fortune survey last spring proved how right he was when 70 percent of the business executives polled stated that they would not work 2 hours a day longer to double their incomes—solely because most of their additional earnings would go to the Government in income taxes.

I said almost everyone agrees that high taxes have destroyed incentive. Not everyone agrees with that proposition. In November the Treasury Department—and surely the Treasury Department is always objective and never rationalizes about such matters—took the opposite view. It declared that high taxes give greater incentive to individual effort and that tax reduction tends to make taxpayers relax in their efforts to earn income. This is how the Department arrived at that somewhat startling conclusion:

"If taxes take larger proportions of their incomes, the incentives of these individuals to work tend to be increased rather than decreased. They will try, within the limits of their abilities, energies, and opportunities to earn more to attain and maintain the desired incomes after taxes. A tax reduction would tend to reduce their incentives to work and slacken their efforts, since their objectives could be met with smaller incomes before tax."

Far be it from me to question what prompted them to put out that choice bit of sophistry as a press release. Experience is squarely to the contrary. It is a well-known fact that persons employed on a commission basis generally stop working for the year when they have earned $18,000, for beyond that amount the Government takes more than one-half of their incomes in taxes. The Treasury has innumerable statistics which disclose clearly the smothering effect of high surtaxes on personal incentive as well as on new investment capital.

The most striking example of this situation is found in current trends in new corporate financing. With an unprecedented demand for increased production and for new products, in this period plant expansions would ordinarily be financed principally with new venture capital, invested in stock or equity issues. This has been the practice and the experience until very recently. In 1925, for example, new security issues accounted for 47 percent of the total new investment in plant and equipment. In 1926 new capital issues were equal to 44 percent of the new investment, but in 1947 the percentage dropped to 25 percent. Even as between 1946 and 1947 the shift from equity, or new ownership, financing to borrowing is apparent; in the first 9 months of 1946 58 percent of the capital raised for corporate financing was obtained by selling common and preferred stocks, and the other 42 percent was raised by selling bonds. But in the same period of 1947 only 29 percent of new capital issues consisted of preferred and common stocks, and the remaining 71 percent of the total new financing was obtained by the sale of bonds, that is, by borrowing. And between the 2 years there was a definite shift from common to preferred stocks. During 1947 new equity issues generally found the market unfavorable and some stock issues were withdrawn in favor of debenture financing.

This situation emphasizes the extent to which under existing conditions high taxes have siphoned off income which would otherwise have been available for capital investment. It illustrates how excessive taxes, coupled with the double taxation of corporate earnings, have prevented the accumulation of new-venture capital and have made the ordinary risks of an equity investment singularly unattractive to such capital as may be available. There is no question but that in this way the present Federal tax policy has progressively stifled the normal and needed growth of our economy. It is an extremely unhealthy condition, particularly at a time when our productive facilities require expansion and adaptation to meet greater demands for consumer goods.

The principal opposition to income-tax reduction is based on the argument that we cannot afford it for budgetary reasons, including primarily the requirements of debt reduction. This reasoning ignores our experience in the 1920's, when each of four different successive reductions in personal income surtaxes was followed by an increase both in incomes and in Federal revenues from income taxes. This same reenergizing of the entire economic structure through stimulus of incentive and the release of venture capital would be brought about by substantial tax reduction at this time. Tax reduction is one of the keys to a long period of sound prosperity in the United States. It is my conviction that Congress will reduce income taxes this year, with or without the approval of the President.

Fourth, and finally, is the curtailment of the high rate of depletion of our national resources. We have enjoyed prosperity in this country because our soil, our minerals, and other resources have been developed and utilized primarily for the use and benefit of our own people. The result is a standard of living of which every other nation in the world is understandably jealous. We have tardily begun to realize what deep inroads have been made into our dwindling and irreplaceable mineral resources by war and by programs of foreign aid and relief. Intensive and protracted agricultural production has mined the fertility of our soil to the danger point.

In a study long withheld from publication, the Interior Department has disclosed the alarming extent to which our mineral reserves have been depleted. The Bureau of Mines reports that at the present rate the United States will exhaust all its known reserves of 21 out of 33 essential minerals in another generation. We have consumed 97 percent of our original supply of mercury; 85 percent of our lead and silver; 80 percent of our chromium; 70 percent of our tungsten, manganese, vanadium, and bauxite; 65 percent of our zinc; and 60 percent of our petroleum.

The prospect is not at all a pleasant one. We have less than 1 year's known supply of nickel and tin left. Manganese will last another 2 years and mercury 3 years. In 4 years our known supply of tungsten, antimony and platinum will disappear. We have enough reserve bauxite for 9 years and enough silver for 11 years. Our known reserves of lead will be used up in 12 years. The diminishing supply of good quality iron ore is a source of concern to every user of steel.

Our poverty in the minerals which feed our industrial machine is part of the price we paid in the war to preserve our liberty as a people and our freedom as a Nation. For many essential materials our peacetime economy will become increasingly dependent upon imports from countries not yet highly industrialized, and another war would create new and difficult problems in industrial production.

To what extent should we accelerate the depletion of our mineral resources and the exhaustion of our soil for the rehabilitation and reconstruction of needy foreign countries?

This is the paramount issue confronting the session of Congress which has just convened. Both sides of the question are affected by political considerations and befogged with propaganda. No one doubts the desperate need of the war-torn nations of western Europe. But I fear that very few have taken account of the far reaching and serious consequences of pledging a substantial part of our remaining resources to reconstruction abroad. I am sure that the average American citizen is badly confused by the prospect of our sending machinery to Socialist England so that she may barter her own machinery to Communist Russia in exchange for grain. Just how the spread of communism will be prevented by that particular do-ci-do in the international square dance is yet to be explained.

The operation of our entire economy might very well be seriously impaired by any long-range, large-scale export program which dipped ever deeper into the dwindling reserves of minerals and soil resources of this country. We must proceed with great caution lest we hasten the day when the United States may become a have-not nation, dependent on the import of vital raw materials for her economic existence.

Let us pause and take stock of America—the richness of her soil, the wealth of her forests, the treasures of minerals in her mines. These are the means by which we live, and they are the only tangible heritage we can leave to our children. We must not be profligate with them.

I have not undertaken to diagnose all of our national ills. I have merely suggested four of the major changes in national policy which I regard as indispensable to our future prosperity. I offer them for your consideration and not as a panacea. Nor do I pretend that the accomplishment of any of them will be easy, or convenient, or painless. But I am satisfied that forthright national policies of restoring the integrity of our currency, reducing both the current cost of Government and the amount of its debt, relieving our weary people of part of the crushing weight of taxation, and conserving our national resources, will establish in America the sure foundations for a resurgent free economy which will become a tower of strength to our posterity and to the whole world.

It is, indeed, a time of great challenge. But it is likewise a time of great opportunity for progress and achievement.

General Arnold Says: "We Will Lose the Next War"

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. RANKIN. Mr. Speaker, the same forces that crucified Gen. Billy Mitchell and prevented us from building up an

adequate air force prior to World War II, which would have prevented the cowardly Jap attack on Pearl Harbor that practically destroyed the American Navy and resulted in the most humiliating disaster this country has ever experienced, seem to be working to prevent our building and maintaining an adequate air force at this time.

Gen. H. H. Arnold, one of the great soldiers of all times, warns us in an article which appeared in Sunday's edition of This Week magazine of the danger of pursuing such a policy.

General Arnold's statement follows:

"WE'LL LOSE THE NEXT WAR"

(By Gen. H. H. Arnold)

We won the last war. And it's the last war we'll ever win. If we have another, this Nation will lose.

We'll lose and the enemy we fight will lose, because victory in atomic warfare is no longer possible. One nation cannot defeat another nation today. That concept died with Hiroshima. War is like fire; you can prevent a fire, or you can try to put it out, but you can't win a fire, because fire is destruction.

If we fought Russia, the best we could hope to achieve is a moral victory, and that would be small comfort to the remnants of our people, crawling amid the burnt-out foundations and charred chimneys of a ruined nation.

So we must not, we cannot, talk about waging war with Russia. Even if we wiped out Russia, we would be wiped out in the process. War itself is defeat. We must talk about waging peace. We must wage peace with all the air power, with all the machines and money and men that we used to fight Germany and Japan. We must be stronger than any other nation in the world, because I am convinced we are one of the few nations in the world today that genuinely, devoutly, and unselfishly want peace.

Where do we stand, then, at this most critical moment in our Nation's history?

How does our air power compare today with that of other nations, either potential allies or potential enemies? Are we strong enough to prevent another war?

ONE-PUNCH OUTFIT

During the war, as commanding general of the Army Air Forces, I was responsible for 2,500,000 men. I still feel a deep responsibility toward these men, and I believe they want to know the facts.

That is why I am breaking a 2 years' silence to state these facts frankly. Any potential enemy knows our military situation anyway; the only ones who do not realize it are our own people. The cold truth is that at present we are almost as bad off, in a military sense, as we were before Pearl Harbor.

If another attack comes, the first blow will again fall through the air. Our Air Force would hit back with all the power it has. It could probably hit the enemy a staggering blow. But then it would be all over for us. Our Air Force today is a one-punch outfit. Without the ability to launch a sustained counteroffensive, we would have to surrender—or be annihilated.

We are little better than a third-rate power in the air. We have about 3,700 first-line aircraft in flyable condition, but more than half of these are being used for training and are not ready for combat. We have another 5,900 or so first-line planes in storage, but to put them in combat readiness would take from 3 to 6 months. And, remember, for many of our first-line aircraft in operation, and for all of our aircraft in storage, time is running out fast. In a very few years every last one will be obsolete.

IT TAKES TIME

Of course, we say, we have the atomic bomb. We comfort ourselves by stating over and over that it would take Russia 2 or 3 or 4 years to get that bomb into mass production. But do we remember how long it took us, last time, to get ourselves ready? If we started rebuilding at full speed, tomorrow morning, we would require several years to reach our full fighting strength.

All the planes and all the engines we used in World War II were on the drawing boards or in actual production at the time of Pearl Harbor, yet American aircraft production did not reach its peak until 1944.

Five full years were consumed last time in reaching our maximum in air power. And at that time we had strong allies to help give us the needed time. Our own factories were never under enemy bombardment. There were no atomic missiles to slow or cripple our production. Even at that, we barely made it; if we had been just a little more tardy, Germany's V–2 program would have been successfully launched, and we would probably still be fighting today. Our margin of victory was perhaps only a matter of weeks.

When Germany surrendered, the Air Force had more than 43,000 combat aircraft. What is more, there were 14,000 fighter pilots and 21,000 highly trained air crews to man our bombardment-type planes. At the time of Japan's surrender, we had 2,865 of the B–29 superfortresses that had smashed and seared Japan's war economy to a state of impotence.

American air power hovered for a moment at that magnificent height. Then, with the war over but with the peace yet to be won, the cries for demobilization mounted in America and echoed around the world. They did what the guns of the enemy had never done. Within a few short months, precipitous demobilization had so riddled the Air Force's wings that not one group was fit for combat.

To be sure, we have made some recovery since that low ebb of our national strength. America is beginning to realize that its part in the allied victories has placed us inevitably in a position of world leadership. We have begun to rebuild our military position.

But we are doing it far too slowly to be safe. The minimum requirement for the Nation's air security is an air-force-in-being of 70 combat groups, supported by the necessary number of service organizations. Although the Air Force was able to activate 55 of these groups by the end of last year, there are funds to sustain the remaining 15 on a skeleton basis only. And a glance at the future is even less encouraging. The Air Force budget for 1948 will permit the maintenance of only 40 combat groups—not much better than half the minimum requirement for the safety of the country.

WE'RE STALLING

Nor does the picture become any brighter when we look at aircraft production. The current Air Force budget allows us to purchase less than 1,500 aircraft of all types this fiscal year. This is just half of the 3,000 new aircraft the Air Force has stated must be procured each year to defend our shores.

Worse even than the decline of our military strength is the deterioration of our national pride. We are growing apathetic toward all national security matters. We hesitate and fumble and stall. We let the Congress cut military appropriations drastically, we debate endlessly over universal training, we let our strength dwindle a little more each day.

These are the plain and chilling facts. We have no time to lose; this golden opportunity to rebuild our military power may not last much longer. It will be too late to start after we are attacked. There are several basic steps that we must take at once, to insure the prompt recovery of our former position as the strongest nation in the world. These may be summarized under four headings.

1. A balanced national defense

We must maintain an adequate Army, Navy, and Air Force as a deterrent to any potential aggressor and as a power actually to stop war. If war does come, our first major task will be the air defense of the United States, its territories and possessions. After that, it would be the task of the Air Force to blunt the enemy's offensive capability through strategic bombardment. This would give us time to build our strength to the point where we could take the initiative.

Once this build-up of offensive strength has been attained, our Air Force would have to launch a full-scale strategic offensive to destroy completely the war industry and the war economy of the enemy nation. Then, when this phase was completed, our Air Force would join with our ground and naval forces to exploit the effects of our offensive and to establish control over the enemy nation.

Our Air Force today is woefully inadequate to perform this task. There is no threat to American sea power in the world; but American air power is dangerously below par. To give America a balanced defense, therefore, we must first of all increase the Air Force's share of our defense budget so it can perform its duty the way it is expected to.

2. Industrial preparedness

The heart and sinews of modern war lie in a nation's production. We must inaugurate a program of industrial preparedness, which will enable industry to maintain pilot plants, to stockpile machine tools, to redesign weapons and adapt them to mass production—in short, to take all steps necessary to insure volume output in a minimum time if another war should ever start.

3. Reserve program

We must support a reserve program which will enable our Army, Navy, and Air Force-in-being to expand rapidly in the event of war. The Air Force budget for 1948 will allow some form of training for only 50,000 members of all three civilian components—the Air Reserve, the Air National Guard, and the Air ROTC. While over 100 Air Reserve training detachments are needed, budget cuts have reduced our Reserve training facilities to 42. These budget cuts must be restored at once. Training takes time; and there may not be much time.

We must change many other old ideas, and fit them to the modern concept of war. Our commercial air lines, for example, form a very important part of our whole reserve system. We must keep our air lines healthy and strong, because we may need them in a hurry if a Pearl Harbor happens again.

4. Universal training

Last but not least, we must establish a program of universal training, to give the three services the trained manpower they need to insure peace. This program has been called for repeatedly by leading statesmen, clergymen, and military men. The temper of the times makes imperative that we set it in motion without further delay.

We cannot win another war. No one can win another war. Therefore, we must not fight another war. Our only hope in this atomic age is to apply our strength firmly and steadily for peace among nations. This is in keeping with our history, our traditions. We must maintain our strength—not to use as a belligerent, but to buttress our position as the world's referee for peace. That means that what we built up together for victory should not be allowed to go to seed. We must work for peace as wholeheartedly, as devotedly as we worked for victory.

Red Cross Chapter To Lose Charter

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Van Wert (Ohio) Times-Bulletin of January 6, 1948:

RED CROSS CHAPTER TO LOSE CHARTER—REVOKED BY ACTION OF NATIONAL BODY FOR JOINING "CHEST"—BELIEVED TEST CASE IN NEW POLICY OF AMERICAN RED CROSS CONTROLLING FUND RAISING

Van Wert County Chapter, American Red Cross, will lose its charter Thursday, by ruling of the national organization, for refusing to drop its affiliation with the community chest's combined fund drives.

This arbitrary action of the American Red Cross against the local chapter, over the manner in which it chooses to raise its funds, is expected by local Red Cross and community chest officials to eventually reach Congress, and to put Van Wert into the national spotlight.

In the meantime, following public announcement of suspension of the local chapter's charter last October 17, Sprague Jones, president of the Community Chest board of directors, stated that any chest donor, whose donation included a subscription to the Red Cross, may have such Red Cross contribution refunded.

This is the first year since the war that the local Red Cross fund goal was included in the community chest quota, the drive having been conducted last October. Before the war the local Red Cross was also affiliated with the community chest.

The chapter suspension was made known here in a telegram of October 17 sent to Mrs. Marcile Borden, president of the local Red Cross board, by Harold B. Nearman of the eastern area of the American Red Cross.

CHARTER REVOKED DECEMBER 8

This same area official advised Mrs. Borden that he was recommending to the National Board of Governors that they revoke the Van Wert County charter at their meeting on December 8 because of the local chapter's violation of the nonaffiliation rule of the national corporation.

This action was taken at the December meeting in Washington, in denial of an appeal made in behalf of the local chapter by Attorney S. S. Beard, who attended the meeting. The ruling made at that meeting gave the Van Wert County Red Cross officers the option, in effect, of resigning or being fired from the national organization.

Speaking in behalf of the county board, Earl Shackley, a member of that board and chairman of the protest committee, said that the local officers would not resign because of their appreciation of the splendid cooperation of the chest and out of loyalty to the contributors and solicitors who gave so generously of their money and time to the Red Cross.

STATE OFFICIALS SPEAK

The heated argument with the National Red Cross stems from a violation of a recent policy set up by the national board, he explained, in which affiliation with other charitable drives is forbidden. In other words, he continued, the issue involvec only the manner in which funds are raised, and the national board's attitude is one of a dictatorial nature prescribing this manner, with no consideration for local situations or desires.

In Columbus, State Red Cross officials said the policy was adopted in 1942, with the approval of President Roosevelt, honorary national chairman, according to the Associated Press.

The question of affiliation with community chests or other fund-raising organizations was the subject of considerable discussion before the war, they said, with a majority of chapters expressing themselves as opposed to affiliation.

FOUR HUNDRED AFFILIATED IN 1938

By 1938, they said, about 400 chapters throughout the country were affiliated, but many were not able to carry on their full Red Cross program with their shares of community chest donations.

Some large chapters, they added, shrank in size as a result, and consequently a policy of independence of all other organizations in money drives was adopted.

A situation similar to the one in Van Wert, though not so far advanced, now exists in Pittsburgh, State officials reported.

Should the revocation go through, they added, the Van Wert chapter will be the first in the country to lose its charter for any reason.

The reasons for a combined drive have long been known here. It eliminates duplication of time and effort on the part of solicitors, and duplication of being solicited on the part of contributors, it was pointed out. With a quota for the Red Cross established, it should be the prerogative of local agencies to determine the most desirable and efficient method of collecting the required funds, Shackley said the local chapter contends.

PROTEST COMMITTEE FORMED

The Van Wert County Red Cross board of directors decided by unanimous vote to again affiliate with the community chest in raising funds for all organizations in one drive. For this "flagrant violation of the rules," as higher Red Cross officials termed it, and the current decision of local officials not to resign, the charter is to be revoked.

Upon receipt of this decision, which was definitely confirmed by Basil O'Connor, president of the American Red Cross, in a terse note to Mrs. Borden, a protest committee was formed here with Shackley as chairman.

This committee sent out letters appealing to all community chests and Red Cross chapters, where there were community chests, for support in this cause and asking the agencies to write to individual members of the national board of governors protesting the nonaffiliation rule. Letters went to communities in Illinois, Indiana, Michigan, Kentucky, Ohio, New York, Pennsylvania, New Jersey, Delaware, Massachusetts, Rhode Island, and Connecticut.

MANY COMMUNITIES RESPOND

The replies were encouraging. Sympathetic letters poured in from many communities, all accompanied with copies of letters which had been sent to higher authorities in the Red Cross. Nearly all of these communications not only favored the local cause but admitted to similar situations in other communities and the desire to conduct campaigns in the same manner. Some encouraged united action in opposing the national rule.

A copy of a letter written by Dan F. Gerber, president of Gerber's Baby Foods, Fremont, Mich., and an avid worker for charitable causes, to a Red Cross official says in part:

"I think the Van Wert incident has a lot of explosive possibilities. I know that before this incident I shared the resentment voiced at the Detroit meeting (sponsored by Henry Ford II to federate some 39 agencies' fund drives). If they persist in the revocation of the charter of the Van Wert County chapter, I would feel almost like a contemptible appeaser if I not only refused to contribute to the Red Cross but didn't actively and aggressively use every bit of influence I could muster in this community to get them to take their quota through our community chest or not get it at all."

MAKE FINAL MAIL APPEAL

Another letter, upholding the Van Wert case and saying, "There is a resentment by these various [local] units to Washington ignoring their own particular local problems," was written by Lewis A. Shea, chapter chairman of the Bridgeport, Conn., chapter, to E. Roland Harriman of Brown Bros. Harriman Co., 59 Wall Street, New York City, a member of the board of governors of the National Red Cross.

And there were many other letters, including a final, lengthy, explanatory letter from the Van Wert County board to O'Connor, stating that the board would not resign. This went out after that official's curt decision was received here following attorney Beard's unsuccessful appeal before the Washington meeting.

LETTER EXPLAINS POSITION

In a statement released yesterday for the local Red Cross board, Mrs. Borden said:

"The controversy with the board of governors involves a priniciple affecting all Red Cross chapters and community-chest organizations.

"It involves only the manner in which Red Cross funds are to be obtained in peacetime and does not curtail the activities of the Red Cross.

"In view of the splendid cooperation recieved from the chest during peacetime years, the local Red Cross board feels that it would be to the advantage of the contributors, the solicitors and the national organization to remain members of the local chest. We feel that the contributors, solicitors, and volunteer workers should have a voice in saying how the funds should be raised and we do not believe anything would be gained by a separate drive for funds.

"In view of our firm belief that our principle is right, we cannot, in all fairness to the community and ourselves, resign. As a result, our charter will probably be revoked."

LIKELY WILL BE TEST CASE

That Van Wert's may well become a test case, and that the situation is one of national scope, is evidenced by an open letter written to O'Connor by Robert Cutler, president of the Old Colony Trust Co., Boston. Lawyer, soldier, public servant, Cutler was national chest president from 1939 to 1942. His letter, copyrighted (1947) by the Atlantic Monthly Co., follows:

"The only true rule to serve as our guide is that the people in each American community, as freemen in a free society, shall have the right to decide how the money which they give to charity shall be raised and shared. It's their money and they work to raise it. Naturally, they think their voice should determine the amount of their goal and whether one campaign or many campaigns shall prevail."

Jones' statement in behalf of the community chest board of directors follows:

"Inasmuch as the community chest did, in cooperation with the local Red Cross board, solicit and accept funds intended for the Red Cross, and inasmuch as the local Red Cross chapter no longer has authority to accept these funds, the community chest board announces the following plan for the return of donations to those subscribers who wish to have their money returned:

"Any donor to the 1947 community-chest drive, whose donation included subscription to the local chapter of the American Red Cross, may have Red Cross subscription refunded by calling at or writing to the secretary of the community chest at the Community Clearing House, Van Wert.

"All funds earmarked for the Red Cross, not so withdrawn, will remain in the treasury of the community chest for later disposition."

The American Red Cross has refused to accept the check of the community chest for its half of the $3,500 raised for the Red Cross in the chest drive last October, according to E. C. Humphreys, chest secretary.

CHAPTER PROTESTS HIGH RED CROSS GOAL

WASHINGTON, January 6.—The American Red Cross goal of $75,000,000 for its 1948 fund-raising campaign brought a protest today from the El Paso, Tex., chapter that quotas set by the national organization are too high.

E. M. Kelley, Red Cross board chairman in El Paso, said in the Texas city that he is flatly rejecting a $33,000 quota there, adding:

"The war is over. If we can cut down 20 percent locally, the national body should be able to reduce 10 percent of its overhead."

Kelley said the El Paso chapter would seek $75,000 in 1948, of which $23,000 would go to national headquarters. This compares with a $99,000 goal last year with $26,000 for the national group.

Rank and File Labor Union Members Oppose Marshall Plan

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a most interesting letter from a citizen of Tulsa, Okla., who has been for many years one of the leading members of a great labor organization. The author of this letter is an esteemed citizen of the community in which he has lived for perhaps a quarter of a century. He is a student of national and international affairs. Knowing this, I sent this gentleman a copy of the so-called Marshall plan and one of the publications issued by the Department of State in support of the Marshall plan, together with a booklet written by Henry Hazlitt entitled "Will Dollars Save the World?"

The following is the reply this gentleman has sent to me on the subject:

DEAR MR. SCHWABE: Referring to a book by William Hazlitt and the second volume of a report by a Committee on Economic Cooperation with Europe sent to my wife and me from your office, I have read Hazlitt. The other volume is very technical and very hard for the layman to understand but appears to be the opposite of Hazlitt.

According to a Mr. Taylor, a commentator, we have already handed Europe, including Britain, $22,000,000,000 in loans, gifts, lend-lease, etc., since VE-day.

According to Mr. Hazlitt (and I thoroughly agree) we cannot save the world with dollars.

According to Mr. Truman, we should have no tax cuts, we should do without and over a period of some 4 years should use another seventeen billion or more dollars to rehabilitate Europe.

According to the morning paper, DeGaulle in France has suggested the killing of French free labor unions and the forming of associations of labor and management, which actually would be a somewhat similar condition to Mussolini's corporate state.

I agree with Hazlitt. And I'll go farther by saying that it is my opinion that only so long as we patrol the European Continent with bayonets can we maintain any semblance of ideolcgies such as we think they should have, and I am not sure we should try to think for them. We do not seem to be saving the world from totalitarianism. Maybe that's what they wish over there. If it is, let them have it, for it will be only a question of time then until it will break up into another European war, and we had better be strong enough to protect ourselves then. We cannot do it if we send our strength and money over there now. Next time it will be hemispheric, the east against the west.

Let's keep our wealth and soldiers at home. Who wants to be world leaders if it costs the taxpayer the loss of his loved ones and penury and want? Brought down to fundamentals, life is still a struggle to get enough to eat, to wear, and a place to sleep for the average person. If Government steps in and takes all he makes and ships it to people in other parts of the world not so fortunate, then we have a form of world-wide socialism, which cannot eternally be enforced without totalitarian power. That I am opposed to, either in the form of bureaus or in the form of one-man power.

We have entirely too much government now. Instead of making it more omnipresent, let us reduce it considerably.

A Defeatist Attitude

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Willimantic (Conn.) Daily Chronicle, issue of January 6, 1948:

A DEFEATIST ATTITUDE

Politics or no politics, the defeatist attitude which President Truman takes toward legislation not of his own making is unworthy of the high office he holds. During the earlier session of Congress he said the Taft-Hartley law wouldn't work and thus encouraged union leaders in their efforts to sabotage it and to interfere in every way with its operation.

In announcing that he would sign the anti-inflation bill, which he presumably had read although later he couldn't find it, declared the law is too feeble to do any good and that the public should not be led to believe that it will either reduce living costs or keep them from going higher.

If that is the spirit in which he approaches the assignments which have been given him under the law what hope can there be of even moderate success? Negative administration can only produce negative results.

The President would have been within his rights in stating that he preferred his own police state anti-inflation bill, complete with OPA, and that he was disappointed by the measure which the Republican majority in Congress enacted into law. But having said that and thus gone on record for the 1948 campaign, he should have stayed his hand.

A President genuinely interested in checking high prices would have proclaimed his intention to do the best he could with the weapons placed at his disposal. He would not have predicted failure in advance.

If now the law does not prove to be an effective instrument for combatting inflation, it will not be clear whether more bureaucratic methods such as proposed by the President should be endured, or whether the fault lies in the fact that the executive branch of the Government made only a half-hearted attempt to put the provisions of the law into effect.

Mr. Truman obviously does not like the law. With the 1948 elections coming up, can't it be also the fact that he does not really want it to succeed?

What Do Republicans Want?

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which was published in the South Pasadena (Calif.) Review on December 13, 1947. In view of the fact that the Congress will be faced with a number of important decisions during the coming year I believe this editorial is particularly timely and thought-provoking. The editorial follows:

WHAT DO REPUBLICANS WANT?

Soon the people of this country will be entering an election year, when citizens will exercise their rights of franchise, voting for what they believe to be their best interests.

Parties will be lined up against each other. Political oratory will ebb and flow. Platitudes will soar to new heights, platforms will be written and criticism of the ins, as well as the outs, will be heard on all sides.

But we are not so much interested in criticism, unless it is constructive, as we are in suggestion and program which will make this Nation a better democracy than it is now.

Just because a proposal is Republican policy or is Democratic policy is not really important. The important thing is whether such policy is good for all the people of this great country of ours.

The Republican Party has recently been entrusted with leadership in Congress at a time when every minute move this Nation makes has a major bearing upon the future of our present civilization, not here alone but in the world over.

We are not interested in politics for politics' sake. We are not interested in Washington decisions that are made simply for political party benefit.

We believe the people of this Nation will not entrust future leadership to a revitalized Republican Party unless it is willing to admit that good has come from opposition party leadership—correct the bad that has come

through wrong leadership, admit the errors of its own past, accept the successes of its opponents, and guide this Nation along the lines of fundamental truths.

The Republican Party should rise above party narrowness. The GOP and some of its leadership in the past has not been wholly savory. At times it has forgotten the welfare of many men at the expense of a few.

What the Republicans need today is more statesmanship and less reactionary political persiflage. Fortunately the party's younger element realizes this and is seeking to give the party a program of fundamental issues on which to rest its case.

The Republican Party must not be known as the party of the great industrialists or of any one segment of our population. By the same token the Democratic Party should not be known as the party of the segment of population known as union labor.

The Republican Party became great during the time of Horace Greeley because it stood for great human and social principles. It rose to power and prestige because of these principles.

There is a need today for a party dedicated to true human values and liberal democratic thought, not to opportunistic panaceas proposed by so-called liberals in recent years who would prostitute the American citizen before the ballot box in emotional appeals for votes and power.

Reorganizing Congress—What Remains To Be Done

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include herein an article written by David Cushman Coyle, eminent historian and political scientist, and published in the winter 1947 edition of the Virginia Quarterly Review. I invite the attention of Members to this thoughtful discussion of what was done and what remains to be done to bring our Congress up to date.

The article is as follows:

REORGANIZING CONGRESS

(By David Cushman Coyle)

The Congress of the United States has been more or less reorganized several times in its history. Many a man is now alive who remembers the great revolt of 1909–11, when young George Norris broke the power of Uncle Joe Cannon and his dictatorial Rules Committee in the House. The Senate in 1917, after a campaign against filibustering that started in 1845, finally adopted a cloture rule, by which two-thirds of the Senate can stop a filibuster but usually won't. Previous history shows that Congress can change its rules, but that any improvement is always stubbornly resisted, and that never yet has Congress done a thorough job of streamlining.

At present the need for streamlining is more acute than ever before, for two principal reasons. One reason is that so many important questions have to be handled by Congress as to strain the minds of legislators who must spend four-fifths of their time on errand-boy work for the home folks or deciding how many taxicabs to allow in the District of Columbia. Most Senators and Congressmen would like to be intelligent, but the system gives them almost no chance to learn or to think; and meanwhile history is moving at high speed.

The second reason is in the nature of the world crisis that we are in. First the Nazis, and now the Communists, deny the whole democratic idea, and one of their chief points of attack is the legislative incompetence of democracies. Once they can get the legislature abolished or really reduced to a rubber stamp, the rest is easy.

The American people still believe strongly in the institutions of democracy, and none of our Presidents has ever shown any sign of agreeing with the attitudes expressed by Mussolini, Hitler, or the Communists. Roosevelt never tried to be a dictator, even in the purge incident of 1938, for he never disparaged Congress as an institution, nor ever questioned the necessity for the free consent of the governed. And the repudiation by the voters of both Roosevelt's and Wilson's purge attempts can be taken as healthy signs of our sensitiveness to even the suspicion of an attack on the independence of the legislature. But we have all too much tendency to scoff at Congress for its stupid behavior, in terms which in time may undermine our faith in representative government as a principle—as did happen in Germany and Italy with fatal results.

The greatest single contribution our Congress could make to our security would be to show itself strong, efficient, and clear-cut, so that its actions would yield neither ammunition to our enemies nor confusion to our friends. Those who undertake to promote a more effective organization of Congress have to make clear that we come as friends, with no shadow of doubt that the legislature, for better or for worse, is the bulwark of our liberties; and that every criticism we make is an effort to buttress, not to discredit.

The Reorganization Act of 1946 came out of a year's work by a joint committee led by Senator La Follette and Congressman MONRONEY. The resolution setting up the committee limited the scope of its possible recommendations, forbidding any reference to rules; i. e., mustn't touch the Senate's sacred cow, the filibuster. But no resolution could prevent those who testified before the LaFollette Committee shooting joyfully at every sacred cow in the place, from the seniority rule for committee chairmanships to the passion for inefficiency of the General Accounting Office. And of course no resolution could protect these doleful animals from the barbs of the many private writers on this subject, such as Dr. George Galloway, who was made secretary of the committee, and Congressman ESTES KEFAUVER, whose book on the situation as of 1947 is the principal basis for the present article.

In due time the La Follette committee reported, and the Democratic Congress on August 2, 1946, passed a Reorganization Act including most of the committee's recommendations, leaving it to come into effect in the Republican Congress of 1947. A year later, Mr. MONRONEY put in the CONGRESSIONAL RECORD his appraisal of the results to date (July 26, 1947). This report, together with ESTES KEFAUVER's book, A Twentieth Century Congress, should be read in full by everyone who has enough interest in the subject to read this present article. The resulting information can well be used as a basis for encouraging, or prodding, your Senators and Congressmen to carry on and make a good job of it.

The chief accomplishment of the Reorganization Act was cutting down the number of standing committees from 48 to 19 in the House and from 33 to 15 in the Senate. In the process, the overlapping of committee fields was largely overcome. The work is now divided among a large number of subcommittees, possibly too many in a few cases, but in general the new system makes sense. Subcommittee chairmen do not have the prestige that has been the chief obstacle to abolishing useless committees. Subcommittees can be set up and taken down with comparative ease, and the main committee can coordinate and direct their work.

The intelligent suggestion of Dr. Galloway and others, of having 13 parallel committees in each House, to allow for joint hearings and easy consultation, was not adopted. No progress was made in getting away from the seniority rule. The act piously exhorts chairmen not to pocket bills which their committee has approved, but makes no provision for sewing up the chairman's pocket.

Special committees in the past have varied in usefulness, from the great investigating bodies such as the Truman committee, to manifestations such as the un-American group. Most of the advocates of reorganization believe that special committees should be used seldom, if ever. There were 12 in the Seventy-ninth Congress and 4 in the Eightieth. Purely partisan muckraking has perhaps not been entirely successful lately. Note the futile history of the Pearl Harbor investigation and the rout of Senator BREWSTER, not to speak of the spectacle of Senator MCKELLAR breaking his teeth on David Lilienthal.

There have been some improvements in the operation of committees, such as requiring a quorum for approving a bill, helping witnesses prepare their testimony, and keeping conference committees from writing bills of their own. But the requirement of open hearings was entirely flouted by the House Appropriations Committee, which could not bear to face the public while it swung the ax.

The intelligence services of the Congress were considerably strengthened. The Legislative Reference Service in the Library of Congress, set up in 1915 to dig out information for committees and Members, had been limping along on a starving appropriation until the Reorganization Act gave it some real money and a chance to build a more effective staff of experts. The Legislative Drafting Service, a group of expert lawyers who draft bills, was enlarged. It had been swamped with work. The standing committees were given larger staffs, but this reform has been partly canceled by the appointment of unqualified persons to expert positions.

An important reform is the transfer of private claims to the departments or the courts. Private claim bills have wasted the time of Congress, and with notoriously unjust results. Private bridge bills and corrections of military records were also abolished.

The act required registration of lobbyists, and a long list was published, including some amusing items. (One, for instance, is lobbying for "a constitutional amendment which will prevent the election or appointment to any office * * * where such [persons] become toxt, or cocktailed or sick or muddled or boozy from smoke or drink and/or from other venoms that menace commonweal.") This registration is a gain, so far as it goes, but it does not touch the master minds who work entirely underground, and it may be evaded rather easily by lobbyists who do not devote a major portion of their time to lobbying. The main defense against illegitimate use of the right of petition must lie in general efficiency and good information services—to give the hard-pressed legislator a chance to know what he is voting about.

Probably the most spectacular failure in the new system came at the point where the Republicans had laid the most emphasis—the handling of the budget. For one thing, this Congress refused to appropriate the money for a study by the Comptroller General, provided in the Reorganization Act, on

the economy and efficiency of the administrative agencies. It may be questioned whether the Comptroller General's office is equipped to recognize good or bad management; in the past its authority has generally been used destructively. It is perhaps fortunate that Congress failed to add to the Comptroller General's activity.

The legislative budget was reduced to an absurdity. After a hasty glance at the President's Budget and hefting that large unpleasant book, the Senate decided to cut the estimates 4½ billion, while the more exuberant House chose 6 billion as its goal; neither figure had any apparent foundation. The conference committee to reconcile these estimates quietly died.

According to the act, the Congress was supposed to decide early in the session on a limit for total expenditures. This limit would then serve as a guide for tax policies during the session, and any appropriations beyond the limit must carry either a special tax or a special authorization to borrow. This plan was widely approved by conservatives and also by liberals. It seemed logical, granting the traditional idea that a budget is mainly a device for controlling the tendency to spend. The absurd outcome of the first trial of the legislative budget, however, opens the question whether the plan really was bungled by the Republicans or whether it fell through by not making sense at all.

The President's budget, offered in January 1947, was primarily designed to help control inflation. For this purpose he proposed to maintain taxes and cut expenditures, except where a cut would injure the productive capacity of the country and thus hurt the other side of inflation control. The budget aimed at being a tight estimate of necessary costs, defined as "necessary" because any cut would waste more than it would save. There was no way to look over such a budget hastily and see if it was really tight. Congress had to work over it, item by item, trying to cut, listening to the cries of pain from the country, and then admitting that the item was already tight, with no more slack in it. A few rather abstract or scientific items could be cut, where the harm done would not show up quickly; and a few fake cuts could be achieved by reducing items that would have to be made up quietly later; perhaps a total of one or two billions in all, but no four and one-half or six billions.

Fiscal policy, actually, is not simply a matter of keeping the budget down. Fiscal policy starts with a judgment as to whether a tendency to inflation or deflation calls for a budget surplus or deficit, respectively. This in turn shows whether the budget should be tight or generous. From these two features would come a proper tax policy, whether to increase or cut taxes. In 1947 the President proposed to limit spending to strict necessities and get a surplus as a guard against inflation; and therefore to maintain taxes, since obviously Congress would never consent to increasing them. In this scene there was no place for the legislative budget. The only quick judgment that Congress could properly make was on one point: Did Congress agree that the largest possible surplus was indicated by the economic situation, as reported by the Council of Economic Advisers? If it did, then it could proceed to comb the budget for errors, to be sure it was really at rock bottom, and meanwhile could either raise taxes or suppress any attempt to lower them.

Liberals might do well to drop the idea of the legislative budget, since it only confuses Congress, which ought rather to be discussing the really critical question: Do we want a surplus, a deficit, or a close balance next year? Once that is decided, the others must follow, and any attempt to promise either the budget total or the tax rate in advance is liable to make those who do it ridiculous.

This, then, is the main outline of a year's experience with the Reorganization Act. The committee system is much improved, though still short of real streamlining, and still burdened with seniority chairmen. The expert staff services are much better, and can probably be further strengthened without any revolutionary changes. Some of the silly jobs such as private bills have been drastically reduced. Lobbyists have been listed, whatever that may amount to. The legislative budget was tried and failed completely, which may be a gain in the long run.

Whether the net effect of the 1946 act is good or bad depends on one question: Does it open the way for further reforms, or does it block progress for another 20 years?

Testifying in behalf of the bill which established the Hoover Committee, one Congressman said: "The legislative branch of the Government has been reorganized and streamlined by the Congress itself. The time is long overdue for a reorganization and streamlining of the executive branch." It is, and the Congressman's main position was well taken. But if many other intelligent Congressmen think Congress has now been streamlined, God help us. The efficiency of Congress as an institution was slightly better in 1947 than in 1946, but it cannot be said to have attracted the gasping admiration of a world torn by ideological conflict. In view of what, from the standpoint of management engineering, could well be done to streamline Congress, the job has hardly been touched.

II

What would a real job of streamlining mean?

First of all, as practically everyone except the committee chairmen knows quite well, the committees or the party caucus ought to choose the chairmen for usefulness, not for their value as antiques. The party in power wants to be a success, but not quite enough to be cruel to old fogies. Both parties need to develop a more hard-boiled concentration on the main chance. The Democratic Party suffers more than the Republican, because of the southern habit of electing men for life. The South needs more accent on youth, if it wants the Democratic Party to win national elections.

Congressmen and Senators ought to be paid about $25,000 a year, for personal income, aside from an allowance for a sufficient office staff. The whole cost of Congress, on an efficient basis, would be about twenty-five or thirty million (not billion) dollars, which is less than one dollar per thousand of the cost of government. Congress costs the American people about 15 cents apiece a year. A properly equipped and properly paid Congress would cost us about 5 cents more per year, or the price of one newspaper, in which the news might be much better if Congress were able to do a bang-up job. But why pay the poor dopes $25,000? The answer is that they are poor, but most of them even now are not dopes, and there would be fewer dopes if the pay were reasonable.

It is not that Congressmen have to work desperately long hours at their job. They do, but they like it, in the main. Their complaint is only that too much of their work is wasted on picayune matters. But they don't like trying to live on $12,500 a year, which seems so princely to most of their constituents. A Congressman has to keep two homes, and Washington, at least, is expensive. He has to travel, with his family, and the travel allowance does not cover the cost. He has to contribute to every good cause. He has to pay a big slice of his wages for printing and other campaign costs, including reprints of his speeches, not printed at Government expense. Or else he must accept contributions from wealthy supporters, and who do you suppose would expect him to show a bit of gratitude once in a while? Integrity costs money, in real life, and if the country wants its legislators to look the world in the eye and fear not any man, wouldn't it be sensible to pay them enough so they can pay their own campaign expenses? Incidentally if the national budget would finance the two major parties about $10,000,000 apiece, wouldn't it be possible to drop the hypocritical assumption that political parties live on the pure milk of human kindness?

To be a Congressman, a man and his wife must either love the job enough to be more or less reckless in their personal finances; or else the man must be incapable of making a living at home; or else they must have backing or money of their own. That is not the way to hire, in business or government. We should offer a living wage.

The work load of Congress still needs to be reformed, though most of the mess of private bills has been cleaned up. The biggest slice of a Congressman's or Senator's time is used up in being a Washington representative of his individual constituents. When they come to Washington they call on him, with family in tow, and expect him to take them all to lunch, at his expense, and give them passes to the galleries. Or they call to ask for a job, or for help in putting pressure on one of the agencies, or to get an amendment to a bill that will promote their interest, or to find them a hotel room or a block of theater tickets. Those who don't call write in for every possible kind of help, from getting a letter-carrier's job to asking the Patent Office for a list of things that have not yet been invented.

All these calls must be courteously and promptly met, or else. One Congressman, for instance, got an urgent request, at one of the hottest points of the war, that he arrange to have the President photographed with a basketball team that was coming to Washington from his district. He replied that no one ought to ask such a thing of the President. The next thing he knew his Senator, whose nuisance value was particularly high, had arranged the matter easily. About 50 votes were lost by the patriotic Congressman, and gained by the far from patriotic Senator.

What is even worse, not only the members of the District Committee, but all Senators and Congressmen, are aldermen of the city of Washington. Everyone from the League of Voteless Women to the Real Estate Board and the friends of local policemen and dive operators, can be found parked in the Congressman's office when he is already jumping sidewise trying to take care of his own constituents who have votes.

The Reorganization Committee recommended that each Member should have an $8,000 assistant to do the Washington Representative job. This is not a clerk's job. It takes knowledge of the town, tact, ability to give a few poisonous people and cranks a skillful run-around, and to serve promptly and effectively the mass of legitimate requests from the citizens back home. The Senate has adopted this recommendation, but the House did not do so in 1947. If it takes 2 or 10 high-paid assistants to keep the constituents off the Congressman's neck, it would pay the country, as well as giving better service to the homefolks. As for the Washington alderman job, that is something else.

There is nothing in the Constitution that requires Congress to govern the District of Columbia, and if there were, it ought to be taken out at once. The District is a weird combination of a branch of the Federal Government, a State, a county, and a municipality. While the Federal Government has 60 major units—departments, agencies, commissions, and boards—the District has 125 major units in its 4 governmental levels of action.

The District Committees of the Senate and House in the Seventy-eighth Congress handled 209 bills. Aside from all the time taken up in private lobbying and District Committee work, the House in full session uses 1 day every 2 weeks to deal with District matters. On these days the Congress acts as a city council, sometimes very much so. All this is a waste of time when matters of importance to the Nation and the world are on the docket. One or 2 days a year, mainly concerned with how much taxes the Government is willing to pay, would do the job if the District were allowed to govern itself.

Congressman KEFAUVER, in his recent book, proposes another important time-saver, the use of electric voting.

At present, when either House votes, the roll is called, which takes about 10 minutes in the Senate and 45 minutes in the House. Moreover, whenever anyone "suggests the absence of a quorum," unless the House adjourns, the roll has to be called, and the quorum call can be used to gain time (i. e., to waste it) or even as a sort of filibuster. KEFAUVER reports that in 1943–45, the war years, the Senators used up an average of 79.5 hours, or nearly 16 legislative days per year, in listening to the melodious sound of their own names. The House used an average of 121.8 hours, or 24 days per year. Since Congress usually meets 5 days a week, the House wasted a month on roll calls alone in each of the war years.

Electric voting is done with a key that each Member carries, which he alone can put into the appropriate slot in his desk. The system is used in 11 States. The Texas Legislature boasts of having voted by electricity 30 times in 30 minutes, though with what net result is not reported by Mr. KEFAUVER. At any rate, it is clear that both Houses of the National Legislature could save themselves a lot of time by putting in a set of pushbuttons.

Not only time would be saved. While a roll call is going on, while Congressmen are finishing their interviews or dictation with one eye on the clock so as to dash over to the House in time to be counted, those who are on the floor are at ease, all business is stopped except personal conferences, reading, or lobbying, and the deadening effect of mental shovel-leaning creeps over the assembly. The people in the galleries, who come hoping to see some action, get as bored as an Englishman at an American football game where the huddles take up most of the time. The show is a bad show, and the effect on thousands of tourists from back home is not good for the reputation of Congress. It does not promote that respect for democratic processes which is all-important.

It would be too bad if our civilization should collapse for lack of a set of pushbuttons in the right spot, but stranger things have happened.

The next big problem is a more efficient relation between the executive agencies and Congress. Normally they stand off at opposite ends of Pennsylvania Avenue and chuck stones at each other, which is a poor way to run a family. In domestic affairs at least, Congress is father, who goes out and finds the money; and the administration is mother, who keeps the house, takes care of the children, and runs up the bills. They should have some system for understanding each other's problems and attitudes.

Woodrow Wilson's first venture into political writing, when he was still a senior at Princeton, was an article in the International Review on Cabinet government. Wilson proposed that the cabinet should be chosen by the President from among the Members of Congress, as is done in parliaments such as the British. The Cabinet would then have seats in either the Senate or House, where they would introduce the Government's bills, and they would resign if defeated. Wilson tried when he was President to start the change toward a parliamentary form, but the war required his attention and nothing came of it. The parliamentary form of government requires either a King or a figurehead President, to hold over when the cabinet falls, and it requires a rigid party discipline, since every vote against the cabinet is a bid to throw the majority out of office. Although this is the standard democratic form in other countries, it does not seem well adapted to American political habits.

The Kefauver proposal is much less drastic. KEFAUVER proposes merely to have a question period every 1 or 2 weeks in each House, where Cabinet members and agency heads would have a chance to answer questions and present their problems. This was the original system used in the First Congress, but soon abandoned, probably because the Government was so small that everyone knew everyone else. The Confederate States Constitution had a provision for letting the Cabinet members appear on the floor, but the Congress did not pass the necessary laws.

The question period is the most conspicuous feature of the democratic form of government in other countries. It gives a chance for the citizens, through their representatives, to raise any sort of question about the administration of the law. If the question turns out to be of wide interest, it is discussed all over the country, and the Government has to yield to public opinion or show very good reasons why not. A question period here, if reasonably well managed, would probably arouse Nation-wide discussion from time to time in a wholesome way, as it does in England. It would undoubtedly give both Congress and the agencies a better line on each other's point of view, and would reduce the amount of sniping based on pure ignorance.

The idea of a question period has been supported by many prominent men, including Elihu Root, Charles Evans Hughes, Charles A. Beard, and Presidents Garfield, Taft, Wilson, and Hoover. A Gallup poll on the plan showed 70 percent in favor and 7 percent opposed. Most of the important newspapers in the country favor it. The proposition would seem to have a rather good chance of adoption sooner or later.

In addition to the question period there should be two other forms of organized contact at lower levels. Each agency could well have a regular day about once a month to confer with its corresponding committee in each house, preferably in joint session, for discussion of its current work and problems. At present the only contact is usually in budget hearings, which are exactly when father and mother are least likely to enjoy each other's company. Regular association would considerably ease the tension of the annual discussion of expenses between Congress and the agencies.

Each Department and important agency should also have an office on the Hill, headed by an Assistant Secretary or Assistant Administrator, who would be available for day-to-day cooperation with committees, and for most of the contacts connected with requests from constituents. The liaison agent could supply the committees with copies of administrative rules and orders, so that objections could be raised, and Congress could get a proper check on the use of its delegated powers.

Neither of these liaison arrangements is new or untried. The National Housing Agency during the war had regular and satisfactory meetings with its House committee under Congressman LANHAM. The Veterans' Administration and Civil Service Commission have offices at the Capitol. What is needed is more of the same.

Under the head of reorganizing Congress may perhaps be considered one of our most troublesome constitutional problems, the two-thirds rule for treaty ratification. At present most of our foreign relations are settled by executive agreements or other dodges—recent examples are the Bretton Woods agreement and UNRRA. Other nations are shy of making treaties with us, remembering how often our treaties have been repudiated by a minority in the Senate.

The House in the last Congress passed a resolution for a constitutional amendment allowing both Houses to vote on treaties, but the Senate Judiciary Committee pocketed it. We shall not be in a good position to handle our foreign relations until treaties are subject only to approval by majority vote. This is a flaw in our democratic form of government which is embarrassing to ourselves and exasperating to our friends abroad.

Another proposed constitutional change would make all elective terms 4 years. A 4-year term would relieve Congressmen of half their campaigning burden, would allow the voters to change the whole Senate if they liked, and would increase the probability of having the President and both Houses all belonging to the same party. This is perhaps not as important as the other proposed reforms. It would give the voters no voice except at 4-year intervals. And though the occasional deadlock between a President and a contrary Congress has been rather distressing at times, it has never gone so far as a flat refusal to make appropriations. In fact, one might almost say that our present example has strengthened Mr. Truman's position, put Congress on its mettle, and given the Nation better service out of both ends of Washington than it has sometimes had from a one-party team.

Many of those who testified before the Committee on Reorganization criticized the poor discipline of both the parties. It is notorious that some southern Democrats ordinarily vote Republican and some Republican liberals normally vote Democratic, much to the annoyance of neat-minded people. But there may be more to this lack of discipline than mere lack of neatness.

A two-party system is undoubtedly the best for running a democracy. Three parties commonly result in electing a minority President, and a dozen parties, after the European pattern, may get in such a hopeless mess that democracy itself is endangered or lost.

In England the two major parties are widely separated in their principles, so that if the public is dissatisfied with poor management by the Labor government, it can get no relief except by jumping to the Tories, a serious and upsetting change of base. A couple of years' observation of British politics during the war gave one the impression that it is dangerous for a country to have two parties with principles far enough separated to make the jump from one to the other a radical change. The English, not being logical, can take it calmly, but for most countries such a wide leap is revolutionary and can easily be violent.

In America, fortunately, Tweedledum and Tweedledee have both practically the same set of principles, with some difference of emphasis represented almost entirely by the character of their candidates. To a large degree, therefore, the intelligent middle group, which if interested can usually decide elections, is able to vote for or against the men who are running, without having the ghastly choice of a Communist-infiltrated "liberal" party versus a Fascist-infiltrated "conservative" one. Those would be the choices if our parties were to adopt a consistent and different set of principles.

Our parties are organizations for getting into office, and that is what they ought to be, since it is obvious that our Government, like all others, is one of men, not of laws. The men make the laws. In Congress they ought to have better caucus organization, not to discipline their Members, but to discuss what party line is best to take and why, with

a canny eye on the voters. In most cases, of course, the party members, wanting their party to be successful, will go along. But the mavericks must not be too strictly disciplined, or the mixed character of the parties may be lost. The danger would be that both parties might split into liberal and conservative wings, and these into moderates and extremists, with a few independents running as one-man parties. As the discipline grew tighter, each group would be more and more pure, its principles would be clearer and its number fewer, till each recognizable principle, from the Townsend plan to prohibition, would have a tight little irreconcilable party. Then only a fitful coalition would ever organize Congress, just as in Europe. Like the British we are possibly too illogical to go so far, but meanwhile we can well be thankful to have two and only two parties, devoted to the praiseworthy object of finding successful candidates.

A comment on this viewpoint is supplied by the apparent desire of both our Fascist and our Communist elements to start third parties, for the evident purpose of undermining the democratic system. Too much party discipline would only play into their hands.

From this hasty review of the condition of Congress, it appears that the effort at reorganization has improved the efficiency of the legislature, but only about a quarter as much as could well be demanded by the needs of the day. Congress wants to be strong and respected. Most of its Members want most of the reforms that still need to be adopted. What is Congress waiting for? It is waiting for help from the people. The very fact that Washington is paved with sticky flypaper, that inefficient chairmen still control key committees, and obsolete rules interfere with business, prevents the streamlining that would make good organization possible. The numerous Senators and Congressmen of both parties who long for a more intelligent organization need the help and encouragement of the home folks; and the minority who stand in the way need a good kick, followed if necessary by a courteous but permanent welcome home.

People of the Southwest Oppose Marshall Plan and Price Controls

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have said that the people of the Southwest oppose the so-called Marshall plan and price control. The two subjects are inextricably connected. Everyone seems to know that the more we send abroad and the more the Government enters into competition with our own citizens in buying the necessities of life, the more scarce the commodities become. The scarcer the commodities, the higher the prices. Thus the spiral of inflation is promoted by the administration's program. Inevitably the Marshall plan will boost prices and furnish a semblance of plausibility for the President's demand that Congress give him authority to control prices.

Mr. Speaker, the people of my section of the country, and I believe it is generally true through the Southwest, do not favor the continuation of the program of giving the substance of our people to foreign governments. They do not like the idea of having the President's representatives buy Argentina wheat from the Argentina Government at $5 to $5.80 per bushel, which the Argentina Government had bought from the Argentina farmers at $1.30 per bushel, and then pay for its transportation to foreign lands and give the wheat to foreign governments. Then the foreign governments dole it out through their favored millers, bakeries, and distributors, and it is sold to the people of those countries who have the money with which to pay for it. A lot of it is sold through the black markets. This does not reach the hungry. This is not a method of feeding starving people. On the contrary, it is merely a method that the New Deal administration has of subsidizing the Argentina Government and the European governments to which the wheat is given.

The following significant statement appears in the January 5, 1948, issue of Newsweek:

In a seemingly offhand speech at Harvard on June 4, Marshall proposed that western European nations get together, formulate a recovery program, and request from the United States enough help in the form of goods and materials to make it work. To his apparent surprise, Foreign Minister Bevin, of Britain, grabbed the Marshall plan with enthusiasm. A recovery plan was quickly adopted at Paris, even though the Russians pulled out and took their satellites with them. Mr. Truman's request to Congress for a $17,000,000,000 4-year European recovery plan is pending before Congress.

Mr. Speaker, I visited 59 cities and towns of my district week before last. I met the people during office hours in 54 post offices and in the evenings at the courthouses of the other 5 cities. Astonishing as it may seem, I talked to people in all walks of life, Democrats and Republicans, and in many instances without knowing their political affiliations, and I discussed with them the many issues of international and domestic interest. I did not suggest any topic for discussion or consideration, but requested them to suggest the topic in which they were most vitally interested. They mentioned the foreign-aid subject at least five times as often as all other subjects combined, and not a single person expressed himself in favor of appropriations by Congress for foreign aid. On the contrary, all who said anything at all on this issue insisted that no appropriation be made by Congress for such purpose. Hence I say the people of the Southwest are opposed to the so-called Marshall plan. Likewise they are opposed to its complement, or necessary accompaniment, the Truman request for price controls by the President.

Practically every letter I have received from my constituents on this subject, and there have been scores of them, expressed disapproval of the Marshall plan and price control. Typical of such letters, I am pleased to quote the following from a letter just received from a leading attorney, a Democrat, of Tulsa, Okla.:

I realize that persons of fixed incomes, as a matter of immediate selfish interest, might be inclined to favor rationing and price controls, but, very frankly, I haven't found anybody that wants price controls reimposed. Even the old-age pensioners, that is, those on the relief rolls, grumble about prices, but they express willingness to go along and let the law of supply and demand operate as it will. You, of course, know how I personally feel about the matter. I am against price controls and rationing, for all the reasons currently expressed by Members of the Congress and the Senate and for many other reasons. It is my feeling that the administration has to some extent badgered the Republican Congress on this issue, and I hope that Congress won't fall into the error of supporting any sort of price controls or rationing. We had just as well be truthful about these matters. The only answer to the problem of scarcity of goods and commodities is production.

Now, about the Marshall plan. I don't think that any plan to feed people to keep them from following this or that political or religious belief will ever work. It seems the administration seeks to scare the people of the country by saying if we do not do this or that communism will spread. And the this or that is always some sort of program which may be camouflaged but actually is a gift of some sort. Communism is simply a corrupt expedient. The ones who are for it and understand it know this, and I am inclined to think that more of those who are given credit for ignorance understand the expediency more than we sometimes imagine. A lot of those who are considered ignorant are not so ignorant but what they see in communism or socialism a way to take away from those who have and give to the have-nots. We have been doing this by law to a horrible extent.

The way to combat communism, socialism, and every other crooked, crackpot ism is to disseminate the truth and emulate it. I haven't found anybody, rich or poor, who thinks that this country can insure the peace of the world by adopting any kind of expediency, whether it be called the Marshall plan or something else. I believe I am correct in referring to the Marshall plan as an expediency.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anne O'Hare McCormick from the New York Times of January 10, 1948:

ABROAD—THE MARSHALL PLAN AMID THE OMINOUS THUNDER IN FRANCE

(By Anne O'Hare McCormick)

PARIS, January 9.—Secretary Marshall's statement before the Senate Foreign Relations Committee has made a deep impression on that section of the French opinion which was able to read what he said. Unfortunately, that section is small. The highlights of the address were featured in Paris newspapers and helped reinforce Premier Schuman's argument before the Assembly last week when he asked how Americans could be expected to make sacrifices to help France if the French were not ready to take painful measures to help themselves. Less emphasis has been placed in France than in England on what European recovery will cost

Americans and more on the other side of the picture. A large part of the press is Communist controlled and keeps telling its readers day after day that American aid means American domination, that America seeks to use France as a battleground in the war against Russia.

Some of the propaganda is bound to stick. It is hard for Americans to realize the effect of this constant barrage on the confused and weary mind of Europe. With every weapon short of guns, Moscow is waging a real war for Europe, and this war is now concentrated on the Marshall plan. Even the secession movement from the CGT, regarded abroad as a defeat for the French Communists, is described by party leaders as a means of getting rid of "unreliables" and forging a surer instrument to carry out instructions. "It isn't a crowd we want," said one frank Communist organizer, "but an army."

ONLY A LULL

No one watching operations here can doubt that the Kremlin is in full accord with Secretary Marshall that "the whole world hangs in the balance." The French see France as the pivot on which the balance turns. They think the fight on the Marshall plan is concentrated in France.

Let no one imagine that the Communist failure in November or the grudging vote of confidence in the Schuman government means more than a lull in the Communist campaign. Already both the middle class and the peasants are in revolt against the new tax program. Communists are closing up ranks and stirring up the rural population to regain, among the farmers, the ground lost in the industrial centers.

Nothing is settled. The atmosphere is heavy with suspense, breathless and ominous with thunder on the right and left. This is the crucial winter for France and western Europe. The government prepares for another crisis by dividing the country into eight zones, each headed by a high commissioner charged to control the state police in time of emergency. Everybody speaks of trouble in February. The de Gaullists predict that the half measures of the government they call illegitimate will fail to halt inflation and that in a few weeks it will reach the point where the Assembly will be obliged to dissolve and call the elections de Gaulle demands.

They are at one with the Communists in expecting a catastrophe—and doing nothing to prevent it—but are exuberantly confident they have backing enough to take over and deal with it when it comes. Certainly the mystic Cross of Lorraine throws a long shadow over the land, and in the present state of flux, with labor moving and the middle class in a desperate fight to survive, no one can be sure of the final line-up.

THE IMPORTANCE OF UNDERSTANDING

There is no quiet on the western front from Greece to Ireland. The battle might have been lost this winter without the promise of the Marshall plan, but it is very far from being won. Only on the ground can one feel how near the breaking point Europe is and what stamina it takes just to hold the line.

The Marshall statement is welcomed as a sign that Washington understands the critical situation. Americans may think it strange that the comprehension of the complex and desperate nature of their problems means almost as much to the people over here as the material aid they are waiting for. The French especially, too weak and self-absorbed since the war to take the European lead, resent seeing Europe at the mercy of non-European powers. Lately, however, their attitude toward America has changed a little, partly because of the shift in our policy toward France but largely because Mr. Marshall has made occasion to identify us with Europe by referring to it as "the historic base of western civilization of which we are by inheritance an integral part."

There is no question of gratitude, nations are not bound together by loving sentiments but by common aims and common ideas. France, like Britain, pays official tribute to American generosity, but that is about as far as it goes. Our investment in European recovery is regarded everywhere as enviable and envied proof of the power to produce and distribute wealth and as a grand-scale act of self-preservation. Recipients of our aid envy us most, it should be added, because we have the means to do this.

"The most admirable thing a nation can do," a highly placed French official remarked, "is to devote its resources to carrying out a policy of enlightened self-interest. That is what we think you are doing and what Secretary Marshall announces you are doing when he asks Americans to measure their sacrifices against the alternative. For this perhaps you will not get thanks, but you will command something much better—respect."

General Clay Uses Military Method in Dealing With Charges in Germany

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. ANGELL. Mr. Speaker, the following article is the sixth in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

GENERAL CLAY USES MILITARY METHOD IN DEALING WITH CHARGES IN GERMANY

(This is the sixth of a series of articles detailing observations recently made in Europe by Phillip H. Parrish, editor of the Oregonian editorial page. The writer spent 7 weeks in Germany, Austria, France, and England.)

(By Philip H. Parrish, editor, the Oregonian editorial page)

That brings me to a job I would just as soon skip—that of making an estimate on how well our American representatives are doing in actual administrative work in conquered Germany and liberated Austria. The complications are infinite and my study has been limited.

However, I have tried to give a practical glimpse into the lives of the people of Germany's thronged industrial centers as they struggle to keep fed, clothed, and warm enough to survive. Then we have seen something of the other side of the city-country conflict and association—the peasant counting his grains of wheat and cunning ladling out his liters of milk to the government collectors. There remains, before we close with the international problems which in the end will decide the whole tumultuous picture, this matter of how proper a job is being done by Gen. Lucius D. Clay in Berlin, Lt. Gen. Geoffrey Keyes in Vienna, and members of their staffs.

Both men appear to have the almost undivided respect of the American personnel on the scene, including the resident American press correspondents. That in itself is a high compliment.

In the case of General Clay, I intend to be cautious of news stories out of Germany in the future, not because he would influence them but because his frankness and friendship has made the correspondents his partisans. Then General Keyes is particularly beloved as well as respected.

NATIVES FEAR CLAY

On the other hand, General Clay gives an entirely different impression to the Germans. When he rises before the Laenderrat—the joint German governmental council in our zone—or before any other German group, he is stern and unsmiling. I inquired of every German I met along the way, and all fear him. His edict that they must work harder if they intend to eat more bothered them particularly, since they profess they do not know where they could work that would give them more food. Perhaps General Clay is right in maintaining the severe mien. It is the universal judgment that Germans are inclined to cry over themselves, more so if encouraged, and that the only way to stop them is to be strictly military.

Anyhow, that is the policy, with a history that goes back to General Dahlberg's mistake in breaking a chicken wing with the late Herman Goering, and to the strict orders against fraternizing issued when the fighting stopped. It has the drawback of keeping our American officer personnel decidedly naive concerning the people they are overseeing and trying to reform, but it prevents the corruption and break-down which could come with unlimited fraternizing and unlimited sympathy. I am simply reporting that General Clay still practices austerity with the Germans and that his example is official for our forces, though with decreasing effectiveness down through the grades.

And that leads into the great paradox now existing. Though we still maintain the stern attitude of the military conqueror, that is no longer our actual practice. We don't give orders any more, except in extreme cases. Last year's elections were held throughout our zone of Germany, and governments were set up, under appropriate constitutions, in the states of the zone—Bavaria, Wuerttemberg-Baden, and Greater Hesse.

LOCALS GET POWER

Then we passed virtually all powers of government back to the Germans with the admonition:

"We will tap you on the shoulder when we don't like what you are doing."

Personally I don't like a lot the Germans have been doing—and more specifically what they haven't been doing—but I don't find much tapping on the shoulder.

What has happened is the clearest possible proof that the political forms of democracy as we know them, such as regular elections and city, county, and state governments, are forms only. They are meaningless unless they spring from an inner understanding and determination on the part of the people. There must be democracy in education, religion, economics, and in legal procedure as well. There must be adherence to the bill of rights—freedom of speech, press, conscience, and public assembly. Without these the political forms are valueless to the people, and only serve as tools for the ambitious.

That is how affairs threaten to turn out in Germany.

We gave them political democracy eagerly and with the best of intentions—told them to run affairs for themselves.

REFORM LACKING

But we did this without reforming the offensively aristocratic educational system, without exacting concessions from the Catholic forces so powerful in the south or the Protestant forces so strong in the north, without breaking down the Schachtianism (after Herr Schacht, the economic dictator) which reduces all German economic life to government order, without reworking the government-controlled courts, without mak-

ing certain of the survival of a free press—without, indeed, bothering about a lot of detail that looms overwhelming in retrospect.

Enjoying self-government, and not understanding the reforms suggested to them, the Germans bow their Bavarian or Swabian necks and procrastinate or refuse.

Take education, the United States has made just one great contribution to world educational practices—the common public school in which every child is supposed to have his chance on a basis of equality. (In spite of the modified aristocratic system in Britain, the people of the United States believe the common school to be a fundamental of democracy.) Yet, we apparently have let slip all chance of getting it accepted in Germany, and Germany has a system which, though dramatically successful with chosen individuals, is the absolute negation of democracy.

FAVORITES GET BEST

In Germany the method is to separate the "begabten" (gifted) from the "unbegabten" (ungifted), at the end of the fourth year. In practice the 10 percent named as gifted never fails to include most of the children of the privileged. The 10 percent goes to separate schools and are trained through the thirteenth year in preparation for the universities. The 90 percent designated at the tender age of 9 or 10 as ungifted are herded into the "volkschule" (people's schools), and their subordinate lot in life can never be changed.

The volkschule proper ends with the eighth grade, at which time the pupil, boy or girl, must choose a life's work. He or she ordinarily enters an apprenticeship, and attends a manual training or home economics school 1 day a week for 3 years. Then the boy—suppose he was apprenticed to a mason—could become a journeyman. After 2 or 3 years as journeyman, he could return to school and become a master. Then after another spell of work, perhaps when he was 30, he could take an examination to enter school a final time and become as good an engineer as anyone—but never socially or in the eyes of the German caste system.

EDUCATOR WORRIED

In Wuerttemberg-Baden, which is typical, the "hoehere"—the high schools for the gifted—have one teacher to 33 pupils even now, and nearly all men. The people's schools have around 75 to the teacher, the latter being more than half women. The high-school teachers do not recognize the people's teachers socially.

Admittedly such schools have been responsible for some of the greatest achievements in modern education; admittedly, also, they have supported the most ruthless military system of the modern world.

At our briefings at Berlin we found Prof. Thomas Alexander, of Columbia University, shaking his leonine locks and declaring:

"We did not get this system reformed before we gave the Germans governmental power, and now they are doing everything to prevent reform. But they will be reformed or I'll not remain on this job."

In which case, apparently, Professor Alexander probably will not remain.

In Bavaria, Dr. Alois Hundhammer, the bewhiskered minister of education, backed by the church, has defied the military government and made himself the most popular figure in Bavarian politics. If he were overridden on the educational issue, the Bavarians probably would make him minister-president. In Wurttemberg-Baden and in Hesse the educational ministers have given tentative promises, but only to the extent that the common school training would continue to the end of the sixth instead of the fourth grade. What a way to give democracy to Germany.

"Well, what would you do at this stage?" I was asked by my old friend Payne Templeton, who has the M. G. assignment with the Wuerttemberg-Badden schools. (We squired the girls and climbed mountains together at the University of Montana thirty-odd years ago.)

STATE RULES PRESS

I had to wash my hands of it: "Maybe it is too late. Maybe the whole idea of organizing Germany democratically has gone to the devil, now that we no longer order but only give advice."

And maybe it has.

For example, in the matter of a free press, without which popular government cannot work, General Clay, and before him General McNarney, took creative steps in this direction. They sifted all applicants and granted licenses to those who looked acceptable. Every available pound of paper is going into this press today, and General Clay scrupulously encourages true freedom of expression. But since restoration of government powers to the Germans, he also has felt he should not interfere on behalf of the press.

With what results?

Virtually every mayor in Germany has set up a press office which passes on the credentials and ration applications of members of the press. Does a publisher need a typewriter or writing paper or an allotment of gasoline for his deliveries? The mayor's press bureau must write "O. K." Those who criticize get nothing.

We met with a group of these newspapermen at Stuttgart and another at Frankfort. They told us: "We are starving. We get the minimum of food allotment of 1550 calories a day, when many classes of workers who do not work so hard have been granted more; if we work overtime, it does not matter. But it matters for all others. It is only us who are not recognized * * *. Also, it is difficult when German newspapermen from the Russian zone come down and show their cards granting extra rations."

HUNGER RAMPANT

The situation is quite simple: We have set up a free press in Germany, and invited it to review the governments in the American manner. But we have left to the governments the power of life and death over the press and the individuals conducting it. I don't believe this press could exist even a few months after American removal. I remember too well the weazened young man who leaned across the table at Stuttgart and said:

"I am down to 94 pounds."

He looked as though a pound of beefsteak would be about the price of his corruption.

And so on through most of the social reforms should, I am convinced, have been firmly established before the granting of political power.

But enough for now. There only remains space to say, much too sketchily, that the failures in the democratization of Germany appear to be due in large part to the concern of military government with the more urgent economic conditions. From General Clay down one hears one or another version of the idea that it is no use to talk democracy while people are so hungry. I don't agree with that entirely. The fellows at Valley Forge were not well fed. But it all depends on how one happens to get hungry.

WEATHER IMPEDES

In any event, the first order of business in Germany—right or wrong—has been to get the shattered economy in operation again, and in this respect General Clay and his staff have performed well, in spite of the conspiracy of nature in the form of storm and drought, and the occasional slowness of supplies from home.

A year ago, just when the economic merger of the American and British zones was going into effect, the Continent found itself in swirling storms and the lowest temperatures of a century. Then this summer, at the opposite extreme, all precipitation stopped and the rivers fell lower and lower. The barges which carry much of the heavy traffic up and down the Rhine and its tributaries, particularly the coal from the Ruhr to the steel mills of the upper river and for distribution throughout upper Germany, had to be tied up. Most of them were still tied up when I was there. At Duisburg were great idle rows of them. And in turn this failure of the barges broke down the 30 percent of rolling stock which remains on the railroads.

Yet in spite of all this the American and British merger has had results, and largely, I think, through American impatience and determination.

HOPE POSSIBLE

Industrial production, including mining and power, dropped to a low of 28 percent of 1936 in February 1947. In December, 3 weeks ago, it was up to 42 percent. And industrial employment is up to almost 90 percent of 1936—meaning that adequate recovery is merely a matter of supplies and of more efficient work.

This is in large part the achievement of American M. G. and against remarkable difficulties—against difficulties of "bad food, bad money, bad government, and bad transport."

Something will have to be done about the "bad money" if the Germans are to be made to work hard, but now that a firmer western Germany is proposed, with the French to be taken in if possible, we can look for drastic action in regard to the currency. And with that, if it sticks, I don't see why western Germany shouldn't be able to get along.

Dairy Interests Not Responsible for the 10-cent Tax on Oleomargarine

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. ROBERTSON. Mr. Speaker, under date of December 18 Senator FULBRIGHT served notice of his intention to introduce a resolution for the rescinding of all Federal taxes and license fees on the manufacture, coloring, and sale of oleomargarine.

No doubt the Senator is prompted to make this move due to the very high price of butter prevailing today. Those of us who are familiar with the long history of butter and its various problems will recall that all too many years has butter been selling at a price much below its true value. There has been a constant conflict between the farmers of the United States who produce butter and the organized interests of oleomargarine. And the effort has been made to lead the American people to believe that the taxes that have been placed on oleomargarine are restrictive, and a great deal of argument is made because certain conditions have been provided to prevent them from the coloring of oleomargarine to make it appear like butter.

I introduce into the CONGRESSIONAL RECORD with my remarks a comprehensive and very intelligent letter addressed to me on this subject from the distinguished dairy commissioner of the

State of North Dakota, William J. Murphy:

STATE OF NORTH DAKOTA,
COMMISSIONER OF AGRICULTURE AND LABOR,
Bismarck, N. Dak., January 5, 1948.

Hon. CHARLES R. ROBERTSON,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I realize that you will be especially busy during this session of Congress due to the fact that there are so many important problems which will be presented to you for action. However, I would like to bring to your attention and solicit your support in opposition to a bill which Senator J. WILLIAM FULBRIGHT of Arkansas will introduce in the Senate during this session.

Senator FULBRIGHT served notice on the Senate floor December 18, 1947, as recorded on pages 11590, 11592 of the CONGRESSIONAL RECORD, of his intent to introduce a resolution calling for the rescinding of all Federal taxes and license fees on the manufacture, coloring, and sale of oleomargarine.

The propaganda, as put out by the oleo interests, would lead the consumers to believe that there are restrictive taxes on all oleomargarine sold. This is not true. When oleomargarine is sold in its natural color, which is white, there is a Federal tax of only one-quarter of a cent per pound and I believe you will agree with me when I state that this tax does not in any way affect the retail price of the product. All of their propaganda against restrictive licenses and taxes is nothing more than window dressing for their main objective, which is to repeal the provision of the law which compels them to pay a 10-cent Federal tax on oleomargarine when colored yellow to resemble butter.

They would also lead the people to believe that large dairy interests are responsible for this 10-cent tax on colored oleomargarine and again this statement is not true. Under the regulations issued by the Federal Security Commission at the time Paul McNutt was director, manufacturers of oleomargarine are allowed to add diacetyl to their product and, as diacetyl is a natural flavor in butter, the addition of this flavor in chemical form results in oleomargarine which has an aroma and flavor similar to butter. They also churn this product in skim milk, which further adds to its butter aroma and flavor. The result is that the only protection the consumers of the United States now have against the fraudulent sale of oleomargarine as butter is the 10-cent tax per pound on the product when colored.

This fight between the dairy interests and the oleomargarine manufacturers is not alone conducted to protect the dairy farmers as the consumers are also vitally interested in receiving a product when purchased which is easily distinguishable for what it is. As you know, yellow is the natural color of butter and all butter made, regardless of time of year or type of feed fed to the cows, contains the yellow color in varying degrees according to carotene content of the feed consumed by the cow.

The dairy farmers in North Dakota have a vital interest in the defeat of this proposed bill due to the fact that North Dakota, with over 50,000,000 pounds last year, is seventh among the States of the Nation in butter production. Our consumers should also be concerned, as when they purchase a pound of butter, they should know that they are getting butter instead of oleomargarine.

If this tax on colored oleomargarine is repealed and the enforcement of this law is taken out of the hands of the Internal Revenue Department, consumers of the Nation will have very little protection against the fraudulent sale of this product. The Federal Food and Drug Administration, the agency responsible for the correct labeling of products, does not have any jurisdiction over products in intrastate commerce and it would be a simple matter for the oleo manufacturers to set up plants to color and print this product and market it within the State where such plant is set up. The only law-enforcement agencies we would have to protect the consumers would be the State agencies and without licensing provisions it would be almost impossible to detect and prosecute the violators. I don't believe anyone holding a responsible position in the dairy industry has any objection to the consumers purchasing oleomargarine, but all of us would like to see to it that these consumers are aware of the fact that they are purchasing oleomargarine.

I am enclosing a booklet which is put out by the National Cooperative Milk Producers Federation which contains the history of six actual cases on the fraudulent sale of colored oleomargarine as butter. I call your attention particularly to the information contained on the second page, which I have marked in red, which is definite proof that even the oleomargarine manufacturers themselves were not able to determine the difference between this colored product and butter, as they themselves purchased some of this fraudulent product as butter.

This issue is, in my opinion, so important to the consumers of our Nation that I believe every effort should be made to bring out the facts during the committee hearings and on the floor of Congress so that the people of the Nation will get a true picture of what this fight is all about.

In my opinion it is imperative that the 10-cent tax on colored oleomargarine be retained, not only for the protection of the dairy industry, but also to protect the consumers of the Nation against the fraudulent sale of oleomargarine as butter.

Respectfully,

WM. J. MURPHY,
Dairy Commissioner.

Montana Is Proud of the Butte High-School Band

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. MANSFIELD. Mr. Speaker, I am taking the floor at this time to tell the House about the Butte high-school band. I want the membership to know how proud I am of these boys and girls; their director, Henry Schiesser; and the friends who made it possible for them to participate in the Tournament of Roses at Pasadena, Calif., where they stole the show. I know I speak for the city and the State of Montana when I say I am proud of them, and I want to congratulate every single one of them for their fine performances in Salt Lake; Las Vegas, Nev.; and Pasadena. They are a credit to their school, their city, and their county. They are carrying on the traditions which have always made Butte famous and its people so outstanding.

Montana can boast of its mines, farms, and scenery, but these boys and girls are the resources which we treasure the most. To all of them I want to say "Good luck in the future" and for their performances in Montana, Utah, Nevada, and California a very well deserved "Well done."

Mr. Speaker, under unanimous consent, I am inserting in the RECORD articles from the Butte (Mont.) Standard of January 5 and 6, and from Missoula Sportlite of January 8, 1948:

BUTTE HIGH BAND GETS ROARING WELCOME ON RETURN—MORE THAN 10,000 PERSONS TURN OUT TO GREET YOUNGSTERS AND TELL THEM "WELL DONE" FOR PERFORMANCES

More than 10,000 Butte residents started out Sunday afternoon to give its now nationally famous Butte High School Band an ear-splitting welcome. The band, on a 6-day special train tour of Utah, Nevada, and California, brought the mining city Nation-wide publicity of incredible magnitude.

The Union Pacific station was jam packed when the 12-car special train arrived, and hundreds lined Arizona street leading from the depot to the uptown district. Due to weather conditions, and the fact the boys and girls were dead tired, a parade uptown from the depot was dispensed with, the parade forming instead at the Finlen Hotel and then traversing several blocks of the business district before disbanding at the high school.

The huge throng paid tribute to the accomplishment of the band in being denoted the outstanding band in the Tournament of Roses parade in Pasadena on New Year's Day, a spectacle viewed by more than 1,500,000 persons. It was perhaps the noisest reception staged here since the late William Jennings Bryan came to Butte.

The crowd, which lined Arizona street from the depot to Broadway, quickly moved to the uptown area when word was passed along that the parade would form in the business district. City police officers working under Police Chief Bart Riley and Capt. Emmet Sullivan, and State highway patrolmen under direction of Capt. L. E. Black, ably handled the traffic, however, and there was no congestion although thousands of cars traversed the streets both before and after the parade.

Henry Schiesser and his young musicians, Mrs. Schiesser and the twirling groups, thrilled by the hearty welcome, and despite the fact they just Saturday performed in Las Vegas where shirtsleeves are the vogue rather than overcoats, put on a great homecoming show. They displayed the marching technique and peppery playing which won the top honors at Pasadena, and the applause of thousands in Salt Lake City and Las Vegas.

At Park and Main Streets they staged a 15-minute concert, playing their repertoire of selections which thrilled thousands at the Town and Public Market in Los Angeles, at Union Station in the same city, on Salt Lake's busiest street intersection and before thousands in Las Vegas.

During its uptown concert the band played California, Here I Come, the Victors, in compliment to the University of Michigan, which endeavored, but to no avail to have the band play in the Rose Bowl, the Notre Dame Victory March, in honor of boys and girls central high schools, their own school song, On, Butte High School, and as concluding number, Thanks for the Memories. This last was dedicated by the band to the residents of Butte and of other cities in the State, who made possible through contribution of $25,000 the band's trek.

The special train's arrival in Butte was approximately 2 hours behind schedule due to the fact that the tremendous reception in Las Vegas on Saturday, followed by a sightseeing trip to Hoover Dam, ran over the allotted time in that hospitable city.

The band's welcome home really started at Dillon where residents of Beaverhead County

gathered on a rain-swept station platform to cheer as the train went through that community.

On board the special as it neared Butte the youngsters and adults aboard held a birthday party in honor of Jackie Perry, 18-year-old twirler, then held an Auld Lang Syne reception.

Band director Schiesser presided and introduced Eddie Price, chairman of the arrangements committee, who was given a fine ovation for his work. Price, in turn, complimented Mayor Barry O'Leary for his participation on the trip, with the mayor also receiving a big hand from the band group. Principal George Haney praised the boys and girls for their fine work in publicizing Butte, saying:

"In my 20 years of school work I have never been prouder of any group of boys and girls. Your discipline has been perfect. You are to be highly complimented for your splendid success."

Director and Mrs. Schiesser were given rousing cheers when praised for their superb direction.

J. D. Ford, agent for the Union Pacific, who made the entire trip with the group, and the various railroad and pullman company employees all came in for their share of appreciation.

But, it was not all one-sided. The band and Butte party in general were likewise recipients of compliments from the railroaders. One of the nicest tributes paid the band was a written statement read during the reception. It was signed by L. L. Young and George W. Price, representing the dining and pullman car attendants and read as follows:

"As members of the crew we wish to congratulate a wonderful group of people, and also a well-behaved group of children from Butte, Mont."

Followed cutting of a birthday cake for Twirler Perry and the band assembled in their respective car units to await departure from the train. The honking of automobile horns by cars parked along the railroad tracks from the station to Montana street was the first inkling the youngsters had of the reception awaiting them here.

After disbanding at the high school following the parade, the boys and girls were taken to their homes by their parents or in cars provided through efforts of John E. Corette, Jr., who with Carl G. Rowan and Ed DeGeorge served as aides to Chairman Price during the trip.

The youngsters did a great job of publicizing Butte. They had one major disappointment. They did not play in the Rose Bowl as they had been previously invited to do.

The reason is not difficult to understand by anyone who watched them perform on arrival in Los Angeles. The reason given by the University of Southern California, which opposed the plan, was that it would set a precedent if high schools were permitted to play at the Rose Bowl game, and that press of time would not permit such an appearance. This announcement was made on the afternoon of December 31 or less than 24 hours before game time.

But, they're the toast of the Tournament of Roses parade, Los Angeles proper, Salt Lake City, and Las Vegas. And, as good-will ambassadors they did a wonderful job. Here's an example:

Chief of Police R. F. Malburg, of Las Vegas, said after the band's performance there:

"This is the finest thing that has ever happened here. I want Butte residents to know that we of Las Vegas feel indebted to them and that if at any time a Butte resident lands at the Las Vegas airport and is unable to secure immediate transportation to the city he or she is to call police headquarters. From today on there'll be a standing order at the station to care for Butte people here in that manner."

Butte High Band Members Cheered for Michigan in Rose Bowl

Thanks for the Memories, a hit selection of the Butte high-school band from Salt Lake City on through its Los Angeles and Pasadena appearances, was played by the mining city pageantry musicians as they boarded their special train at Los Angeles for the trip home.

And the Butte youngsters brought many memories back to the mining city. Memories of a great ovation in the traditional Tournament of Roses parade in Pasadena overshadow all the rest. They brought factual souvenirs of their musical triumph in that renowned spectacle in pictures and print. Los Angeles papers were generous in their praise of the showing made by the group. The Los Angeles Times carried a four-column picture of the band and in an accompanying story told of the cheering that greeted the group as it swung smartly down Colorado Boulevard in Pasadena. "Butte was repaid for having raised $26,000 to enter the band in the Tournament of Roses parade by the cheers the band received," the Times said. "The Butte high band marched, and how," was comment of the Los Angeles Herald Express.

Discipline of the band on the trip was superb. Aside from splendid response to signals during its marching and playing, a tribute to the work of Director Henry Schiesser and the ability of Majorette Jean Ann Fisher, the band readily responded to directives of Principal George Haney, and to members of the chaperon group. All adults in the party were impressed with the fine manner in which the band conducted itself all along the line, and this behavior, as much as its great showmanship, was a boost for Butte wherever the group made a public appearance.

Among tributes to the band was one received from Ed Allen, chairman of the Tournament of Roses publicity committee, who said:

"I have never seen a finer high-school band or a group of boys and girls who conducted themselves in such orderly manner."

Gen. Omar Bradley recalled with pleasure his associations with mining city residents during the time he was stationed in Butte, as captain of an infantry unit during World War I. He extended his New Year's greeting to Butte through Mayor Barry O'Leary, Eddie Price, chairman of the general arrangements committee; and Principal George Haney, when the Butte group met the Army Chief of Staff at a luncheon held Thursday at the Brookside Country Club.

Jack Meyers was the only casualty on the trip to the *Helena*. He lost a shoe while clambering up the gangplank. Efforts of seamen in the motor launch to recover the shoe from Long Beach Sound were fruitless.

The University of Michigan band is probably the finest playing and marching collegiate organization in the country. It is, however, a different type of band than that boasted by Butte, in that the mining-city musicians are more noted for pageantry and intricate maneuvering. The Michigan band marches with military-like precision, using a high-step cadence of 180, or 60 over the normal marching time. The Butte band members were deeply impressed by the Wolverines' musical group's appearance in the bowl.

Slick, in their snazzy purple and white uniforms and twirling costumes, the mining city kids were prominent at the bowl in that they led a Michigan rooting section just west of the press box. Three Michigan cheer leaders, quick to take advantage of the Butte group's favoritism for Michigan, led them in cheers.

Fully 2,000 persons heard the final performance of the band played in Los Angeles. The boys and girls, tired as they were, gave another sparkling exhibition of their skill on the Union station patio just before boarding the train. The assemblage included scores from all parts of the Nation who were awaiting departure on the numerous trains leaving California's Gotham. Director Henry Scheisser had planned using only a few numbers on the departure program but was forced to use almost every selection in the repertoire as the crowd shouted, "more, more, more."

John E. Corette, Jr., was not an official entry in the Tournament of Roses parade but he marched nevertheless. Mr. Corette followed along in the wake of the band and garnered comments of hundreds of spectators.

"It was one continuous ovation for the 14 blocks I hiked," the vice president of the Montana Power Co. said.

Maurice Cantlon, chief of police of RKO-Pathe, Culver City, and formerly of Butte, was the recipient of the heartfelt thanks of the entire Butte party. Cantlon, on New Year's eve, took uniforms of the entire band to the RKO cleaning plant, and through cooperation of that picture company, had the outfits cleaned and pressed for the New Year's day performance at Pasadena. Sgt. Jimmy Cook of the RKO police staff took over the obligation of returning the uniforms to the special train. He brought them back at 4 a. m. New Year's morning.

Johnny Crowley, one-time Kalispell resident, now chief of the fire department of Culver City, was another big help. Johnny provided transportation to and from the Alameda street station for members of the Butte party and also to points along the band's sight-seeing tours.

Sheriff E. W. Biscoilu of Los Angeles County provided a 24-hour guard for the special train while it was stationed in Los Angeles.

Jimmy Trucano, Butte high, '22, was among the receptionists at Twentieth Century Fox Studios in Beverly Hills. Jimmy, who played with such Purple and White football stars as Tom Walsh, Tom Grady, "Chappy" Chapman, and the late "Shoes" O'Connor, is employed at the studio. He had previously informed his associates of the splendor of the band, and the boys and girls, playing on a lawn before a mansion set used in "Foxes of Harrow," didn't let him down. Carpenters, electricians, gardners, camera men and extras, all took time out to watch filming of the group for Fox Movietone News.

Elliot Levy, former Butte resident, now living in Las Vegas, cried as the band staged its stirring concert at Fremont and Second in Las Vegas. "Haven't wept for 10 years," he said, "but I'm so proud of those kids. They'll be the talk of Las Vegas for a long time."

A beautiful girl on a sleek, black horse, trailed the parade leaving the Las Vegas station. On the counter march she headed the show.

"We don't know who she is," R. W. Elkins of the Junior Chamber of Commerce said, "she wasn't invited to take part but she's doing a fine job of it."

A Lot of People Get a Different Slant on Butte

We have an idea that millions of citizens from all parts of the Nation have a totally different notion of Butte, Mont., the richest hill on earth, after having seen the Butte high-school band perform during its week-long invasion of metropolitan areas from here to the Southwest coast and back again. The fact that Butte is rich not only in metal deposits but rich, as well, in the finer things of life may have come as a distinct surprise

to many people whose only impression of the mining city had been acquired from reading an almost continuous flow of magazine articles and books over a long period of years.

Of course, the mere fact that writers of national reputation had found Butte interesting copy may have indicated to the more discerning readers that people of Butte and the city itself possessed a much more substantial quality that the scribes had been willing to admit in their articles and their books.

The appearance of as fine a high-school band as exists anywhere in the Nation before the eyes of millions of people in Salt Lake City, Los Angeles, Pasadena, Las Vegas, and at way points thus has served to present the city of Butte in a light which has not been possible heretofore.

Butte citizens staunchly maintain that the old mining city has character. That it has color, traditions, unique local customs, ideals, ambitions, and all the other ingredients which go to make up a metropolitan community goes without saying. It is the peculiar mixture of all the various ingredients of a person or a community which add up to the one significant thing called character.

And the Butte high-school band stands today, as a result of its invasion of a broad outlying area, as a representative of the true character of Butte.

From all quarters have come the highest praise of the precise marching, maneuvering and playing of the Butte high band. Its being voted the outstanding band in the Tournament of Roses parade is testimony of this.

But perhaps much more significant is the fact that also from every quarter has come the highest praise of the fine young men and women comprising the band, their excellent behavior and discipline everywhere and their well-groomed, fresh, and wholesome appearance.

This, as the saying goes, is the pay-off.

Butte and all Montana may boast about production of the finest metals, crops, livestock, lumber and other materials. But all this is secondary. It's the young people that count.

The people of Butte and of all Montana doubtlessly were paying an unconscious tribute to the youngsters when they chipped in $26,000 to send the Butte high-school band to the Tournament of Roses. The money may be considered as having been repaid with tremendous interest already. The dividends will continue to roll in for years.

As for the youngsters themselves, they will have their memories. They said thanks Sunday afternoon in a demonstration at Park and Main.

[From the Sportlite of January 8, 1948]

BUTTE'S BAND LAUDED

This piece could be written in the hat's-off column, but it would be a bit late, inasmuch as a couple million Californians already have been lavish in their praise for the now nationally famous Butte (Mont.) High School Band.

Besides, it is no secret to all of Montana today that the 136-piece prep band from the mining city and its capable director, H. J. Schiesser, are the toasts of the Treasure State for their magnificent showing in the recent Tournament of Roses parade at Pasadena, Calif. Thousands upon thousands of spectators cheered Butte's marching musicians who occupied the No. 1 spot in the colorful pageant on Colorado Avenue, and with every step taken by the Butte boys and girls it brought acclaim to the mining city and all of Montana.

QUINN QUOTES

Frank Quinn, veteran newspaperman with the Butte Daily Post, who accompanied the band to California, proved adept at prying information out of celebrities. The roving reporter derived speeches from governors, admirals, colonels, prominent businessmen—all of whom extolled the merits of Butte's musical organization.

Perhaps most notable of the praise for the "note makers" came from California's Gov. Earl Warren. He said:

"I think it was a splendid thing for the people of Butte to join together in sending the Butte high-school band to the Tournament of Roses. I know that these splendid boys and girls will enjoy their visit to Pasadena and their presence was most welcome. It is a grand organization."

In their flashy uniforms, the Butte youngsters performed an intricate routine with perfect precision, putting personality, cheer, and color into every step, every note. As writer Quinn put it: "The mining city—in fact, all of Montana—can be justly proud of the flashy performance of these youngsters."

To us the showing of the Butte band symbolizes the paramount item that has stood out for years and years in the mining city's athletic teams—competitive spirit. The music-minded boys and girls gave it that extra "oomph" which brought their efforts higher and into more prominence than if they had just gone through the motions.

California's papers splashed stories, features, and pictures of the Butte band and all comment was favorable toward the Montana music delegation. To the California writers the band had much more luster than the University of South California football team, which certainly hit a few sour notes on that memorable Thursday afternoon.

Bombs, Bonds, and Burdens

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. COLE of Kansas. Mr. Speaker, under leave to revise and extend my remarks, I include in the Appendix of the RECORD, a copy of the radio speech made by me over NBC, January 9, 1948.

The two atomic bombs which, 29 months ago, brought victory in Japan, cost a billion dollars each to produce.

If the billions we spent to win World War II had all been used to buy atom bombs at this price, this Nation would have made 331 such bombs during the years from 1941 to 1945.

And if, after World War II, this country had been permitted to destroy, as a safety measure, only those atom bombs it had paid for in cash, it would still have on hand 180 bombs liable to explode at any minute. It would be forced to use any available means to prevent such an explosion—a blast of such magnitude that it would certainly wreck the United States as a nation.

We are, of course, in no present danger of an atomic explosion of this size. But we do have a public debt of $256,000,000,000 (and 180 of these billions stem directly from the money cost of World War II). Each of these billions can, unless systematically paid, cause a fiscal explosion as destroying to property as the impact of an atomic bomb.

Our Government can liquidate this war-created obligation if it chooses. For example, it could repudiate it through a method recently used by the Soviet Union; it could declare that the two hundred and fifty-six billions it now owes as a result of World War II will henceforth be worth only eighty-five billions. In other words, it could say, "Instead of waiting for all of our debt to explode, let's explode two-thirds of it right now." The price of any experiment of this type is, of course, a rigid dictatorship; and no American Government is, as yet, openly willing to pay this price.

But what the Truman administration would not dare attempt with an atomic push-button, it is perfectly willing to risk with a slow-burning torch.

It has not, and will not, resort to open repudiation—it will not explode all at once most of our bomb-laden war debt. But it has openly sought to minimize the burden of our war debt by resorting to inflation. When the cost of this inflation, in high debt, high taxes, and high prices brings protests from voters, the Democratic Party does not offer to end inflation; it simply offers to use inflation for its own ends by establishing an economic dictatorship in Washington. Faced with the necessity of increasing production, it prefers to ration scarcity.

This is the administration which told us after VJ-day that the United States should have a $30,000,000,000 budget, a national income of $130,000,000,000, and a permanent debt of $260,000,000,000. More than 2 years later, it is firmly addicted to huge budgets that involve from three to six billions of unnecessary, and, therefore, inflationary spending. This policy has boosted the national income to two hundred billions. If the administration does not curb its own spending, it will boost the 1948 national income to an inflationary high of $230,000,000,000—and each one of these dollars will have a purchasing power of 45 cents. At this pace, we shall be assured within the next 4 years that a per capita debt of $1,600 won't matter because it will be balanced by a per capita income of twenty-one hundred. These dollars, however, will have only a purchasing power of 25 cents. We shall also be told that an interest burden of $6,000,000,000 is only 2 percent of our national income, and is, therefore, of no particular consequence.

But, to redeem our present, tremendous debt, we need not hold to the administration's plan of accomplishing through a creeping inflation what we would not dare attempt through a Soviet-style repudiation. We are not faced with the unpleasant alternatives of destroying our debt burden through an explosive repudiation of consuming it with the slow fire of inflation. Properly harnessed, the material which produces an atomic explosion will yield beneficial atomic power. Properly harnessed, our explosive national debt can give us the power to find and retain peace and prosperity.

Of our present public debt, one-fifth is held in United States savings bonds by individuals. About one-eighth is owed by the United States Treasury to agencies of the United States Government or of the United Nations. Roughly, one-third of our total debt may be counted an asset rather than a liability. But the remaining two-thirds constitutes a potent and continuing threat to our prosperity unless properly handled through a program of steady and consistent debt reduction. These marketable billions—which can be sold for cash at the discretion of their owners—are the economic bombs which must be transformed into power plants during the next 20 years, if this Nation is to preserve its prosperity.

Of this vast sum, $47,000,000,000 is in low-interest debt, subject to annual redemption or renewal. The remaining $118,000,000,000 is held, however, in high-interest bonds; and these bonds, unless they are paid off as they fall due, must be renewed for periods of as long as 20 years. In other words, they will become a liability of the next generation; and since it is human nature to pay only those debts which are incurred for one's own benefit, to renew a bond issue on such long-range terms, is to create perpetual debt at a high rate of interest.

This is the path which the Truman administration is now relentlessly pursuing. While insisting that taxes be maintained at their present level to reduce the public debt, it proposes a tax-reduction measure which, through its rigid forty-dollar credit, regardless of income, would manage to increase food prices and discourage food production. The administration which would now penalize corporations for prosperity is also the administration which, in 1945, willingly reduced tax rates on corporations. Through forty billion dollar budgets, Mr. Truman boosts inflation. At the end of each year, many departments have large, unspent funds which tax even the skills of money-mad bureaucrats. These scientific spenders do a good job, however, in tossing these surpluses out of Washington windows at the end of each year, in the hope that the Treasury will not be unduly rich with unspent funds. These wasted sums are sufficient to solve most of our current debt problems.

The administration has been forced to this costly measure by its own uninhibited extravagance. It refuses to save money for debt reduction by curtailing Government spending; it seeks, rather, to curb your spending and mine through high taxes, rationing, and price control. It realizes, as I have suggested in a bill now before the Congress, that we must set aside $10,000,000,000 each year to pay the interest and principal of our national debt. But it contributes not 1 cent to this debt-reduction fund through its own efforts, even though a vigorous savings program might yield $9,000,000,000 during the next 18 months at no cost to the taxpayer. Its program remains the notorious "spend and spend, tax and tax, elect and elect" of the threadbare thirties.

Foreign aid, debt reduction, and tax reduction are not conflicting aims, although the administration is apparently willing to spend our last dollar to prove they are. Each of these aims can be made to help the other. In fact, if they are not made to work together, there is grave danger that each aim will fail separately. Properly administered, foreign aid will stimulate production and substitute useful goods for virtually worthless foreign currency. Properly administered, a planned debt reduction of five billions each year will trim Government costs, safeguard our savings, and release for private investment and production, money now kept idle in explosive Government bonds. Properly carried out, tax reduction can stem inflation by heading off demands for wage increases and improve our standard of living by encouraging production.

Through its present policies of unchecked spending, high taxes, and rising high debt costs, the Truman administration is bound to assure prosperity for bureaucrats by increasing, beyond all present limits, the burdens on all other Americans. By channeling into more constructive efforts, the energies it now wastes through inflationary spending, the administration could redeem our bonds, curb our tax and cost-of-living burdens, and forestall the chance that bombs will fall in another great war during this generation.

"We Are Overextended"—Lippmann

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a pointed editorial by Mr. Walter Lippmann which appeared in the Washington Post. He points out the danger that exists at the present time in this matter of foreign aid and inflation:

WE ARE OVEREXTENDED

Never more than in the next 6 months while Congress is in session will so much depend on whether practical judgment is to be the master of our fears and our wishes. Practical judgment is first of all the act of comparing what this country can do with what if it were not opposed, or if it were omnipotent, it would be desirable to do. It will be obvious that it is impossible to do everything for which a strong, even a compelling, case can be made. Practical judgment then consists in choosing to what ends the available limited means shall be applied.

It is the principles of practical judgment which distinguish common sense from hysteria, and statesmanship from agitation, and national commitments which can be realized from entanglements which end in bankruptcy.

The necessity for practical judgment confronts us now because the claims upon our resources, our military power, influence, and competence are now excessive. They cannot all be met. The total will have to be reduced. The question as a matter of fact will be whether the total claims are to be reduced crudely and without a plan by Mr. TAFT and Mr. TABER, who will look at the budget but not at the high national interest, or whether they will be reduced by selection on the considered decision of Mr. Marshall, Mr. Forrestal, Mr. Snyder, and Mr. Harriman.

I think it is fair to name these four principal Cabinet officers as the men who must in agreement make the decisions, with the President's approval, which will bring into balance our responsibilities and our over-all resources, our commitments and our power, our means and our ends.

The limiting factor in making this decision is that the productive capacity of this country is now fully employed and cannot be expanded very much very rapidly. In the primary components of national wealth, in food, in raw materials, in steel, and in transportation, there is, of course, room for greater efficiency, harder work, better management, and productive investment. But for the practical purposes of those who make national policy the net improvement possible quickly is negligible as compared with the immense totals. There is not now, as there was in 1940, a very large reserve of unused facilities and unemployed labor.

Against these inelastic resources we must measure the claims. First and foremost are the huge deferred claims, the unspent purchasing power, accumulated by individuals and corporations during the war. This is the domestic inflation. It is, moreover, of a kind which is creating more inflation, and could potentially through the expansion of bank credit create almost unlimited inflation. If this inflation is not checked drastically and resolutely by taxation, a budgetary surplus, and by monetary restriction, it can devour all the means which we must find to maintain our military security and to support our foreign policy.

If the Democrats and the Republicans cannot agree on an anti-inflationary policy, the Kremlin will not have miscalculated when it holds that a domestic crisis in the United States will change the world situation in their favor. But the Democrats and the Republicans will not agree, and the real issue will be lost in cheap politics, if the Administration does not concentrate its effort on checking the cause of inflation rather than on demagogic palliatives to deal with the high prices which are only the effects of inflation.

The inflated claims of American consumers and of American business enterprise upon our limited resources are in competition with many other claims. The two principal ones come from the armed forces and the State Department. Here decisions of high policy will have to be taken. For it will be impossible at one and the same time to find the funds for a strategic Air Force, a Navy which commands all the oceans, a ground Army based on universal service, research and development of new revolutionary weapons, the Marshall plan for western Europe, the occupation and reconstruction of enemy territory, the support of Greece, Turkey, Iran, the Arab states, and China, and our implied obligations under the good-neighbor policy.

We are morally and politically over-extended. Decisive choices, each of which involves sacrifice, risk, losses, and deep misgiving are, therefore, unavoidable. We are at a point where the Truman administration cannot please all the services, all the departments, all the specialized divisions of the State Department, all the countries to which by its unconsidered and no doubt well intentioned declarations it is morally committed.

The process of deflation is an exceedingly painful process, especially for a democracy, especially in an election year. But we can no more avoid it than could the Russians, who have deflated themselves brutally but effectively, or than the British who are struggling with it, or the French who are face to face with the imperative need for it. Our margins of safety are greater than those of any other great power. But our commitments and our obligations are also greater, and the necessity of making both ends meet is now squarely before us.

We shall have to have from Secretary Forrestal a decision, as is required under the new military legislation, on how our military investment is to be allocated. We shall have to have from Secretary Marshall judgments as to where on the great globe our diplomatic effort is to be concentrated and pushed forward decisively. And in the presence of these decisions we shall have to concentrate our attention, refusing to let it be dispersed all over the surface of the earth. For the earth is much too large, and its troubles and disorders much too extensive, for us to regard ourselves as the ultimate fixers of everything everywhere.

The Wallace Candidacy

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. NORBLAD. Mr. Speaker, I wish to call the attention of the House to an excellent editorial on the Wallace candidacy, written by Verne McKinney, an outstanding newspaperman in my State. The Hillsboro Argus, in which this was published on January 8, has, under the ownership of Mr. McKinney, won a number of State and at least one national journalistic award:

THE WALLACE CANDIDACY

Henry Wallace has envisioned himself as the savior of the world and is going to give the American people the opportunity to vote for him as an independent candidate for President. It is probably just as well for him to come out in the open so that the electorate can reveal its good judgment.

He has listened to the pleas of the radicals and the acclamation of Communist Party organs to the point where he is convinced that he is the hope of the world. The former Republican and then Democratic Secretary

of Agriculture, then Vice President, and then Secretary of Commerce has taken an appealing slogan—"Peace and Prosperity"—which, without question, everyone wants, but because of their common sense have different ideas as to how to reach that goal. Doubtless, every candidate will be for peace and prosperity.

While serving as Secretary of Commerce in President Truman's Cabinet, Wallace criticized the Nation's foreign policy at a time when the then Secretary of State James Byrnes was in the midst of a critical conference with world powers in Paris, jeopardizing our position and creating doubt as to our policy in the minds of other Government representatives. After resigning by request from the Cabinet he went abroad and criticized our policies before peoples in other lands, which to many seemed in very poor taste and a disservice to this country.

Wallace has charged that the present bipartisan foreign policy, which means standing firmly for the things for which this country fought, is leading us into war. The Wallace view, as we see it, is one of appeasement and opposition to adequate preparedness, which have proved in error twice within the lifetime of most Americans.

He opposes the Marshall plan of aid to Europe on the ground that it divides Europe into two warring camps, yet all nations, including Russia and her satellites, were invited to participate in the recovery program. He says he will fight against the spreaders of hate and falsehood against Russia, but what else could develop from such withering propagandistic blasts as were leveled against this country by Vishinsky and Molotov, of Russia, in recent months. Surely peace-loving Americans want understanding but what chance is there for it when nothing but abuse and insults are heaped upon us.

Wallace declares flatly against universal military training, which has been declared necessary by those charged with the defense of this country and is backed by the American Legion and Veterans of Foreign Wars, men who know from experience the need and value of adequate training and defense. Our deplorable lack of preparedness in 1917 and 1939 only served as encouragement to the forces of aggression.

Much of the Wallace support has come from the extreme radicals, from Communists and their official organ, The Daily Worker. Communists in their zeal to throw a monkey wrench into the Marshall plan for the recovery of Europe have called for the formation of a national third party under the leadership of Wallace. Nowhere have we seen any repudiation by him of such support.

Oleomargarine

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. BUCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. BUCK. Mr. Speaker, under consent to extend my remarks in the Appendix of the RECORD, I include the following editorial from the New York Times of December 20, 1947:

TIME FOR COMMON SENSE

For 61 years, ever since 1886, the sale of margarine has been conducted under the handicap of restrictive and discriminatory law. Dairy and farm interests, affecting a tearful and altruistic concern for the consumer's welfare, have managed to block at almost every step the efforts made through the years to lift this yoke laid down in Federal and State law. Now Senator FULBRIGHT of Arkansas is determined to try again. He has introduced a bill to repeal all Federal taxes on margarine on grounds that they are directly opposed to the spirit of free enterprise. He sees these taxes and license fees as the only levy made on a domestic product for the benefit of a competing product.

With butter at about $1 a pound retail; with hospitals, schools, and other institutions struggling to keep their heads above water because of high prices and either forced by law to serve no margarine or otherwise handicapped in its use; with some States barring entirely the sale of colored margarine; with the people of low income who are the heaviest users of margarine bearing the chief burden of the unjust, discriminatory tax—surely this is the time to stop listening to the sob stories of the interests fighting margarine and to begin listening to the people as a whole.

Congress needs no long hearings to get the facts on this old story; if it needs to do any more than consult common sense it can examine the 317-page record of Senate committee hearings held in 1944. Albany also has some work to do on this question, and so have many other States. Margarine should be plainly identified. It should be subject to the same pure-food safeguards as anything else to be eaten. It should be produced, sold, and used on the same basis as butter.

Indian Traders

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article written by Mr. Frank C. Waldrop, entitled "Indian Traders," which appeared in Sunday's Washington Times-Herald, January 11, 1948:

INDIAN TRADERS

(By Frank C. Waldrop)

Here is a little story about Mrs. Ruth Muskrat Bronson and her friends. Mrs. Bronson is a vibrant ladies' club speaker and registered lobbyist at the Capitol for the National Congress of American Indians. But let's just let this one go from left to right, in the order named, and see what happens:

1. Last year Secretary of the Interior Cap Krug, who looks after Alaskan affairs, asked Congress to pass a law opening the Tongass National Forest in Alaska to modern world development.

Specifically, he asked the power to join with the Secretary of Agriculture in appraising the timber and selling off cutting rights to make newsprint and other pulp products so badly needed on the west coast.

2. Tribes of Indians live in the Tongass region. It's a question whether they have any legal, titular claim to anything, since the United States Government bought Alaska outright from Russia on June 20, 1867, and the title passed between the two Governments without any provisions for Indian tribal claims of any kind.

But, nevertheless, Uncle Sam is a softhearted guy.

And so when Congress passed a law last summer authorizing the projects requested by Interior Secretary Krug, a section was inserted specifically requiring that all money from the Tongass timber sales be put in a special Treasury account until the rights to the land and timber are finally determined.

3. It looked like a good deal for some enterprising pulp and paper outfit to go up to Alaska and do some pioneering, also make paper for the United States west coast, which is so badly in need of same.

So the Puget Sound Pulp & Timber Co., of Bellingham, Wash., got set to bid for the timber rights and put up a papermaking plant costing around $16,000,000.

4. Whereupon, the Puget Sound Pulp & Timber Co. got a letter from Washington, D. C., signed James E. Curry, advising them that his clients, the Tlingit and Haid Indians of Alaska, would be heard from in the law courts and under no conditions to put any faith in certain bureaucrats who might say otherwise.

You can imagine how quickly Puget Sound Pulp & Timber Co. lost interest in putting up a paper mill on land that the Indians and the United States Government would have to fight over with Puget Sound Pulp & Timber Co. as grass under the elephants' feet.

5. Just by chance, there is a James E. Curry listed as counsel to the National Congress of American Indians, for which Mrs. Ruth Muskrat Bronson is lobbyist.

And just by chance, last summer after Interior, Agriculture, and Congress had hotted up the Tongass deal, Mrs. Ruth Muskrat Bronson drifted up to Alaska. And just by chance, she discovered that Indians up there were afraid they were going to lose the timber and so begged her to help them.

Next thing anybody knew, there was James E. Curry up in Alaska doing about, and lo and behold in time it came to pass that the Timber Development Corp., No. 9 Rockefeller Plaza, New York City, found itself with contracts from Indian tribes up there for timber rights.

The contracts each affected a specified $10,000,000 worth of timber. And to tie up the Indians' ownership, if any, Timber Development Corp. deposited with the tribes $500 per contract.

Nice work, a $500 binder for a $10,000,000 deal, is it not? It is.

For the record it appears that Timber Development Corp. was organized by a New York attorney, Richard G. Green, No. 9 Rockefeller Plaza, and as he says himself the incorporators are all people in his office.

6. The Agriculture Department, through Chief Forester Lyle Watts, has denounced the Indian claims and said the Forest Service will oppose them. He invites pulp and paper makers to bid and get started developing Alaska. But Curry, Timber Development Corp., Mrs. R. M. Bronson & Co., have scotched all that.

In fact, Mrs. Bronson put out a press release here last month after the third contract between Alaskan Indians and Timber Development Corp. had been signed, flatly forecasting:

"* * * litigation that will bring to a head the conflict over ownership of timber in Southeastern Alaska that has been simmering for more than 20 years between the Indian inhabitants of the area and the Forest Service of the Department of Agriculture."

She said the Indians are sticking by the Interior Department in its interminable bureaucratic war for power against agriculture, and that "Interior Department officials have urged the Indians to proceed to cut and dispose of their own timber resources, notwithstanding Agriculture Department objections."

But just the same, the forest service will invite bids for timber in Tongass forest in a few weeks, offering a United States Government contract on the same trees the Indians have already sold to Mrs. Bronson's pals.

So here we have Interior Department bureaucrats pulling one way, Agriculture another, pulp companies scared to bid for fear of lawsuits, and lawyers forming timber development corporations nobody every heard of before, and Mrs. Bronson busy lobbying.

When is the United States Congress going to investigate this sort of deal and clean up the whole Indian mess?

Truman Message to the Congress Held Bid to Left-Wing Element for Campaign Support

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. ROBERTSON. Mr. Speaker, Mr. David Lawrence, who in my personal judgment is one of the most accomplished writers of the country, analyzes correctly the President's speech on the state of the Union in a syndicated article appearing in the Evening Star of January 8, 1948.

Under unanimous consent, I include it herewith:

TRUMAN MESSAGE HELD BID TO LEFT-WINGERS FOR CAMPAIGN SUPPORT—PRESIDENT SEEN VEERING FROM MIDDLE OF ROAD TO ATTRACT RADICALS

(By David Lawrence)

President Truman's message to Congress is a historic document—mostly because it signifies a complete turn by Mr. Truman to the radical left.

Until now Mr. Truman has been regarded as possibly following a middle-of-the-road course. Now he has embraced radicalism wholeheartedly. Whether this is a victory for Henry Wallace and an effort to keep many Democrats from following the third party or whether it represents a determination previously arrived at to make the issue of the 1948 campaign a fight in behalf of the radical point of view is not immediately explainable.

The first tenet of radicalism is to demolish the profit-and-loss system and wreck individual initiative so that the Government may take over the economic system. Mr. Truman embraces such a doctrine by insisting that all citizens should get the same amount of tax reduction—namely, $40 apiece—irrespective of what they earn. To his way of thinking a skilled mechanic earning close to $100 a week nowadays is on the same level as the unskilled laborer who gets less than that sum in wages.

The man who has spent a lifetime in his profession or in his trade—the doctor or the lawyer or dentist or accountant or college professor or storekeeper—all may earn different amounts but they must be considered on the same level so far as tax reduction is concerned. This is the Truman doctrine assimilated from the industrial union philosophy hitherto championed primarily by the CIO and other radical groups.

THEORY HELD COMMUNISTIC

It sounds all right in theory to say that everybody should get a cost-of-living credit of $40, but it is not this theory that has built America. The idea of penalizing thrift and success and skill and talent is not basically American. It is communistic.

Mr. Truman also accepted another piece of the American Communist Party program—to increase corporation taxes as a means of penalizing the success of those companies.

In wartime high taxes on corporations were feasible because wages and prices were stabilized and controlled. Today, however, if corporation taxes are increased so that every company pays to the Government in taxes 50 cents out of every dollar earned, the chances of raising any money in the investor markets will vanish for many companies.

America's stability today depends on the ability of companies to get working capital to finance their large operations. In one breath, Mr. Truman speaks of the need to spend $50,000,000,000 on expansion of American industry and in another he says the corporations must be taxed at much higher rates, forgetting, of course, that a cut in the rate of earnings will demolish the entire structure of credit for financing the expansion of productive facilities. It will also tend to kill competition and promote monopoly. It will stunt the opportunities of small companies to compete with large ones. Only by retaining earnings can small businesses be built up today. Risk capital is unavailable to them.

WOULD BRING DEPRESSION

Everybody who is at all familiar with the processes of industry knows that it is necessary to improve machinery and facilities if prices are to be brought down through increased productivity and efficiency. Mr. Truman, without stopping to think through his own recommendations, has swallowed the CIO propaganda about corporation profits. If the Truman program were adopted, it would bring the worst depression in all history. The only scheme the radicals would offer to remedy the situation then would be state socialism, which is but one step removed from communism.

The message is indeed historic. It means that New Dealism has been revived and that radicalism is going to be the Truman campaign program. Against such a program, the nonradical forces of America will doubtless be mobilized. The task of nominating a leader to fight radicalism has been made easier for the Republicans. Once the country understands the real meaning of the Truman proposals and their threat to employment, it will elect almost anybody the Republicans select. The President's so-called tax program is a blunder of such magnitude that it seems probable he will modify his proposals materially between now and next November.

The Uncalculated Risk

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, of the hundreds of booklets, pamphlets, and newspaper articles that have been written on the so-called Marshall plan, I believe one of the latest and most convincing statements I have read is an article by Henry Hazlitt, entitled "The Uncalculated Risk," appearing in the January 5, 1948, issue of Newsweek, which I am pleased to quote, as follows:

THE UNCALCULATED RISK

(By Henry Hazlitt)

It has become fashionable to say that while the Marshall plan does not guarantee European recovery or a peaceful victory over communism it would be cheap even at $17,000,000,000 if it did bring these results. We are told that we are asked to take no more than a calculated risk—a gamble for tremendous stakes in which the odds are heavily in our favor. This argument, however, begs the central question. It takes it for granted that the European recovery program, in the form now proposed by the President, could do only good and no harm.

Yet Europe's economic crisis today is only partly the result of war destruction or of bad weather. It has been brought on mainly by Europe's own economic policies, which have destroyed the free-market mechanism and its incentives. Nearly everyone seems to assume that if this self-imposed crisis deepens, or if controls intesify shortages, Europe will turn in desperation to still more drastic controls and even to communism. The Marshall plan, it is thought, will prevent this by making the situation better.

It never seems to occur to those who hold this view that a deepening of this self-imposed crisis could lead to a demand in Europe, not for communism, but for a return to economic freedom. Yet there are already encouraging signs of this. Italy has restored relative freedom of foreign exchange. France has dropped some important controls. Former Premier Daladier recently declared in debate that inflation cannot be overcome in France as long as a managed economy prevails. In Britain the public faith in the managed economy has been visibly slipping. Is there not a real risk that the funds and goods supplied by the Marshall plan, by making the situation more tolerable than it otherwise would be, could delay or prevent a return in Europe to free markets and free enterprise? Will the Marshall plan be in fact so framed and administered as to save socialistic Europe from communism? Or will it be so framed and administered as to save Europe from capitalism?

At present, certainly, these questions cannot be answered with confidence. In his message to Congress on the Marshall plan President Truman admitted that our proposed $17,000,000,000 of help to sixteen European nations would constitute only some 5 percent of their total national production.

Yet he declared the two purposes of our help to Europe to be to lift the standard of living in Europe closer to a decent level, and at the same time to enlarge European capacity for production. Would a 5-percent difference in its standard of living decide socialistic Europe to return to capitalism instead of driving on to communism? To enlarge European capacity for production is to supply Europe with capital goods. To the extent that we do this we must necessarily defer our own capital expansion. Are we going to do it while Europe continues to follow the policies that systematically throttle its own capital production and investment—price fixing and profit control which discourage the output of capital goods and plant expansion; drastic income taxes that dry up the sources of capital accumulation; threatened socialization and seizures that discourage or prevent private investment?

Yet in the President's message there was not one serious word of criticism of the economic policies now being followed by European governments. There was not one hint that these policies have been in any way responsible for the present European crisis. Nothing was said of the effect of overvalued currencies in discouraging exports. European promises for the future were taken as the equivalent of accomplished facts. Mr. Truman warned Americans against the consequences of providing only half-hearted and halfway help. He said nothing of the consequences of half-hearted and halfway self-help in Europe. Yet on the President's own estimate what Europe does to increase its own production will be at least twenty times as important as the American contribution.

It is clear that the risks of the Marshall plan, in the form in which it has been presented to Congress, have not yet been soberly calculated.

Sound Government and Inflation

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. BUCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the New York Journal of Commerce of January 9, 1948:

A STRIKING CONTRAST

"Government, if mismanaged, can be the greatest factor in producing an increasing inflation." (From Governor Dewey's annual message.)

The job of running the country is, of course, vastly more complicated than that of administering the affairs of only a single State, large as it may be.

Yet there are principles of sound government and administration that apply in either case. Foremost at this time is the adjustment of governmental policies to the fight against rising prices which is of equal concern to every public authority from the Federal Government down to the smallest municipality.

That is why the two annual messages presented to their respective legislatures on the very same day by President Truman and Gov. Thomas E. Dewey offer an interesting study in contrasts.

It is, of course, not news that everybody is against inflation. Yet while the Federal Government is floundering around in a vain attempt to weld its own policies into a systematic economic program instead of hysterically asking for blanket authority to revive wartime controls over the economy, Governor Dewey's program, as presented in his message to the New York State Legislature, shows a practical approach to the problem of how Government policies can be adjusted to the threat of continued inflation.

Governor Dewey's program is based on two considerations:

1. Government expenditures must be cut as far as possible without jeopardizing essential services and new programs must be financed in such a way as to cushion their inflationary effect; and

2. Taxes must not be increased at this time because some of the State's resources must be kept in reserve against the time when they may be needed to offset the effects of an economic set-back.

While the Federal Government at this time indulges in the pleasant preelection game of promising additional benefits to all large groups except business, New York State is launching its next fiscal year with a cut in expenditures that averages 9 percent for all its departments.

Moreover, New York State is postponing expenditures for public works wherever possible because of the high costs and the directly inflationary effect of such governmental expenditures.

This policy means that New York State will not be able to meet many of the demands made upon it but, hard as the choice of refusal in such instances may be, the Governor says that "the severest of tests" will be applied to any program that would engender additional government debt or expand in anywise the expenditure of governmental moneys derived by taxes.

Unless restraint in adding to expenditures now is exercised, Governor Dewey is afraid that serious trouble may result at the first signs of business recession.

The Governor's financial advisers apparently are uneasy about the present level of income because the Governor hints that "in the midst of an inflationary spiral we may well be toward the top of the abnormal revenues which flow from that inflation."

This is by no means a predication of an early set-back in business but it shows statesman-like determination to be prepared for any eventuality. Otherwise, the message warns: "With the first mild recession in business, the government of the State, and consequently of all of its municipalities, would be in a catastrophic situation."

Truman Invites Disaster for the U. S. A.

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial entitled "Truman Invites Disaster for the U. S. A.," which was published in the Rolla Daily News, Rolla, Mo., Thursday, January 8, 1948. Attention is called to the fact that the Rolla Daily News is an independent newspaper published and widely circulated in a traditionally Democratic city and county in the President's home State.

TRUMAN INVITES DISASTER FOR THE U. S. A.

(An editorial by Edward W. Sowers)

President Truman is inviting disaster for this Nation to further his own selfish political aims.

Never in our recollection have we heard such a bombastic and dangerous program projected upon our Nation by a man in high position as was proposed by President Truman in his State of the Union address to Congress yesterday. It simply reeked with political overtures.

President Truman would sell this Nation out in order to extend his residence in the White House. He would destroy the American system of private initiative and leave us nothing with which to fight communism, the greatest threat upon the world today.

The President, outlining his campaign platform for 1948, proposes a further socialistic form of government, expansion of the bureaucratic Frankenstein, more and more taxes on business and industry which eventually will lead to unemployment of the masses. He would dump more billions of our money into foreign countries and make not one attempt to economize. In his entire address, not one word was devoted to cutting Government expenses.

Now, let us analyze Truman's major legislative proposals, one by one:

1. Tax reductions of $40 for every individual taxpayer plus an additional $40 for each dependent.

That sounds fine, and would practically eliminate income taxes for some 10,000,000 in the low income bracket, but if you will go a little further into Truman's plan you will find that his plan may eliminate the jobs of that same 10,000,000.

2. Increase business and corporate taxes 30 percent to make up for the estimated $3,200,000,000 loss in Federal revenue through the lower personal taxes.

There's where the rub comes in. Already business and industry taxes are so high that expansion of plants and further employment has become practically impossible. In fact, taxes take so much from business and industry that the desire for expansion has vanished. Private initiative is practically dead or dying in this Nation today. When you kill private initiative and profits you kill and prevent business and industry from laying aside reserve funds for expansion and jobs for the masses. And that kills our capitalistic system—the only weapon we have to fight communism.

3. Extension and strengthening of rent controls.

That is simply extending Federal controls on our life.

4. Increase in the national minimum wage from 40 to 75 cents.

That is all right but it will bar the employment door to many inexperienced young men and women. Many employers will feel that they might add more help at 40 or 50 cents per hour—but would not add any at 75 cents.

5. Public housing for low income families.

More millions thus to be spent. And remember, it is your money the Government is spending! Can you remember when people used to work for and build their own homes?

6. Authority to impose price-wage controls and rationing.

That means more bureaucratic control. You may not realize it but government has passed from local hands. It is now centralized with the bureaus in Washington. Is that democracy? Let us bring our Government back to the local level!

7. Continuation of farm price supports and extension of crop insurance.

Why, oh why, does the Government feel it has to support $3.00 wheat and $2.68 corn? Prices like that simply make prices of foods higher for that vast 10,000,000 who are told that they will get a mere $40 reduction in their taxes. That $40 will melt like a snowball in h—— under the heat of Truman's program for this country.

8. Approval of a $20,000,000,000 4-year Marshall plan for aid to Europe with a downpayment of $6,500,000,000.

That, in part, is your money Mr. Truman is proposing to dump into Europe—and 20 billion is a lot to add to our already stupendous debt of 260 billion. And many question whether aid to Europe will do us any good.

9. Adoption of universal military training.

There is much to be said for this proposal. We must keep this Nation's defenses strong to hold off the threat of communism.

10. Extension of unemployment compensation, old-age benefits, and adoption of a national health plan.

This means more "rocking-chair money" to pay dead beats who won't work. It means adding to the $10,000,000 already set aside in Missouri for that purpose. It puts a premium on laziness. It means paying out good money to no goods who won't work alongside of you. Moreover, it means socialized medicine. Socialism. A further drift away from the American system. More and more into the troubled Old World isms. Isn't the American way good enough, Mr. Truman?

11. Approval of Federal financial aid to education.

More money for the bureaucrats to spend. More control for the boys in Washington to exercise over our schools. More propaganda to pump into our youth. Let us pay for our schools at home and control them at home.

12. Admission of displaced persons to the United States.

Sure, throw down the immigration bars. Let the driftwood of foreign countries flood our Nation. We can use a lot more troublemakers in this country. At least they would mean more votes for bloom-brains like Henry Wallace and maybe some more for Truman.

If that's Mr. Truman's platform, then what a program for the American people to stomach.

It is definitely a platform for vote-getting and not for the good of the Nation. Not one word for economy, for less Government spending. Not one iota for curtailment of

exports to provide for home needs and bring prices down.

Mr. Truman's program sounds too much like Wallace's Communist-inspired Utopia. We believe that all thinking citizens will see through it. We hope that all good American citizens will look hard and think carefully and act wisely during this critical election year. We sincerely hope that some other Democrat or some Republican comes forward with a program for the good of the United States of America and not merely good for votes. We believe you will join us in wishing for Mr. Truman's return to his Kansas City clothing store or to the judgeship of Jackson County where he can do less harm and before he leads this Nation into disaster. This is no time to be misled by partisan politics. It is too critical a period in history.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. MADDEN. Mr. Speaker, I wish to hereby incorporate in my remarks an editorial by H. B. Snyder, editor of the Gary (Ind.) Post-Tribune, on the important problem of displaced persons in certain European countries. Legislation should be passed early in this session to admit a great number of European people who are anxious to become citizens of the United States. Mr. Snyder sets out some timely facts in the following editorial:

CONGRESS SHOULD TAKE ACTION ON DISPLACED PERSONS

The Marshall plan is assured of top place on the agenda of Congress as it gets down to work again. But no matter what is done about it on Capitol Hill, there are nearly a million people in western Europe who won't be affected, who will get no benefit from any of the billions we may send across the Atlantic.

These 850,000 people are the displaced persons still living in detention camps, the survivors of Nazi concentration camps; and slave-labor battalions. They are fugitives from all forms of religious and political persecution, and victims of barbarism and Nazi terror.

Their hope for help from the United States rests largely in the Stratton bill, which will be before Congress again in its new session. That bill would permit 100,000 a year to enter the United States for a period of 4 years. It doesn't ask that any money be spent on them; it would just give them a chance to build a new life in America.

If the bill is passed, some of them would come to Gary. A study made by the International Institute, which has been the contact organization for a number of DP's hoping to join relatives in the United States, shows what we might expect under the Stratton bill.

The study lists 217 displaced persons, representing 132 family groups, who would be vouched for by 166 sponsors. Sixty percent of these DP's are males. Of 174 for whom the Institute has age records, 30 are 20 years old or less, 127 are from 21 to 50 years old, and only 17 are over 50.

Out of the group, 81 are from Poland, 54 from Yugoslavia, and 24 from Lithuania. Twelve are from Rumania, and lesser numbers from other European countries.

The Institute found no reason to believe these displaced persons would be a burden on us here. Its study showed that they were largely cousins, nephews or nieces, sisters or brothers of their sponsors, and that their sponsors were able and willing to care for them.

An analysis of 91 sponsors for whom the Institute had full information showed only 23 had assets in savings and property of less than $10,000; 44 had from $10,000 to $25,000, and 24 had more than $25,000.

There's no hazard for us in providing a new oportunity for homeless people such as these displaced persons. They will be carefully screened before admission. They won't become public charges; affidavits of support must be furnished by every sponsor. And we have need of the work they can do.

Further, we will not be upsetting our immigration system by admitting them. If we should accept 400,000 during the next 4 years, we would use up less than half the quotas that went unfilled during the war years.

Another Democrat Opposes the Marshall Plan and Price Controls

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, daily I receive letters from my constituents, Democrats and Republicans alike, protesting vehemently against the adoption of the so-called Marshall plan and the reimposition of price controls. I have sent copies of the Harvard address by Secretary Marshall, which has now become known as the Marshall plan, together with official documents issued by the State and Commerce Departments to many of my constituents. I have also sent one or two pieces of literature answering the administration's arguments in favor of the Marshall plan and price controls. Thus I have attempted to give my constituents the benefit of the best reasoning on both sides of this highly controversial issue, and I have asked them what they want Congress to do with reference to the Marshall plan and price controls.

The following letter from a lifelong Democrat and one of the most outstanding attorneys and citizens of my district, is truly representative of the answers I daily receive from my people. I quote the entire letter as follows:

JANUARY 5, 1948.

Hon. GEORGE B. SCHWABE,
Member of Congress, House of Representatives, Washington, D. C.

DEAR GEORGE: You sent me, with many others in your district, a letter and data in connection with the so-called Marshall plan, and you ask the question in that letter: What do you want Congress to do with the President's proposal involving the appropriation of perhaps $15,000,000,000 of the people's money, and price controls?

The simplest answer I could give in the fewest words is to turn such proposals down and refuse them, and that is my answer, although I would like to make certain observations with that answer.

In the first place, the so-called Marshall plan is nothing but fantastic.

From all available information, we are not called on to feed starving people, yet the administration attempts to use nothing less than pure propaganda to get this effect, to get the consent of the people to such a plan when it is intended to rebuild the national economies of the recipient nations. If we merely feed the starving, anybody would be in favor of keeping body and soul together, and to do so the amount of money would be less than one-fifth of the proposed cost.

There is no obligation, morally or otherwise, to help any country that will not help itself. Production is the only answer to the basic economy of any of the warring nations. We cannot hire them to not be Communists. It is like buying friendship, which cannot be done. Regardless of the cost to this Nation, if repayment is asked, the United States will be called a Shylock, and these advances, if made, will ultimately buy us the enmity of all nations that we help. Too much government regulation exists in these European countries and that is the reason the people cannot produce.

Now as to price controls, the administration seems to want the same controls exercised by the European nations that want help. We have had controls before and our experience in that is the answer to the whole question. The idea is to control necessities and not luxuries. Controls make scarce the items controlled and increase the manufacture of goods not controlled. Absolute Government controls will put the United States in the same condition as Europe. Besides, nobody that has ever enjoyed the blessings of freedom wants to surrender to Government agents, acting as Gestapo agents, spying on their every act, and looking down our throats at all times.

Government meddling in business and the lives of people produces the conditions it complains of. If we are going to have a free country, let's have it; otherwise, change our Government to men that will leave us alone and give an opportunity to restore our own economy.

Poduction and more production is the answer and that can be accomplished only by lowering taxes and relaxing controls. We are not required to restore European economy. If such a thing is done, let the European nations work for their own economy first. They control everything except labor and laborers will not work.

Moreover, the minimum wage scale should not be increased now or at any other time by law. Our recovery was more rapid after the first World War and we had very few controls. Why should we now have controls 2 years and more after the war is over? Get rid of thousands of Government employees and the cost of Government can be reduced.

As you know, I am a Democrat but not a New Dealer. I expect to vote with the Republican Party until such time as new dealism is destroyed and we have a Democratic Party that is democratic and not socialistic and communistic.

Ever since the advent of new dealism it seems to have been the idea to establish a control over the people from the cradle to the grave and yet claim that the people are free. Where is the freedom we boast of if we are controlled by Government agents—carpet baggers—whose controls are changed from day to day, and nobody ever knows his rights?

Pardon this lengthy letter. I can write a book about controls by Government. The same ones we have had were tried during the Ceasars in Rome. None of them are new and none ever worked, and they will not now.

With personal regards, I am,

Cordially yours.

Italy and France Soon May Be Compelled To Ask United States Aid in Military Equipment

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Evening Star:

ITALY AND FRANCE SOON MAY BE COMPELLED TO ASK UNITED STATES AID IN MILITARY EQUIPMENT

(By Constantine Brown)

Italy and France, which are slated to receive assistance under the stopgap aid program and the full Marshall plan, soon may be compelled to ask that military equipment, particularly planes and tanks, be included in supplies sent from the United States.

While Congress is settling down to a lengthy debate over how much to appropriate for the European recovery program, the political situation in Europe is rapidly deteriorating and France and Italy once more have become the target of Russia's expansionist aims. Moscow has issued orders to its subordinates to stymie the efforts of the United States to bring order in the west.

The situation in France has improved temporarily, thanks to stern measures adopted by the government of Premier Robert Schuman. But it is admitted by French leaders that conditions in their country necessarily are tied up with those in Italy, where the Communists, possessing a strong Partisan army, are prepared to place the northern part of the country behind the iron curtain.

VIOLENCE NORTH OF RIVER PO

The Italian Communists "Duce"—Palmiro Togliatti—is preparing his men for action. In the last 10 days there have been many uprisings accompanied by violence north of the River Po. Communists penetration into army ranks was disclosed when hundreds of soldiers in various garrisons demonstrated against being kept in the armed service.

The Communist convention, now being held in Milan and attended by delegates from all the Soviet satellites, may decide to call a general strike preparatory to an armed rebellion against the present government of Premier Alcide de Gasperi.

The Soviet Government is giving them a helping hand. The propaganda against the United States has been intensified. The stopgap aid plan, giving Italy some $180,000,000 worth of American supplies, is being described as a move toward assumption of physical control over Italy.

Moscow's propagandists described the signature of the aid agreement in Rome as follows: "The agreement was submitted to the Italian government in the form of an ultimatum. It was not open to any discussion. Moreover, it was preceded by a very unambiguous reminder of the American warships with guns trained on Rome."

Hundreds of thousands of pamphlets containing this fairy tale are now being distributed throughout Italy. The statement that we had to use threats of force to persuade the Italian Government to accept our supplies, of course, is ridiculous to all informed Italians. But to the majority of people, particularly in north Italy, the story seems plausible since they know little about the nature of the agreement signed in Rome last week.

PARTISAN MOVES IN FRANCE

Underground Partisan units in France which were spread throughout the country are now reported to have been concentrated in areas close to the Italian border in order to make common cause with the Italian Partisans.

From available information it appears that after the collapse of the French Communist-led strike last December, Moscow instructed Maurice Thorez that when the Italian Communists began their moves in the north the French Communists should try to form at least a token democracy, regardless of how small, near the Italian frontier. This would offer an excellent excuse for Communist forces in the east to intervene in France.

Under these circumstances the French and Italian Governments feel that their present forces are inadequate to cope with the situation. The French Army is far better than the Italian and can put down any attempt by Thorez' followers to carry out a coup. But France lacks sufficient planes and tanks to offer real resistance to forces which might come from Italy.

Despite the gift of thousands of machine guns and millions of rounds of ammunition when American occupation troops were withdrawn December 15, the Italian Government still does not have enough strength to cope with even the Partisans, who are better equipped and more numerous at vital centers than the army of the new republic. Moreover, the Yugoslav Fourth Army is within a few hours' march of the Italian frontier.

Military observers maintain that for the immediate future it is more important to send planes and tanks than industrial equipment. But it is doubtful that the American Government will view the situation in that light.

A Dangerous Device

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me to extend my remarks in the RECORD and to include therein an editorial, I am very pleased to have this opportunity of bringing the attention of the Members of Congress to the excellent editorial appearing a few days ago in the Asbury Park Press, of Asbury Park, N. J.

It is entitled "A Dangerous Device" and it refers to the suggestion by the President to offset the decrease in revenue on account of reduction in income taxes by increasing the corporation taxes. The President justified this suggestion because he stated that corporate income after taxes had reached a very large sum during the past year, and his argument was based on the claim that the corporations were better able to pay than other types of taxpayers.

Apparently the President's reasoning is based on the false idea that increased costs to corporations can be met without increasing the price of their products. This theory was exploded when increased wages were advocated on the basis that there was no ground for an increase in the cost of products, but it seems that this economic fact has not yet percolated through the heads of the President or his advisers.

The editorial points out various other fallacies in the President's suggestion, but additional criticism may be found in the fact that the money of insurance companies, trust funds, and the like is invested in the securities of our great corporations and any impairment in the financial stability of these corporations would be to the everlasting disadvantage of a great many American citizens. The President's suggestion is certainly a dangerous device.

I commend the reading of this excellent editorial because it preaches sound doctrine:

A DANGEROUS DEVICE

The prospect that the current session of Congress will be a slugfest between the administration and the Republican majority has been strengthened by the report that President Truman will offer an increase in corporation taxes as the basis of his tax "reduction" program. Certainly if there is a more demagogic way in which to handle the tax problem the administration has not discovered it.

Obviously there is considerable appeal in a rise in corporation taxes. Superficially it is a gesture aimed at taking money from the wealthy and giving it to the lower income brackets. But in reality it is far from that. For corporation profits do not to any appreciable extent go into the purchase of yachts and a fleet of automobiles for stockholders. On the contrary, they are used to produce a reasonable dividend to millions of stockholders throughout the country, many and perhaps most of whom are living on modest incomes, and in maintaining the Nation's industrial plant.

This latter point requires emphasis. Because taxes have been exorbitant for almost two decades, most corporations have had limited funds for replacing wornout equipment and for expanding their facilities. As a result the total American industrial plant has been depreciating. This means that the factories and tools needed to keep men employed are dangerously limited to the point where thousands of corporations and millions of workers may soon find themselves lacking the facilities for production.

The situation has been aggravated by section 102 of the internal-revenue law, which requires corporations to pay out some 70 percent of their earnings in dividends and keep but a relatively small amount for replacing capital equipment and for enlarging their plants. With the population growing and the standard of living rising, there is need for larger plant facilities to supply the wants of the American people. Our tax policy, however, has forced a reduction in our industrial productive capacity and in job opportunities for workers.

The tax on the net profits of corporations now reaches 38 percent. When the balance is paid out as dividends each stockholder must pay a personal income tax on the dividend he receives, the rate depending upon the bracket in which his total income places him. Thus corporation profits are subject to a double tax. The owners of corporations, who are millions of small investors as well as wealthy persons, must pay not only a corporation tax ranging up to 38 percent but a personal income tax on top of this. This brings the total tax on corporation profits to outrageously high figures.

But even if it has no concern in the stockholders who own corporations, the administration should be concerned with the tens of millions of workers employed by corporations. Unless business is allowed a profit balance sufficient to maintain and expand its plant, the development of American indus-

try, which has been the wonder of the world, will be curtailed. Then job opportunities will be lost, our productive capacity to fill our wants will be impaired, and in the event of war this country will be unable to meet the need for industrial equipment upon which victory will depend.

That dire prospect is the inevitable result of taxing corporations to the point where they must reduce productive facilities. It is simply bait concocted by an administration bent on making a capricious appeal for votes.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF of January 10, 1948:

Dear friends of the Triple Cities and my congressional district, as the Congress once again convenes, I want to urge each one of you to write me whenever you feel like expressing your thoughts about the state of the Union.

Remember, also, that my Washington office stands ready to go to bat for you whenever you have a problem.

Let me know if you do not get an answer to letters you may write somebody down there. This is your Government and any official who throws your requests in the wastebasket ought to be thrown there himself.

A lot of folks tell me that the bureaucratic big shots in our Nation's Capital refuse to comply with the simplest request. I ask you, who do they think they are? Aren't your hard earned dollars paying their fat salaries?

Who is making it possible for these swivel chair appointees to buy the expensive cigars they chew, while they laugh and chuckle behind the scenes at sincere letters written by the rank and file of our citizens?

Who pays the shot for the luxury-loving official who may give sumptuous banquets at an elite Washington hotel while people I represent are groaning under the heavy tax burdens such expenses cause them?

The answer is, you are footing the bill. While I realize it is well nigh impossible to put a stop all at once to the lush living, the extraordinary cuisine, the rare dainties, and high-priced bill of fare some of these dandies overindulge in, I do feel they might temper their voraciousness with a little hard work in your interests.

Don't get the idea I am indicting Washington officialdom in blanket fashion. There are many, many painstaking and conscientious public servants. There are countless efficient career employees. There are numberless men and women on the Government pay roll who do a real job in making our way of life work.

But the laggards, the neglectful, the wrong-minded stick out like sore thumbs so often and cause blame to be heaped upon the shoulders of the majority who have the best of intentions.

So, I say to you, let me know if you don't get the service from Washington you are entitled to. Or, better yet, write me in the first place. I will personally see that you get a square deal. I will go to bat for you the minute I hear.

Too many big-time appointees like to think themselves far above common herd and close the door to ordinary visitors. The way to their attention is barred unless the caller or writer might be one of pomp and circumstance.

However, a 3-cent stamp is all you need to send a message to me. Or if you don't have one handy, just write me on a penny postcard.

No, they haven't taken the penny postcard away from you yet and they aren't going to if I have my way. They've tried to, though, and they'd do it if some of us in Congress didn't keep pretty wide awake.

Yes, this is still America. You have the right to appeal to your Government and to your Congressman. I can't accomplish the impossible, but I can do a little whip cracking, which I have done, and put some of the boys I've been talking about on their toes.

Don't let the doubting Thomases back home try to discourage your writing to me. Don't let the sophisticates, the self-sufficient, the worldly-wise try to shame you out of your constitutional right of corresponding with the man you elected. Bear in mind, you elected me, not the handful of scoffing, would-be important big-time operators who look down not only on you and me but the whole world.

No, I've never been able to win much favor with them, whether they come from Washington or up our way. But I'll let you in on a little secret: I don't much care what they think because they don't have to be reckoned with.

Why? Because they don't have the votes and you do.

In all seriousness, though, I want you to write me. I need your letters, your suggestions, your views, your reactions. This is going to be a difficult session of Congress. Much will be decided for a long time to come.

I've never suffered any illusions about my being able to solve the great issues we are facing without the advice of you home folks. When the day comes that your Representative is unable to have the benefit of what you are thinking, then my time has run out, and I will gladly relinquish my post.

So let me hear from you at any and all times and I'll be better equipped to do the job you expect me to do. I'll know more about what everybody wants and that means the policy of our Government will be decided along American lines instead of through dictatorship, tyranny, and arbitrary means. Just address me 1121 House Office Building, Washington, D. C.

Thank you.

Clarence E. Hancock

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. GRAHAM. Mr. Speaker, in the passing of Clarence E. Hancock every Member of this House who knew him is filled with a sense of personal loss.

While it is true that he has not been numbered among us during the past year, yet, the memory of such a man outlasts the confines of mere years in the recording of time. Such lives are timeless.

Truly he was beloved by all his friends and associates. For 8 years it was my privilege to sit with him in the Committee on the Judiciary. There I learned to know him well, and the better I knew him the more I admired him. He was a truly great soul. A friend, a guide, a counselor.

In his nature many fine qualities united to make him outstanding. Innately modest and retiring, he brought to all his work a true humility. Only the wise, the good, and the great do this.

I never knew Clarence E. Hancock to injure anyone by a single spoken word or deed of action. His nature was kindly, gentle, and serene. Nothing disturbed him. He was never hurried or rushed. He always had time to listen to every man's story and to respond with good advice and kind assistance.

A few years ago in speaking of the death of a colleague from the great State of New York, he said: "He served his city, his district, his State, and his Nation long, faithfully, and brilliantly."

Each statement therein made applies with equal force to the worth, the life, and the activities of Clarence E. Hancock. No man could have a better epitaph.

Everyone present on last Tuesday when his death was announced on this floor was saddened by the knowledge that he had gone on forever to join the choir invisible, but, by the same token, each person who heard the heartfelt words that came from the hearts knew that our former colleague was worthy of every word said of him.

Every man who knew Clarence E. Hancock is the richer for that knowledge. To all of us, he has left a priceless heritage. God grant that we will prove worthy of it.

To every man there openeth a way, and ways, and a way,
And the high soul climbs the high way,
And the low soul gropes the low,
And in between, on the misty flats,
The rest drift to and fro.
But to every man there openeth
A high way and a low,
And every man decideth
The way his soul shall go.

And, having chosen that high way, Clarence E. Hancock never faltered. Farewell, my friend.

The New (Raw) Deal

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. GOODWIN. Mr. Speaker, I have not seen a more convincing commentary on the President's message on the state of the Union than an editorial in the Boston Herald of January 8, 1948, and in order that my colleagues may read it, I am including the editorial under leave to extend these remarks:

THE NEW (RAW) DEAL

The message on the state of the Union delivered to Congress yesterday must have come from a tomb. It was certainly not the product of the conservative old Missourian named Harry Truman who used to sit for his State in the United States Senate. Nor even of

that early Presidential Harry Truman who vied with a Republican Congress to see which could decontrol first, which could out-conservative the other. No, something new has been added. The something new is most certainly the Presidential aspiration of Henry A. Wallace. Indeed, if it were not for the foreign-policy portions of the message one might have thought Wallace was its author.

There was never a better demonstration of what is wrong with our democracy than that a President of the United States could stand up, in such times, and make such a sordid appeal for votes—votes at $40 per head. And this from the man who has been chastising a Republican Congress for many months for even thinking of a tax reduction in these perilous days of inflation. This from the the man who twice vetoed a tax-reduction bill. He said it was not the time for such a cut. He has fully lived up to our prediction that when the election got near enough it would be time for a tax reduction, on his terms.

By proposing the ridiculous procedure of lowering individual income taxes to relieve the burden of inflation, the President not only flies in the face of his own economic advisers, but also abandons all semblance of economic common sense. He is trifling not only with the immediate future of our country, but with the longer term interests of democracy and free enterprise as well.

There are good and solid reasons for some tax reductions at this time, but the President didn't mention them. The tax portion of his message was in the same tenor as all of the rest—something for everyone, an angel hovering over the head of every citizen who votes for Truman next fall. While a good political case can be made out for individual income-tax cuts in the lower brackets, there is practically no economic case for it. Witness the President's principal financial adviser, Secretary Snyder, talking about the need for more sales of savings bonds to syphon off spending power from the public. The President would syphon it back again through his $40 a vote tax cut. Moreover, by passing the revenue loss over to the corporations, the President doubles the inflationary impact of his proposal. Corporations will have more cause for higher prices. The fellows who save $40 in taxes will pay it all back through the corporations in the form of higher prices. It is quite clear that the President has been listening to his political advisers, and that they know very little about economics. Also, they grossly underestimate the intelligence of the American public.

What is really needed, taxwise, is to clear up impediments to investment. If the lower income groups need tax relief, which is doubtful, the higher income groups need it more. The reason is economic, not political. The President barely recognized the need for investment to keep our whole free enterprise system going when he said, in passing, that industry needs at least $50,000,000,000 of new investment in the next few years. Where does this investment come from but investors? Who are the investors? Such savings as the lowest income groups accumulate in the form of life insurance, and otherwise, are a factor, to be sure, but the really risk capital which is the dynamic factor in free enterprise comes from investors, the fellows who can afford to gamble. But now they can't afford it. There is, instead, too much "safe" money.

Then, the Chief Executive dragged out that old saw about high corporate profits. Sure, they're high, and why shouldn't they be? Some new investment will come from these profits, but more importantly if profits aren't the highest in peacetime history when production is the highest in peacetime history, then there's something wrong with capitalism. Indeed, if we get much more of this latest variety of Truman economics, we might as well give it up. For if we don't get leadership instead of demagoguery, if we don't face facts instead of serving soothing syrup; we cannot hope to make a go for long of a system which depends for its success upon self-imposed restraints.

If the President hoped to stir up political sentiments with that message of yesterday, he certainly succeeded. But we suspect they will not be generally to his liking. On the contrary, it was such a vulgarly obvious bid for votes from every segment of the population that all intelligent citizens will be offended. It will strengthen the opposition, giving power to the Republican Party's political propaganda that only the GOP is fit to govern. God forbid that the Republican Party, too, will enter this race for demagoguery. Not only common sense, but sound politics dictate that it should stick more firmly than ever to the middle road. President Truman has provided the opportunity that it has long needed—to be the party of the people, against the rash promisers, opposed to the lie that the Government can be all things to all people, defending the individual against the dangerous Truman mythology that we can preserve free enterprise by ignoring its substance. In the best interest of America, we hope the Republican Party will provide the leaders to make the best of this opportunity for statesmanship.

Otherwise, we get the Truman New (Raw) Deal, or something even worse.

Safety Program

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. DAVIS of Tennessee. Mr. Speaker, the National Safety Council continues to promote the cause of safety in this country in a perfectly splendid way. Recently its president, Ned Dearborn, delivered a strong address to over 10,000 men and women assembled in the city of Chicago for the purpose of making plans and projecting a much wider safety program throughout the country during the next 12 months. The address was so well determined and so inspiring that I include in the RECORD the full text for the benefit of my colleagues:

I would like to advocate a purge of certain public enemies.

These public enemies are not men. They are ideas and beliefs—murderous beliefs—which pile up a huge and needless toll of human life and limb. They make the prevention of accidents extremely and unnecessarily difficult.

The aim of all safety education is to change attitudes that obviously impede progress toward safe living. But it is hard to change attitudes. Let's examine some of these murderous beliefs—the public enemies that need to be purged.

We are all susceptible to the influence of labels, slogans, and verbal tags of various kinds. If these are wrong or misleading, their influence is bad; if correct and helpful, their influence is good. The following six concepts are bad. They lead to wrong labels.

1. THE "OTHER FELLOW" CONCEPT

Nearly everybody seems to assume that an accident will happen to the other fellow, but never to him. We seem to think we are smarter, or luckier, than the other fellow, and that accident victims must be dopes. Are we individually immune? Or worse, is there in us a lurking arrogant egotism which makes us feel that we are smarter or luckier than anyone else?

2. THE "YOUR NUMBER'S UP" CONCEPT

An amazing number of people subscribe to the philosophy that an accident happens, or it doesn't—that your number is up or it isn't up. In other words, accidents are inevitable when the time is right. Isn't this merely an easy way out of explaining our carelessness and misfortune? Or worse, do people really believe in fatalism to the point of predetermination?

3. THE "LAW OF AVERAGES" CONCEPT

Too many people shrug off accidental death and injury, saying that they are due to the law of averages. Is the factor of chance actually of such magnitude that we are doomed to destruction despite reasonable precautions? Or worse, are a certain number of persons—in proportion to total exposure—bound to be killed or hurt? Is there an inexorable law of fate?

4. THE "PRICE OF PROGRESS" CONCEPT

It is often said accidents are the natural price paid for progress. Must scientific advancement take place in some fields of human endeavor, and not in others? Or worse, is science a parasite that thrives on the blood of the very humanity it benefits? According to this concept, every forward step in human progress is offset by a backward step.

5. THE "SPIRIT OF '76" CONCEPT

Some people hold that safety is inconsistent with the spirit of our forefathers who took great risks to found our country or, in other words, that safety is sissy. In our efforts to prevent accidents, are we being disloyal to our forefathers? Or worse, is accident prevention actually cowardly, and therefore contrary to the true spirit of America? This point of view is very common.

6. THE "ACT OF GOD" CONCEPT

Finally, some folks who are sincerely religious feel that an accident is an act of God. Can there really be a supernatural carelessness? Or, worse, can there be divine retribution which visits us and our loved ones through accidents? This concept is closely related to the belief in some inexorable law of fate, with the added belief in a divine planning.

Adding it all up—is accident prevention impractical, sacrilegious, and effeminate? And are accidents unavoidable, inevitable, predetermined, a matter of luck, the price of modern living?

No. But unless we purge these concepts—these murderous beliefs—and supplant them in the minds of our citizens with positive beliefs we may as well give up the struggle to reduce accidents. We are wasting our time, effort, and money.

Can accidents actually be prevented? Yes—most of them can be prevented.

Can the common misbeliefs be changed? Yes.

One hundred years ago the idea of vaccination was intolerable to a large portion of the population. Today the idea is generally accepted. A similar change came about in attitudes toward inoculations, surgery, and other forms of disease prevention and cure. Only a little more than a century ago even physicians predicted that trains traveling at 15 miles an hour would bring fatal results to heart and respiratory action. You and I remember people saying, "The horse and buggy is good enough for me." Now some say, "The automobile is good enough for me." But tomorrow a New Yorker will say, "Let's wait until we arrive in San Francisco to have our breakfast." And day after tomorrow we will say, "Let's take a cruise next week end to see if what they say about the moon and Mars is true." And on long week ends we will visit another universe just for a change.

So we must make it our No. 1 job to convert the millions in our population to a new credo, new articles of faith, new attitudes.

It is an everlasting job—a job that can be done only if all the big and little guns of our great public information resources are kept constantly in action.

Now that the beliefs have been set forth, let us examine them analytically and constructively.

CONCEPT NO. 1—THE OTHER FELLOW

Our slogan this year—Be Careful, the Life You Save May Be Your Own—recognizes that you and I are not immune to accidents. Accidents do not always happen to the other fellow. The advertising council is rendering invaluable assistance in driving that point home. The slogan has caught on, and it is being used over and over again by people who write and talk about safety. Let's keep it going.

Who can rationally believe that some special dispensation forever especially guards him against an accident and act accordingly? The assumption is so obviously fallacious as to be absurd, and yet the very absurdity is the ghost that must be laid. You as a person may so act as to prevent accidents and to protect yourself from accidents, but you cannot with reason suppose for a moment that anyone else will so act for himself—or for you. One of the most active and influential safety leaders and his wife were crushed to death in Chicago while window shopping. A motor vehicle out of control brought instant death to both of them.

An accident can happen to you. Never forget that.

CONCEPT NO. 2—YOUR NUMBER'S UP

Fatalism is a complete denial of the efficacy of individual initiative. It is especially pronounced among oriental peoples because of the character of their philosophies. Western philosophies and religions do not uphold fatalism.

Fatalism would eliminate traffic lights and signs, safety guards on machinery, life guards at beaches, and any measures to eliminate or reduce accident hazards on our farms or in our homes. Fatalism is fantastic. Fatalism should be eliminated.

CONCEPT NO. 3—THE LAW OF AVERAGES

The law of averages, as used by those who take that defeatist point of view, has some vague relationship to the normal curve of distribution. Anyone with even elementary knowledge of statistics knows that a distribution curve can be skewed by circumstances and—what is even more important—it can be moved up or down the scale of possibilities.

The factor of chance must be accepted in any competent statistical calculation, but it is always a small part. The chance factor is dominant in, at most, 5 percent, and more likely only 2 percent, of all accidents. Thus the belief that chance dominates the frequency and severity of accidents is another absurdity which must be dispelled.

CONCEPT NO. 4—THE PRICE OF PROGRESS

Those who talk about progress and its inevitable price seldom know the meaning of progress. They probably refer to scientific advancement, especially in the last 75 years. They are doubtless thinking, too, of the constantly accelerating rate of advancement. Scientific discovery and invention are the expressions of that advancement in the public mind.

In the field of medicine during the last 50 years, methods, instruments, facilities, and training have brought under control such deadly human ailments as yellow fever, smallpox, diphtheria, malaria, polio, diabetes, and some heart conditions.

Physical and chemical sciences have brought us the steam and electric railroads, telephones, motion pictures, television, telegraphy, high-speed water carriers, the automobile, and the airplane. Only about one-fifth of the fatal motor-vehicle accidents and one-fourth of the fatal train and scheduled air-transport accidents can be attributed to mechanical faults or failures.

The same engineering genius that gave us the modern motorcar can give us complete mechanical safety. But we don't like to wear goggles in hazardous factory operations, and we are proud of our highly polished floors and scatter rugs, which are always good for a quick take-off and a one-point landing.

No, the blame is not on scientific advancement. The blame is mainly on human failure. That can be corrected.

CONCEPT NO. 5—THE SPIRIT OF '76

The courage and daring of our forefathers in risking all for their ideals and purposes is an American tradition to be preserved. Yet that spirit itself can easily be misinterpreted. Our forefathers took risks, but not unnecessary risks. Our pioneer settlers soon learned in Indian warfare that open fighting was extremely unwise. So they fought the Indians in Indian style. Not accustomed to the vicissitudes of the wilderness, our forefathers took immediate steps to build shelters that would protect them from the climate and unfriendly neighbors. They planted grain and vegetables to provide foods necessary to health, because wild game, berries, and fruit were not enough. They used the best safety knowledge they had in felling trees and in hewing logs. They kept their guns at hand and their ammunition dry.

They certainly were not sissies. Neither were they fools. They could turn their backs on a dare without loss of dignity or manhood. It's hard to imagine one of them daring another to stick his head out of the stockade so an Indian might take a potshot at him. And yet that is what we do when deliberately take unnecessary risks and openly invite accidents. It's no fun to be hurt. We need to remember that our heroes of yesterday and today, who are no sissies, protected themselves from unnecessary dangers—Lindbergh, in 1927, flying alone across the Atlantic, the football player wearing nearly a hundred dollars' worth of protective gear, the conditioned and skilled boxer, the trained soldier.

No, there is nothing manly about carelessly stepping in front of a moving truck, needlessly losing an arm in a corn picker, foolishly falling down the cellar stairs or being in dangerous waters when you can't swim.

CONCEPT NO. 6—THE ACT OF GOD

This theory of accidents is not supported in any religion commonly accepted in the Western World. A God on His throne in Heaven deliberately directing death and destruction is inconceivable.

It doesn't make sense that retribution is visited upon an individual as such in the form of an accident which may kill or destroy that which was created in the image of God. When natural causes are obscure or unknown in relation to effects, it is always easy to find an explanation in a divine source.

It will be no disservice to religion, and should be no affront to the religious, if these misbeliefs in acts of God and divine retribution are replaced by beliefs founded on the true ethics and morals of religion.

Can accidents be prevented? Yes; by constant public education to replace common misbeliefs with constructive and positive faith in word and deed.

This is no denial of the importance of enforcement and of engineering. Education transcends enforcement and engineering and makes them possible of improvement. Accident prevention is a problem of public morality. Without an ethical base and a moral code we cannot build a sound safety faith.

Safety must be a promise. The Declaration of Independence and the Constitution were hardly more than glamorous promises, when they were conceived, in an ugly, threatening world. Safety and a safety creed must partake of promise rather than threat, a positive promise of something bigger, better, and more glorious than we have had before or than we have now.

What does safety promise? Safety can promise 20,000 children a year a chance to live and have fun, a chance to grow up and become men and women. Safety can promise freedom from a large amount of unnecessary worry, anxiety, and grief. Safety can lift an enormous economic burden from the backs of 35,000,000 American families. Safety can put money in the pockets of every man, woman, and child in this country. Safety can contribute to our national strength, to world strength.

Let us as safety specialists and safety leaders help build in America a new safety faith that our great work may continue to add more speedily to the happiness and welfare of all mankind. Ours is a glorious opportunity, a tremendous challenge, a solemn duty.

Decline in Airplane Production Threat to Nation's Security

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks, I wish to introduce in the RECORD an article from the Miami Herald of December 28, 1947, written by one of the aviation experts in our part of the country. This article well points out the threat to our national security by the decline in our aviation industry. To those of us who are vitally concerned with national defense this article will be of intense interest as it will warn us of the urgent need for immediate action toward maintaining our air defenses.

The article follows:

DECLINE IN AIRPLANE PRODUCTION THREAT TO NATION'S SECURITY—ONLY GOVERNMENT HAS RESOURCES FOR FINANCING IMPORTANT PROGRAM

(By Ned Aitchison)

Whatever 1948 may have in store for the Nation's aviation industry, its present predicament hardly can grow worse. It is, of course, a matter of grave concern to the United States when any major industry hits the skids and tumbles toward the bottomless pit.

For our complex economy is certain to feel the resulting effects.

But there is a double menace to the Nation in the troubles now besetting the aviation business, because our national security is tied up inseparably with that industry.

In this age of the atomic bomb, broad, swift, far-traveling wings hold the key to our entire defense structure.

So long as the aviation industry is geared to turn out the kind of planes we need, in the number that any emergency may require, we are sitting pretty, regardless of unsettled conditions around the world.

But when the industry loses that capacity—through enforced curtailment of resources, capital and manpower—the door is opened to a very dangerous situation affecting both our future security and the peace of the world.

Aircraft development is a terrifically expensive business. Only the Government has the resources needed to finance such a program. In wartime, when the Nation's productive capacity reached an all-time peak, plane manufacturers were assured a market for all the planes they could turn out. Expense in designing and building advanced types of combat and other planes was not a factor. The only thing that counted was to win the war, regardless of cost.

Today, the situation is exactly reversed. Military purchases of all types of aircraft have dropped to an insignificant fraction of the orders that poured in on the plane plants while the conflict raged.

Sales of new types of commercial transports have been extremely limited, far below the rosier forecasts of late 1945.

Likewise, the expected avalanche of orders for private planes has failed to materialize.

These are the three markets upon which the aviation industry must depend to sell the planes it produces.

Millions of dollars of losses will be written into the operating accounts of American aviation manufacturing concerns for this year.

And, despite drastic further curtailments planned for 1948, the picture is no brighter for next year.

It is obvious, of course, that the aviation industry is different from any other major business in our whole economic set-up. Without Government support, in some form, it cannot be maintained on a basis necessary to assure our national security.

That means not so much the production-line capacity of the plants today as their ability to gear themselves to any situation this country may face in the foreseeable future.

It means that only through Government support (subsidiary is another name for it) can the research and study be maintained to assure us the best and finest military aircraft if and when we need them.

Without that support, it is inevitable that (1) we will lag hopelessly in the development of types of aircraft upon which our security will depend if an emergency develops, and (2) we will be deprived of the productive plant to turn out these planes as quickly and in such numbers as may be necessary.

That's the headache: Maintaining a huge and costly industrial set-up in peacetime as a guaranty of our future safety, or the alternative of leaving us wholly unable to meet any threat which may emerge out of the present troubled global situation.

Either way we can guess wrong—and it can cost a lot of money. But there is a lot more than dollars and cents involved in the decision. It involves, too, the possibility of our survival if the challenge should come to our peace and to our future.

Fortune magazine, in seeking answers to the complex matter, suggests: "All proposals for solving aircraft's problem acknowledge one condition—that only Federal credit is sufficient to keep the industry going. In fact, the aircraft industry never has been able to exist satisfactorily in a purely competitive, unsubsidized atmosphere, for its huge customer in war or peace always has been the United States Government."

Factors in the present chaotic conditions facing the plane builders are summarized by the magazine as follows:

Production today is less than 3 percent of the wartime peak, but plants, labor forces, and capital structures are still war-inflated. This year, the armed forces bought only 1,500 combat planes. Foreign orders faded owing to lack of dollar exchange. United States airlines canceled orders left and right. The private plane market ceased to exist.

It sees as a result of the developing situation a 10-year lapse in design of new planes, owing to costs of new development, adding: "Some new way must be found of meeting the financial risks that aircraft companies and their commercial customers can no longer bear alone or together."

It lists, without comment, some of the proposals as including Government loans to companies for construction of new aircraft; direct Government aid to carriers for purchase of planes; Government financing of plane development, experiment and production with the Government retaining title to the planes and leasing them to the air lines.

"Every one of these proposals," the magazine adds, "acknowledges that only the credit resources of the U. S. A. are sufficient to keep the aircraft industry going."

The rub is, of course, that military and commercial types of aircraft are tremendously expensive to create and build, and the field of sales for them is by that very factor extremely limited.

Yet when the chips are down and our national safety is at stake, we have to have the best and fastest planes in the world, in tremendous numbers.

There is no way to build these aircraft cheaply, or to conjure them out of a magician's hat at the last minute if we face an emergency. To have them, we will have to pay for them, and pay to maintain the manpower, productive facilities, and creative genius needed to turn them out on the proper scale.

To do less is to gamble with our national security and our very existence. It is a policy the American people will have to decide. For they must foot the cost, and their liberties are involved.

American and Canadian Taxes Compared; Contrary to General Belief, American Income Taxes Are Higher

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. KNUTSON. Mr. Speaker, we are indebted to the Winnipeg Free Press for a very interesting and informative article entitled "How Taxes Vary," which will be a revelation to those who have been telling us that the American taxpayer is in a favored position when compared with his Canadian brother.

In addition to paying lower Federal taxes, our Canadian friends do not have to pay State income taxes which, when added to the Federal tax, places the American taxpayer at a serious disadvantage.

The Winnipeg Free Press is a most excellently edited newspaper, with a fine reputation for reliability, therefore the article which follows can be accepted as 100 percent authentic. The Free Press article follows:

HOW TAXES VARY

Those who pay Canadian income tax, and feel themselves hard done by, will be interested in a comparative table on income taxes payable in this country and the United States. The rates shown are those effective in the latter part of 1947 and are applicable to earned income, as distinct from investment income.

In the case of the United States, the compiled Federal and New York State tax is shown. Canada and the United Kingdom have no State income taxes. In the United States case also the tax payable was calculated after making the standard deduction of 10 percent from gross income up to $5,000, in lieu of contributions to nonprofit organizations, interest paid, State and local taxes, and medical and other personal expenditures exempt. For gross incomes over $5,000 there was also deducted the New York State income tax in excess of the amount of such a tax on a $5,000 gross income.

No similar deductions from gross income were made in calculating the Canadian and United Kingdom tax.

For the purposes of comparison the family allowance received by a Canadian taxpayer with children is deducted from the income tax payable by him, since for income-tax payers the family allowance takes the place, in part, of the former income-tax exemptions for children. This accounts for the negative income tax equal to the family allowances shown at low incomes in the following tables. Similar allowances are made for family allowances paid in the United Kingdom in respect of children after the first child.

Gross income in dollars	Single person		Married person without children		Married person with 2 children	
	Canada	United States	Canada	United States	Canada	United States
$600	-------	$8	-------	-------	−$144	-------
$750	-------	33	-------	-------	−144	-------
$1,000	$29	76	-------	-------	−144	-------
$1,250	70	121	-------	$24	−144	-------
$1,500	120	167	-------	66	−144	-------
$1,750	170	212	$29	109	−139	-------
$2,000	220	257	70	152	−108	-------
$2,250	270	304	120	195	−64	$5
$2,500	320	350	170	238	−14	48
$3,000	420	447	270	328	86	133
$3,500	520	548	370	421	186	221
$4,000	620	650	470	523	286	311
$5,000	835	858	670	726	486	505
$7,500	1,465	1,536	1,260	1,267	1,064	1,108
$10,000	2,253	2,333	1,960	2,141	1,786	1,824
$20,000	6,515	6,692	6,140	6,414	5,896	5,922
$35,000	14,478	15,416	14,065	15,088	13,811	14,471
$50,000	22,728	25,338	22,315	24,980	22,061	24,287
$75,000	37,690	43,706	37,240	43,310	36,976	42,534
$100,000	53,903	63,757	53,415	63,334	53,141	62,503

American Legion Endorses Proposal To Admit Displaced Persons Outside of Normal Immigration Quotas

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. KLEIN. Mr. Speaker, much has been made by the people who believe that the United States can live behind an imaginary Chinese wall, shut off from the rest of the world, of the opposition by the American Legion to the admission of displaced persons from Europe outside the regular annual national quotas.

The wildest possible misstatements and misrepresentations and distortions of the clear facts have been perpetrated, and some of the opponents of immigration have even descended to invoking racial and religious animosities repugnant to American traditions.

I am very happy, therefore, to bring to the attention of the House again the fact that the American Legion has reconsidered its position and now endorses the principle embodied in the Stratton bill.

I am particularly happy to place in the RECORD the following letter, dated January 9, from Mr. Irving M. Engel, commander, Willard Straight Post, No. 842, of New York, which embraces many

members who reside in my congressional district, clearly stating the approval of the Legion to immediate admittance of displaced persons as a humanitarian act:

THE AMERICAN LEGION,
WILLARD STRAIGHT POST,
No. 842, NEW YORK,
January 9, 1948.

Mr. ARTHUR G. KLEIN,
House Office Building,
Washington, D. C.

DEAR MR. KLEIN: As commander of the Willard Straight Post of the American Legion, Department of New York, I am inviting your attention to the recent favorable action taken by the American Legion regarding displaced persons.

The action of the American Legion was taken on the recommendation of the National Americanism Commission made by its chairman, James F. Green. The recommendation was based on first-hand information on the DP problem obtained during a 2-month personal survey overseas by Past National Commander Paul H. Griffith and other prominent Legionnaires.

I invite your attention especially to the following paragraphs from Mr. Green's report to the national executive committee:

"Past Commander Griffith reported that these persons have been driven from their countries by persecution during the last war, or have fled from the tyranny of later established communistic dictatorships. There are no homes to which they may return and there is no hope of reestablishing them where they now are. Neither can they remain forever in the camps in which they are presently located, the objects of our Nation's charity. They must be permitted to reestablish themselves in new lands in which they may pick up the broken fragments of their lives and work out their own destiny under circumstances which will afford them an opportunity to succeed.

"These persons are men and women of character who represent a variety of skills which could be fitted advantageously into our national economy. The ability they have, the occupations they pursue are sorely needed in many part of our land. There are no Communists among them.

"He further reported his own conviction that our present national policy of selective restrictive immigration must be continued and strengthened; however, he informed the commission that the problem of displaced persons must be considered separate and apart from our normal immigration law and custom, as a humanitarian emergency requiring immediate correction applicable to the emergency alone. For that reason, he recommended to the commission that it reconsider its prior position, and make provision for the admission of displaced persons in specifically designated numbers in the United States."

An early solution of this problem is certainly indicated. In line with the present stand of the American Legion on this subject, your support of adequate legislation to admit our fair share of displaced persons is strongly urged.

Sincerely yours,

IRVING M. ENGEL,
Commander.

Richard Eberhart: Minnesota Poet

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. MACKINNON. Mr. Speaker, Richard Eberhart, one of today's outstanding lyric poets, is a native of Minnesota. During the last war he served with distinction in the United States Navy, and it was on that occasion that I made his acquaintance. He has recently published a collection of his lyric verse under the title "Burr Oaks," the reading of which I strongly recommend. Under leave to extend my remarks, I include the review of this book, which recently appeared in the New York Times:

BURR OAKS, BY RICHARD EBERHART, NEW YORK; OXFORD UNIVERSITY PRESS

(By Selden Rodman)

Among the half dozen inspired lyric poets writing today in English, Richard Eberhart deserves to be better known in America. His neglect here may be traced in part to the circumstances that he was educated at Cambridge, published by Oxford, and wrongly identified in the early thirties with the Auden-Spender-MacNeice group. Also in part it may have been felt that for an American the subject matter of Eberhart's early poems was too English, his idiom overly literary. Actually Eberhart's one widely quoted poem, The Groundhog, stems directly from Thoreau; and the dry energy of speech that informed such matchless early lyrics as I Walked Out to the Graveyard To See the Dead and I Wish I Could Live at the Pitch That Is Near Madness derives as much from the poet's native Minnesota or adopted Cambridge, Mass., as from the well-assimilated mysticisms of Nash, Blake, or Hopkins. Nevertheless an air of affectation hung heavily over A Bravery of Earth (1930), clouded stretches of Reading the Spirit (1937) and Song and Idea (1942), and has not been altogether dispelled from Eberhart's latest collection.

Burr Oaks is divided into three groups of poems. The first, consisting of short lyrics, contains six of Eberhart's finest—The Ineffable, The Full Weakness of Man, Mysticism Has Not the Patience, The Moment of Vision, I Will Not Dare to Ask One Question, and New Hampshire, February—and at least one of his worst, The Magical. The second group includes four longer poems. Triptych, an argument between a poet and a practical man, fails to come off; one's sympathy is all with the latter who can hardly open his mouth without being overwhelmed by a deluge of whimsy. The title poem is a remembrance of childhood, rich with pastoral imagery.

The Chinese Paper Snake, one of Eberhart's most successful poems, is a subtle and witty evocation, somewhat in the manner of Marianne Moore, of the cross-fertilization of cultures:

The father of a metaphysical principle,
Made in Hong Kong but sold in San Francisco,
The paper snake is foreign to the people of Maine
And has never been seen in the hives of Vienna.
Nearest to stillness his force is most potent.
Thus he adumbrates the meaning of innocence,
Liable in gross action to the unsalvageable and comic;
His least motions manipulate the fiercest evil.
Delicacy is also the mark of civilization
And this is a most uncultured Satanism;
Him no Spengler fingered into exotic play
Nor divested him of his striking parody.

The third part of the book contains six war poems, two of which, Dam Neck, Virginia and The Fury of Aerial Bombardment, have been widely reprinted, and one of which, At the End of the War, has been unaccountably neglected. In these, as in The Chinese Snake, the poem is held in control by its specific subject. Eberhart is an inventive poet, with a healthy urge to let violence and exuberance "shock out over the teeth," and the consequence is that the poems of ideas tend to fly apart like a reved-up machine without a governor. Sometimes the language gets so far out of hand as to be ludicrous, as when he speaks of "My being being being's essence, a mathema" with its "non-feverous, but non brittle-brainy lack-brawn Convolvement." When he adds that "it is to be non-mooned to morality as it is to be bubbly renunciatory"—as proof that "only my I was pure"—one is tempted to beg him to leave his ego alone.

Fortunately, the passage and the style are not typical. Eberhart can write straight, even sparely, and for the most part does. And when he does, he can impart to even so tenuous a subject as the poet himself an unforgettable majesty:

The moment of vision will come when it will,
The gift of the gods, the unshakable
Intuitive stewardship, and still
That matchless satisfaction of the maker.
To read the spirit was all my care and is,
To lose life to find hope,
To destroy in the heady grope
For new world's upon an old's effacement,
Through the breach of evil the breath of grace
The worthy one who did a worthier thing
Than all the worthies did—he kept that hit;
Him whom another age heard not
But now my surest music of the word,
Earth-thrown singer, who burnt his bridges.

Natural Gas Shortage in Pennsylvania Is Not Improving

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. VAN ZANDT. Mr. Speaker, since the advent of winter weather, western Pennsylvania is again faced with a serious shortage of natural gas.

Even with drastic restrictions in effect regarding the use of gas for certain purposes, the demand for natural gas is the greatest in the history of the industry. The supply of gas has increased over 300,000,000 cubic feet per day and is expected to increase to 400,000,000 cubic feet before the end of the winter.

According to the Federal Power Commission, local natural gas from wells in the Appalachian area continues to decline. With the increased demand for natural gas, due to cold weather, there is today a shortage that has caused industries to either cease operation or transport bottled gas to avert a shutdown.

A complete analysis of the natural-gas situation, as it affects Pennsylvania, is contained in the following letter from Mr. Harrington Wimberly, Acting Chairman of the Federal Power Commission:

FEDERAL POWER COMMISSION,
Washington, December 19, 1947.

Hon. JAMES E. VAN ZANDT,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN VAN ZANDT: This will acknowledge your letter of December 4, 1947, in which you requested current information with respect to the natural gas shortage.

From the information the Commission has available, it appears that there will be some, but not much, improvement in the natural

gas picture in Pennsylvania this coming winter over the situation that prevailed last winter, which was described in our letter to you, dated February 27, 1947.

This is in spite of authorization by the Commission of various pipe-line projects to increase the capacity of pipe-line companies to deliver gas in the Appalachian area, such as the projects of Tennessee Gas Transmission Co. to increase its capacity from 263,000 thousand cubic feet per day to 600,000 thousand cubic feet per day and that of Texas Eastern Transmission Corporation (owner of the Big Inch pipe lines) to increase its capacity from 140,000 thousand cubic feet per day to 433,000 thousand cubic feet per day. Tennessee does not expect to have its new facilities completed until the end of 1948 and Texas Eastern expects to reach a capacity of 340,000 thousand cubic feet per day by February 1, 1948, and 433,000 thousand cubic feet per day by August 1, 1948. Other major projects approved recently to help the Appalachian area include a 20-inch pipe line of the United Natural Gas Co. extending from a connection with the Big Inch lines in Greene County, Pa., to its system at Ellwood City, Pa., and the Coatesville-Port Jervis line of the Manufacturers Light & Heat Co. in eastern Pennsylvania. These latter projects are scheduled for completion some time this winter. Continuing difficulty in securing steel pipe is hampering the efforts of the gas companies and delaying completion of needed facilities.

Both Texas Eastern and Tennessee Gas appear to be making strenuous efforts to increase the capacity of their systems as authorized by the Commission, and these efforts have resulted in substantial increases in the volume of gas being delivered each day from Texas and Louisiana into the Appalachian area. A year ago this time, the Big Inch lines were being made ready for the transportation of natural gas. Today Texas Eastern is delivering 216,000,000 cubic feet per day through these lines and the quantity will continue to increase this winter as the company completes additional compressor stations. Since last December, Tennessee Gas has increased its capacity more than 100,000,000 cubic feet per day and its construction program is continuing. Thus the outside supply to the Appalachian area has been increased more than 300,000,000 cubic feet per day since last year and this increase will probably exceed 400,000,000 before the end of this winter.

However, local natural gas supplies from wells in the Appalachian area continue to decline, and the demand for natural gas is the greatest in the history of the industry and is still increasing, despite restrictions and limitations on service to consumers for certain purposes, particularly space heating.

Estimates submitted to the Commission by the principal natural gas distributors in the Appalachian area show that, on a comparable basis (same temperature conditions) the demand of their customers on the peak day of last winter was 3,181,000,000 cubic feet and will increase to 3,378,000,000 cubic feet on this winter's peak day, or by 197,000,000 cubic feet. The total supply from all sources on last winter's peak day was 2,543,000,000 cubic feet and is expected to increase to 2,927,000,000 cubic feet on this winter's peak day, or by 384,000,000 cubic feet. Hence the deficiency in peak day supply will drop from 638,000,000 cubic feet to 451,000,000 cubic feet, or by 187,000,000 cubic feet. The deficiency in supply last year was 20 percent and this year is estimated to be 13 percent of peak day demand. Since the demand of their industrial consumers on this winter's peak day is estimated by these companies to be 635,000,000 cubic feet, the indications are that a curtailment of approximately 70 percent in the use of gas for industrial purposes will be required on the peak day (and lesser percentages on other cold days) in order to protect service to domestic and commercial consumers. Due to inadequacy of facilities or special circumstances, there may be some localities in which service to domestic and commercial consumers cannot be fully and adequately maintained on very cold days.

The Commission's Opinion No. 157, in the matter of Texas Eastern Transmission Corp., and Opinion No. 161, in the matter of Panhandle Eastern Pipe Line Co., contain information concerning the gas situation which you may find useful, and a copy of each is enclosed.

If you desire any further information concerning the natural gas situation, we shall make our best efforts to supply it.

Sincerely yours,

HARRINGTON WIMBERLY,
Acting Chairman.

Truman and Politics

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Mr. Fred Brinkerhoff, of the Pittsburg (Kans.) Headlight, on the President's recent message on the state of the Union. He is recognized as one of the outstanding editors in Kansas and one who keeps his ear to the grass roots. I know the opinion expressed here is the opinion of the people throughout that section.

The editorial follows:

TRUMAN AND POLITICS

President Truman proposes a reduction of Federal taxes for individuals—$40 for each individual and the same amount for each dependent—and an increase in taxes on corporations to make up the loss in Federal income from individual reductions.

The tax cut for individuals which the President proposes would reduce the Federal Government's income by $3,200,000,000. To offset this loss and retain the Government's income at the present figure, the President would increase the tax on corporations he says are able to pay to take up this slack.

There is nothing in the President's program, which went to Congress after some boasting from Truman aides that the message was a "slugger," to promise reduction of Government expenses. The President said that the Government expenses would be cut down as much as could be safely done. There was no indication that the President believed any reduction could be safe.

The political appeal in the message is obvious. Mr. Truman proposes to throw a little saving to individuals. This he dubbed a cost-of-living cut. At the same time he proposes to hit business, which action would be popular with many individuals who are not in business. His $40 saving would go to more than 54,000,000 Americans. The increase would reach many thousands of corporations. The expected results would be appreciation politically by those receiving the small cuts and approval by them of the increased soaking of the corporations. Soaking corporations is generally considered a paying gesture in politics.

The thing that should appeal with tremendous force to thinking citizens is that the President is not proposing to cut expenses and reduce taxes. He is for maintaining expenses or increasing them and shifting a part of the cost from individuals to business. This will appeal to many as an evasion of the issue that sooner or later must be brought to a solution—that of expenses of government that the people of the United States cannot afford.

Last year Congress sent two tax-reduction bills to the White House. They would have required the reduction of expenses. They would have necessitated the mustering out of an army of pay rollers. The President vetoed them and thus defeated the wishes of the majority of Congress which included in the reduction a great many Democrats. It was maintained then that the tax reduction for which the people had voted overwhelmingly in 1946 should be made at that time. It was suggested that if thrown over into this year the matter would be made a political issue.

There is plenty of reason to conclude that tax reduction now has been made a major political issue. The Republican Congress will be charged with doing that. However, the Republicans of Congress brought in the tax bills last year. They said then that they would be back this year at the very start of the congressional session with tax-reduction legislation. The President was in opposition to reduction. Now he is shifting and proposes reductions—of his own kind—and increases of his own kind, too. Mr. Truman here in 1948 becomes a tax reductionist and cannot escape the charge of promulgating a program for political effect.

The Republican Congress should proceed with its own reduction program which would be an expense-reduction program as well.

Using all efforts to bring about economizing in the Federal Government is a responsibility of the Republican Congress. President Truman stands opposed to that program.

Communists on American Ships

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. WEICHEL. Mr. Speaker, the American merchant marine is a part of the defense of the United States as well as a part of our peacetime economy. During the past 5 years our Government built a great number of ships which helped to win the war. In the operation of these ships tens of thousands of persons were employed. With the war over the American merchant marine remains an integral part of the defense of our country. Nevertheless those who are engaged in the operation of the American merchant marine have little to say as to who is employed on such ships. The captain must take as crew, whomsoever is sent to the ship, without regard to his belief in America, without regard to his allegiance to America, and without regard to his being a Communist. It has been publicly demonstrated as to the number of Communists engaged in maritime activities throughout the world and it is well known that the philosophy of communism is being spread in utter opposition to America. Yet the command-

ing officers of our merchant ships flying the American flag, are obliged to take such Communists as part of the crew of an American-flag seagoing ship. It is folly to spend money to stop the progress of communism throughout the world, while the American merchant marine is wide open to the secret attacks of communism. Above all things the American merchant marine should be safe, and be free in its operation from communism. Mr. Speaker, I am requesting that the Federal Bureau of Investigation make an immediate investigation as to Communists serving as crews in the American merchant marine.

Hon. Albert Engel

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. DAVIS of Tennessee. Mr. Speaker, our colleague, ALBERT ENGEL, is highly respected in this body for his industry, fairness, and study of public questions. There appeared an editorial in the Commercial Appeal in my city of Memphis, Tenn., which was most complimentary. It was certainly well and accurately written. Under leave to extend my remarks, I include that editorial that he and all of you may know how a great newspaper in the Midsouth feels about him:

SPEED THAT COUNTS

Chairman ENGEL'S announcement that flood-control hearings on 1949 fiscal year appropriations will begin next Monday is heartening, indeed, for it indicates a vastly beneficial change of pace and viewpoints.

The hearings start, according to that schedule, on the same day President Truman submits his budget message. In the past, flood-control hearings haven't got underway until weeks after the Budget proposals have been received by the Congress. Not infrequently appropriation measures have not been approved until after a new fiscal year actually begun, and there has been a consequent costly delay in continuing or starting flood-control construction.

It is Chairman ENGEL'S hope that hearings can be completed within a period of 3 weeks and that the 1949 appropriations can get final approval by April 15, or not later than May 1. If that can be accomplished it will set a record—give Army engineers an approximate two and a half additional months on their working season.

In his first year as chairman of the War Subcommittee, Representative ENGEL proved, in 1947, that he is a sincere and practical friend of flood control, and of the areas where flood control is imperative. Now he is demonstrating further leadership qualities by insisting that the necessary funds be made available at a time which will enable attainment of maximum benefits.

The gentleman from Michigan is one of the few in Congress, during our long experience with flood-control matters, who has quickly come to realize that flood-control construction is something requiring months of preappropriation planning and that, in the main, it is done on continuing basis from year to year.

Failure to know what could be expected in the way of funds well in advance of the start of any given fiscal year has been the greatest barrier to achievement of peak construction efficiency. Worse, it has resulted in great waste and frequently has been an invitation to flood destruction. Contrary to the rule, haste with flood-control funds means vast savings—a fact which Chairman ENGEL obviously recognizes.

Our Navy in the Future

EXTENSION OF REMARKS
OF
HON. CLAUDE I. BAKEWELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. BAKEWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of January 9, 1948:

OUR NAVY IN THE FUTURE

In his valedictory report to the Secretary of the Navy, Fleet Admiral Nimitz has drawn up an impressive argument against those who have come to belittle the role of sea power in the new age of rockets, guided missiles, long-range bombers, supersonic flight, atomic weapons, and other actual or potential wonders revolutionizing the grim art of warfare.

It may be, of course, that navies will one day be largely obsolete, but Admiral Nimitz, who has just retired as our Chief of Naval Operations, leaves little room for doubt that that day is distant. In his opinion, and it is a decidedly convincing one, our sea-air power, which now controls the oceans more absolutely than they have ever before been controlled by any other nation, will be of decisive importance to us "in the event of war within the foreseeable future."

This holds true, according to Admiral Nimitz, in both a defensive and offensive sense. But it is of particular significance offensively. Thus, given its present strength in relation to others, our Navy—surface, subsurface, and air—probably would have only a minor problem of defense in case of war in the next decade or so. Its attack role, however, would be very large. Wholly apart from what it would have to do to transport troops and arms to advanced areas—a thing that no other service is equipped to do on the same scale—it would be expected, especially in the opening stages of hostilities, to project its weapons against vital enemy targets on land, the reduction of which is the basic objective of warfare.

Moreover, as Admiral Nimitz persuasively argues, our Navy, if properly maintained and kept up to the minute in adjusting itself to revolutionary new weapons, would be admirably suited for such offensive operations. As demonstrated against Japan, it could have great, mobile, fast-striking task forces virtually as complete as any air base ever established. From these, set up offshore anywhere in the world, it could launch carrier planes capable of dropping atomic bombs, or it could use its heavy surface ships and submarines to project rockets and guided missiles. Indeed, as Admiral Nimitz sees it, our Navy—air, surface, and subsurface—should be able within the next 10 years to critically damage enemy vital areas many hundreds of miles inland. The task forces—the great floating bases—would make this possible and they would be able, besides, to defend themselves with arms and tactics specifically designed to cope with the special naval problems created by the atom and kindred instruments of mass destruction.

Certainly, as far as the foreseeable future is concerned, this estimate of our sea-air strength seems so sound that we can ignore it only at the risk of frittering away our present absolute control of the oceans—a control of vital interest to us, in Admiral Nimitz's words, not because it means riches and power as such, but because it bulwarks our national security and serves to promote that balance and stability among nations that will insure to each the right of self-determination. In sum, until there is genuine disarmament and collective security, our Navy must remain preeminent for the sake of our own peace and the world's as well.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. KILBURN. Mr. Speaker, at a regular meeting of the Ogdensburg Rotary Club, Ogdensburg, N. Y., the following resolution was adopted endorsing the great St. Lawrence seaway and power project:

The St. Lawrence seaway and power project has received the endorsement of every President from Woodrow Wilson to Harry Truman. It has been approved by the Governor of this State and many other States.

It offers a splendid power site and deep water connection between the Atlantic and the world's greatest inland waterway, the Great Lakes.

Our supplies of high grade ore are being rapidly depleted in the West and upwards of one-half billion tons have been discovered in Labrador and the seaway is needed to transport it cheaply to the blast furnaces near the Great Lakes from Pittsburgh to Chicago.

The United States and Canada on March 19, 1941, signed an agreement to complete the St. Lawrence-Great Lakes seaway and power project. Most of the construction work needed to complete this development of the Nation's No. 1 power project has been completed except in the international rapids section of the St. Lawrence River in the boundary waters between the State of New York and the Province of Ontario.

The completion of the seaway will modernize the existing channel for commerce already improved for use by ocean-cargo vessels.

The dual-purpose navigation and power project to be built will develop 2,200,000 horsepower of the cheapest electric horsepower in the world, to be divided equally between the State of New York and the Province of Ontario.

The completion of this great power project will reduce the household rates throughout the State about 63 percent, and will reduce the cost of power to industries by one-half:

Resolved, That we who live in the St. Lawrence Valley and for years have seen the waste of its mighty resource, declare the proposed project to be the greatest public improvement to be built in any part of the world, and strongly favor its construction in order to provide tens of thousands of jobs for returned veterans, displaced war workers; to promote foreign trade and domestic commerce in all parts of the United States; and to furnish 4,000,000 or more individuals—rural and industrial consumers of the State

of New York—with power and electricity at low rates.

Resolved, That a copy of these resolutions be forwarded to President Truman; the Governor of the State of New York, Hon. Thomas E. Dewey; to the senior Senator of the State of New York, Hon. Robert F. Wagner; to the junior Senator of the State of New York, Hon. Irving Ives; and to our Representative in Congress, Hon. Clarence Kilburn. That a copy also be forwarded to the Power Authority of the State of New York; be it further

Resolved, That copies of this resolution be forwarded to other Rotary clubs in this State with the recommendation that they adopt similar resolutions.

OGDENSBURG ROTARY CLUB,
DONALD A. HUNTER, *President*.

Approved:

CLARK M. BOWMAN,
Secretary.

Inspired Control

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include an editorial by Mrs. Roe Chase, editor and publisher of the Anoka Herald, which appeared on January 8, 1948. Mrs. Chase is one of the outstanding editors in my State and her editorial "Inspired Control," reflects the conclusion of many Christian Americans, that most of our present-day evils result from excessive materialism and blind self-interest. I am sure we could solve many of our problems if we were to pay more heed to Christian principles. This is really an inspired editorial:

INSPIRED CONTROL

President Truman's call for new rationing brings up an old lesson—one we never seem to learn from history. Freedom and selfishness won't mix. When men do not voluntarily control selfishness, somebody has to step in to curtail freedom.

Why, however, is it always freedom that's curtailed? Efforts have also been made to end selfishness. But these nearly always simmer down to preachment. Somebody tells somebody else to be less selfish. And we need, not exhortation, but inspiration.

Unselfish men can inspire unselfishness in others. They can, with authority, call on others for the self-control that makes government control unnecessary. Without this authority we can't call for unselfishness in anybody. So the place to start is with you and me.

It may be hard for you and me to be unselfish. It may even be impossible if we try it on our own. But hundreds—even thousands—find that the secret of unselfishness lies in loving something bigger than yourself—love of family, love of country, love of God. The latter, they say, takes care of both the former. So those of us who are tired of having others control our freedom might take a chance at letting God control our demands.

Inner discipline of this kind insures continuance of freedom with stability in economics. Rising morals in you and me can begin to end rising prices in the Nation, without recourse to compulsion, rations, or controls.

Rent-Control Story

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the Wall Street Journal of December 29, 1947, outlining the experience and the results of rent control in France over a period of 33 years:

RENT-CONTROL STORY—FRANCE'S RENT CEILINGS ARE 33 YEARS OLD; SO IS HER HOUSING SHORTAGE—SOME APARTMENTS COST BUT $10 A YEAR; UNREPAIRED BUILDINGS FALL APART—BUILDERS WON'T RISK MONEY

(By Charles R. Hargrove)

PARIS.—For 33 years France has enjoyed rent controls. And for 33 years France has suffered from a housing shortage. Today it's one of the world's worst.

Last year Paris saw 60,000 people turned out of 2,000 uninhabitable buildings. This year the number has about doubled.

Paris police recently warned about the danger of injury or death from falling pieces of balconies, chimneys, cornices, and window railings because "for years no repairs have been executed on the facades of the buildings."

The police, of course, called proprietors' attention to their "responsibility." The proprietors, after three decades of super low rents that meant investment losses, replied by reminding the Government of its responsibility for their irresponsibilities.

NOBODY WANTS TO BUILD

You can go almost anywhere in France today and see people living in makeshift homes. The state has no money to put into new houses. Private builders, even if they can get the materials and locate laborers, have no desire to risk their money in a field that has been so rigidly controlled by the Government. Although properties built now are not subject to rent control, they would have to carry rentals 5 to 10 times the controlled properties to make a profit.

It was the First World War that brought the first law designed to keep homes cheap, to compensate for soaring prices of food and clothing. What started off as emergency legislation has, over the years, developed into a series of laws voted by successive Parliaments. Rent legislation is now so complex it defies the comprehension of landlord and tenant and everyone else except a handful of experts.

The first law provided a sort of moratorium on rent increases. Subsequent laws were all based on two main principles: (1) The maintenance of rent ceilings that would rise with currency devaluation but never in proportion to the devaluation, and (2) the right of tenants, with few exceptions, to retain their homes despite lease expirations.

Following the First World War it was decided that buildings built after 1918 would be free from rent control; that was to stimulate building. But this privilege lapsed with World War II, and now all buildings predating 1939 are under controls.

RENTALS 1 TO 5 PERCENT OF ANNUAL INCOME

For that half of France's population which lives in cities, where house renting is the rule and house owning the exception, all this mass of legislation means that as long as you behave yourself nobody can turn you out of your apartment. And your apartment will cost you at best 1 percent of your annual income and at worst 5 percent.

Take an example or two.

Here is the proprietor of a house that has been split into two-room apartments with kitchens, running water, electricity and modern sanitation. Several tenants in this house earn the equivalent of $1,500 a year; yet they pay only $10 a year rent. The landlord's gross income from all rentals in this house is $375 a year. Yet after deducting costs of operating there is barely $100 left for him and that is subject to taxes.

Or take the theoretical but typical case of a mason living in what is officially classed as a "worker's dwelling," built in 1914. The rent then was less than 1 franc a day. Now it is around 4 francs (a little over 3 cents). But the mason back in 1914 earned 5 francs a day and now earns more than 300. Thus in 1914, the mason's rent was about 14 percent of his income; today it's a little over 1 percent.

The only condition for being able to settle your annual rent bill with the earnings from a day or two of work is that you stick to your apartment. That, of course, presents many practical problems. A young married couple, for example, is comfortable in a compact two-room place; but over the years the family may expand to five or six people to be cramped into the same space. Or a big family that occupies six rooms may shrink down again to a couple—bouncing around in unneeded space. In some cases such contracting families leave extra rooms empty.

SWAPS AND PREMIUMS

There is one possible way out of such dilemmas. Tenants can arrange to swap premises. Some newspapers, in fact, do a big business in advertising such trades.

In such a rental situation it is inevitable that a black market would exist. Generally there is no direct open cash bribe. But the person taking over an unfurnished apartment will pay an exaggerated sum for old wornout furniture left by the outgoing tenant.

Thus an ancient carpet might bring 48,000 francs (about $400). Sometimes American dollars are demanded, due to distrust of the franc. Instances are known where a million francs (about $3,400) have been paid to find a home this way.

Frenchmen have come to take it for granted that landlords should pay for the privilege of having them as tenants. But underneath there is a growing concern among those thinking Frenchmen who look further than their noses. Not only is most housing antique, it has become dilapidated.

MANY ANCIENT BUILDINGS

Real-estate men explain that a building in urban regions can normally be used 60 to 100 years. In Paris over half the buildings are more than 60 years old. Throughout France one building in five dates back more than 100 years; in certain areas the proportion runs as high as 70 percent. Some experts in this field forecast that over the next few years a high percentage of France's 9,000,000 homes will fall in ruins for lack of upkeep.

And for 33 years there has been almost no new housing. For 10 of those years there was war. Between the two World Wars and since the last one, building has been either suspended or so far below normal as to make little impression. The last war, what's more, destroyed or damaged an estimated 300,000 dwellings.

France's building industry, meantime, has become as out of date as her buildings. The secretary of the building federation recently estimated that in France it takes 25,000 man-hours of work to build a house. In Britain, he said, the figure is 9,000 and in America it is 4,500.

France's building-cost index stands at 6,500, compared with 100 in 1914. The rent index, in sharp contrast, has risen only to 500 from 100.

All political parties and classes of people agree France's housing conditions can't go

on as they are. Already millions are living in hovels. But what happens when the hovels collapse?

REMEDIES ARE PROPOSED

There are several proposals—all with their own draw-backs.

Rents could be raised sharply, to a point where landlords could afford to repair their properties. But such sudden mark-ups would mean hundreds of thousands would have to get out of dwellings they couldn't then afford, or their wages would have to be raised sharply, adding to France's inflationary spiral.

The Tenants' Federation has put forward a plan to finance new buildings by the issue of special redeemable notes interchangeable with ordinary bank notes. That is the way to headlong inflation, monetary experts emphasize.

Another scheme, somewhat more reasonable and more likely of being tried, calls for a series of moderate readjustments of rents. A portion of all such increases would be earmarked for a fund to assist in new building. But even this more cautious approach to the problem implies stability of the general price level. When prices of other things rise as much as 25 percent in a few months, as they have recently, an increase of 5 percent or 10 percent in rents would still leave landlords' income lagging.

If the housing problem is allowed to drift along and owners are forced into bankruptcy, the state will be able to buy housing properties for a song. More conservative people in the Government suggest that Communists, so recently active in France, have not overlooked this possibility.

The Late Honorable Clarence Hancock

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. LEFEVRE. Mr. Speaker, it was with deep regret that I learned of the passing of my good friend and former colleague Clarence Hancock. I immediately thought of my first meeting with Clarence when I came to Washington in January 1943 to begin my first term in the House of Representatives. From the very start, I was greatly impressed with his quiet manner and what seemed to me to be very valuable information for a freshman in Congress to receive. A friendship started then that I shall always cherish. It so happened that we belonged to the same college fraternity and possibly it was due to that fact that he gave me so much good and sound advice. Soon I learned of his ability as a legislator and the respect all the Members of the House held for him. To this day it is not unusual to hear Members who served on the Committee on the Judiciary with him, express the highest praise for his judgment and their regret that he was no longer with them. Personally, I feel that one of the highest compliments that can come to a man is the support and confidence given him by his home people. This Clarence Hancock had. His great patriotic spirit for his country and devotion to the people of Onondaga County will always be remembered. His good-natured humor, sound advice, and delightful fellowship with the Members of our New York delegation are qualities we all admired and shall deeply miss.

My deepest sympathy goes to Mrs. Hancock and their son John. It was my good fortune to have known this family quite well. I have always admired the love and loyal family spirit that existed. I know that Mrs. Hancock and John will have the courage to bear this great loss, feeling that Clarence would have it no other way.

"Investigatin' Congress"

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. ENGEL of Michigan. Mr. Speaker, a couple of weeks ago I saw the following little article in the December 14, 1947, issue of This Week magazine. It is by Wally Boren, author of the popular Wally's Wagon column in that publication. We who are on the receiving end here in Congress are in the best possible position to know how exceptionally well expressed Mr. Boren's article is. I take the liberty of quoting one sentence from a letter I have subsequently received from Mr. Boren:

I am thinking of a follow-up piece; it's terribly important that the American public have a feeling of warmth and friendliness toward Congressmen—the foundation on which a respect for Congress, the institution, is built.

In short, let us differ on issues as much as necessary. But let not our differences break down faith in the great institution itself.

Here is Wally Boren's December 14 article:

You know, if I was a Congressman, I would get somebody tough to bargain for me. I would want a fellow that could get me some fair treatment.

Couple of weeks ago a Congressman stopped here. We don't have many Congressmen amongst our regular trade, so I started in braggin' about how I had fried a hamburger for the Honorable Mister X.

Those that recognized the name all knew somethin' bad about him. He had voted wrong on the tax bill or was bought body an' soul by the lobbyists or was known to be a horse thief.

Those that never heard of him before didn't want to now. He was a Member of Congress an' that was enough to stamp him as a nitwit an' a wife beater. Now I think this is all wrong. Congressmen do a lot of good things. But you just take a look at the papers. Or listen to the commentators on the radio. You could cram a year's praise of Congress on a postage stamp. The criticizin' an' complainin' about Congress hardly leave room on the air for the soap operas an' practically crowds the murder stories off the front page.

I was over to the library yesterday. Had to take Miss Coggins, the librarian, some lunch. So I asked her, did she have any books devoted to extollin' the good deeds an' high quality of the elected representatives of the people. Sure enough, she had one. It was wrote in 1904 an' the last time anybody took it out was the summer of '09.

However, Miss Coggins found 41 books that knifed the law-makin' boys—not countin' two shelves of history books heavily sprinkled with their misdoin's.

There was four books defendin' Jesse James, a couple that claimed Benedict Arnold was a martyr an' quite a few that figured some of our famous bandits an' grafters was only guilty of boyish pranks.

But I learn from Miss Coggins that the present Washington set-up is the Eightieth Congress in a row—an' the country is likely to survive a few more. I just can't believe the United States has managed to be so big an' rich, in spite of Congress.

Fact is, I feel so patriotic an' so sympathetic towards Congress that if I knew my Congressman's name, I'd write the stinker a fan letter.

WALLY BOREN.

Survival in Chaos

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. ANGELL. Mr. Speaker, the following article is the second in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

SURVIVAL IN CHAOS—DISCOMFORTS OF ATLANTIC CROSSINGS OFFSET BY NEAR DISASTERS ON LAND

(This is the second of a series of articles detailing observations recently made in Europe by Philip H. Parrish, editor of the Oregonian editorial page. The writer spent 7 weeks in Germany, Austria, France, and England.)

(By Philip H. Parrish)

After my 1946 trip to Europe, and the articles resulting from the trip, a surprising number of persons asked why I hadn't written anything about how it felt to fly the Atlantic.

The reason was that it had seemed presumptuous to dwell upon the trials and palpitations of a party of VIP's (very important persons), when so many scores of thousands of our service personnel had made the crossing on bucket seats as a mere detail of the war—dutiful if not uncomplaining.

After all, we did have it better. Very frequently, if one were quick, there was a double seat or a space on the floor of the DC–4 where one could hunch into an hour of restless sleep. Not, however, in the broader space between the front seat and the baggage compartment. That was reserved, by unanimous consent, for Ralph McGill, learned and hearty editor of the Atlanta Constitution, as the only place ample for his girth. Experienced traveler that he is, Mr. McGill could curl up there like a great teddy bear.

COWLING FLOODED

Not that a VIP's feet smell better than others when you are sleeping in an aisle, and not that our journeys were without discomforts and adventures, or at least near adventures. All of Europe and even the islands between were shrouded in cloud and rain and sometimes snow, so that several times we had to come down through the overcast under ground-control assistance.

Then there was that night of tropical downpour in the Azores, when we sat in our plane on the rocky ledge which forms the Lagens airfield, impatiently waiting for the engines to turn over and the ship to take

off on the final hop to Bermuda and home. But if they had turned over, we would have been fried on the spot or we would be running yet—one or the other.

Capt. Charles A. Thomas, our devoted chief pilot, came into the cabin.

"Someone in serving the plane overflowed the gasoline," he explained, not too happily. "About 50 gallons are loose in the cowling of the No. 4 engine. We caught it dripping and vaporizing in the rain."

GEAR FREEZES

So back we went up the hill through the storm to the officers' club, very glad to be alive, and not at all minding that the eternal gales of the Azores kept the club roof out of repair, so that water ran in on some of our beds. It was fortunate in another way that we returned that night. We found we had miscounted and had left Herbert Brucker, editor of the Hartford, Conn., Courant, behind asleep. Odd. Herbert was annoyed at having been overlooked but mollified by the thought that he might have been the only survivor. I think he would have considered it a form of justice.

Then there was that earlier incident at the Azores, on the way over, when the hydraulics handling the landing wheels froze and the wheels had to be shaken down with gravity. The Red Cross wagon and crew were waiting below for pieces of VIP's in event that didn't work. But we didn't know this until afterwards. In a way, it's better to know things afterwards.

All of which is to say that, as yet, air travel to Europe, particularly in Decemberish weather, isn't designed for pleasure, under the best of auspices. The north European plane is wrapped in much colder and closer clouds than western Oregon knows, and London is painfully as advertised, with the sun a red ball through the fog for a short time each day. And so far as living when one gets there is concerned, it is impossible in Germany and Austria unless one is an authorized traveler and can stop in army hotels, and it is difficult in such countries as Britain and France because of the fearful prices. Of course, one can always deal on the black market and buy British pounds at more than a 25-percent discount, or French francs at better than 260 to the dollar instead of the legal 120. But there is also the foreign jail.

VEIL WELCOME

For my purposes, however, it was actually helpful that clouds should have obscured the sea approaches to Europe and lain like a floor beneath us as we moved into the Continent. Last year I had leaned out the windows the better to see the hedgerows of Normandy, the roofs of Paris, the vineyards of the Rhine, and the little strip farms around the innumerable villages of the plains—all merging into an economy so strange to western eyes. But the scene was clear from memory, and this time I was satisfied to zoom down through the ceiling onto the Templehof Airfield, close to the center of Berlin, having my return in the very heart of the very worst.

That is, one stepped directly—it seemed a matter of moments—out of boisterous, crowded, unscarred Washington, with its jammed stores and jammed traffic, into the darkened ruins of what had been Europe's greatest city. One stepped from the brilliant, if perhaps unstable, peace of the New World into the Old World's grimmest example of what all-out war means in an industrial civilization. Here the scurrying, drab, dirty, and unsmiling people passing among the rubble of a city 60 percent destroyed, lived in obedience to Darwin's law of survival. Here an estimated 80 to 90 percent of the women had been raped by a barbarian conqueror. (Don't mention that, you say. But why not?)

Here a comparatively cultured people had released the lawlessness of war and now existed in the wretchedness they had designed for others.

TRANSITION SUITS

But I don't intend to preach. The point is that the suddenness of the transition from Washington to Berlin exactly suited my particular program—a program resulting from my observations in 1946 and considerable studying done in preparation for the second trip.

It is obvious, of course, that what has happened in Europe, primarily Germany, is what philosophers and imaginative writers have been stewing about for a century and a half—almost since the beginning of the industrial revolution, when people started massing in cities and leaving a dwindling percentage of the population to farming, fishing, and forestry. What about catastrophe? the philosophers wanted to know. What then? they asked. Anatole France made it the theme, and the smashing final chapter, of his Penguin Island. He conceived of a disgusted human as dynamiting the industrial agglomeration and leaving the blackened rocks to wild animals.

We know now, from experience, that M. France made his people much too amenable to dynamite. Industrialized man has undergone worse and lived, after a fashion.

BATTLE STILL ON

But the battle for survival isn't concluded. The people of these top-heavy and now almost smokeless industrial centers continue to burrow and hoard among the stones, and claw one another for what they can secure from the countryside, meanwhile eking out with foreign—largely American—generosity. If that generosity were withdrawn at this particular moment, western Germany—the industrialized heart of Europe—would inevitably resort to animal law within a matter of weeks, and I regard it a duty, as a privileged witness, to give the clearest possible report on the conduct of the two principal classes in Germany—the city masses and the peasant producers—so that readers can judge for themselves just how far they wish to go in discouraging or encouraging America's official policies.

Then there is the further necessity of always insisting that we, as Americans and citizens of the New World, stop judging the Europeans as though they were exactly like ourselves.

Perhaps the most shocking thing to me on these visits has been the discovery of the degree of difference. Not that I was unacquainted with the situation from the standpoint of theory. Obviously Europe, including European Russia, is only about the size of the United States and yet is fragmented into many nations, each with its ancient quarrels and prides. Obviously no one of these nations has resources for the American standard of material prosperity, and obviously they need to federate and destroy the disastrous customs barriers which entwine them in poverty.

What one is not really prepared for is the unplumbable depths of their resistance. One is not prepared for the narrowness of their minds as well as their fields. In the United States, where the population is made up of peoples of all races we cannot be prepared for a situation where each race or pseudo-race nurses its tribal heroes and its memories, and hates all its neighbors for wrongs of centuries ago. We cannot be prepared for the fact that there isn't a Lincoln or a Washington in all the galaxy of Europe's great. Through the centuries the Europeans have pulled their forelocks to strength and ruthlessness, while we in our brief history have denied the final salute to those whose strength lacked moral character.

STARK REALITY

I may not have agreed with the late Mr. Roosevelt's programs, but there was an ocean, and ages, between him and Hitler, and between the peoples who followed the two.

All this, which is ordinarily just schoolbook stuff, becomes stark reality to the visitor in Europe today—a Europe stripped of pretense and raw in its hunger.

I thought of all this during our flight above the clouds across western Europe, and tried to bear it in mind throughout our subsequent travels in Germany, Austria, France, and Britain. I felt that my report must do more even than give the maximum of details as to how the city masses and the peasants of central Europe were meeting catastrophe. It also must contain a background of psychological explanation of Europe—not in criticism and not for purposes of sitting in judgment. (There, but for the will of God, go I.)

But for the purposes of cautioning all of us in America to make due concessions on behalf of peoples who have been living under more restricted conditions, and who, at the same time, feel a constant sense of superiority as a result of having given birth to modern civilization. It is hard on western Europeans to have upstart America and upstart Russia struggling and maneuvering across their sacred acres.

MARSHALL HEARD

Having borne this thought in mind throughout Europe, it was strange I should have ended up in London at the Pilgrims dinner, and heard Secretary of State Marshall, the guest of honor, rise and express almost the same idea—in a voice quiet and patient. It was the night of the day on which he had made clear that the Russian position was unacceptable and could not be taken as a basis for further negotiation by the foreign ministers.

He spoke of the difficulties which the people of the United States have in understanding the exact conditions, and the outlook, of Europe. He was sorry for this. There seemed for a moment to be apology in his tone.

Then he added—and a touch of sadness in his voice made his message moving and magnificent—that the reverse must be realized. The difficulty of Americans in understanding Europe, he said, was less than the difficulty of Europeans in understanding America—the breadth of our continent, our traditions, our way of life.

I can only hope that the idea sank home among the assembled ministers and the lords of the empire. Understanding works both ways. Europeans should not always be talking and expecting; sometimes they should be listening.

But I am getting ahead of myself. Just now, for the purposes of this series, our DC–4 is coming down through the clouds onto Templehof Airdrome—an airdrome whose very name once caused the world to shiver, but which now rises silently up to meet us, grim and gray.

Burial of Veterans Dying Abroad

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. KEATING. Mr. Speaker, under regulations promulgated by the Secretary of War in accordance with existing law, the parents, widow or next of kin of one who died in the service of his country, who elect to bring their loved ones back to this country for burial, are allowed $75 for that purpose. This

amount is not adequate to defray the necessary expenses.

Although I understand that a considerable number of morticians, with commendable generosity, have adopted a policy of not charging in excess of this amount at least in cases where such additional charge would constitute real hardship, several constituents have called to my attention the fact that they have been required to expend considerably larger sums in order to give to these war heroes the final token of honor, respect, and affection which they have so richly earned.

While it is unquestionably our duty to scrutinize carefully every assault upon the public purse, it came as a shock to me, as I feel it will to most of the Members, to learn that the families of these boys, who gave their lives that the rest of us might live in peace and in freedom, have been called upon to defray a large portion of the interment expenses. In many cases they could ill afford this outlay. It meant perhaps going without the actual necessities of life for an extended period in order that a fitting final memorial might be accorded a fallen hero husband or son. I cannot believe that those who sent us here want or expect us to economize at this expense to those who have already given so much. It is small wonder that I have detected a certain note of bitterness in some of the correspondence which I have received on this subject. To relieve, rather than to increase, the suffering of those who grieve should be our aim.

I have, therefore, introduced a bill to provide for reimbursement to the next of kin of their interment expenses in a sum not to exceed $200 provided the burial is in a military or national cemetery or a burial plot set apart in a private cemetery and provided without cost to the next of kin. The measure further provides that if the family prefers to have the remains rest in a family plot or one purchased or provided by the next of kin, a sum not to exceed $275 will be allowed for that purpose. This legislation is applicable not only in the future but also to those cases where burial has already been effected and where an expenditure has been made in excess of the amount allowed by the Government.

This bill, in my judgment, merits the support of those many Members who I know feel, as I do, a deep and continuing obligation to the widows, mothers, fathers, and close relatives of those who fell in defense of us and our great Nation.

Federal Loyalty Tests

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Northern Virginia Daily, Strasburg, Va., of January 8, 1948:

FEDERAL LOYALTY TESTS

The very difficult matter of measuring the loyalty of Federal employees is now in operation. There are more than 2,000,000 persons on Federal pay rolls all over the country. The task of processing that many individuals is in itself a tremendous job. Yet it is essential to be sure of the loyalty of the people who serve and administer our Government. The definition of a thing as elusive as loyalty presents an added problem. The Loyalty Board, headed by Seth W. Richardson, former Assistant Attorney General under President Hoover, appears to be endeavoring to use common sense and good judgment in dealing with a problem so delicate and yet so vital.

The Board has stated two standards by which it will appraise the loyalty of Federal employees: First, that the employee is not serving a foreign power, and second; that he does not hold beliefs or belong to organizations calling for the overthrow of the United States Government. These seem to be very mild tests. Any employee who deserves to be on the Federal pay roll should be able to clear himself on both these counts.

Certainly there is nothing unreasonable or unfair in demanding such clearance. The affairs of the Federal Government are much too vital to be entrusted to people whose loyalty is open to question. If an uncertainty exists in any particular case, it is better to err on the side of national safety than otherwise.

The Federal Bureau of Investigation, raised to new peace-time power, has complete authority in weighing the status of United States workers in the matter of loyalty. In most cases the FBI will give no special attention to the routine statements employees must sign. It is only in the case of adverse information that the worker will be brought before loyalty boards to be set up in various sections. This loyalty sifting is an effort to weed out Communists from Federal bureaus where many have found pleasant berths. Obviously there will be some outcry that the screening is in violation of the Bill of Rights. This is not true, of course, for the Federal Government, like any other employer, has the right to decide who shall work for it and who shall not.

It is important to bear in mind that Federal employees have no vested right in their jobs, any more than the employees of private businesses have. Their ability, their conduct, their character, their temperament, and their general suitability for their employment are all subject to the scrutiny of their employers as are the similar qualifications of other workers. In other words, Uncle Sam doesn't owe anybody a job and doesn't have to keep them employed if they don't suit him. No witch hunt is being made of the loyalty investigation. Those who make the loudest protest against being investigated are likely to be those with most to fear. For most employees the whole thing will be merely routine. No good American need fear complete investigation. He should, on the contrary, take pride in proving his status as a loyal American.

Taxes and Inflation

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Jackson Herald published in Ripley, W. Va., and edited by Mr. Sattis Simmons.

Ripley is the center of enormous natural gas production territory in West Virginia, and one of the finest farm sections of the Ohio Valley. No doubt the good editor is reflecting the thinking of the people in his section. It should impress the Members of the House that the people back home are not being fooled by the administration's double-talk on taxes.

The editorial follows:

TAXES AND INFLATION

One of the prime arguments of those favoring high taxes is that such taxes are anti-inflationary, that to lower personal taxes will increase inflation by stimulating buying on the part of the public.

Under certain conditions this might be true, but not under the New Deal theories which are still activating the executive department of our Government. It is generally agreed that the first safeguard against uncontrolled inflation is a balanced national budget. Our Federal budget has to all intents and purposes been balanced. High taxes limit the spending power of the individual in a time when prices are high and consumer goods are scarce. But they do not necessarily prevent inflation. For the Government will not save the bulk of the money it gets as a surplus from high taxes and apply it on the national debt. What it has been doing and will do is to spend this money itself. It will do this through an inflated budget, with a greater than necessary public pay roll and through heavy spending in Europe.

Now if the Government collects, say, five billions more through high income-tax rates it takes this much spending power away from our people. But if Uncle Sam spends this money himself he is not curtailing inflation. Quite the reverse. It means spending more money on a million too many Government employees who produce nothing in the way of consumer goods which might hold prices down. It means spending more money in Europe which indicates, in turn, shipping more scarce goods out of the country. So far as inflation is concerned there is little difference whether his money is spent by the Government or by our own people, who could use it in their own interests if their taxes were reduced.

Century of Rising United States Debt Ending

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 7, 1948

Mr. REED of New York. Mr. Speaker, it might be of some interest to the Members to consider the extraordinary and extravagant budget proposal by President Truman in the light of the facts and figures set forth in an article which I am including with this observation:

CENTURY OF RISING UNITED STATES DEBT ENDING; PER CAPITA BILL $1,789—CITIZENS OF 1836 OWED NOTHING, BUT A DEPRESSION THE NEXT YEAR STARTED BORROWING WHICH HAS GROWN STEADILY FOR 11 DECADES

WASHINGTON, December 20.—The United States is nearing the end of its eleventh

decade of rising public debt. Since 1837 the Treasury has been going deeper into the red.

Today the Federal debt is about $258,000,000,000, each citizen's share is $1,789, and the man with a family of four owes a little more than $7,000. He is paying interest on it, in taxes, at about 2 percent a year.

The lucky American of 1835 and 1836 owed not a cent of public debt. The account had been practically wiped out by good husbandry and sale of public lands.

In 1837, because of a depression, the Government began a little borrowing—$336,000—and the long upward climb began. The debt has been in the millions and billions since 1838.

The United States started out in life with a debt, a total of $75,880,000 in 1790 ($19.32 a person). This comprised chiefly Revolutionary War expenses of both the Federal Government and the States. The small young Nation tightened its belt and achieved a remarkable reduction of the debt to $45,000,000 by the time the War of 1812 began. This was despite President Jefferson's expenditure of $11,250,000 for the Louisiana Territory, deemed a gross extravagance by many.

GALLATIN PLAN CUT DEBT

The whittling was done largely through a plan of Albert Gallatin, fourth Secretary of the Treasury, whose statue was recently erected in front of the Treasury.

The debt first went into billion-dollar figures after the Civil War. The Union in 1866 owed $2,755,763,000 ($77.69 a person). This debt was retired slowly, but fairly consistently, until the Spanish-American War gave it a boost. Construction of the Panama Canal and some other expenses kept the figure high.

The national debt was about $1,000,000,000 in 1914. World War I raised it to $25,484,500,000 ($253 a person). In the 1920's we paid off at the rate of about 2½ percent a year and reduced the total to $16,185,308,000 in 1930.

Deficit spending in the depression years brought the debt to $40,445,417,000 in 1939. To finance the last war we borrowed about $225,000,000,000, bringing the national debt to its all-time peak of $279,764,000,000 on February 28, 1946.

No people in the world ever owed so much real money as we do. Foreign nations' debts through monetary inflation have reached numerically higher figures, but every dollar of our debt is a Government obligation which can be cashed in for money. It is, of course, an "internal" debt—owned by a large portion of our people, financed by the whole people.

DEBTS RELATIVELY MODERN

The whole idea of Government borrowing seems to be relatively modern. Very little was done until the latter part of the 1700's. Before that government loans were transactions between kings and private money lenders. (Kings had poor credit standings. The lenders often used to make them put up the crown jewels or the crown lands.)

Political philosophers frowned on public borrowing. David Hume, in 1752, warned that it would waste the public's money in interest charges, and that it would encourage idleness among those living on the interest. Adam Smith, in 1776, predicted that borrowing would ruin any state which tried it.

But the habit of borrowing grew with the development of democracies. The peoples willingly supported taxation, and government obligations were viewed as sound investments.

Scholars changed their opinions. C. F. Bastable wrote in 1892: "We may say that any state that pretends to be civilized regards the creation of a debt as one of the essential marks of its having reached that position."

Great Britain is one of the most practiced borrowers in the world. She had a debt of £50,000,000 in 1715. At the end of the Napoleonic Wars she owed £861,000,000. The British national debt had risen to £1,171,000,000 by the time World War I began.

Most of the British debt in 1914 was about 100 years old. The Government had redeemed only about 35 percent of it in a century. World War I raised the total of the British debt elevenfold, and interest charges just after the war amounted to 46 percent of the tax yield.

The British debt at present amounts to about $103,000,000,000, of which all but about $3,000,000,000 is an internal obligation.

The Labor Party during its administration in the 1920's seriously discussed a capital levy as a means of cutting or eliminating the debt. This means appropriating a proportion of all the wealth and property in the nation. But the plan was abandoned.

Some countries on the Continent, practically bankrupt because of debt and monetary inflation, have resorted to capital levies. In Czechoslovakia and Germany it seems to have had some success, but it was a failure in most countries. What can a government do with hundreds of billions of dollars worth of property?

Russia, despite her scorn of capitalistic processes, has contracted quite a substantial internal debt—162,000,000,000 rubles, as reported by the State Department previous to the conversion of the ruble this week. It is not yet known how the conversion affects this total. In terms of the new diplomatic rate of exchange this amounts to $22,750,000,000.

Before 1915 she borrowed from her people at 4-percent interest. Since then all her bond issues have been on a lottery plan. Instead of interest, lottery prizes are given to a portion of the bondholders. The rest receive only their principal after a certain term of years.

Road to Peace or to War

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Winchester Evening Star, Winchester, Va., of January 3, 1948:

ROAD TO PEACE OR TO WAR

With 1948 comes the third anniversary of the United Nations. And this New Year finds the world league not only in ill health, but so sick that many of its friends fear lest its cradle becomes its grave.

The failure of the United Nations to function as an effective instrument for world peace seems to rest almost entirely on the primary defect in the United Nations' charter—the veto power. This permits one nation, if it be Russia, United States, Britain, France, or China, to veto any act or policy agreed upon by the rest of the nations. Almost every experienced observer admits that a world organization cannot succeed so long as one nation possesses the power to nullify the hopes, the fears, and the wishes of all the others.

That being the case, why is it that the State Department and the President will not take positive steps leading to the elimination of the absolute veto? There can be only two possible answers: Either (1) the administration lacks faith in the world organization and desires that it remain as impotent as it is now; or (2) it believes that an effort to modify the veto would bring about the withdrawal of Russia, and that without Russia a world league would be doomed to failure. Of the two, the second seems the most probable. But it seems to us that the answer to that is twofold: (1) If Russia persists, as she apparently has every intention of doing, in blocking all efforts toward an effective peace, then isn't it better to have her outside the family of nations rather than inside; and (2) to the statement that a league cannot succeed without Russia, one has but to point to the very obvious fact that it is not now succeeding with Russia.

This newspaper believes that an effective, workable world organization is essential to a firm and continuing peace. In our opinion, the time has come for a showdown within the framework of the United Nations. This newspaper has opposed and continues to oppose unilateral action on the part of the United States, such as was taken in Greece and Turkey. We believe that the road to peace lies in collective action. If such is true, then isn't it time that we seek to modify what is given as the cause for unilateral action—the veto power? Isn't it time to bring this question into the open and to make a determined effort to strengthen the present world organization? If Russia is not willing to play ball unless she can call all the plays, then it seems to us we must consider organizing a team without Russia.

And as to whether the United Nations without Russia would be stronger or weaker than the present one, it would be well to consider a resolution of the Second Congress of the International, a world-wide Communist organization: "The Communist Party enters (a group) not to participate organically in its activities, but to undermine from within * * *." The resolution continues: "Every Communist representative in a parliament is required to realize that he is not a legislator searching for agreement with other legislators, but an agitator of the party sent to the camp of the enemy in order to carry out the decisions of the party."

Can anyone doubt that those have been precisely the tactics employed by Gromyko, Vishinsky, and Molotov?

The clause in the United Nations' Charter which permits the world organization itself to be sabotaged must, in our opinion, be eliminated, else the league which was born at San Francisco in 1945 will die at Lake Success in 1948. And isn't it apparent that an effective, workable world organization can be achieved only through the leadership of the United States? Isn't it proper to ask when will the State Department and the President supply this leadership? When will they face the issues forthrightly? When will we take determined steps to strengthen this organization which seems on its deathbed? If we delay much longer, it may be too late.

Mikolajczyk Tells of the Double Attack on Poland by Germany and Russia

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two additional installments of articles published in the Milwaukee Sentinel, telling Mikolajczyk's story of Poland which all

the world should know. The articles follow:

MIKOLAJCZYK RELATES MIRACULOUS ESCAPE FROM RUSSIAN ARMY

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment IV)

Russia might have disposed of me as long ago as September 1939, and saved itself such subsequent embarrassment as I have been able to impose as an official of a Poland whose love of freedom remains unquenched.

For on September 18, as what was left of the Polish Army unit to which I was attached headed for the Hungarian border, to escape being pocketed between the ever-closing German and Russian forces, a group of us in trucks and light cars ran into a column of Red army tanks in a little Polish town near the border.

But for some reason which I'll never understand, they permitted us to pass, though we were completely at their mercy. The Russian heads which protruded from the open hatches of the tanks seemed unable to comprehend that we were Poles. They were perhaps not too bright, for as we passed by the tank column—expecting every moment to be blasted into eternity—several of the Red army men saluted us.

And so we moved into Hungary and were interned at Camp Hangony with perhaps 4,000 assorted officers and men, ragged symbols of unpreparedness.

Our only thought, now that we were still alive, was to reform our lines and somehow hurl back a punch at the Germans and Russians, who were calmly erasing Poland from the map of Europe by dividing it in half along a line agreed to by Ribbentrop and Molotov.

The morale of the Poles in internment was as low as that of a military man can get. And in the hope of raising it I started a tiny camp newspaper, the news for which was supplied by a sympathetic Hungarian, a retired colonel, who lived near our camp and permitted me—with the consent of the Hungarian prison authorities—to listen to his radio.

But inevitably the paper was banned and for the remainder of my career as a "publisher" in that camp I was forced to make verbal reports of what was happening to our homeland and the world.

One item of news aroused our camp as none other, for it held out a promise that we might renew the fight for our homeland. General Sikorski had escaped to France, and with the help of the French and British, was forming a new Polish armed force.

President Moscicki and his government had also managed to escape but had been interned in Bucharest. Thus stripped of his ability to carry on the functions of government, Moscicki appointed an old Pilsudski-Beck politician, Wieniawa Dlugoszewski, as president—an act which was permissible under the reshaped constitution which Pilsudski and Beck had inflicted on Poland in 1935.

AGREED ON SIKORSKI

France refused to recognize Dlugoszewski, who was Polish Ambassador to Italy, and Moscicki was then forced to name a second choice. Wladyslav Raczkiewicz, who was in Paris and acceptable to the Quai D'Orsay. Raczkiewicz took office and agreed to appoint General Sikorski his prime minister.

My every thought was to break out of Camp Hangony and join Sikorski in France. But I was only one. We all shared that desire and it fell to my lot to put the plan into effect.

First I had to secure civilian clothes, which the colonel provided for me. I let it be known around the camp that I had come down with typhus, which would account for my absence from my daily newscasts in the main compound and allay suspicion. Then I slipped into my new clothes and walked out the gate.

I knew only one word of Hungarian, the word for "good evening," and I had to travel 300 miles to Budapest to secure the funds and support needed for what we hoped would be a mass evacuation of our camp.

I used that lonely word of mine to greet the guard on the camp gate through which I passed, and all might have gone well, but he turned out to be in want of someone to talk to. He began asking me a stream of questions and when I was able to answer only "good evening," or nothing at all, his suspicions erupted. He flashed a light in my face.

HID IN DARK FIELD

Hundreds of workers happened to be streaming into the village that bordered our camp. I ran this way and that among the crowd, something like an American football player, and the guard was afraid to shoot for fear of killing one of the workers.

Once through the crowd, I threw myself into the dirt of a dark field and tried not to breathe when guards swept by on their bicycles, their lights sweeping the road and gullies.

I lay there an hour, then walked 12 miles to the nearest railroad station at Ozd, bought a ticket (I spoke German) and started for Budapest.

The train reached Budapest at 6 the next morning, but when I arrived at our legation in that city, two Hungarian policemen guarded the door. I kept walking and checked into a hotel, where I was immediately visited by the police.

Somehow, I was able to convince them that I had not escaped from an internment camp; that I was a Polish political refugee who wanted only to see some one in authority at his legation.

The police promised to escort me there the next morning, and then I realized, to my great annoyance, that this was Sunday. The legation was closed and I faced the task of remaining at liberty for 24 additional hours.

But at last Monday morning arrived, and I was at the legation virtually at sunup. The Polish colonel who received me thanked me for offering to Poland hundreds of trained airmen, infantrymen, mobile warriors, and technicians, but he said quite coolly that our camp would have to await its turn. Other camps also were providing troops to renew the fight.

But I convinced him we must have a priority, because of our youth and eagerness to get to France, and in the end he gave me enough money to buy a Leica camera and film, told me to make my way back to Camp Hangony, take as many "passport" pictures as I could, and deliver them to him. Then he would go to work on spurious passports which would enable the men to leave without too much of an offense to the neutral Hungarian Government.

I did get back, selected 700 men, photographed them surreptitiously, and made a deal with a patriotic and very brave Jewish merchant to supply clothes and trucks for us at much less than their cost.

We got all the way to the Yugoslav border—there were 28 or 30 in my particular group—before we were stopped. We were ordered back to Budapest by the Yugoslav guards. They put us on a train headed back toward internment.

But 16 of us jumped off the train after a few miles, walked on foot to the border, and rowed across the Drawa River in a fishing boat we appropriated.

There were a few stray shots at us in midstream. But we reached land, made our way to Zagreb, thence to Italy, and finally France.

I reported immediately to Sikorski. I was a private, he a general. I stood at attention, gave my name (we were very old friends), and told him I wanted to go on with the fight to free our country.

He smiled and then threw his arms around me. A new phase of my life was opening.

COLLAPSE OF FRANCE, NORWAY GREAT SHOCK TO MIKOLAJCZYK

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment V)

The Poles who escaped to France in the first savage days of World War II did their utmost to carry on the fight against the Germans and Hitler's ally, Russia.

In what was generally a welter of confusion and mounting despair we formed three divisions under the command of Generals Prugar-Kettling, Maczek, and Szyszko-Bohusz, made up of fugitives and Poles then residing in France.

Our fliers joined the soon-to-be-doomed French Air Force. Our land divisions were sent into the Maginot line and to Norway. But France fell with a terrible swiftness, and in the wild confusion around Paris and then Bordeaux we were appalled to learn that they had arranged for our Polish forces to capitulate with the French forces.

General Sikorski immediately urged General Weygand to retreat into North Africa and reshape the forces. But there was only numb defeatism at the top of France's military and political rule. Sikorski stormed out of his meeting with Weygand declaring that France might capitulate but Poland had every intention of continuing the fight.

It became my duty to evacuate the Polish Parliament in exile to Africa and to help speed our airmen to the same haven. It was not easy. As we moved through southern France to Port Vendres our men—though en route to reengage the enemy—were often assailed by the hapless refugees along the roads who cursed us as the promulgators of all their misery.

When the job was done, I made by way back through the Pyrenees toward Bordeaux in the abysmal days of Dunkerque. But the city was already occupied. I fled south and by June 24, 1940, reached St. Jean de Luz and caught what must have been the last ship to leave—the *Batory*, one of the Polish ships which Winston Churchill had ordered to the Continent to rescue Polish forces.

In London, where I later was named minister of the interior of our government in exile, my first job was to reorganize the Polish underground. Its morale was at the lowest ebb. It had survived both German and Russian invaders, bolstered by the hope that the British and French forces would soon sweep the enemies from our land. But the fall of France and the rupture of the British expeditionary force crushed all hope.

I had to reestablish communications, prevail upon large forces in hiding to come into the open and prepare for a long campaign by organizing themselves into less conspicuous and more efficient units. I set up propaganda organs that would keep the people informed, arranged for underground schools and social services and set about the task of gaining physical aid.

Britain's back was to the wall. There remained only the neutral but essentially sympathetic United States to turn to for help.

So in April 1941 General Sikorski and I journeyed to Canada, to arrange with Mackenzie King to permit Canadian and United States Poles to train on Canadian soil. And then we came down to Washington to see President Roosevelt.

PLEDGE FROM F. D. R.

Roosevelt promised to include Poland in the newly founded lend-lease program, and then asked Sikorski and me to visit United States cities where there were concentrations of Polish-American workers and implore them

to resist the Communist saboteurs then combating American efforts to supply the fighting democracies.

The general and I spoke in Chicago at Soldier Field, in Detroit, New York, and Buffalo. When Sikorski returned to London I remained and made many other speeches—including one in Humboldt Park in Chicago which drew an audience of 230,000.

The Communist press lambasted me without letup. I was "an agent of British imperialism attempting to force the United States into a war." My speeches were sometimes distorted. My only actual theme, of course, was for the workers to resist Red infiltration and continue to produce goods for the cause of democracy everywhere.

PREDICTED BERLIN RAIDS

The political isolation of the United States at the time was none of my business, and I made a point of saying so wherever I spoke. But I did predict aloud that the weapons of warfare would be improved; that oceans could no longer protect countries and that Berlin would eventually be bombed, "an attack on the heart of an octopus which will then be forced to draw in its tentacles wherever they may have spread."

Immediately after our encouraging visit to the White House, Sikorski and I went to Palm Beach, Fla., where Ignace Paderewski, President of our Parliament in Exile, was slowly recuperating from the combined rigors of his great age and the hardships he had undergone.

What a great old man he was. He was an artist to the tip of his fingers. The day we called on him he was preparing to go on the air with other leaders of conquered countries. But almost until it was time to speak, he sat there slowly, feebly looking through his script.

SUPERB PLEA

But when his cue came he spoke in a suddently strong voice and was letter-perfect It was a superb plea for the outraged and overrun democracies in a world threatened with totalitarianism.

Paderewski wept from weakness after he finished, and a reporter, touched by the emotional scene, asked him very gently if he would honor all of us by playing the piano.

Paderewski looked at the young man with a sadness that I cannot record, and with the tears still coming from his eyes he said very quietly, "I cannot play * * * so long as my country is not free."

It was the last time we were to see him. He died shortly thereafter from pneumonia contracted while speaking at a rally of Polish patriots in New Jersey.

Wherever Paderewski is today, he must still grieve for his country. Poland is enslaved by a new and even more sinister totalitarian invader, and for that reason heaven perhaps must be deprived of his music until the old gentleman's wish is gratified on earth.

Relationship of Motion Pictures, Radio Broadcasting, and Comic Strips to the Administration of Justice

EXTENSION OF REMARKS

OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. BAKEWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement made by Arthur J. Freund, an attorney, of St. Louis, Mo., who is chairman of the section of criminal law of the American Bar Association. His remarks were made at a meeting of the criminal law section of the American Bar Association on September 24, 1947, at Cleveland, Ohio.

His analysis of the relationship of motion pictures, radio broadcasting, and comic strips to the administration of justice commends itself to all who are concerned with the dangers of unrestricted emphasis on the subject of crime through the various media of free expression.

The statement follows:

At the meeting of this section of criminal law last year in Atlantic City, there was authorized a committee on motion pictures, radio broadcasting, and comic strips in relation to the administration of justice. With the assistance of Mr. Carl B. Rix, president of the association, a committee of the association was appointed, comprised of some of the distinguished members of this association.

The problem concerns itself, so far as we of the bar view it, (a) with the emphasis placed by the three media upon the depiction of crime and the portrayal of the manner in which crimes of violence are committed, detected, and prosecuted; and (b) the manner in which the lawyer, the judge, and the processes of law are depicted.

Mr. Rix suggested that I act as chairman of the committee and Mr. James V. Bennett was designated as secretary. Members of the public relations committee of the association, together with officers, members of the board of governors, and important committees of the association comprise the membership of the committee, and a meeting was called for June 4, 1947, at the Mayflower Hotel in Washington.

We invited the presidents or managing officers of the national associations of the media concerned, together with the presidents of the four radio broadcasting systems, and the three comic-strip syndicates to attend the Washington meeting to discuss informally the problems outlined. All of those invited, with the exception of the American Broadcasting Co., responded to our invitation.

Before proceeding further with an account of the Washington meeting may I give you my own views on the problems involved and what we hope to achieve.

It is probably fair to say that no one subject in the manifold areas portrayed in motion pictures, radio broadcasting, and comic strips receives greater emphasis than crime and the processes of the law. The listening, reading, and motion-picture public is overwhelmed with the voluminous treatment of this subject, a treatment so extended and continuous as to imply that crime, its methods, techniques, and detection, and the psychical abnormalities of those engaged in criminal pursuits were the major concern and chief subject of interest of the American public from the nursery to the grave.

May we say in all fairness that we recognize the contributions which have been made by the motion-picture and radio-broadcasting industries in programs devoted to mass education of the highest value and on levels wholly in the public interest. We do not believe that it is necessary to concern ourselves here with the good that has been done, and which we are confident will continue to be done by these media. We are not here however, primarily to praise Caesar, but rather to point to what we believe are some of his shortcomings.

It may be helpful first to discuss the manner of presentation of the lawyer, the judge, and the processes of the law in the three media. Our interest in this matter is not generated by motives of self-justification, but rather comes from a belief that grave harm is being done to a fundamental American institution, the administration of justice, through a course either designed or the inevitable effect of which is to breed contempt and disrespect for the keyarch of a free and democratic government.

The lawyer, the judge, and courtroom procedures are all too frequently depicted in an unfavorable manner. Whereas the doctor is almost always represented as a kindly, charitable, and capable professional person, the lawyer is usually portrayed as cruel, selfish, tricky, and unethical. The judge is, also, often shown either to be unworthy of his high office or he demonstrates his probity through the exposure or condemnation of corrupt or stupid counsel. The delineation of courtroom procedures usually strays so far from reality as to border upon the grotesque. This phase of our subject is of high importance, though we approach it with natural diffidence. The lawyer and the law's processes, seeming circumlocutions and delays have been the subject of satire and derisive humor for centuries. There is probably no other subject or group in our society which has a longer history as a target for ridicule. We know that there is some justifiable basis for this and that lawyers, possessing, as they must, the imperfections of ordinary mortals, are not always perfect and that the processes of the law do not infallibly operate to produce absolute justice. We cannot object with validity if instances of this character are reported or portrayed either in fact or in fiction. Such unfortunate circumstances are the exception rather than the rule, though the portrayals in the three media would lead the public to believe that the reverse were true. Furthermore, lawyers and judges, trained to and rigidly disciplined by an exacting professional code of ethics, feel generally that they are performing a vital service to society upon a high plane; and we may perhaps be forgiven for feeling that if unwarranted attacks are made upon the profession from without, the defense might appropriately also come from without our ranks. In any event, whether the legal profession may properly entertain a sense of grievance, if not irritation, upon being misrepresented and distorted, we are far more concerned with the destructive effects of such treatment upon the administration of justice in this country.

Although the lawyer, the judge, and the law have been the butt of ridicule for hundreds of years, the opportunity for mass education and the fixation of social attitudes has never been so great as now. Radio broadcasting, motion pictures, and comic strips reach millions of our people each day, whereas a century or less ago it was not possible to affect the mental processes of a people so quickly or with such continued devastating effect. The evil of the modern process as used by the three media, as we view it, is to infect the minds of the youth and adolescent with the conviction that lawyers are per se antisocial beings and that the law through the judges and courts is an instrumentality unwholesome to our welfare. We know that our Government can only operate through the law, and that if the time should come when the law cannot be enforced fairly and honestly, our republic as we now know it will cease to exist. However, in the motion picture, radio broadcasting studios, and in the comic strips this fundamental axiom all too frequently finds no recognition.

Perhaps something might be done by the media on the positive side. It seems conceivable that the portrayal of the dramatic incidents of the careers of great American lawyers would have a popular appeal. Possibly such portrayals of the accomplishments of John Marshall, Judah P. Benjamin, and William Howard Taft, to mention only a few, would approach in public interest analogous portrayals of Al Jolson or Louis Pasteur.

There may be other affirmative approaches in this area which the industries may be able

to suggest, initiate, and carry into effect. Their record of remarkable achievements in their respective industries demonstrates their ability to attain virtually any goal so long as they are convinced that the goal is one worth achieving.

The major specification in our bill of particulars, however, has to do with the emphasis on crime, criminals, and the techniques of criminals in the three media under discussion. We are wholly aware that crime does pay the motion picture producer, the radio broadcaster, and the comic strip syndicates, and that in this respect the dramatization and exploitation of crime is one of the best paying features of these media. Consequently, a vast host of economic interests has developed sympathetic to the notion that crime in this sense shall continue to pay. We realize that in dealing with such vast vested interests we must overcome obstacles which are not governed ordinarily by good motives or a desire to act in good taste or completely in the public welfare. Nevertheless, we are reluctant to believe that the minds of the leaders of these large enterprises will be completely insensible to the welfare of the Nation when the grave and critical nature of the problem is clearly revealed and understood.

It was said regarding the comics as far back as 1936, and it has equal applicability to each of the media today:

"Sadism, cannibalism, bestiality. Crude eroticism. Torturing. Killing, kidnaping * * * . Raw melodrama, tales of crimes and criminals; * * *. All these, day after day, week after week, have become the mental food of American children, young and old. * * *

"The repetition in word and picture of * * * bestial and degenerate scenes and characters is a * * * serious matter. Such things make their deep impression upon the plastic minds of growing children and have their dangers for the never-too-mature minds of countless adults."

More recently, Mr. Jack Gould, radio editor of the New York Times, wrote in the March 2, 1947, issue:

"Radio programs heard by children again have moved to the forefront of controversial subjects in broadcasting. Several parent-teacher groups in various parts of the country have indicated the 'crime shows' and the hair-raising serial 'thrillers' as psychological dangers to impressionable youngsters as possible stimulants to juvenile delinquency."

Outside of the classroom, the home, and the church, the motion picture, the radio, and the comic strips constitute the most powerful existing educational influences upon the mental growth of the child and adolescent. The usual routine is for the child to read the funnies, later he turns on the radio, and in his more extended leisure he attends the movies. The sequence is variable but the ingredients of the diet are staple.

In each step the emphasis in his menu is crime and criminals. In this there is often the seasoning of illicit sex relations. No one of the media alone at any one time or over any extended period can be said to be more harmful than another, but the insistent and continued repetition of these influences, each complementing the other, must produce a deteriorating effect upon the mind of the impressionable. Immature and undeveloped minds are molded to the concept that crime and criminal conduct is the norm of human behavior. Ethical concepts are twisted from reality, weakened, and all too frequently destroyed.

In addition, crime techniques are blueprinted with meticulous accuracy. Criminal methods are set forth step by step, thereby giving the recipient an accurate handbook for antisocial and often criminal conduct.

To illustrate what we have in mind, may we mention one representation in each media merely as an example of the evil we seek to correct. They are the comic strip Kerry Drake, the motion picture The Killers, and the radio broadcast Gang Busters. Each, however, is highly successful in its field, each makes the presentation of crime pay the producer enormously, and each has stimulated a number of competitors, or else is the result of prior competition or prototype. For example, The Killers was a contemporary of The Outlaw. The financial success of those sordid portrayals of crime was followed by Duel in the Sun, another dramatic account of the same character. This in turn apparently encouraged the production of Brute Force, of which Life magazine in the August 11, 1947, issue has this to say: "The production is a turn-about moral code which portrays each representative of law and order almost as a case history of depravity, while all the lawbreakers seem like real nice fellows."

We are aware of the body of opinion of some of the social-service profession and psychiatrists, that children and adolescents are in need of emotional release afforded by the portrayal of criminal and sadistic exploits. While children do need a certain amount of adventure in their entertainment, there must be a point beyond which the law of diminishing returns begins to operate. We think that current practices in the three media have long demonstrated the operation of that rule, and we do not hold with the minority of experts who defend these programs. While juvenile crime is on the increase in almost every locality in this country, the surprising circumstance is that the rate is not higher than it exists at the present time. However, the effects of the weakening of the moral codes and ethical concepts cannot be measured with any accuracy by crime rates or statistics. With almost every child and adolescent bombarded many times daily with the jargon of the criminal and the horrors and depraved methods of his activity, we should rejoice that we have as much normal and rational child and adolescent behavior as we do.

It is said that the criminal is always brought to punishment, and that thereby the moral lesson is given that the way of the transgressor, if not shown as hard, is at least futile. However, the overwhelming majority of opinion, both lay and professional, is of the view that the eventual capture and punishment of the miscreant in no real sense mitigates the evil created by the lurid portrayal of his criminal activities. On the general subject we quote briefly from an article by Bosley Crowther in the New York Times of May 11, 1947. Mr. Crowther speaks of motion pictures, but his views are equally valid to each of the media. He says:

"For a business which makes so much pretense of being explicity moral and which proudly policies its members with a pious production code, the motion-picture business has been pulling some mockeries of late. Meekly, this sideline observer would like to ask who's kidding whom? Do the industry's moralistic guardians think that the public is being easily fooled—or are some of its less considerate members slyly slipping the business the bird?

"We refer, of course, to the several recent pictures—and others coming up, which emphasize baser passions for no other than sensational effects. * * * Do these films conform to the industry's actual notion of moral responsibility? And, more than that, are they such entertainment as meet the test of public interest and public weal?

"Again we repeat our questions: Is this regarded as fair and responsible by the industry? And does this technique—and the picture—meet the test of public good? We ask them again because it strikes us that the fiber of some of the people in films has shown signs of disintegration under the pressure of making sales. Last week we saw a full-page advertisement in a weekly trade magazine, calling attention of exhibitors to a forthcoming film. It promised 'tawdry love and vicious murder.' The kind that sells millions of newspapers and millions of box-office tickets.

"Invariably, the makers of such pictures excuse their admittedly coarse wares by protesting that they are only 'giving the public what it wants.' And they righteously remark that 'the transgressors are always punished in the end.' How absurd and hypocritical. The public's taste for films is as high as the imaginations and the talents of film makers are able to reach. And as for the transgressors being punished—what's the difference after the damage has been done?"

As Mr. Crowther points out, productions of this category are on the increase, and we could cite the figures to demonstrate this. As a result, the more wholesome productions in each of the media decreases by the operation of a law as inexorable as Gresham's law in economics: The bad productions tend to drive out the good.

The situation today in which we find the three media may be compared to the condition which prevailed in this country prior to 1890, when the Sherman Antitrust Act was passed, and in 1887, which marked the creation of the Interstate Commerce Commission. A period of rapid business expansion resulted in a large number of abuses demanding control and correction. The railroads and business interests generally were either unable or unwilling to correct harmful practices, and the forces of competition often made it impossible for industry alone to correct the evils. As a result, Congress passed regulatory legislation which has been augmented through the years.

The three media have likewise had a tremendous economic expansion over the past quarter century and this very circumstance has created problems which require adjustment. I am sure that every lawyer here believes that regulation of each of the media is equally possible under our constitutional government, both National and State. Indeed, Judge Justin Miller, now president of the National Association of Broadcasters and a former chairman of this section, sounded a warning in a letter to the St. Louis Post-Dispatch of April 20, 1945, wherein he said: "Only by intelligent anticipation of public reaction and by equally intelligent self-discipline can we prevent legislative intemperance."

The very essence of American democracy is founded upon freedom of expression. Legislative restrictions upon the three media, or any one of them, to restrict their free expression would probably entail administrative control resulting in some form of censorship. Someone or some group would have to determine what presentation was in the public interest and what was harmful to that interest. I think that the American public would deplore such legislation and it is my hope that it will never become necessary. However, with the present situation which confronts us, it might be advisable to study the problem of drafting legislation in conformity with the powers granted Congress by the national constitution, and to make a like study for the States. As I have indicated, I should deplore the enactment of any such laws; we know that many in the eighties felt the same way concerning restrictive legislation upon business, but it is clear that unless conditions improve in the media, legislation is inevitable.

As a corrollary, consideration can be given by the American Bar Association, through an appropriate group or section, acting alone in the name of the association, or in conjunction with other organizations in the public

interest, to appear before the Federal Communications Commission and oppose the renewal of a license of a key radio broadcasting station on the ground that the great volume of its programs devoted to crime portrayals warrants the Commission in refusing to grant the renewal of the license. While the Commission, as we understand its public views, has no desire whatever to censor the content of radio-broadcast programs, the law directs the Commission to grant licenses and renewals only if the public interest, necessity and convenience will be served thereby. Such intervention by the American Bar Association would focus national attention on the subject we are considering here today. A denial of license renewal by the Commission on such ground would produce results which no one can now foresee with any clarity or precision.

Are the self-imposed and self-regulated codes in the motion-picture and radio-broadcasting industries operating effectively in the public interest? We are advised that there is no such code formulated and in operation for the comic strips except as such small restraint comes from the syndicates which sell them and the newspapers which print them. It is obvious that the contents of this medium differ in no substantial respect with reference to the treatment of crime from the other two media. It is, therefore, entirely fair to inquire whether the codes which are in effect really accomplish as well as they should their stated purpose to achieve decency and operate in the public interest.

It would appear to one unacquainted with the industries except as an interested observer that the codes are not operating effectively. Perhaps with competition so keen and with the tremendous financial stakes involved the industries cannot effectively regulate themselves without some form of independent supervision.

We appreciate that the three industries cannot have one regulatory code. If the codes are to operate, there must be separate ones for each industry, and yet there should be common approaches in each with a like objective. We submit that consideration be given to the advisability of a complete reexamination of the codes now existing, both formal and informal, with special emphasis upon the desirability and feasibility of injecting administration and supervision by outside objective resources concerned not only with the welfare of the industry, but also of the public.

The third and final suggestion for consideration is one which combines the objectives of the two preceding. Facts, in a field so large and important not only to those engaged in the industries but also to the public at large, are difficult to determine. It may appear desirable to create an independent commission of interested persons and experts to study upon the highest professional basis the entire subject matter and to bring back findings and recommendations. A survey of this character would require the assistance of many persons in many fields. It would require continuing supervision and direction. The cost of such a survey and the method of its financing would also be an important consideration.

We are dealing with great forces affecting the lives of many millions of our people and the millions yet to come. If such a survey could be productive of substantial progress, the time and funds devoted to its formulation and publication could not and should not be counted in dollar value. A revelation of the facts so ascertained would do much to hasten proper self-regulation, should it be found, as many of us believe, that there are abuses which require correction. The draft of proposed forms of legislation, if such recommendations were made by the group, might in itself produce results that would eliminate the need for such legislation.

The views set forth here were not presented in detail at the Washington meeting of June 4, 1947, but their general substance was there given. A large majority of those appointed on behalf of the American Bar Association were present and the media were represented by a distinguished group of representatives. There was a full, free, and frank discussion of the subject matter and a general concurrence of views that the media would approach the problems with sympathy in a genuine endeavor to reach a corrective solution. A résumé of the proceedings of the meeting appeared in a recent issue of the American Bar Association Journal, and I shall not repeat them here.

There was a disposition during the meeting on the part of some of the representatives of the media to doubt the existence of any problem. On the one hand it was said that lawyers, judges, and the processes of justice were not unfairly portrayed. An elaborate self-analysis of motion pictures produced in 1946 was offered to substantiate this view. There were those of the media who took the position that no harm was done by the depiction of crime and that the portrayal of such episodes were a part of our modern way of life. The Washington meeting concluded with an agreement that the representatives of the media would report the views expressed to their respective organizations and that another meeting of the entire group would be held in the late fall of this year, either in Washington or New York. To this end, a committee of members of this association and those of the media has been appointed to prepare an agenda for the fall meeting.

We are deeply gratified that the National Broadcasting Co. has this month officially recognized the problems we seek to correct. In a code formulated for its future programs, it is provided among other corrective measures that:

"Law, justice, and officers of the law should be portrayed without disparagement or ridicule, but with respect."

It gives further recognition to our position that:

"The vivid, living portrayal of crime * * * dramas on the air, has an impact on the juvenile, adolescent or impressionable mentality that cannot be underestimated."

As a first corrective functional operation, the National Broadcasting Co. will broadcast its crime programs at hours when children are supposed to be in bed and fast asleep. With this explicit recognition of the harmful effects of these programs by the industry we may expect even better results.

The National Association of Broadcasters has also taken official notice of the harmful effects of the portrayal of crime. It proposes that crime should never be presented in a favorable light and that references to kidnapping should be barred. While this may be a short step, it is one in the right direction.

We are not expecting immediate results of our efforts and with forces so deeply entrenched we cannot hope that success will come to our endeavors except through the process of discussion with those of the media and a program of public enlightenment. We are gratified that the representatives of the media have agreed to sit down with us and consider the subject in a friendly, cooperative atmosphere for if there is a will to carry out the objectives we seek, a way will somehow be found to reach a solution of the problems.

I am hopeful that more portrayals of a positive character may be produced; portrayals of the lives and experiences of great lawyers, noble judges, and of episodes depicting the majesty and dignity of the law. We have embarked upon an important project affecting the lives of great numbers of our citizens. We are confident of a large measure of accomplishment.

The Late Robert L. Norton

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a recent article from the Boston Post of January 8, 1948, relative to the passing of the eminent and distinguished newspaperman, commentator, editor, and publicist, Robert L. Norton, who had been a staff member of that paper for many years. I also would like permission to include the statement which I issued at the time of Mr. Norton's untimely passing.

Bob Norton was a close and dear friend of mine and it is most difficult for me to express the great sense of personal loss which moves me at this time. He was unquestionably one of the outstanding newspapermen in the country and his profession and reading public will greatly miss him. He leaves an irreplaceable void in the ranks of the truly great political writers and thinkers of our time.

The article follows:

R. L. NORTON, NOTED POST WRITER, DIES—FAMED AS POLITICAL ANALYST—SERVICES TO BE SATURDAY

Robert L. Norton, of the Boston Post, one of America's foremost and best-known political commentators—confidant of Presidents and business leaders while Washington correspondent and columnist—died in his sleep early yesterday morning in his home, 53 Monmouth Street, Brookline. He was in his sixty-third year. Death was due to coronary thrombosis, a heart disease.

An erudite student of government and history, and an exceptionally keen observer of political trends, his widely read Personal Message From Your Washington Observer daily, and his special varied feature stories on Sunday were closely followed from day to day by upward of half a million readers. He died shortly after completing his regular day's work—just the way he often said he wanted to.

Funeral services will be held Saturday morning at 10 o'clock, with a solemn high mass of requiem at St. Cecilia's Church, on Belvidere Street, near Massachusetts Avenue, Back Bay.

He leaves, besides his wife, Marion, a son, Robert L. Norton, Jr., of Brookline, a naval officer in the war; a daughter, Mrs. Barbara Schlitzer, of Norton, and two brothers, Charles, a well-known Boston architect, and William, an official of the United States Treasury Department here.

SCOOP ON HARDING

Both children were absent when the noted columnist died. His daughter, accompanied by her husband, had gone to Utica, N. Y., to attend the funeral of Victor Schlitzer, her father-in-law. His son was attending a business conference in Dayton, Ohio.

For 48 years of his life Mr. Norton had been an active newspaper reporter. One of the greatest tributes ever paid him, he recently said, was when his editor described him as being a good reporter, and a true one.

Among his greatest newspaper feats—though one he never boasted of but referred to as "all in the day's work" was his world-

wide scoop of the death of President Harding in August 1923 when he flashed the first word from San Francisco to the Post of the approaching death of the post World War I President.

KNEW MANY PRESIDENTS

Noted throughout the newspaper world for his dispassionate handling of the news, his resourcefulness, erudition, and fidelity to fact, he established an enviable reputation during the many years he conducted his column for the Post for his fairness, nonpartisanship, honesty, and integrity. His contacts and friends were legion—among the humble and the great alike.

He knew, had personal contact with, and wrote about every President since Theodore Roosevelt, and since 1908 had covered for the Post every political convention of importance held in the country. His circle of friends and acquaintances extended far beyond the political field in which he was a specialist.

He first entered the newspaper profession as a boy of 15, and after a short apprenticeship on the old Boston Advertiser came to work for the Post. That was at the turn of the century and since then he had been a Post man—first, last, and always.

BORN IN HUB

His matriculation into the field of politics came shortly after joining the Post. At first he handled general assignments, then became the city hall reporter. It was in that capacity that he revealed a propensity for political writing, commentating, analyzation, and interpretation which quickly won him recognition from every quarter.

He was born in South Boston and while still a child was moved with his family to Butte, Mont. There, while in the midst of his early education, his father, Charles Norton, died. Shortly afterward Mrs. Norton returned to Boston to resume her residence here.

Even as a child he displayed evidence of the sharp memory that was to serve him so well in his newspaper work ahead. He was able to recite to his teachers names, dates, places, and events long after he finished studies pertaining to them.

His profound knowledge, his erudition, his perspicacity regarding matters and events political carried him to lofts far above the newspapermen around him. And he had his other side. He was a naturalist and a philosopher. Money and the material things in life were not primary in his life. He could not be flattered nor bribed.

His true erudition came from literature, nature, and thought. He was never without a book. His affection for friends—and he made friends easily and quickly—was based upon his profound love of humans. He had no prejudices and did not differentiate among race, class, color, or creed. He always and truly sought to defend principles as he saw them in true light, and as they affected all people. In conducting his column and presenting his observations to the hundreds of thousands of Post readers who followed him daily, he was a true reporter.

Of him, his closest friends and associates said, "He came closer to being an altruist than anyone we met."

SIMPLE HABITS

He was wholly indifferent to materialism, and among the many friends he liked to talk about, from time to time, were servants, porters, trainmen, elevator boys, and waiters. He was quick to turn over to any of them in need every penny he might happen to have with him.

His habits were simple. He loved fishing and hiking. He detested hunting animals with pain-inflicting devices. Whenever he was able to, he spent week ends, and a holiday now and then, on his 85-acre farm at Mason, N. H. It was a dead-end farm and afforded him a full view of the mountains around. He loved going there, and a daily sight while there was Bob Norton, of the Boston Post, out strolling along the quiet country road, with Tara.

Tara was his 5-year-old pet Irish setter. The faithful hound was at his master's bedside when death came to the famous columnist in the midst of his slumber. Last night, at the usual hour when Mr. Norton would walk Tara, but was unable to, the setter sensed he had lost his master. This was evidenced by the forlorn manner in which the animal wandered about the Norton homestead—from cellar to garret—pleading with his sad eyes for Bob.

TRAVELED WIDELY

Mr. Norton's assignments for the Post carried him through two continents—his own country and Europe. He knew his America intimately—its cities and towns, its plants, its birds, and its rivers and streams—and he loved all of it.

His charming manner, soft voice, patience, and tolerance, won him friends wherever he traveled. In Paris, following World War I, he was publicly cited by thousands of Legionnaires, for his brilliant stories of the first American Legion convention in a foreign city. Following that convention he traveled extensively over the continent interviewing royalty, ministers, industrialists, and plain people. He treated stories of all of them alike—with truth and fairness.

These stories, which appeared exclusively in the Post, attracted the attention of millions of Americans and won for Mr. Norton additional spurs in his field of reporting.

The faith Presidents, Cabinet members, political leaders, top businessmen, and others had in him was explicit, for "Bob Norton, of the Boston Post," never broke a confidence, never betrayed a news source, never violated a trust placed in him.

Among his closest friends, in addition to the Presidents since Theodore Roosevelt, were Bernard M. Baruch, Sinclair Weeks, James J. Storrow, James A. Farley, Alfred E. Smith, Franklin D. Roosevelt (the latter long before he became the President), Murray Crane, David I. Walsh, the Lodges, and many others.

Mr. Norton followed certain set rules in his handling and presentation of the news and features he wrote for Post readers. He gave all sides of the story. He never resorted to innuendo, fanfare, or flourishes. He was factual, truthful, fair, and considerate—whatever the subject matter being reported or the party label attached.

PLANNED BUSY YEAR

In his chosen field his judgment was good, his perspective proper, his calculations based upon facts and not generalizations. He was familiar and conversant with all great topics—having been an active reporter in the midst of the great events of two tremendous World Wars and a dozen national upheavals.

He had wanted very much to live through 1948, he confided to friends only a few days ago. He was in the midst of preparations, for the Post, for covering of the coming political conventions of the two great American parties.

"This year—1948"—he told them, "may prove to be the most interesting in the history of our country. I pray I shall be able to report its political events."

STATEMENT OF HON. PHILIP J. PHILBIN, OF MASSACHUSETTS

I am stunned by the news of Bob Norton's untimely passing. He has been a dear and close personal friend of mine for many years. I am very deeply moved by his loss.

Bob Norton was an exceptional man. Of amiable personal qualities—kindly, generous, warm-hearted, loyal to his friends, sympathetic and tolerant by nature, he had a host of friends all over the country. I have never known a man, in or out of public life, who knew so many public figures and people in every walk of life as intimately and as well as Bob Norton, or who was more respected, admired, and loved by those who knew him.

A widely read veteran newspaperman, editor and commentator, trained in the traditions of the old school, he was exceedingly proud of his profession, and its members. He was particularly proud of his associates on the Boston Post. He had supreme confidence in the ability of the newspaper business and its personnel to adapt itself to the demands of changing times. He enjoyed the esteem of all his fellows because they recognized in him outstanding ability and achievement and one of the great figures of their craft.

He counseled and helped countless boys entering the newspaper business and politics and was the trusted confidante and adviser of many public men. Like many others, I frequently consulted him and held his judgments and opinions in highest regard. He was imbued with the loftiest sense of honor and would never violate a confidence. Because of his warm, gentle, human qualities, loyalty and wisdom, his friends in every walk of life were legion and intensely devoted to him as he was to them.

He possessed a most remarkable mind, one of the finest I have ever encountered. In the true sense of the word, he was an intellectual. No college professor, no holder of high collegiate degrees could possibly excel him in gathering facts and information, not only in public affairs, which was his specialty, but in many other fields, and then selecting, analyzing, and interpreting them in the light of contemporary events.

He was a sharp, penetrating analyst and a gifted diagnostician of political questions who always went right to the root of the problem. Though he liked to deal mostly with broad principles and concepts because his mind rose above pettiness of detail, this attribute never limited his faculty for presenting the facts in true reportorial style, whenever the occasion demanded. His great contributions throughout the years will need and will receive more careful and extended appraisal but it is unquestionable that in his passing, Boston, the State and the Nation lose one of the truly great newspapermen of our generation. His genius and unique capacity, his love of his work, his wide contacts, his broad human approach, his constructive achievements and above all his deep-rooted attachments to his friends and his fellowmen mark him indelibly as a man of great mind and great heart.

He will be sorely missed by countless readers who implicitly trusted his brilliantly written commentary on current events, but he will be missed most of all by those of us who knew and loved him for the great and noble soul he was.

I feel deeply and keenly his sudden passing and am bowed with grief. I extend my humble sympathy to the members of his bereaved family to whom he was so genuinely devoted during his life and also to the publishers and staff of the Boston Post for what is indeed an irreparable personal loss. Our dear friend and happy philosopher has gone. May he find his true reward in eternal peace.

President Truman Continues New Deal Wild and Reckless Spending Program

---

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 7, 1948

Mr. REED of New York. Mr. Speaker, under leave heretofore granted, I include, as part of my remarks, an article by David Lawrence entitled "Colossal

United States Budget Nearing Danger Point of National Economy," which appeared in the Washington Evening Star of January 13, 1948, as follows:

COLOSSAL UNITED STATES BUDGET NEARING DANGER POINT OF NATIONAL ECONOMY—FORTY BILLIONS IN TAXES TERMED HEAVY DRAIN THAT PORTENDS TROUBLE

(By David Lawrence)

What's $40,000,000,000! The Federal budget of expenses proposed by President Truman for that amount is just about eight times what the Government collected in 1939.

It is more than twice all the profits made by American industry in the year 1947.

It is $13,000,000,000 more than the entire Federal public debt at the close of World War I.

It is more than the entire national income in the year 1933.

It is more than four times the Federal budget in 1939.

It is nearly eight billions more than the 1942 budget which included the first year of the war.

The colossal sums in the President's recommendation are intended to be spent in the fiscal year beginning July 1, 1948, and ending June 30, 1949. This means that 4 years after the close of World War II the Government of the United States is spending at a higher rate than at any time in its peacetime history.

DANGEROUS DRAIN ON PEOPLE

Much more important than the sums to be expended is the size of the tax collections. Approximately forty-five billions are to be taken out of the national income in taxes and other receipts. This is such a substantial part of the money earned by the people that it constitutes a drain of dangerous proportions.

It is considered by many economists to be hazardous when the Government extracts as much as 20 percent of the national income for taxes. Assuming a national income of $200,000,000,000 the Federal Government will be drawing out of the stream of national income more than 20 percent.

What is most disconcerting about the President's budget, however, is that it exceeds the 1948 budget by $2,000,000,000. How long can the Federal Government go on increasing its expenses at that rate per annum?

The risk is that the Federal budget may increase fears of a maladjustment in the whole economic situation. There is a tendency to lose confidence in a government which keeps on spending and spending and taxing and taxing. Certainly the system of private initiative gives way to State socialism and Government programs of nationalization when taxes become so burdensome as to make it impossible for individuals to save for investment purposes.

Unless a market for risk capital is provided, many enterprises in business will be compelled to restrict their operations and start laying off employees.

The most depressing aspect of the whole problem is that the Federal Government shows no signs of putting its house in order. This is a sign of approaching trouble in any government. It is true that for the fiscal year 1948 a surplus of $7,000,000,000 is indicated and for 1949 about $5,000,000,000. But the fact that the administration has made no provision for tax reductions and wants to use these surpluses to retire debt without relief to individual taxpayers in the investor class will mean deflation in the midst of inflation.

WILL TEND TO CUT CREDIT

Unfortunately it will tend to restrict credit at the banks and discourage business from getting money in the capital markets generally. The deflation may set off a spiral of curtailment sometime in 1948 which may not be offset by the huge amount of tax-reduction bonuses designed by Mr. Truman for distribution among those in the low-income groups.

The announcement of the Federal budget will send a wave of discouragement throughout the business and industrial sections of America and intensify the drive to get Congress to cut the budget by several billion dollars.

It is true that a billion dollars today buys much less than it did in 1939, so that in terms of prewar dollars the budget would probably be around $25,000,000,000, but even this is a big expenditure for the Federal Government to be making as against $12,770,000,000 in 1941.

The President's huge budget will, of course, become a political issue in the campaign. It would seem that Mr. Truman might at least have tried to present a budget of expenses less than last year. His willingness to raise it by $2,000,000,000 must mean that he is confident the American people don't care how high the expenses of the Federal Government do go.

Oil Shortage Growing Worse

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. BRYSON. Mr. Speaker, in view of the acute shortage of petroleum products throughout the country and especially along the eastern seaboard which includes South Carolina, I am keenly interested in ascertaining the truth about the oil situation.

It had been my purpose to introduce a resolution calling for an investigation in the oil industry as suggested by the South Carolina Oil Jobbers Association in a resolution which is hereto attached. I find however there are two resolutions already pending, one, Senate Resolution 187 as introduced by the junior Senator from South Carolina, the Honorable OLIN D. JOHNSTON; and another, House Resolution 420 introduced by Congressman THOMAS J. LANE, of Massachusetts.

A very excellent and yet astounding summary of the petroleum problem is presented in an article appearing in the January 16 issue of the United States News, which I herewith attach.

I sincerely trust that a proper resolution will be adopted by the Congress and that authoritative information may be gathered and disseminated so that our people will know what to expect. I, of course, am cooperating with other Members of Congress in endeavoring to bring relief where there is now suffering.

The resolution and article referred to follow:

RESOLUTION OF THE SOUTH CAROLINA OIL JOBBERS ASSOCIATION

Whereas the east coast and some other sections of the country are suffering from the worst fuel-oil shortage in history, and predictions point to a similar shortage of other petroleum products later in the year of 1948; and

Whereas there has been an increase in refining and sales by the major oil companies this year as compared to last year in excess of sales percentage wide by the independent marketers; and

Whereas there has been a sharp advance in the price of crude oil, and finished products at the refinery from which the 20 largest oil companies have received most of the benefits, while the independent jobbers' margin has remained stationary or been reduced; and

Whereas the costs of operation of the jobbers has been increased to the point where they are unable to maintain present facilities in line with good practice, and are prevented from building new facilities to take care of expanding demand from the public, while the major oil companies justify their greatly increased earnings as necessary to this end; and

Whereas efforts of the jobbers towards effectuating relief within the industry have proven futile; and

Whereas this trend if continued will eliminate the independent segment of industry and create a monopoly detrimental to the public interest and to our economic structure: Now, therefore, be it

Resolved by the South Carolina Oil Jobbers Association in meeting at the Columbia Hotel, Columbia, S. C., on this 8th day of January 1948, That an investigation be requested by Congress to ascertain if the antitrust laws have been violated by the major units of the oil industry;

That the investigation be solely for the purpose of investigating such violations; and

That if a report be of such nature as to justify prosecution by the Department of Justice, it cover recommendations for appropriation in sufficient amount to carry such prosecutions to a just and final conclusion; be it further

Resolved by the South Carolina Oil Jobbers Association, That the South Carolina congressional delegation be requested to introduce legislation in the National Congress to divorce the marketing segment of the oil industry from the producing, refining, and transportation segments;

That this legislation be pressed for prompt passage and enforcement;

That copies of these resolutions be sent to all members of the South Carolina congressional delegation, to Senator KENNETH S. WHERRY, and to the Attorney General of the United States.

[From the United States News of January 16, 1948]

OIL SHORTAGE GROWING WORSE—TREND TO COOLER HOMES AND LESS DRIVING

Oil shortage, now beginning to hurt, is to grow worse in 1948.

Homes using oil for heat will be colder next year than now.

There will not be enough gasoline next summer to meet all demands for pleasure driving.

Rationing by dealers, not Government, will limit consumer supplies. It will be many months before supply catches up with demand.

The shortage of oil for heating and of gasoline for driving, bad as it is now, is to grow worse during 1948. Some houses will be colder a year from now than they have been this winter. Many car owners are to have less gasoline next summer than they will want. There is danger that farmers will not be able to keep tractors and other machinery in constant operation for growing and harvesting seasons.

Demand for oil and oil products has climbed to dizzy heights since the war and threatens to run still further away from supply in the months ahead. Unless a business set-back cuts demand more sharply than now seems possible, scarcities are likely to continue for a long time.

Relief measures that can be applied during the year will be only partially helpful. Imports can be stepped up moderately, and will be. Exports will be cut. Refinery capacity and transport facilities will be increased. A plan to pool oil supplies, now being developed by producers and distributors, will ease the situation somewhat. But all these measures will provide only slight relief.

Rationing by industry and consumers, not by Government, will be necessary to stretch supplies in some communities. Service stations in some cases already are limiting sales to customers. Home owners will find it necessary to conserve oil by turning thermostats down. Restrictions will be voluntary, with no return to compulsory rationing probable.

For users of oil and gasoline the outlook is this:

Oil for home heating will become less plentiful before the present heating season ends. On the basis of the present outlook, oil supplies for homes will be reduced even more drastically next season. Deliveries to consumers already are being cut 10 to 15 percent by dealers in some areas, and further restrictions are likely. A 15-percent cut in oil means a 5-degree reduction in room temperatures. However, since the average room temperature is 73 degrees, much oil can be saved without causing real discomfort.

A big problem here is that of distribution—of making certain that oil is delivered to areas and homes that need it most.

Back of the shortage of heating oil for homes is a rapid increase in the number of oil burners being made and sold. New installations totaled 700,000 last year, raising the number of burners in use to 3,250,000. The number may reach 4,000,000 this year. Strikes in the coal mines have frightened many home owners away from coal as a fuel, despite warnings by Government and the oil industry that oil burners should not be installed without assurance of oil to feed them.

This demand has boosted oil consumption for home heating 50 percent since the war. Last year 320,000,000 barrels of oil were burned as fuel in homes. This year an estimated 346,000,000 barrels will be burned. To meet this demand, many refineries have been compelled to reduce production of gasoline.

Gasoline for driving is in greater demand than ever before. More cars are on the road and more are being built. There are increasing demands for gasoline from trucks and airplanes. Then, too, gasoline production is retarded somewhat because the demand for fuel oil prevents rebuilding of gasoline stocks.

The pinch in gasoline will begin to show up when motorists take to the road in large numbers next summer. The result will be allocation of gas to dealers by distributors. Gas stations, in turn, often may have to restrict sales to consumers.

Farmers are using steadily increasing quantities of fuel. Consumption of fuel for farm machinery jumped to 2,821,000,000 gallons in 1947 from 1,783,000,000 in 1941. Another large increase is indicated for 1948. Voluntary limitation of fuel for farm equipment is almost impossible. This year there may not be enough gas to go around. Partial loss of some crops might result.

Industrial demand for heavy fuel oil is 5 to 10 percent in excess of supply this winter, and the situation here also is expected to become worse. Relief must come from conversion to coal or from an increased supply of crude oil. Refineries, now producing at capacity, cannot relieve the heavy-oil situation much without producing less light heating oil for homes.

A shift to coal, in many instances, is not difficult. Electric utilities often have dual heating installations. Oil shortages and high oil prices are causing some plants to return to coal.

Diesel fuel demand, almost triple that of 1941, also is contributing to the over-all shortage. Use of oil for Diesel-powered locomotives is increasing rapidly. Of 604 locomotives on order recently, 534 were Diesel-powered. Demand for oil as fuel for ships also runs high.

Military needs for oil have increased sharply in recent months, with the military now taking 4 percent of the country's oil supply. Some is for civilian use in occupied areas and in foreign countries receiving aid from the United States. Congress is looking critically at this practice, but anything it does about it will not affect total United States supplies substantially.

Consumption of oil products, when all uses are added up, is greater than it was during the wartime peak. What is more, this country is burning more oil than the entire world consumed in prewar days. The following figures tell the story:

In 1934 the United States was consuming 2,800,000 barrels of oil a day. At the height of the war, in 1945, consumption had jumped to 5,300,000 barrels. Instead of dropping after the war, as expected, demand continued to climb, so that by 1947 the daily average was close to 5,900,000 barrels. Official estimates for 1948 are for a daily consumption average of 6,150,000 barrels, up 250,000 from last year. This assumes that production can be stepped up that much.

On the supply side, this country is expected to produce 5,700,000 barrels a day. The remaining 450,000 barrels required to make a daily average consumption of 6,150,000 must come from abroad. This will consist mainly of crude oil from the Caribbean area. Any increase above this amount is doubtful, since oil fields in such countries as Venezuela and Colombia are producing to capacity. Little oil can be expected from the rich fields of the Middle East because of distance and tanker shortages.

Total demand, if it could be filled, would run close to 6,500,000 barrels a day during 1948. Thus, the country will actually be short about 400,000 barrels a day from its maximum needs, as long as the United States boom continues.

Bottlenecks that restrict supplies of oil are not to be broken sufficiently in the next year or so to give much relief. The steel shortage restricts production of tank cars, tankers, pipe lines, and expansion of refinery capacity. But removal of all these bottlenecks, however, would not bring an end to the shortage. Supply of crude oil still would be limited in relation to demand.

Relief, over the years, must come from new oil discoveries in this country and from development of synthetic oil and gas.

Drilling for new oil fields, and deeper drilling in old fields, is going on at record rates. Many men in the industry dispute this view and believe that vast untapped resources remain to be discovered.

Synthetic oil, in important quantities, is some years away. Plants now under construction will produce small amounts of gasoline and fuel oil from natural gas, at costs that will be little, if any, higher than for production from crude oil. The effect on total supply, however, will be negligible.

Coal also will be turned into gas and oil in the next few years, but costs at first will be high. Production of synthetics from shale still is in the experimental stage and this, too, is handicapped by high costs.

All in all, the prospect is for a growing shortage that can cause annoyance and some discomfort to many people for many months to come. A sharp business set-back sometime in 1948 could change all this, but the immediate prospect is that the pinch will get worse before it gets better.

South Dakota Leads the Nation in Purchase and Retention of United States Savings Bonds

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. MUNDT. Mr. Speaker, the records have now been made available for 1947 showing the State-by-State record made in the purchase and retention of United States Savings bonds. This report shows that South Dakota—land of bright sunshine, good sense, and sound stability—leads the entire Nation both in the per capita purchase of United States Savings bonds and also in the percent of bonds retained. In fact, through 1947 South Dakotans bought approximately three times as many E bonds as were redeemed in our State.

Mr. Speaker, South Dakota led the Nation in the per capita E bond purchases, South Dakota led the Nation in the per capita E, F, G sales, and South Dakota led the Nation in having the lowest percentage of redemptions of bonds already purchased. Such an unprecedented and unchallengeable record, sir, comes not by accident. It is the result of a working combination of many factors including the patriotic and unselfish cooperation of many people engaged in the sales of war bonds, the great loyalty of the citizens of this fine agricultural State, and the fact that the vast farming acres of South Dakota and the business and industrial institutions of our cities are busy at work producing large quantities of the products needed in this world.

The people of South Dakota are not contaminated by European "isms"; they are not lured away from the path of sanity and soundness by the siren calls of communism; our laborers and our farmers dedicate an honest day's work for an honest day's pay, and do not fritter away their substance and the Nation's future by joining picket lines and participating in unjustifiable and unnecessary strikes. In addition, South Dakota folks are thrifty and they recognize in Government bonds an investment having value both to themselves and to the Republic which they love so dearly.

Mr. Speaker, there are 47 other States in the Union besides South Dakota. We invite competition in this business of purchasing and retaining Government Savings bonds. We challenge our neighbors and our fellow States to equal our record, and we serve notice that if they are to deprive South Dakota of its place at the top they must better the record we have made in 1947, as our people are resolved to improve our own percentages in the month ahead.

I am including with these remarks an editorial from the Sioux Falls Daily Argus Leader, published in Sioux Falls, S. Dak.,

which comments upon the great record South Dakota compiled in 1947:

SOUTH DAKOTA'S WISDOM AND WEALTH

South Dakota's remarkably fine record in the purchase of United States Savings bonds in 1947 is a source of gratification.

The following tabulation tells the story in brief form:

	United States [1]	South Dakota	South Dakota rank
Per capita E sales	$29	$79	First.
Per capital E, F, G sales	$48	$114	Do.
E sales as percent of redemptions.	100	281	Do.
1947 sales as percent of 1946.	89	147	Do.
Percent of quota reached	95	154	Second.

[1] Based on 11-month actual statistics and estimate for December.

Total savings bond purchases in South Dakota in 1947 amounted to $62,800,537—about $11,000,000 in excess of the average wartime sale of bonds in this State.

South Dakota bought about three times as many E bonds as were redeemed in this State—a national record and one actually 65 percent higher than North Dakota, the State in second place.

The exceptional bond record reflects the wealth and wisdom of South Dakota. It required good earnings to permit the residents to make such a showing and good judgment to decide to set aside so much money as a reserve for future use.

Aggression Is on the March

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 13, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by me entitled "Aggression Is on the March." This appeared in the New Hampshire Morning Union of January 8, 1948, and in the Manchester Evening Leader of January 8, 1948. Both papers are published in Manchester, N. H.

The article follows:

AGGRESSION IS ON THE MARCH—ISSUES BEFORE THE CONGRESS

During the next few months the second session of the Eightieth Congress must render decisions which will be of far-reaching importance and of impelling significance to the welfare of the country on a variety of exceedingly complex and grave national and international questions. Tax reduction and legislation to halt inflation have priority in the domestic field. Universal military training, extension of reciprocal trade agreements, the Marshall plan for the economic recovery of 16 nations in western Europe, the question of further assistance to Greece, and the achievement of air supremacy are questions which we must face realistically. Adequate preparedness, especially in the air, is the most important issue—barring none—before the Nation today. To solve the problems I have mentioned we must have constructive, progressive, and fearless leadership.

AID TO GREECE

When I was in Athens last October I had a series of conferences with several members of the Griswold Mission. On October 24, 1947, the New Hampshire Morning Union carried an article on aid to Greece which I wrote immediately after my visit to that country. In this article I stated, "Should the Soviets decide to make a stand by all-out assistance to the bandits, the United States must decide upon the course it will follow in the future. To finish the task of destroying or capturing the bandits, the United States will have to continue beyond June 30, 1948, its aid to Greece, and in all probability must appropriate 200 to 300 million dollars to carry on this work. I believe that our future course in respect to Greece is clear.

"We must continue to help Greece until she is free, until the Communist pressure is removed, until the bandits are surrounded or destroyed, and until there is no longer danger of the country being seized, controlled, and dominated by the Kremlin.

"If Greece capitulates to the Communists and falls into the hands of the Soviets, Italy would quickly be overtaken by the same disaster. I canot too strongly emphasize the strategic significance of Greece and the gravity of the current bandit issue. We have adopted a policy of keeping this country out of the hands of the Communists. We must continue this policy and must be ready and willing to increase our assistance until the bandits no longer exist and Greece is on her way to economic recovery and is completely free from Communist pressure."

My position in reference to Greece is the same today as it was when I wrote the above paragraphs. I shall support any and all measures to accomplish the objectives set forth in my report to this paper last October.

OIL

The integrity of Greece is of vital necessity to the United States. This is a Mediterranean outpost and should it fall into the hands of the Soviet Union, the injury to our country would be incalculable. In the Mediterranean area our stakes are tremendous. Russian domination of strategic outposts on this sea would imperial our safety. In the Near East, United States oil interests are vast and illimitable. This supply must be protected for our use in peace, and in the event of war the availability of petroleum reserves of this region for use by our country would be crucial. The vast oil supplies of the Middle East which will soon furnish the lifeblood of our economic system must not go unprotected.

THE MARSHALL PLAN FOR EUROPEAN RECOVERY

The Marshall plan for European recovery contemplates the spending by the United States of $17,000,000,000 from April 1, 1948, to June 30, 1952. The economic recovery of western Europe is essential in this world-wide fight against the spread of communism. An economically strong Europe would be a great bulwark against the Red tide of aggression. The Marshall plan is designed to prevent the sinking of Europe into an abyss of economic chaos more vicious and more devastating than anything mankind has yet seen.

I have long been a vigorous supporter of the Marshall plan. Weeks before the Secretary of State made his now famous speech at Harvard on June 5, 1947, I stated that we should adopt the principle of spending whatever is necessary to bring about the economic recovery of western Europe for the express purpose of stopping the march of the Soviet Union to the west.

There is a fundamental principle in our foreign policy, but the achievement of air supremacy should be considered on the same plane and this second principle is equally as fundamental in any realistic foreign policy for the United States. If I were forced to choose between the two principles, the Marshall plan or air supremacy, I would place air supremacy as of first importance; and as sad as it may seem, we are doing scarcely anything to create an all-powerful striking air force.

WITHOUT AIR POWER MARSHALL PLAN TOO GREAT A RISK

If we spend billions of dollars in western Europe without full military preparedness at home, without adequate air power, the money we spend may be lost and all our efforts to stop the Red tide by trying to bolster the economies of Europe may be to no avail. Without proper preparedness we will be indeed pouring our dollars down the proverbial rat hole. To secure our investments in recovery abroad we must have the power to protect our interests. United States air supremacy is a prerequisite to the successful operation of the Marshall plan, and without air supremacy I go so far as to say we may as well forget the whole business of trying to bring about economic recovery in Europe and Asia. The Marshall plan without an all-powerful air force would involve this Republic in a risk too great to take. By the expenditure of the billions proposed in the Marshall plan we can well do ourselves an irreparable injury unless we have an air force capable of making our voice heard and our will respected.

AIR POWER

Air power—overwhelming—is the only possible defense against assault in this atomic age. Any nation contemplating an attack on the United States will hesitate only if she knows that within a period of hours from the time the attack is made there will be delivered in reprisal a knock-out, devastating, retaliatory blow from the air. The United States can be immunized against attack from the air by building a completely unassailable and invincible air force. With air supremacy and atomic supremacy any aggressor would not entertain the idea of an attack upon us because it would be perfectly clear that the cities of the country making the attack, the industrial centers, the lines of communication, and great segments of the population would be wiped from the face of the earth by a practically instantaneous single paralyzing blow from the air. Only by being fully prepared to deliver such a blow within a matter of hours after the first indication of an impending assault upon us will we be able to consider ourselves to possess any measure of security.

THE SOVIETS, JUST AS HITLER, HAVE DRAWN US A PICTURE

The obvious reason for my recommendations for the achievement of air supremacy is that the policies being pursued by the Soviet Union lead us to the conclusion that if and when their leaders consider the time to be propitious they will move to attack us and to attack areas the integrity of which are essential to our security. Mr. Hitler in his book, Mein Kampf, explained to the world with striking lucidity his intentions. In fact, he drew a picture so obviously clear that even the most unobserving and the most disinterested person could not have possibly failed to thoroughly understand what the dictator of Germany had in mind if and when he was in a position to strike. For years the final victims of Hitler's fury sat idly by debating whether or not Hitler really meant what he wrote and debating whether or not he would really start a war. They got their answer.

The Communist philosophy as developed and written by Karl Marx informs us clearly

that the ultimate goal of the Communists, with the spearhead in the Kremlin, is to dominate the world. If you doubt it, read the Marxian philosophy and there will be no question left as to what the guiding principles of the Communist Party are. Since the close of the Second World War, the Soviet Union by aggressive expansion, by the spread of communism, by the refusal to cooperate, by deliberate attempts to prevent the recovery of western Europe, by constantly rearming and by a never-ending stream of insults has clearly demonstrated that it believes fanatically in the Marxian doctrines and the Marxian objectives.

So by their philosophy and by their actions the Communists in Russia and elsewhere have told us—yes, they have drawn us a picture of their intentions. They have set forth their program. They are developing their plans to realize their goals. Can we blindly stand by and debate as to what they are going to do if and when there is an opportunity? We saw what happened in the 1930's. We can see that within a very short period of time history is repeating itself in almost the same pattern—aggression is on the march.

A TOUGH POLICY

I hope you will agree with me that our policy must become tough, and tough quickly. We must fight communism on all fronts. We should begin a program of counterpropaganda. We must appropriate the necessary money for the rehabilitation of those countries taking a stand against Soviet aggression. We should immediately put an embargo on all materials being shipped to the Soviet Union. The President should be directed by mandatory legislation from the Congress that the sending of goods to the Soviet Union must stop and that we will not tolerate the building up of a country who by her statements and her acts is avowedly hostile to the United States.

The question of strengthening the armed forces of the United States, particularly the Air Force, is the most crucial issue before the country, and if we postpone action we will be doing so at our own peril. I most carefully consider my words when I say if the Congress sanctions a condition of preparedness in any way short of the ability to bring the full might of the United States to bear at once against any aggressor who delivers an attack upon us or any nation, the integrity of which is vital to our security, we will, in my opinion, be negligent of our duty. To pursue a course of inaction will be most disastrous to the Republic. I am making this plea because I am convinced that, were I to remain silent at this critical moment, I would be failing to do my duty as a Representative of the people.

THE HOUR OF DECISION

The United States must decide, and must decide quickly, whether or not she will take the responsibility of world leadership. We must decide at once whether or not we will make ourselves secure against any and all aggressors. The price to maintain our destined position will be great, but the reward is freedom, and no price is too high for liberty. Great effort and sacrifice are required to make ourselves secure in a world where others entertain neither the hope nor the desire for a decent international society.

During the war I never heard anyone ask the question: "Can we afford to win?" We knew we had to win and we put forth the energy required to be victorious. We should not haggle, hesitate, and confuse the issues by asking the question: "Can this Republic in its very prime and in its enviable position of potential power afford to win the peace?" We cannot afford to lose.

Armistice Day Address by Secretary of the Navy

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. LUCAS. Mr. President, on last Armistice Day, Hon. John L. Sullivan, Secretary of the Navy, delivered a very appropriate and inspiring address at the Armistice Day ceremonies sponsored by the American Legion at Arlington National Cemetery. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This shrine in which we meet today is the symbol of America's sacrifice for humanity. This day which we have set aside for the remembrance of our war dead is the symbol of America's enduring hope for lasting peace.

The moment of silence which we have observed in humility and in reverence for those who here rest in honored glory signifies our Nation's gratitude to all who have fallen in the pursuit of this ideal. That unspoken tribute marks our rededication to the completion of the tasks for which they gave their lives.

These honors rendered, we ask ourselves in all sincerity why we are here. Surely it must be for a more important purpose than the formal expression of our gratitude. Certainly we are here to render more than mere words in return for the imperishable deeds of those who sleep around us.

We are here on these hallowed grounds, in their company, to take solemn counsel among ourselves as to how best we may accomplish the objectives for which they died.

If we are to give this occasion meaning, if this ceremony is to be more than solemn pageantry, if the wreath which our Commander in Chief has laid at the Tomb of the Unknown Soldier is to be a true measure of the Nation's gratitude—we must implement these symbols of affection and indebtedness with a determination to pursue with all our heart, with all our skill, with all our strength, and with all our resources the twin objectives of security for our Nation and a lasting peace for all the world.

Our goal must be their goal. We must work as hard and as unceasingly for security and peace as they who died to preserve them for our keeping. Our courage must match their bravery. Our devotion must equal their sacrifice.

Our Nation, in recent years, has been dedicated by two great Presidents to the pursuit of international peace through the twin avenues of adequate national strength and full support of the United Nations. The American Legion, under whose auspices we meet here today, is similarly pledged. This is the American way to peace. This is the will of the American people.

We propose to cooperate in every way to help the United Nations realize the hope of humanity which was written into its Charter at San Francisco 2½ years ago. Meanwhile, in this critical period, we do not propose again to risk world chaos or to encourage aggression in others by failing to provide for our own national security. History has demonstrated twice within a generation that unreasoning forces look with contempt upon an America too weak to defend her ideals. Until the United Nations has demonstrated its capacity to establish and to preserve world peace, the price of peace will continue to be preparedness.

The establishment of an effective new world order cannot be accomplished overnight. It will call for the utmost realism and idealism and unity in American thought and action. It calls now for loyalty to our aims, for cooperation among all groups of our economic and political life; for sacrifice by all—at the dinner table, on the job, everywhere and all the time—if we are to succeed.

The time has come for us to be firm with ourselves, if we would give true meaning to the firmness we would assume in democracy's cause abroad. The time has come when we must count it a privilege to be as bold in the pursuit of peace as we were daring in our recent battle for survival.

This opportunity which lies before us today to provide for our own security and to assure the peace of the world, may be our very last such opportunity if we do not seize it eagerly and pursue it with all our zeal.

The task is difficult. There will be delays and irritations. There will be bitter frustrations. There will be seemingly endless disappointments. We must not permit these to discourage us. In the trying years which lie ahead, when we feel our determination is flagging, we must remind ourselves that we are asked only to work for something for which many men died.

These men, our brothers, our sons, and our friends, watch us from some distant shore. To them we must be true.

In their memory, we must wage peace as they waged war—with everything we have. Above all, we must regain that harmony of spirit and that unity of effort which welded the people of America into an unconquerable power through the great crisis of the war years.

We must be strong. We must be strong in our economy, drawing the substance of our fruitful land to our own use and passing on the surplus to men and women overseas in return for the many raw materials and products which we require. We must be strong in our loyalty, taking unto ourselves freely such obligations as nurture among all Americans a true appreciation of the blessings of freedom and equal opportunity for all.

To secure an enduring and just peace, we must for the time being also be strong militarily.

In order to achieve the military standing which befits our position in international affairs, we enacted legislation under which our military services—the Army, the Navy, and the Air Force—recently were made in fact, what they had long been in effect, coordinates of the National Military Establishment.

These three services today—in equipment, in morale, and in leadership—are unsurpassed. Their effectiveness, however, is hampered by lack of a reserve of trained manpower. Crack ground units, vaunted air squadrons, and proud ships cannot be reinforced with phantom ranks, missing elements, or half-complements of crew. Manpower today is the crying need of all these services.

The remedy lies in legislation which would give us an adequate reserve of trained men. Such legislation is now before Congress in the form of a bill to authorize universal military training. Under this measure, each of the three services would obtain its quota of men to train. After training the men would be returned to civilian life, better fitted to become better citizens because of

their tour of military service. They would become our modern minutemen in any emergency.

They would provide the land, sea, and air reserve that in the future might well mean for us the difference between survival and oblivion. As Commander O'Neil so well said—they would serve notice on the world of America's willingness to accept the responsibilities of world leadership.

We became the victims of aggression 6 years ago because we had not learned the lesson which World War I should have taught us. Our guard was down, even though we knew that international banditry was on the loose in Europe and Asia. This must never happen again.

Conversely, 2 years ago when our military, naval, and air strength was at its peak, we exerted an influence in international affairs commensurate with our position as the greatest democracy in the world. In the months since VJ-day we have pared this strength down to but a shadow of its former self, and day by day, as demobilization progressed, our representatives in the council of powers found their tasks increasingly difficult.

The time has come to realize the peril of benevolent disarmament, unilaterally accomplished. We cannot jeopardize our security in the hope that others will again win for us the time we need to prepare to defend ourselves. The next time there may be no time.

In the words of Burke, "a nation is a contract in which three parties are involved—the dead, the living, and the yet unborn." Thus, America is today at once a legacy from the past, a trust of the present, and the hope of the future. Let us pledge here and now among our dead, that we the living will so plan and work among ourselves and with other nations, that peace shall be ours to cherish for ourselves and for generations yet unborn.

Much remains to be done to bind up the wounds of this tired, confused world. A great task must be performed if peace is to become the final fruit of victory, and if we are to keep faith with those who died. We must so conduct ourselves individually and as a Nation that their sacrifice will prove not to have been in vain.

Their place in history will rest upon our actions rather than upon our words. God grant our action will be worthy of their sacrifice.

The Palestine Situation

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered in New York City on December 29, 1947, by Dr. Abba Hillel Silver, who is chairman of the American section of the Jewish Agency for Palestine and of the American Zionist Emergency Council. The address was delivered at a testimonial dinner given in honor of Dr. Silver just prior to his sailing for Palestine. The address is of such significance that I think it should be incorporated in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was just a month ago that the decision was taken in the Assembly of the United Nations. It has been a month of unprecedented exaltation for our people all over the world. Their spirits leaped up like a brilliant flame in the glad surprise of the long hoped for and never quite expected victory. Their parched and thirsty souls drank deep of the waters of salvation. The nations of the world had again vindicated our claim to national restoration. By an overwhelming vote—only two Christian states dissenting—they decreed that the Jewish state shall be reestablished and set the date for its establishment for October 1948.

Thus the messianic drama of Israel which had been unfolding in many lands through long centuries of tragic acts and sorrowful scenes suddenly reached a triumphant climax in the dramatic setting of an international council chamber, where in an atmosphere of unspeakable tension, they voted, each in turn, and when the vote was tallied, they had decreed the end of the Galut. We have rejoiced in the fulfillment of a prophecy that has come true: "When the Lord will bring back captive Zion, we shall be like dreamers! Then will our mouth be filled with laughter and our tongue with song."

Our tired hearts were refreshed and uplifted when we witnessed the fine championing of our cause of liberation by one noble country after another, by the many countries of South and Central America, by the countries of western Europe, by all the dominions of the British Commonwealth and by other countries of good will. We were deeply moved by the strong, unfaltering support which we received from the Soviet Union and from Poland and Czechoslovakia. And we were, of course, profoundly pleased and happy with the role which our own Government came to play in the final hour of decision. Especially gratifying was that rare phenomenon—baffling and disturbing to all those who prescribe cold war as the remedy for an ailing and war-sick world and proscribe all suggestions of amity and reconciliation—which showed the two greatest world powers working in complete accord and unity of purpose to solve a grave international problem, and succeeded in reaching a solution.

Those who are despondent over the turn of affairs in international relations and the apparent irreparable rift which has been created between the East and the West might well take heart in contemplating the full and ready cooperation which did exist between the United States and the Soviet Union on the issue of Palestine. Here was an area where we were told imperial interests were inevitably destined to clash, and where power politics would most certainly tear East and West hopelessly apart. Nothing of the sort happened, to the utter consternation of all the preachers of the irresistible conflict. On the contrary—here was ready and friendly agreement. In my humble judgment there is much food for thought here, and strong warrant for a more hopeful world outlook, and a less intractable statesmanship.

In this connection it should be stated that those who were responsible for the earlier and now discredited propaganda that the Soviet Union, in its desire to penetrate the Middle East and its rich oil fields would side with the Arabs against the Jews, and, that Great Britain and the United States must therefore not favor the Jewish cause for fear of driving the Arab States into the arms of the Soviet Union, have now slightly revised their propaganda. The Soviet Union, it is now proclaimed, favored the setting up of a Jewish State in Palestine in the confident expectation that this would arouse the Arabs, create disturbance, and necessitate the intervention of the Security Council. The Security Council would have to send troops. The Soviet Union, being a member of the Security Council, would then have its own troops included in whatever international force is sent to Palestine. Once there, they will never be dislodged.

This is the new, or rather the revamped, propaganda which is being peddled about today in Washington by agents of all sorts—British, American, and Arab—as well as in the public press, and which along with the supplementary propaganda that the so-called illegal immigrants coming into Palestine are really Communist agents in disguise—is being adroitly spread to destroy United States-Union of Soviet Socialist Republics cooperation on Palestine, and to prevent the implementation of the UN decision. Every effort is being made to thrust Palestine back into the dangerous arena of power politics, from which the United States-Union of Soviet Socialist Republics agreement and the action of the UN has most opportunely lifted it. There are even some Members in the Congress of the United States who out of ignorance or malice, are lending themselves to the spreading of this baseless and mischievous propaganda. Needless to say the Zionist movement has no orientation either to the west or to the east. If we need to define our orientation, it is definitely and unmistakably to the United Nations. We are happy that our problem received a solution by international agreement in which the east and the west harmoniously cooperated. We hope that it will remain so in the future.

It might be noted, in passing, that our frank joy in the decision of the UN to reestablish the Jewish state was not prompted by an infatuation with the idea of nationalism as such, or by the idolatry of statehood. We are not chauvinists. Zionists have been denounced as secularists and political nationalists. Of course we are secularists insofar as we oppose a theocratic state, and we are political nationalists insofar as we believe in the reestablishment of the Jewish state. But this does not exhaust the full content of our aspirations.

Israel's resolution through the centuries to rebuild its national life in its ancestral home was guided by sound instinct and inspired by the same prophetic idealism which twice beckoned our exiled ancestors from exile to national restoration in Palestine. In both instances, at Sinai and by the rivers of Babylon, there stirred a deep, mystic conviction that only in a free national existence, could that which was best and unique in its life find full scope and opportunity and what was best and unique was always conceived of as transcending the moiety of political independence, or the customary compensations of national status and security. It reached beyond that to a vision of "new things, things kept in stire, not hitherto known." * * * to a redeemed humanity and a world order reconstructed after the pattern of the Kingdom of God.

In 1929, on the occasion of the twenty-fifth anniversary of the death of Theodor Herzl, I wrote in a Herzl memorial volume which was published in that year:

"It is well that the political phase of Jewish Messianism is coming to a close in the upbuilding of the national homeland. We shall not have to lay so much stress in the future on the importance of nationalism. We shall henceforth be confronted not with its lack but with its consequences. Hitherto wanting the full complement of the attributes of nationalism, we were constrained to overemphasize its virtues. Many of the spokesmen of our cause were driven to extol nationalism, per se, which is after all a

quite recent and, demonstrably, a quite inadequate human concept.

"It is not mankind's ultimate vision. Certainly it is not the substance of our own ancestral tradition, whose motif is not nationalism but prophetism. Nationalism is not enough. It is a minimum requirement, not a maximum program. Our national rebirth was made possible by a war in which nationalism was thoroughly exposed and discredited. Nationalism is a means, not an end. 'What is great in a man,' said Nietzche, 'is that he is a bridge and not a goal.' This is true also of men collectively—of nations and of national cultures.

"Nationalism will not suffice the eternally questing soul of our people. After its national life is secure Israel must push on to the frontiers of the new world—the world of internationalism, of economic freedom, of brotherhood, and of peace."

I believe that this motif of authentic Jewish lineage has not been wanting in the humble and consecrated labors of the present-day nation builders in Palestine, and I am convinced that Palestine will in the days to come become the workshop of our people's highest ideals and aspirations.

Our builders in Palestine will have much to endure and much to overcome, but they will assuredly match their hour. They have still to discover their political eyes. They are children of the crucible. They have come from the four corners of the earth and from all parts of the Galut, and the Galut leaves its mark on everyone. They hail from all cultural zones and from all political backgrounds. They represent most diverse personal experiences, and they must all be fused into an organic whole. They must learn unity in diversity and patience under stress and the knack of subduing the voices of the partisan, the doctrinaire, and the fanatic in the joyous tumult of building.

Edmund Burke defined the religion of the early American colonists as being a refinement on the principle of resistance. "It is the dissidence of dissent and the protestantism of the Protestant religion * * * agreeing in nothing but in the communion of the spirit of liberty." That might well define also the temper and character of our pioneers in Palestine. There is marvelous promise in all this for a free and unshackled life, but also much danger.

Our people will live in a land which is not a "fortress built by nature for herself against infection and the hand of war" as Shakespeare sang of England, but in a very open land whose borders are difficult to defend, and whose security must rest on the stout hearts, the political wisdom and the national discipline of its people. What they had gained with courage, they will have to keep with prudence.

But the spirit, the will and the capacity are there, and they will not be found wanting.

The Land of Israel will be small, made smaller by partition, but the people of Israel will make it great. The monumental contributions to civilization have been made by great peoples which inhabited little countries. Mind and creative endeavor will compensate for what our people has been forced reluctantly to relinquish. Generations to come, living in that land of challenge and renewal, will speak great words and do great deeds, and in the magnitude of their upsoaring, there will tower the majesty of that little land of revelation which, like some precious jeweled clasp, draws three continents together on the shore of the western sea. Not in opulence but in eminence will their destiny be fulfilled and the elixir of their pride will be distilled not out of dominion or far-flung borders, but out of the faithful and skillful building of the good society.

It is now a month since the historic decision, and while our happiness is unabated, our minds are turning soberly to the pressing and difficult problems involved in the implementation of that decision.

Those problems are ours—but they are also those of the United Nations. The UN accepted the responsibility to decide the future government of Palestine. It accepted after long and careful examination and debate the report of the special committee which it had appointed to make a complete and thoroughly objective survey of the entire situation. It has set up the machinery and fixed the time schedule for implementation. It was completely aware of all the difficulties involved, and was forewarned, not once but many times, by delegates of Arab States of their resolve to thwart by violence a decision of the UN favorable to partition. Nevertheless the UN acted, despite these threats and in the full knowledge of all that was involved, convinced that there was no other way out, and that a solution could no longer be postponed. If the UN were now to be deterred from its course by the planned violence by riots and demonstrations, calculated to convince the world that the UN decision is impossible of implementation, and thus by force to alter the settlement which it decreed, the UN would not only suffer an irreparable loss of prestige and authority, but its future effectiveness as the agency "to bring about by peaceful means and in conformity with the principles of justice and constitutional law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace"—would be disastrously undermined.

The Mufti and his henchmen are attempting to sabotage the establishment of the Jewish state but they and their collaborators in the neighboring Arab States, which are covenanted member states of the UN, and as such pledged to abide loyally by its decisions, are engaged as well in a shameless, frontal attack upon the very life of the UN itself.

We are confident that the UN will not permit itself to become the victim of insolent intimidation and the sport of organized hoodlumism. We are also confident that the Security Council of the UN—which is to act as the guide of the UN Commission appointed by the Assembly to implement its decision, will give this Commission every measure of support and encouragement, and should the situation in Palestine come to constitute a threat to the peace, as a result of the attempts to alter by force the settlement envisaged by the resolution of the Assembly, the Security Council will act with decisiveness and dispatch. The conference of some Arab delegates that the Security Council will fail to back up the action of the Assembly will prove as vain as was their earlier confidence to prevent a two-thirds vote in the Assembly itself.

The future of the UN will be enormously strengthened in the difficult months ahead if our own Government will remain indubitably firm throughout and lively and ardently cooperative with the UN in this matter. It has not always been so in the matter of Palestine. It was not always so during the protracted Palestine deliberations in the UN. Our officials were not always of one mind, and this resulted in confused counsel and stultified action as well as in the bewilderment of governments who quite naturally looked to the United States for guidance and leadership.

Our Government has, since the last war, assumed unprecedented diplomatic initiative and preeminent leadership in world affairs. It has not been content to remain passive, or only mildly active, as just one Nation among many, in the tasks of world reconstruction. Destiny has singled it out for leadership in this century and regardless of cost, it has boldly and wittingly assumed that role. In many parts of the world the impact of that political direction is now felt. Palestine is definitely within the orbit of those great political problems which America, true to its assumed role, must face, and to which it must bring the same determined leadership which has characterized its approach to other world problems. Should it fail to do so, and should it evidence, as on occasions it did, only a formal and passing interest, for the sake of the record or to allay criticism, the Palestine problem, in spite of the UN decision, will sag hopelessly, and the situation will move from bad to worse.

Time and again, both at Lake Success and Flushing Meadow, we heard from some American spokesmen the ominous slogan: "The Palestine issue is a matter for the UN, not for the United States. We will vote for the UNSCOP Report when the time comes, but we will do no more than that." We know who was the author of this quite transparent slogan and who defined that line. Fortunately he did not prevail. Involved in this slogan was the total renunciation by our Government of the clear responsibilities of the new diplomatic leadership which it had assumed in the world, and in that very part of the world. Our Government did not announce that Greece and Turkey, or the political and economic fortunes of Western Europe, or China, were matters for the UN and not specifically for the United States.

When the crucial hour of decision arrived, however, our Government rose to the challenge of the hour and the mandates of its destiny. Its voice rose clear and unmistakable; and in so doing, it encouraged other states to back up the recommendations of the UN Special Committee on Palestine. As a result, the resolution was overwhelmingly adopted. Our Government now stands committed to its implementation. The UN plan is now definitely a part of American foreign policy and should be as aggressively and determinedly advanced as other major policies of our Government. Our Government should assist the UN in every way possible and should employ all its diplomatic machinery and influence to expedite the matter. Delay is dangerous. Defeat will be catastrophic.

The problem is to tide over the next 10 months. Once the Jewish state is established and admitted to the UN, and the neighboring Arab states are confronted by an accomplished fact, they will as a matter of practical politics, seek ways for mutually satisfactory arrangements with the Jewish state and for peaceful cooperation—and the way will be open. Peace with the Arab world will then be possible. The dangerous period is the short formative one of the next few months. Here is where our Government can be tremendously helpful.

There is no provision in the UN resolution for an international police force to insure law and order during the transition period. Great Britain announced that it would be responsible for law and order as long as it remained in the country. It is clearly not doing it. If 100,000 soldiers and police cannot insure security in that small country or even patrol properly one main artery of travel in Palestine—the 42-mile road between Tel-Aviv and Jerusalem to enable men to travel on it without being killed by snipers, one is forced to question the sincerity of the government's declaration. It would be highly desirable to have an international force accompany the Commission of the UN when it arrives in Palestine to carry out the instructions of the UN. It need not be large, but it must know what it is there for. The present military force in Palestine is the

blunted instrument of the hopelessly blundering policy of Mr. Bevin which amounts to this, His Majesty's Government "loyally accepts the Assembly's resolution" but it will do nothing to implement it. The British forces in Palestine will maintain law and order but they will remain neutral when clashes result between the Jews who have loyally accepted the decision of the UN and who seek peace—and the Arabs who are violently resisting it and provoke war.

But whether an international force is sent to Palestine or not—it is immediately imperative that the Jewish people of Palestine shall be enabled forthwith to defend themselves. They have the manpower. They need arms. Surely those states—and foremost among them the United States—which voted to create a Jewish state must feel honor bound and duty bound to see that the citizens of that state in the making are properly protected against the murderous assaults of those who have resolved to defy the will and the conscience of the nations of the world. Here, again, the United States holds the key to the situation, both as regards the formation of an international force and the equipment of the Jewish militia. Our Government has not hesitated to send arms and military missions in other parts of the world to back up its foreign policy.

The problem of our refugees still remains most pressing. When will our refugees begin at last to move in large numbers into Palestine? What conceivable purpose is served by keeping these men, women, and children pent up in detention camps where they have languished for so long; or in driving them away from the shores of Palestine now that the United Nations has finally decreed that the Jewish state shall be set up in Palestine in 1948? What else but the meanness of spirit of a prostrate statesmanship and the spitefulness of a disgruntled bureaucracy can account for it? There are thousands of refugees in various parts of Europe who simply can no longer wait. They will not be permitted to remain where they are. They must move. Surely it cannot be Great Britain's wish to climax and close her political career in Palestine with some more stark tragedies like the *Exodus*. Why cannot the act of parting be sweetened by an act of generosity and humanity which will help to reconcile friends who should never have been estranged?

My dear friends, American Jewry has deserved well at the hands of the Jewish people. History will pay homage to the role which it played in this searching and heroic hour. It rose to the occasion splendidly. It knew how to close ranks. It acted with wisdom, dignity, and courage. It spoke effectively to the hearts and minds of the American people and its representatives in government, and to the responsible heads of our Government. It is generally acknowledged that what was achieved was due in a large measure to the magnificent labor of American Jewry.

But much remains to be done. November 29 was only the evening and the morning of the first day—the day when light broke through the darkness of our world. Our great community providentially spared for this hour must now shoulder the vast economic burdens involved in the setting up of the Jewish state. Judging by the remarkable demonstration a few days ago at the conclave of the leaders of American Jewry in Atlantic City, our people are fully aware of their new responsibilities and are resolved to meet them. Whatever aid may come from other sources, the primary responsibility is ours.

We shall also have to stand on guard during the next critical period to see that no political conspiracy of evildoers shall undo or harm the Jewish state as its builders proceed to lay its foundations. The Jews of America, proud and loyal citizens of this great country who have demonstrated time and again, in peace and in war, their devotion and patriotism, will in the spirit of American democracy wish to assist this new free and democratic country which will rise on the shores of the Mediterranean, and which will embody those same great biblical ideals of justice, brotherhood, and peace which inspired the founding fathers of this Republic.

World Peace

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Miss Nell Battle Lewis appearing in the column which she conducts regularly in the Raleigh News and Observer every Sunday under the title "Incidentally." Miss Lewis has conducted this column for years. She has a wonderful grasp of public questions and is intensely patriotic and thoroughly devoted to the ideals of the Republic, and tremendously interested in world peace. She has made an effective fight on communism, and brilliantly champions the cause of world peace through an enlarged and rejuvenated United Nations organization. This article sets forth her aims for 1948, which I think might well be adopted by our citizens generally throughout the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INCIDENTALLY

(By Nell Battle Lewis)

AIMS FOR 1948

The aims of this column for the year 1948 are:

1. To combat in every way possible the infiltration of communism into American institutions, particularly those nearest at hand, i. e., in North Carolina. I intend to do this not merely because communism and democracy are basically irreconcilable, but because I, with many others, believe the representatives of communism to be bent upon the overthrow of democracy and because I believe that democracy, the cardinal principle of which is the freedom of the individual, deserves the stanchest defense by us all.

2. To advocate and spread in every way possible the idea of world federation as the greatest single political hope of mankind in this period of gravest peril. Incidentally's advocacy of world federation will be, as it has been, by favoring the strengthening of the weak international organization which already has been set up—the United Nations, that is, making this organization more than a feeble league of nations based on merely a multilateral treaty, one that would be powerless to keep the peace at any time of serious international stress (as we have already seen it to be), i. e., turning it into a real world government in which the member nations delegate part of their vaunted and now most perilous "sovereignty" to the central authority, and relinquish, under that authority with a world police force, the "right" to make war.

3. To foster and encourage in every way possible friendship and cooperation between the English-speaking peoples, not in a spirit of hostile exclusion of others, but believing that, with the common background of constitutional liberty which the Anglo-Saxon peoples have, their unity at this grave point in history is of the utmost importance to the world.

4. To continue to collect and discuss accounts of authenticated instances of phenomena not yet explained by any known law and generally known as "psychic," believing eventually discoverable law to underlie these phenomena, like all others. The ultimate discovery in this field would be that of the survival of human personality after bodily death, which already is strongly suggested—indeed, already in some minds (including my own) proved—by the results of psychical research to date. I consider such research of special value at the present time, when materialism is at its most dangerous height, when many of the old religious concepts have lost their hold on the popular mind, and when for many people human life has become spiritually meaningless, senselessly truncated at the grave. Reestablishment or reinvigoration of the idea of the immortality of the soul by psychical research, as well as through generally accepted religious channels, would be of incalculable value to us in our present materialistic confusion.

THE UNITED STATES SHOULD LEAD THE WAY

"Till the war-drum throbbed no longer, and the battle-flags were furl'd
In the Parliament of man, the Federation of the world."
—*Tennyson in Locksley Hall.*

Throughout this year all pieces in Incidentally advocating world federation will be opened by this quotation from "Locksley Hall," which of late has become familiar in connection with discussions of world unity. In Tennyson's poem this stanza follows close upon two setting forth the poet's interesting prophetic vision of aviation in which he—

"Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales.

"Heard the heavens fill with shouting, and there rained a ghastly dew
From the nations' airy navies grappling in the central blue."

As the prophecy of those two stanzas, made in the early 1880's, has now been fulfilled, it is to be fervently hoped that the stanza about "the parliament of man, the federation of the world" will turn out to have been equally prophetic and that its fulfillment will come soon.

In the extremely important leading article in the January issue of the Reader's Digest, Our Final Choice (between world government and the destruction of civilization), by W. T. Holliday, part of which has already been discussed here, Mr. Holliday makes the point that it is possible under the charter of the United Nations for a general conference of the members for reviewing the present Charter to be called by two-thirds of the members of the UN General Assembly and 7 of the 11 members of the Security Council. Thus, no one nation on the Security Council could veto the calling of such a conference.

By that conference, the present Charter of the United Nations could be changed into a federal constitution for the world, as the weak and inadequate Articles of Confederation were changed by the new American States into a Federal Constitution for this country.

The United States should take the lead in calling this conference. Mr. Holliday writes: "We ourselves are the crux of the problem. Do we want world federation? Will we work for it? Will we lead the way? We had better know for sure what we will do, before we try guessing what somebody else will do."

Now the most powerful Nation in the world, an adolescent giant upon whose reluctant shoulders leadership in the defense of civilization has devolved, the United States should immediately instigate in the United

Nations organization the calling of such an internatonal conference for the alteration of the UNO Charter into a federal world constitution.

Awards to High-School Students for Achievements in Scholastic Journalism

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1948

Mr. O'CONOR. Mr. President, it will be generally agreed that the success of America's future will rest in the hands of the youthful students of today, now being educated in schools of the United States. The Baltimore Youth Advisory Board inaugurated the practice of recognizing youth excellence by selecting an outstanding boy and girl for the month to be given awards. It has been announced recently that these awards should be presented by Charles E. Moylan, Jr., the son of the Honorable Charles E. Moylan, associate judge of the supreme bench of Baltimore City, and Mrs. Moylan, and to Marguerite Rogus, the daughter of Mr. and Mrs. Joseph A. Rogus.

An article giving a full account of the awards was recently published in the Baltimore Sun, and I ask unanimous consent to have this interesting article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH-SCHOOL STUDENTS HONORED FOR ACHIEVEMENTS

Two honor high-school students whose achievements are in the field of scholastic journalism are the Girl and Boy of the Month for November, it was announced yesterday by N. Ellsworth Bunce, advisor to the Baltimore Youth Advisory Board, sponsor of the awards.

The girl, Marguerite Rogus, 17, is a senior at Patterson Park High School, and editor in chief of her school's weekly newspaper, the Patterson Press. She is the daughter of Mr. and Mrs. Joseph A. Rogus, of 629 Rappolla Street.

JUDGE'S SON CHOSEN

The boy, Charles E. Moylan, Jr., 16-year-old City College junior, in addition to being managing editor of his school's newspaper, the Collegian, is president of the school's Quill and Scroll Society, president of its Press Club and assistant managing editor of The Greenbag, City's yearbook.

His parents are Judge and Mrs. Charles E. Moylan, of 401 Bretton Place.

Both were recommended for the awards by their schools and by a fellow journalist, William Evans, editor in chief of the Collegian.

ACHIEVEMENTS EMPHASIZED

In nominating Marguerite and Charles, the Collegian's editor emphasized their achievements in the Maryland Scholastic Press Association's contest, held at the association's annual convention at College Park on November 8.

In that contest, Marguerite and Charles won first awards in feature writing and editorial writing, respectively, in competition with more than 200 students from 28 Maryland public and parochial schools, according to the recommendations.

Always on the honor roll in her 7 years in Baltimore's public schools, Marguerite also won a Patterson letter for scholarship, described by her principal, Dr. Chester H. Katenkamp, as one of the highest achievements the school offers.

Charles attained early recognition for scholarship at City College. His general average of 97.6 for the first semester not only led the freshman class, but was the highest in the entire student body. He also has always been an honor student.

ON DEBATING TEAM

In that year Charles achieved another rare honor for a freshman by being selected as a member of the debating team of the Carrolton Wight Literary Society. The six debaters, four seniors, a junior, and Charles, won the annual debate with the traditional rival, the Bancroft Society. The team, of which Charles still is a member, also won last year.

He is his class's representative on the student advisory and executive boards; was one of two student speakers chosen to address Community Chest workers at the kick-off luncheon for the 1946 campaign, and speaks frequently at city-wide student-panel discussions.

ADDRESSED STATE TEACHERS

He was one of five high-school students chosen to address the Maryland State Teachers Association here on October 31, and, as a member of the City College chapter of the United Nations Youth Organization of Maryland, participated in a discussion broadcast here on November 10 on Preparing Youth for the World of Tomorrow.

When a member of Boy Scout Troop No. 64, Charles won 32 merit badges, qualified as a life scout and was a pitcher on the troops' baseball team.

Motion Pictures, Radio Broadcasting, and Comic Strips in Relation to the Administration of Justice

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1948

Mr. MORSE. Mr. President, at the last meeting of the American Bar Association, Mr. Arthur J. Freund, a distinguished member of the St. Louis, Mo., bar and chairman of the criminal law section of the American Bar Association, made a very able address on the subject Criminal Law Section of the American Bar Association on Motion Pictures, Radio Broadcasting, and Comic Strips in Relation to the Administration of Justice. There has been a great demand for his speech. Therefore, I should like to have it reprinted in the CONGRESSIONAL RECORD, in the Appendix thereof, and I am informed that the cost of printing it will be $230.75. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At the meeting of this section of criminal law last year in Atlantic City, there was authorized a committee on motion pictures, radio broadcasting, and comic strips in relation to the administration of justice. With the assistance of Mr. Carl B. Rix, president of the association, a committee of the association was appointed, comprised of some of the distinguished members of this association.[1]

The problem concerns itself so far as we of the bar view it (a) with the emphasis placed by the three media upon the depiction of crime and the portrayal of the manner in which crimes of violence are committed, detached and prosecuted, and (b) the manner in which the lawyer, the judge, and the processes of law are depicted.

Mr. Rix suggested that I act as chairman of the committee, and Mr. James V. Bennett was designated as secretary. Members of the public relations committee of the association, together with officers, members of the board of governors, and important committees of the association comprise the membership of the committee, and a meeting was called for June 4, 1947, at the Mayflower Hotel in Washington.

We invited the presidents or managing officers of the national associations of the media concerned, together with the presidents of the four radio broadcasting systems, and the three comic strip syndicates to attend the Washington meeting to discuss informally the problems outlined. All of those invited, with the exception of the American Broadcasting Co., responded to our invitation. Curiously enough the American Broadcasting Co. carries over its network a very large quantity of programs devoted to the depiction of crime.

Before proceeding further with an account of the Washington meeting, may I give you my own views on the problems involved and what we hope to achieve.

It is probably fair to say that no one subject in the manifold areas portrayed in motion pictures, radio broadcasting, and comic strips receives greater emphasis than crime and the processes of the law. The listening, reading, and motion picture public is overwhelmed with the voluminous treatment of this subject, a treatment so extended and continuous as to imply that crime, its methods, techniques, and detection, and the psychical abnormalities of those engaged in criminal pursuits were the major concern and chief subject of interest of the American public from the nursery to the grave.

May we say in all fairness that we recognize the contributions which have been made by the motion picture and radio broadcasting industries in programs devoted to mass education of the highest value and on levels wholly in the public interest. We do not believe that it is necessary to concern ourselves here with the good that has been done, and which we are confident will continue to be done by these media. We are not here however, primarily, to praise Caesar, but rather to point to what we believe are some of his shortcomings.

It may be helpful first to discuss the manner of presentation of the lawyer, the judge, and the processes of the law in the three media. Our interest in this matter is not generated by motives of self-justification, but rather comes from a belief that grave harm is being done to a fundamental American institution, the administration of justice, through a course either designed or the inevitable effect of which is to breed contempt and disrespect for the key arch of a free and democratic government.

The lawyer, the judge, and courtroom procedures are all too frequently depicted in an unfavorable manner. Whereas the doctor is almost always represented as a kindly, charitable, and capable professional person, the lawyer is usually portrayed as cruel, selfish, tricky, and unethical. The judge is, also,

[1] The membership of the committee is set forth in appendix A.

often shown either to be unworthy of his high office or he demonstrates his probity through the exposure or condemnation of corrupt or stupid counsel. The delineation of court-room procedures usually strays so far from reality as to border upon the grotesque. This phase of our subject is of high importance, though we approach it with natural diffidence. The lawyer and the law's processes, seeming circumlocutions and delays have been the subject of satire and derisive humor for centuries. There is probably no other subject or group in our society which has a longer history as a target for ridicule. We know that there is some justifiable basis for this and that lawyers, possessing as they must the imperfections of ordinary mortals, are not always perfect and that the processes of the law do not infallibly operate to produce absolute justice. We cannot object with validity if instances of this character are reported or portrayed either in fact or in fiction. Such unfortunate circumstances are the exception rather than the rule, though the portrayals in the three media would lead the public to believe that the reverse were true. Furthermore, lawyers and judges, trained to and rigidly disciplined by an exacting professional code of ethics, feel generally that they are performing a vital service to society upon a high plane; and we may perhaps be forgiven for feeling that if unwarranted attacks are made upon the profession from without, the defense might appropriately also come from without our ranks. In any event, whether the legal profession may properly entertain a sense of grievance, if not irritation, upon being misrepresented and distorted, we are far more concerned with the destructive effects of such treatment upon the administration of justice in this country.

Although the lawyer, the judge, and the law have been the butt of ridicule for hundreds of years, the opportunity for mass education and the fixation of social attitudes has never been so great as now. Radio broadcasting, motion pictures, and comic strips reach millions of our people each day, whereas a century or less ago it was not possible to affect the mental processes of a people so quickly or with such continued devastating effect. The evil of the modern process as used by the three media, as we view it, is to infect the minds of the youth and adolescent with the conviction that lawyers are per se antisocial beings and that the law through the judges and courts is an instrumentality unwholesome to our welfare. We know that our Government can only operate through the law, and that if the time should come when the law cannot be enforced fairly and honestly, our Republic as we now know it will cease to exist. However, in the motion picture, radio-broadcasting studios, and in the comic strips this fundamental axiom all too frequently finds no recognition.

Perhaps something might be done by the media on the positive side. It seems conceivable that the portrayal of the dramatic incidents of the careers of great American lawyers would have a popular appeal. Possibly such portrayals of the accomplishments of John Marshall, Judah P. Benjamin, and William Howard Taft, to mention only a few, would approach in public interest analogous portrayals of Al Jolson or Louis Pasteur.

There may be other affirmative approaches in this area which the industries may be able to suggest, initiate, and carry into effect. Their record of remarkable achievements in their respective industries demonstrates their ability to attain virtually any goal so long as they are convinced that the goal is one worth achieving.

The major specification in our bill of particulars, however, has to do with the emphasis on crime, criminals, and the techniques of criminals in the three media under discussion. We are wholly aware that crime does pay the motion-picture producer, the radio broadcaster, and the comic-strip syndicates, and that in this respect the dramatization and exploitation of crime is one of the best paying features of these media. Consequently, a vast host of economic interests has developed sympathetic to the notion that crime in this sense shall continue to pay. We realize that in dealing with such vast vested interests we must overcome obstacles which are not governed ordinarily by good motives or a desire to act in good taste or completely in the public welfare. Nevertheless, we are reluctant to believe that the minds of the leaders of these large enterprises will be completely insensible to the welfare of the Nation when the grave and critical nature of the problem is clearly revealed and understood.

It was said[2] regarding the comics as far back as 1936, and it has equal applicability to each of the media today:

"Sadism, cannibalism, bestiality. Crude erroticism. Torturing. Killing, kidnaping * * *. Raw melodrama; tales of crimes and criminals; * * *. All these, day after day, week after week, have become the mental food of American children, young and old. * * *

"The repetition in word and picture of * * * bestial and degenerate scenes and characters is a * * * serious matter. Such things make their deep impression upon the plastic minds of growing children and have their dangers for the never-too-mature minds of countless adults."

More recently, Mr. Jack Gould, radio editor of the New York Times, wrote in the March 2, 1947, issue:

"Radio programs heard by children again have moved to the forefront of controversial subjects in broadcasting. Several parent-teacher groups in various parts of the country have indicated the 'crime shows' and the hair-raising serial 'thrillers' as psychological dangers to impressionable youngsters as possible stimulants to juvenile delinquency."

Outside of the classroom, the home, and the church, the motion picture, the radio, and the comic strips constitute the most powerful existing educational influences upon the mental growth of the child and adolescent. The usual routine is for the child to read the funnies, later he turns on the radio, and in his more extended leisure he attends the movies. The sequence is variable but the ingredients of the diet are staple.

In each step, the emphasis in his menu is crime and criminals. In this there is often the seasoning of illicit sex relations. No one of the media alone at any one time or over any extended period can be said to be more harmful than another, but the insistent and continued repetition of these influences, each complementing the other, must produce a deteriorating effect upon the mind of the impressionable. Immature and undeveloped minds are moulded to the concept that crime and criminal conduct is the norm of human behavior. Ethical concepts are twisted from reality, weakened, and all too frequently destroyed.

In addition, crime techniques are blueprinted with meticulous accuracy. Criminal methods are set forth step by step, thereby giving the recipient an accurate handbook for antisocial and often criminal conduct.

To illustrate what we have in mind, may we mention one representation in each media merely as an example of the evil we seek to correct. They are the comic strip Kerry Drake, the motion picture The Killers, and the radio broadcast Gang Busters. Each, however, is highly successful in its field, each makes the presentation of crime pay the producer enormously, and each has stimulated a number of competitors, or else is the result of prior competition or prototype. For example, The Killers was a contemporary of The Outlaw. The financial success of those sordid portrayals of crime was followed by Duel in the Sun, another dramatic account of the same character. This in turn apparently encouraged the production of Brute Force, of which Life magazine in the August 11, 1947, issue, has this to say: "The production is a turn-about moral code which portrays each representative of law and order almost as a case history of depravity, while all the lawbreakers seem like real nice fellows."

We are aware of the body of opinion of some of the social service profession and psychiatrists, that children and adolescents are in need of emotional release afforded by the portrayal of criminal and sadistic exploits. While children do need a certain amount of adventure in their entertainment, there must be a point beyond which the law of diminishing returns begins to operate.[3] We think that current practices in the three media have long demonstrated the operation of that rule, and we do not hold with the minority of experts who defend these programs. While juvenile crime is on the increase in almost every locality in this country, the surprising circumstance is that the rate is not higher than it exists at the present time. However, the effects of the weakening of the moral codes and ethical concepts cannot be measured with any accuracy by crime rates or statistics. With almost every child and adolescent bombarded many times daily with the jargon of the criminal and the horrors and depraved methods of his activity, we should rejoice that we have as much normal and rational child and adolescent behavior as we do.

It is said that the criminal is always brought to punishment, and that thereby the moral lesson is given that the way of the transgressor, if not shown as hard, is at least futile. However, the overwhelming majority of opinion, both lay and professional, is of the view that the eventual capture and punishment of the miscreant in no real sense mitigates the evil created by the lurid portrayal of his criminal activities. On the general subject we quote briefly from an article by Bosley Crowther in the New York Times of May 11, 1947. Mr. Crowther speaks of motion pictures, but his views are equally valid to each of the media. He says:

"For a business which makes so much pretense of being explicitly moral and which proudly polices its members with a pious production code, the motion-picture business has been pulling some mockeries of late. Meekly this side-line observer would like to ask who's kidding whom? Do the industry's moralistic guardians think that the public is being easily fooled, or are some of its less considerate members slyly slipping the business the bird?

"We refer, of course, to the several recent pictures—and others coming up—which emphasize baser passions for no other than sensational effects. * * * Do these films conform to the industry's actual notion of moral responsibility? And, more than that, are they such entertainment as meet the test of public interest and public weal? * * *

"Again we repeat our questions: Is this regarded as fair and responsible by the industry? And does this technique—and the picture—meet the test of public good? We ask them again because it strikes us that the fiber of some of the people in films has shown signs of disintegration under the pressure of making sales. Last week we saw a full-page advertisement in a weekly trade magazine calling attention of exhibitors to a forthcoming film. It promised tawdry love and vicious murder. The kind that sells millions of newspapers—and millions of box-office tickets. * * *

"Invariably the makers of such pictures excuse their admittedly coarse wares by pro-

[2] John K. Ryan, How Moral Are Comics? Forum, May 1936, p. 301.

[3] Radio Crime Drama, Rowland, Educational Research Bulletin (Nov. 15, 1944), College of Education, The Ohio State University, vol. XXIII, No. 8, p. 210.

testing that they are only 'giving the public what it wants.' And they righteously remark that 'the transgressors' are always punished in the end. How absurd and hypocritical. The public's taste for films is as high as the imaginations and the talents of film makers are able to reach. And as for the transgressors being punished—what's the difference after the damage has been done?"

As Mr. Crowther points out, productions of this category are on the increase, and we could cite the figures to demonstrate this. As a result, the more wholesome productions in each of the media decreases by the operation of a law as inexorable as Gresham's law in economics—the bad productions tend to drive out the good.

The situation today in which we find the three media may be compared to the condition which prevailed in this country prior to 1890, when the Sherman Antitrust Act was passed and in 1887, which marked the creation of the Interstate Commerce Commission. A period of rapid business expansion resulted in a large number of abuses demanding control and correction. The railroads and business interests generally were either unable or unwilling to correct harmful practices, and the forces of competition often made it impossible for industry alone to correct the evils. As a result, Congress passed regulatory legislation which has been augmented through the years.

The three media have likewise had a tremendous economic expansion over the past quarter century and this very circumstance has created problems which require adjustment. I am sure that every lawyer here believes that regulation of each of the media is equally possible under our constitutional government, both National and State. Indeed, Judge Justin Miller, now president of the National Association of Broadcasters, and a former chairman of this section, sounded a warning in a letter to the St. Louis Post-Dispatch of April 20, 1945, wherein he said: "Only by intelligent anticipation of public reaction and by equally intelligent self-discipline can we prevent legislative intemperance."

The very essence of American democracy is founded upon freedom of expression. Legislative restrictions upon the three media, or any one of them, to restrict their free expression would probably entail administrative control resulting in some form of censorship. Some one or some group would have to determine what presentation was in the public interest and what was harmful to that interest. I think that the American public would deplore such legislation and it is my hope that it will never become necessary. However, with the present situation which confronts us, it might be advisable to study the problem of drafting legislation in conformity with the powers granted Congress by the National Constitution, and to make a like study for the States. As I have indicated, I should deplore the enactment of any such laws; we know that many in the eighties felt the same way concerning restrictive legislation upon business, but it is clear that unless conditions improve in the media, legislation is inevitable.

As a corollary, consideration can be given by the American Bar Association, through an appropriate group or section, acting alone in the name of the association, or in conjunction with other organizations in the public interest, to appear before the Federal Communications Commission and oppose the renewal of a license of a key radio broadcasting station on the ground that the great volume of its programs devoted to crime portrayals warrants the Commission in refusing to grant the renewal of the license. While the Commission, as we understand its public views, has no desire whatever to censor the content of radio-broadcast programs, the law directs the Commission to grant licenses and renewals only if the public interest, necessity, and convenience will be served thereby. Such intervention by the American Bar Association would focus national attention on the subject we are considering here today. A denial of license renewal by the Commission on such ground would produce results which no one can now foresee with any clarity or precision.

Are the self-imposed and self-regulated codes in the motion-picture and radio-broadcasting industries operating effectively in the public interest? We are advised that there is no such code formulated and in operation for the comic strips except as such small restraint comes from the syndicates which sell them and the newspapers which print them. It is obvious that the contents of this medium differ in no substantial respect with reference to the treatment of crime from the other two media. It is, therefore, entirely fair to inquire whether the codes which are in effect, really accomplish as well as they should their stated purpose to achieve decency and operate in the public interest.

It would appear to one unacquainted with the industries except as an interested observer that the codes are not operating effectively. Perhaps with competition so keen and with the tremendous financial stakes involved, the industries cannot effectively regulate themselves without some form of independent supervision.

We appreciate that the three industries cannot have one regulatory code. If the codes are to operate, there must be separate ones for each industry, and yet there should be common approaches in each with a like objective. We submit that consideration be given to the advisability of a complete reexamination of the codes now existing, both formal and informal, with special emphasis upon the desirability and feasibility of injecting administration and supervision by outside, objective resources concerned not only with the welfare of the industry but also of the public.

The third and final suggestion for consideration is one which combines the objectives of the two preceding. Facts, in a field so large and important not only to those engaged in the industries but also to the public at large, are difficult to determine. It may appear desirable to create an independent commission of interested persons and experts to study upon the highest professional basis the entire subject matter and to bring back findings and recommendations. A survey of this character would require the assistance of many persons in many fields. It would require continuing supervision and direction. The cost of such a survey and the method of its financing would also be an important consideration.

We are dealing with great forces affecting the lives of many millions of our people and the millions yet to come. If such a survey could be productive of substantial progress the time and funds devoted to its formulation and publication could not, and should not, be counted in dollar value. A revelation of the facts so ascertained would do much to hasten proper self-regulation, should it be found, as many of us believe, that there are abuses which require correction. The draft of proposed forms of legislation, if such recommendations were made by the group, might in itself produce results that would eliminate the need for such legislation.

The views set forth here were not presented in detail at the Washington meeting of June 4, 1947, but their general substance was there given. A large majority of those appointed on behalf of the American Bar Association were present and the media were represented by a distinguished group of representatives.[4] There was a full, free, and frank discussion of the subject matter, and a general concurrence of views that the media would approach the problems with sympathy in a genuine endeavor to reach a corrective solution. A résumé of the proceedings of the meeting appeared in a recent issue of the American Bar Association Journal,[5] and I shall not repeat them here.

There was a disposition during the meeting on the part of some of the representatives of the media to doubt the existence of any problem. On the one hand, it was said that lawyers, judges, and the processes of justice were not unfairly portrayed. An elaborate self-analysis of motion pictures produced in 1946 was offered to substantiate this view. There were those of the media who took the position that no harm was done by the depiction of crime and that the portrayal of such episodes were a part of our modern way of life. The Washington meeting concluded with an agreement that the representatives of the media would report the views expressed to their respective organizations and that another meeting of the entire group would be held in the late fall of this year, either in Washington or New York. To this end, a committee of members of this association and those of the media has been appointed to prepare an agenda for the fall meeting.

We are deeply gratified that the National Broadcasting Company has this month officially recognized the problems we seek to correct. In a code formulated for its future programs, it is provided among other corrective measures that:

"Law, justice, and officers of the law should be portrayed without disparagement or ridicule, but with respect."

It gives further recognition to our position that:

"The vivid, living portrayal of crime * * * dramas on the air, has an impact on the juvenile, adolescent, or impressionable mentality that cannot be underestimated."

As a first corrective functional operation, the National Broadcasting Co. will broadcast its crime programs at hours when children are supposed to be in bed and fast asleep. With this explicit recognition of the harmful effects of these programs by the industry we may expect even better results.

The National Association of Broadcasters has also taken official notice of the harmful effects of the portrayal of crime.[6] It proposes that crime should never be presented in a favorable light and that references to kidnaping should be barred. While this may be a short step, it is one in the right direction.

We are not expecting immediate results of our efforts and with forces so deeply entrenched we cannot hope that success will come to our endeavors except through the process of discussion with those of the media and a program of public enlightenment. We are gratified that the representatives of the media have agreed to sit down with us and consider the subject in a friendly cooperative atmosphere for if there is a will to carry out the objectives we seek, a way will somehow be found to reach a solution of the problems.

I am hopeful that more portrayals of a positive character may be produced; portrayals of the lives and experiences of great lawyers, noble judges, and episodes depicting the majesty and dignity of the law. We have embarked upon an important project affecting the lives of great numbers of our citizens. We are confident of a large measure of accomplishment.

---

[4] A list of those present on behalf of the media is set forth in appendix B.

[5] July 1947, issue; vol. 33, p. 649.

[6] The complete statement of the National Broadcasting Co. is set forth in appendix C. It will be noted that the premise we seek to establish, namely, the harmful effects of the type of programs we discuss are recognized and a specific and positive approach will be used to meet them.

APPENDIX A

COMMITTEE ON MOTION PICTURES, RADIO BROADCASTING, AND COMIC STRIPS IN RELATION TO THE ADMINISTRATION OF JUSTICE

FOR THE AMERICAN BAR ASSOCIATION

Carl B. Rix, former president, American Bar Association, Wells Building, Milwaukee, Wis.

William L. Ransom, editor-in-chief, American Bar Association Journal, 33 Pine Street, New York, N. Y.

Howard L. Barkdull, chairman, house of delegates, American Bar Association, Union Commerce Building, Cleveland, Ohio.

Loyd Wright, member, board of governors, 111 West Seventh Street, Los Angeles, Calif.

George Maurice Morris, chairman, public relations committee, American Security Building, Washington, D. C.

Judge Robert G. Simmons, chairman, section of judicial administration, Supreme Court, Lincoln, Nebr.

William Clarke Mason, member, board of governors, 123 South Broad Street, Philadelphia, Pa.

Henry Cole Bates, member, public relations committee, 1 Madison Avenue, New York, N. Y.

James D. Fellers, national chairman, junior bar conference, Apco Tower, Oklahoma City, Okla.

W. Carloss Morris, Jr., national director, public information program, junior bar conference, 1302 Rusk Street, Houston, Tex.

Charles B. Stephens, First National Bank Building, Springfield, Ill.

Tappan Gregory, president, American Bar Association, 105 South LaSalle Street, Chicago, Ill.

Judge John J. Parker, Federal Building, Charlotte, N. C.

Judge James P. Alexander, Supreme Court, Capitol Station, Austin, Tex.

Judge Bolitha J. Laws, United States District Court for the District of Columbia, Washington, D. C.

Hon. Earl Warren, State Capitol, Sacramento, Calif.

Arthur T. Vanderbilt, 744 Broad Street, Newark, N. J.

Wayne L. Morse, Senate Office Building, Washington, D. C.

James V. Bennett, secretary, criminal law section, Department of Justice, Washington, D. C.

Arthur J. Freund, chairman, criminal law section, 506 Olive Street, St. Louis, Mo.

APPENDIX B

COMMITTEE ON MOTION PICTURES, RADIO BROADCASTING, AND COMIC STRIPS IN RELATION TO THE ADMINISTRATION OF JUSTICE

FOR THE MEDIA

Donald M. Nelson, president, Society of Independent Motion Picture Producers, 6233 Hollywood Boulevard, Hollywood, Calif.

Robert W. Chambers, research director, Motion Picture Association, 1600 Eye Street NW., Washington, D. C.

Theodore W. Smith, assistant vice president, Motion Picture Association of America, Inc., 28 West Forty-fourth Street, New York, N. Y.

Sydney Schreiber, general counsel, Motion Picture Association of America, Inc., 28 West Forty-fourth Street, New York, N. Y.

Judge Justin Miller, president, National Association of Broadcasters, 1771 N Street NW., Washington, D. C.

Col. J. Hale Steinman, chairman of Federal laws committee, American Newspaper Publishers Association, Lancaster, Pa.

Elisha Hanson, counsel for the American Newspaper Publishers Association, 370 Lexington Avenue, New York, N. Y.

Joseph H. Ream, vice president, Columbia Broadcasting System, 485 Madison Avenue, New York, N. Y.

W. K. Hutchinson, International News Service, 235 East Forty-fifth Street, New York, N. Y.

Kent Clark, public relations, Motion Picture Association of America, Inc., 28 West Forty-fourth Street, New York, N. Y.

Eugene Juster, public service manager, National Broadcasting Co., RCA Building, Radio City, New York, N. Y.

Carlton Smith, general manager, National Broadcasting Co., RCA Building, Radio City, New York, N. Y.

Benjamin M. McKelway, Washington Evening Star, American Society of Newspaper Editors, Washington, D. C.

Charter Heslep, Washington manager, Mutual Broadcasting System, Inc., 1440 Broadway, New York, N. Y.

SUPPLEMENTAL APPENDIX B

COMMITTEE ON MOTION PICTURES, RADIO BROADCASTING, AND COMIC STRIPS IN RELATION TO THE ADMINISTRATION OF JUSTICE

FOR THE MEDIA

Others invited who have indicated an interest to participate:

Cranston Williams, general manager, American Newspaper Publishers' Association, 370 Lexington Avenue, New York, N. Y.

Wilbur Forrest, former president, American Society of Newspaper Editors, New York Herald Tribune, New York, N. Y.

Dr. Frank Stanton, president, Columbia Broadcasting System, Inc., 485 Madison Avenue, New York, N. Y.

Mollie Slott, general manager, Chicago Tribune-New York News Syndicate, Inc., News Building, New York, N. Y.

Barry Faris, editor in chief, International News Service, 235 East Forty-fifth Street, New York, N. Y.

Ward Greene, general manager, King Features Syndicate, 235 East Forty-fifth Street, New York, N. Y.

Eric Johnston, president, Motion Picture Association, 28 West Forty-fourth Street, New York, N. Y.

Edgar Kobak, president, Mutual Broadcasting System, 1440 Broadway, New York, N. Y.

Lawrance Rutman, general manager, United Feature Syndicate, 220 East Forty-second Street, New York, N. Y.

Robert McLean, president, the Associated Press, Bulletin Building, Philadelphia, Pa.

Hugh Baillie, president, United Press Association, News Building, New York, N. Y.

N. R. Howard, president, American Society of Newspaper Editors, Cleveland News, Cleveland, Ohio.

A. L. Ashby, general counsel, National Broadcasting Co., Inc., Radio City, New York, N. Y.

Niles Trammell, president, National Broadcasting Co., Inc., Radio City, New York, N. Y.

George T. Delacourte, Jr., president, Association of Comic Magazine Publishers of America, 149 Madison Avenue, New York, N. Y.

APPENDIX C

NBC BARS MYSTERY PROGRAMS BEFORE 9:30 P. M., EFFECTIVE JANUARY 1

(Statement of the National Broadcasting Co. of September 15, 1947, released to the press)

ATLANTIC CITY, N. J., September 13.—The National Broadcasting Co. convention here Saturday unanimously adopted a proposal by NBC that, effective January 1, 1948, "no series of detective-, crime-, or mystery-type programs" will be broadcast over NBC before 9:30 p. m., New York time.

This action, the object of which is "to reduce the exposure of juvenile and adolescent minds to crime suggestion," was taken at a closed meeting of NBC executives and representatives of 160 of the network's stations.

The proposal in full follows:

"Dramatization of crime, mystery, and detective stories, while a recognized and justly popular form of entertainment and literature, requires particularly mature and discriminating judgment in radio presentation.

"While mystery and crime stories are as old as literature itself, the vivid, living portrayal of such dramas on the air has an impact on the juvenile, adolescent, or impressionable mentality that cannot be underestimated.

"In order further to reduce the exposure of juvenile and adolescent minds to crime suggestion, effective January 1, 1948, no series of detective-, crime-, or mystery-type programs will be broadcast over the National Broadcasting Co. network before 9:30 p. m., New York time. Crime and mystery programs broadcast at 9:30 p. m., New York time, or after, will not be broadcast in the Mountain and Pacific coast time zones before 9 p. m., local time, or in the Central time zone before 8:30 p. m., local time. Individual delays—i. e., use of a recording of the original 'live' program—will be permitted on stations in these zones whenever the client does not decide to do a live repeat broadcast.

"It is important, therefore, to reiterate at this time, for the guidance of producers and sponsors of such programs, and for the information of the general public, the policies of the National Broadcasting Co.:

"1. No program will be broadcast which glorifies or justifies crime, criminals, or any antisocial practice, or which treats these matters in a cynical or condoning fashion.

"2. Lurid, overly realistic dramatizations of the morbid or criminal aspects of the story must be avoided: detailed portrayal of murders, electrocutions, hangings, third-degree methods, physical agony, torture of any kind, cruelty to children or animals, are not acceptable for broadcast.

"3. Programs which by virtue of detailed descriptions of the technique and methods of crime become blueprints for imitation by impressionable listeners must be avoided.

"4. Revenge shall never be justified as a motive. Episodes involving kidnaping of children, rape, adultery, or other illicit relationships are not acceptable. Suicide will not be detailed in method or presented as a satisfactory or justifiable solution to any human problem.

"5. No mention, direct or implied, of sex crimes, prostitution or sex perversions will be permitted.

"6. Law, justice, and the officers of the law should be portrayed without disparagement or ridicule, but with respect.

"7. Crime must always be punished, either specifically or by implication. Crime is not a subject for comedy.

"8. News of crime will always be presented factually. No appearance of persons involved or featured in current criminal or morbidly sentimental news stories will be allowed."

Automobile and Truck Exports

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, many inquiries are made as to the exports of automobiles and trucks. The following official table shows that the 1946 shipments of automobiles, trucks, busses, chassis, and parts equalled nearly one-half billion dollars. The

table also shows that for the first 10 months of 1947 these exports had a value of $959,000,000, and that the 1947 exports will be somewhat over a billion dollars in value.

The table is as follows:

Automobiles, trucks, and busses, and parts: United States exports of domestic merchandise, 1946 and January to October 1947

Item	1946 [1]		1947 (January to October) [1]	
	Number	Value	Number	Value
Trucks and busses, and chassis, new	137,278	$197,900,244	185,305	$317,183,834
Automobiles and chassis, new	116,944	122,500,568	226,632	282,943,892
Truck, bus, and automobile parts	[2]	157,387,867	[2]	238,409,654
Total, new	[3]	477,788,679	[3]	928,537,380

Brotherhood Week

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. WILEY. Mr. President, the week of February 22–29, 1948, will be National Brotherhood Week. For this occasion I have prepared a statement on the topic of the unity of all religions, races, and colors in America. I ask unanimous consent for the printing of the text of my statement in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AMERICAN BROTHERHOOD WEEK—PROTESTANTS, CATHOLICS, AND JEWS UNITE IN HARMONY

Mr. President, in accordance with the proclamation of the President, during the week from February 22, to February 29, 1948, America will celebrate National Brotherhood Week, which is sponsored by the American Brotherhood of the National Conference of Christians and Jews. The purpose of this week is obvious. It is to draw attention to the paramount need in our times for Americans of good will—of all races, all creeds, and colors to work together harmoniously as children of the one universal God, as brothers unto another.

The first suggestion for Brotherhood Week came from a Catholic priest in Denver in 1932. The idea took fire and the first observance was held in 1934. Since then, Brotherhood Week has expanded so that at the present time, each year countless newspapers, magazines, and radio stations throughout the Nation generously cooperate in helping to foster its noble ideals.

RELIGIOUS BOOK WEEK

Sponsorship of this week is but one of the activities of the National Conference of Christians and Jews of which President Truman is honorary chairman and Robert P. Patterson, general chairman, and on which a very distinguished panel of American citizens in all phases of our national life ably serve. Among the other activities of the National Conference is Religious Book Week. The fifth annual Nation-wide Religious Book Week was celebrated in May of last year, and over 100,000 book lists featuring 200 books for adults and children were distributed. This year Religious Book Week will be celebrated during the second week of October.

PRESERVATION OF RELIGIOUS RIGHTS

Among the other activities of the National Conference are those handled by its Committee on Human Rights. This committee has, for example, called upon the United Nations to investigate the state of religious liberty in Yugoslavia involving the trial and imprisonment of Archbishop Stepinac and anti-Catholic activity. It has also recommended that the United Nations give favorable consideration to the proposed convention making illegal by international law the persecution of groups of people for the reason of their race, language or political opinion. The National Conference also has commissions on educational organization, on community organizations, and on religious organizations working actively with Protestant, Catholic, and Jewish groups throughout the Nation in fostering better understanding among all Americans. It is reported that once every day throughout the year, and many times within the same day, trio teams of a minister, a priest, and a rabbi or laymen of the three faiths appear before audiences from one coast to the other, thus representing the fundamental unity of the three great religious creeds of America.

I feel that it is deservant that recognition be paid to the outstanding work of the National Conference and to all those who participate in Brotherhood Week and the Conference's other activities in order to make America a land of still greater harmony and unity.

ORIGIN OF NCCJ

The national conference was established by such great leaders as Charles Evans Hughes, Newton D. Baker, Dr. S. Parks Cadman, Roger W. Strauss, and Carlton J. H. Hayes. The First World War, as we all recall, was followed by a period of widespread racial and religious prejudice, which was best represented by the spread of the Ku Klux Klan. We in Wisconsin successfully met the challenge of the Klan, as did all of the other States of the Union eventually. But knowing that much intolerance still existed, the great Americans whom I have mentioned founded this inspiring organization. Its president, Everett R. Clinchy, has performed invaluable work in the field of better human relations and has contributed mightily to the success of the national conference's endeavors.

INTERNATIONAL HUMAN RIGHTS

In August 1946 an international conference of Christians and Jews was established. In August 1947 an international emergency conference to combat anti-Semitism was held in Switzerland and widely attended by representatives of many nations. Short- and long-term recommendations were prepared by this emergency conference and detailed suggestions were made for the setting up and operation of councils of Protestants, Catholics, and Jews in all countries. The members of the conference signified the importance of close relations with the United Nations and with its related organizations, particularly the United Nations scientific, educational, and cultural organizations so as to secure their cooperation and assistance in the fight to eliminate hatred.

NEED FOR BROTHERHOOD

Edward Markham told us, "The crest and crowning of all good; life's final star is brotherhood." In the Old Testament, in the Book of Genesis, it is asked, "Am I my brother's keeper?" as indeed you and I are. Today 20 centuries after the coming of the Prince of Peace, mankind is still unfortunately widely divided. Barriers exist everywhere between nations, between races and religions. It is up to us in America to set a standard for the elimination of these barriers, to demonstrate conclusively that we, in the words of our first President, George Washington, "give to bigotry no sanction." It is, of course, in the week of Washington's birthday that Brotherhood Week is customarily celebrated.

Among the devices used by the sponsors of American Brotherhood Week in my own and other States have been publicity materials, such as posters and folders; program aids for educational, religious, civic, and other organizations; the sending out of copies of plays and pageants; and making available speakers for schools, clubs, and other organizations.

We in America have always believed that every man should be judged on the basis of his own merit, not on the basis of the color of his skin, nor on the basis of the temple, cathedral, or synagogue in which he worships, nor on the basis of the land from which his father comes, nor the accent of his words, nor the cultural mannerisms of his people. Yes; he should be judged only on the basis of his own intrinsic worth, his character, his deeds, his relations with his brother men.

ANTI-SEMITISM IN AMERICA

Americans well remember the days of the Ku Klux Klan, the Know Nothing Party, the APA, and other hatemongering groups. We have witnessed in the past outbursts of anti-Catholic feeling and particularly in the recent past instances of anti-Jewish sentiment. This last problem remains as one of the real problems of our American Republic. It is an unfortunate fact that even in this modern day and age there is intolerance against American members of the Jewish faith, in spite of the fact that they have proven that they yield to no group in their patriotism, in their love of country, in their complete devotion to human liberty. I do not want to magnify this problem out of proportion, but I do wish to point out that there has been unfortunately unjustified hatred and envy and fear of the members of the Jewish faith, in spite of their magnificent contributions to every phase of American life—in medicine, in education, in the field of entertainment, in statesmanship, in law, and, yes, on the battlefield.

AMERICA'S JEWISH VETERANS

In this latter connection, one of the most interesting works that has been published is the volume, American Jews in World War II—the Story of 550,000 Fighters for Freedom, by I. Kaufman. This work reports the monumental undertaking of the Bureau of War Records of the National Jewish Welfare Board of chronicling the splendid contributions made to American victory by the 600,000 Jewish men and women who served in

our armed forces—the equivalent of 40 Army divisions. (I have previously paid tribute to this record in the Senate on June 4, 1946.) Incidentally, I might note that the work of the National Jewish Welfare Board earned from the War and Navy Departments hearty joint commendation for "exceptional aid in the successful prosecution in the war and in the preservation of the enduring values of American democracy."

TEN THOUSAND FOUR HUNDRED AND TWENTY-SIX WHO GAVE THEIR LIVES

The volume shows that the total casualties of members of the Jewish faith who served in the armed forces in World War II numbered 35,157, of which 10,426 made the supreme sacrifice. A total of 26,931 awards were given to American Jews, including all of the major medals and other tributes to heroism. In addition, members of the Jewish faith won more than 26,000 Purple Hearts, including those received by the 8,000 who died in action and the 18,000 who were wounded in action. The distribution of Jewish servicemen by services and activities was as follows: 80.59 percent in the Army, 16.6 percent in the Navy, 1.14 percent in the Coast Guard, and 1.81 percent in the Marine Corps. It should be noted that many of these figures are of necessity incomplete and it is estimated, for example, that the number of Jews killed in action may actually be as much as 15 to 20 percent higher than the number listed.

In volume 2 of this monumental work to which I refer, there is a list by State of origin of many of the men and women of the Jewish faith who died in their country's service or who were wounded or who have won awards, including many pages listing men from our own State of Wisconsin.

ALL AMERICAN VETERANS DESERVE TRIBUTE

This record is comparable to the record made by Americans of all creeds and colors—Catholic, Protestant, white, Negro. Tribute is deserved by all of them, not because they are members of any one group, but because they are members of the American community.

It is in this spirit of unity that American Brotherhood Week should be celebrated this year and every year.

CONCLUSION

America has grown great because she has accepted on a free and equal basis men and women of all the lands on earth and all the races and creeds on earth and enabled them to make their full contribution to our economic, political, social, and spiritual life. Let us celebrate this Brotherhood Week and then make of each of the other 51 weeks of this and every year a week of true brotherhood between all Americans.

Economy in Government

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. LUCAS. Mr. President, sometime ago our colleague the senior Senator from Virginia [Mr. BYRD] wrote an article entitled "Economy in Government," which was published in the Elks magazine for December 1947. Recently a friend of mine in Illinois sent this address to me and requested that I have it printed in the Appendix of the RECORD. I ask unanimous consent that it be so printed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ECONOMY IN GOVERNMENT

(By Senator HARRY F. BYRD, of Virginia)

The cost of living in the United States—excluding taxes—for food, clothes, rent, etc., is almost twice its prewar emergency level of 1939.

The cost of governments in the United States—Federal, State, and local—is nearly three times the total 1939 governmental outlay, and the cost of the Federal Government alone is four times its 1939 expenditures.

Gross personal income in the United States—including pay-roll deductions, but excluding corporate income—is two and a half times the national pay check.

Direct personal taxes and payments collected by all governments in the United States—including taxes and payments withheld, but excluding corporate tax payments—are nearly nine times the 1939 take.

Separately, these four accepted facts are more widely discussed than the weather. Together they make a devastating case against the high cost of government and demonstrate conclusively that increased taxes are a predominant factor in the high cost of living.

While States and localities are just now shifting into high gear on postwar programs for which their current revenue seems generally to be insufficient, most of the tax increases to date, since 1939, have been in Federal assessments. Two efforts to reduce the taxes this year have failed.

Since the budget was submitted we have virtually committed ourselves to future foreign assistance which is unpredictable as to duration and ultimate cost. It is certain, however, that this program precludes the wisdom of Federal tax reduction unless it is accompanied by a substantial decrease in Government spending for other purposes.

The minimum figure suggested for this world relief program is $20,000,000,000. The magnitude of this program, which is proposed as a repellent to expanding communism, may be seen when it is compared with a total of $16,000,000,000 of Federal expenditures in the seven "emergency budgets" for the years 1932–38, inclusive. These were the pump-priming budgets of the depression era, which included AAA, CCC, FERA, WPA, PWA, HOLC, Resettlement, etc.

The importance of this comparison is forcefully significant when it is realized that these "emergency budgets" totaling $16,000,000,000 for home relief were accompanied by budgets for regular governmental functions which averaged less than two and one-half billion dollars a year; whereas now we propose to spend $20,000,000,000 at a greater annual rate in "foreign relief budgets" at a time when the President tells us that the Federal budget minimum is $37,500,000,000, of which nearly $33,000,000,000 is for regular Government functions and outlays, exclusive of foreign relief. This, broadly and briefly, is the Nation's postwar problem. It is as serious as it is perplexing.

The outstanding factors in the problem are these:

1. Taxes—especially Federal taxes—are a predominant quantity in our high cost of living.

2. The American people will not permit starvation abroad, any more than they will at home.

3. There is no irresistible pressure from home upon Congress to deflate the quadrupled peacetime Federal expenditures, ordinary or otherwise.

With respect to taxes, the President's recent economic report shows that the personal tax bill—paid directly to governments by individuals—accounts for more than $1 in every 10 in the cost of living. When the excise taxes on numerous items of merchandise, amusement, etc., and other indirect taxes are added, everybody's tax bill is more than doubled.

No current consideration of taxes should omit the fact that taxes on business have been at a point of diminishing returns for some time. This means reluctance to expand production, which in turn is one of the prime elements of inflation. Inflation—stemming largely from taxes which stifle business incentive—plus over-burdensome taxes on individuals equal high cost of living. Inflation is an abnormal economic condition which does not touch all segments of the population with the same degree of intensity. Therefore, some suffer. Lower prices and lower taxes, with reasonable income and profits, would be better for all.

With respect to foreign assistance, the people of this country are not of a nature to stand by while humans starve anywhere. We will feed the hungry without question. But beyond this, we owe it to ourselves to determine our limitations on ventures into global subsidies of debatable value because communism would thrive just as lustily on American insolvency as it does on distress in other areas.

Neither our own people nor those who would accept our aid should ever forget that the might of America lies in our strength at home—our fiscal solvency, our productive capacity under free enterprise, and our ability to finance our obligations without crushing taxation. Our financial stability is far more urgent for freedom in the world than any program of international subsidies which would severely strain our economy. Fiscal instability in the United States would serve the enemies of democracy far more than any lethal weapon that could be devised. By the same token our financial soundness is the only hope for those who seek our help. Without it there would be no bulwark against communism, and freedom could not survive either here or elsewhere.

With respect to the cost of government which we now not only indulge but condone, by apathetic acceptance, we are spending this year more than $30,000,000,000 for so-called ordinary Federal activities, exclusive of foreign aid. Unless this extravagance is curtailed with force and dispatch, this second full postwar budget may become the peacetime base for Federal budgets of the future.

We can pay such bills only by continuation of the present onerous tax rate against a minimum national income of $150,000,000,000 a year. If, in addition, we should continue spending four to five billion dollars a year for foreign aid, as we are this year, we can pay the bill at the present tax rate only if our national income is around $175,000,000,000 a year. Prior to the recent war-emergency years the national income for the best year in all our history was $83,000,000,000, or less than half of the $175,000,000,000. There is no more reason to expect perpetuation of the present inflated income than there is to expect perpetuation of the present inflated costs of living, and there is already a loud and persistent clamor for tax reduction.

So, on the basis of cold facts and reasonable expectancy, the absolute necessity for cutting ordinary costs of government and moving cautiously on foreign subsidies is clearly obvious. Not only is the need apparent, but most of us actually have observed both waste in Federal operations, and places where expenditures could be eliminated entirely without impairing either security or essential service. To this date there is no irresistible demand upon Congress to ferret out the nonessentials and waste.

In fact, economy in government is still unpopular. A whole generation nearly reached maturity during 17 years of deficit financing by the Federal Government. The prolonged period of heavy peacetime spending has hardened too many people to the misguided acceptance of a grant as a gift. Too

many have come to regard government as a third party when, indeed, we ourssives are the Government. The Government's wealth is no greater than our own collective possessions—they are the only wealth of the Government. Government debt is our debt. When we receive money from the Government, it's our own money. If it pays you a dollar, you can wager it will cost you more than a dollar in the end, for the Government is not noted for administrative economy.

Red tape and overhead are not the only extra added costs to Government spending—especially when it is deficit spending. In all those years of spending more than we had, in peace and war, we piled up a national debt of $258,000,000,000, which today is costing $5,000,000,000 a year in interest alone. That puts the first $35 on everybody's tax bill. Payment of the interest involves the Government's integrity, and it cannot be cut until the debt is reduced.

There is one other item which is virtually irreducible, and that is refunds of taxes collected in excess of amounts due. This runs to more than $2,500,000,000 a year. These excessive collections are largely the result of the withholding system. Some social-security payments and other expenditures, more or less in the nature of trust obligations, also are in the untouchable category. All of these, including the interest payments total about $10,000,000,000, or a little more than a fourth of the entire Federal budget.

Neither national defense nor the Veterans' Administration should be overlooked. Every other item of expenditure should be scrutinized for proper reduction. If functions cannot be curtailed, economy can almost certainly be applied to administration.

National defense is a $10,500,000,000 item, and no one would do anything to impair our military securfity, but the War Department still is employing one civilian for every two men in uniform. It is equally difficult to understand the Budget estimate that the peacetime per man cost of uniformed personnel is nearly 98 percent of the per man cost in the recent war. The per capita cost is now placed at $6,790. In wartime it was $6,960. The difference is less than 50 cents a day.

The budget figure for veterans' affairs is $7,500,000,000 a year. No one would deprive the veterans of their benefits and services, but there is an employee in the Veterans' Administration for every 70 veterans of all wars. These employees total more than 200,000. Veterans themselves have possessions. They pay taxes. They have all the responsibility of citizenship. They stand to gain as much as others through more efficient administration and service.

The items mentioned constitute about seven-eighths of the Government in terms of ordinary Federal budget expenditures. It is probable that the percentage of reduction should be greatest in the remaining eighth.

Congress, in the past session, made some cuts, but they were little more than a token reduction. They must be deepened and broadened in the next session.

There are still 2,000,000 civilian employees on the Federal pay roll. That is twice the number employed in the prewar emergency year 1939. It is more than twice the total membership of the BPOE.

The Government still operates its Federal activities through more than a thousand agencies, many of which duplicate effort and overlap authority such as the score of agencies in the field of housing.

The Federal Government is still paying out on the average of three and a third billion dollars a year in domestic subsidies and grants, all of which are accompanied by Federal control over all who accept them, whether they are State and local governments, or individual including businessmen, farmers, etc.

We fought the recent war at tremendous personal sacrifice for freedom under democratic government. Public frugality and private industriousness are the requirements we have overlooked in 2 years of effort to consolidate the peace. Without these there may be uneasy peace, but not contentment.

Third Party Theme Song: "I'm Wild About Henry"

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. REED. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial column entitled "Third Party Theme Song: 'I'm Wild About Henry'" by Dan Kidney, from the Indianapolis Times of January 10.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIRD PARTY THEME SONG: "I'M WILD ABOUT HENRY"

(By Daniel M. Kidney)

DEAR BOSS: Why President Truman devoted so much of his state of the Union message to trying to appease Henry A. Wallace remains the $64 question here.

That rhetorical part of his speech to the Congress where he repeated the phrase, "This leads to peace—not war," was purely designed to win the Wallace followers—if any—who are not completely committed to the Communist Party line.

Maybe the Boston Globe poll, which showed Mr. Wallace has some supporters in Massachusetts, caused him to bother about this one-man third-party movement. For to a machine-made professional like Harry S. Truman, Mr. Wallace himself must rate as that most despised pariah of politicians—the political ingrate.

This is not without some reason. Because a Democratic President, the late F. D. R., promoted Henry to the Cabinet, Vice Presidency, and back to the Cabinet again. He probably couldn't ever have been elected even to the city council in Des Moines.

For Mr. Wallace has what political reporters hate—shyness born of arrogance.

He loves humanity but he just doesn't like people.

MAKES SENATOR TAFT APPEAR FRIENDLY

Mr. Wallace doesn't want followers. He wants worshipers. And the idolatrous Commies are just the ones to provide them for him—imprisoning him meanwhile.

The man is so aloft and self-satisfied with his own ego that he makes the somewhat frigid Senator TAFT seem friendly.

Where is the humility that his backers boast about? He kicked off his own nomination by saying he had served notice on the Democratic Party and its high command just what they should do—and not having followed his orders he was off them. If that's humility, both the dictionary and Bible need rewriting.

But to get down to cases. When Mr. Wallace was Secretary of Agriculture he held weekly press conferences. Reporters attended them religiously. But maybe 2 hours later he would pass them on the street and not even speak. That went on for years.

After President Roosevelt jammed him down the Democratic convention delegates' throats—some sore from booing him out of the hall at Chicago—he presided over the Senate for 4 years and didn't make a single close friend on either side of the aisle.

ALWAYS STOPPING IN TO SEE GARNER

Where former Vice President "Jack" Garner had a constant open house in his office, with both Democrats and Republicans flocking in for a drink or chat, no Senator ever came to see Henry unless on very urgent business. Senator PEPPER, of Florida, may have been an exception.

When he was replaced by Senator Truman, a whoop went up from Senators of both parties.

Later President Roosevelt appointed him Secretary of Commerce. Having helped depose him as Vice President, it would seem only natural that Senators should drop their opposition. But he only got confirmed for the Cabinet post by a single vote. New Dealers, like Senator HILL, of Alabama, pulled all possible strings to get that done. When they got through, Mr. Wallace never even said "thank you."

When Henry batted down the ears of a news photographer, he was in natural form. When he relented later and posed, he was doing just that—posing.

His favorite game here used to be boomerang. He likes that. For he can both pitch and catch. That should be the symbol of his third party and its campaign song should reflect the real reason for his running. It should be, "I'm just wild about Henry."

DAN KIDNEY.

Our Final Choice

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. HATCH. Mr. President, I have already commended the remarks which have been made today by the Senator from Oregon [Mr. MORSE] in support of the Marshall plan, and I have said that I agree wholeheartedly with what he has said. I have said that the Marshall plan must be enacted and that we must maintain our armed strength, although I deplore the condition of the world that forces such a policy.

However, Mr. President, there are other means which we should also be following. In that connection, I request unanimous consent to have printed in the Appendix of the RECORD an article entitled "Our Final Choice," by W. T. Holliday, president of the Standard Oil Co. of Ohio. The article appeared in the January 1948 issue of the Reader's Digest. Certainly Mr. Holliday, a man of wide practical business experience, cannot be classified as a starry-eyed idealist. In the article he is stating practical facts. On the first page of the article, as printed in the Reader's Digest, is an inset reading as follows:

World government is absolutely essential to avoid catastrophe; therefore it is possible. A stirring, forceful article pointing out the steps which should be taken right away.

So, Mr. President, I request that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FINAL CHOICE

(By W. T. Holliday, president, Standard Oil Co. of Ohio)

(World government is absolutely essential to avoid catastrophe; therefore it is possible. A stirring forceful article pointing out the steps which should be taken right away.)

I am one of those terrible people, a munitions-maker. As chief executive of an oil company, my business is just as essential to war as tanks or planes. So I am supposed to welcome war as a fine thing for my business.

But the next war will not be a fine thing for my business—nor for any business. It will simply be the dead end of all our business—and of a good many other things as well. Man, at long last, has developed the instruments with which he can destroy his world—and will destroy it, unless the power to do so is taken from him.

So I put this to your common sense: If you know that down cellar in your house there is a hundred pounds of dynamite, with a fuse of a certain length attached and lit, is it your main job to see that the beds are made and the cupboard is filled?

Let us wake up. The first job of all of us today is to secure world peace. Our only alternative is World War III. The horror behind those cool words is beyond imagination. Already the scientists, in the merest babyhood of atomic power, are talking about bombs a hundred times more powerful than the Hiroshima type, which could blast New York off the earth and kill 6,000,000 people. Just as appalling, the scientists tell us, are developments in warfare by deadly bacteria.

Whenever a civilization is faced with a new and fundamental challenge, there is only one thing that can save it from decline and fall: Its men and women must change their habits of thought to meet the challenge. Either they meet their new world with new thinking, or they go under.

Do all of us realize that our present and normal state of world affairs is nothing but raw anarchy? We are living under a world condition of lawless chaos that we could not tolerate for an instant in our immediate lives.

Scholars talk about "international law," but the plain truth is that there is no such thing. Law means enforced law. To enforce law, it takes a government. And where is their international government?

Well, you say, don't we have the United Nations?

We do—for what it is. But at present the United Nations is not constructed to do the job that needs doing; let us recognize its shortcomings and try to correct them. While there is still time.

The United Nations cannot maintain world peace for the simple reason that the United Nations is not a government. It has no world laws and no power to enforce them if they existed. The United Nations is nothing but a league, a many-sided treaty signed by 57 separate nations—each of which keeps all its independent power of deciding at any moment whether it will make war.

History is full of such agreements, from the leagues of ancient Greece down to the League of Nations. Every one has proposed to abolish war and every one has ended in war. If the league theory were all that history had to tell us about maintaining peace, the human race might as well shut up shop.

Under our noses, however, is a different fact of history that is equally well proved; it constitutes the only hope by which imperfect men in an imperfect world can live in peace together.

THE PROMISE OF FEDERATION

What is the real meaning behind the symbol of the policeman? If you look closely at the public peace in your city, you will be reminded that you and your fellow townsmen would be completely incapable of maintaining the peace by yourselves as individuals. The policeman represents public force, wished-for order, and agreed-upon laws. Most important, he represents the unseen fact that you and your fellow citizens have given up your primitive, independent right to settle your own disputes with your own force, and have assigned to him the power to handle something which you are individually powerless to handle. In a word, you and your fellow citizens have federated.

The essentials of federalism are all within the policeman. He does not tell you when to get up in the morning or what to eat for supper—his powers are his assigned powers, and no more. But when you have trouble within the scope of his duties and powers, he takes charge. And it works.

It is one thing to say that a federal world government would have supreme jurisdiction in maintaining the peace. But how would it enforce this peace? Right here is where you and I must change our habits of thought. It is hard for us to think of armies and navies not belonging to separate nations but to the world as a whole. Yet, it is a condition of world government that all the great weapons of mass destruction must be given up by the nations and handed over to the world government. Theoretically, the world government would have the power to make overwhelming war upon any nation that threatened world peace.

I say "theoretically" because the real nub of enforcing world peace would be something quite different. Otherwise we are back at the impossible paradox of making war upon a nation for the sake of preventing war. How do we get around that contradiction?

The writers of our Constitution were puzzled by exactly the same point. They wanted the Federal laws to be obeyed in the States. But they knew the Union could not merely ask the States to enforce Federal laws. And they knew that for the Union to proceed by force against a State as a whole, for the sake of punishing a few lawbreakers, would be like burning down the barn to get rid of the rats.

They solved the problem by giving the Federal Government the power to go straight to the individual citizen, within any State, and punish him for his violation of Federal law.

And that is how Federal world government would enforce world peace. Just as you and I, whether we live in Oregon or Ohio, are punished if we break the Federal laws against counterfeiting, any national citizen under world government would be punished if he broke world laws against fomenting international war. If this seems an extreme break with our old habits of nationalistic thought, the fact is that the world is already moving in this direction. The principle of individual guilt for fomenting war is simply setting up Nuremberg trials before the event.

The shape of this world government is clear in outline. At the top is a world constitution. Under this, world government is embodied in a world legislature for enacting the laws to maintain peace, world courts to interpret those laws and decide disputes, a world executive body to execute the laws, and a world police to enforce them.

ARGUMENTS AGAINST WORLD GOVERNMENT

The objections to world government are numerous, but I have never once seen the statement disputed that it is the only final answer to world war. In sum the critics more or less tacitly concede world government to be necessary—and loudly declare it to be impossible. They list a variety of obstacles.

I was invited not long ago to take the side of world federation in a debate against a well-known commentator. I replied that I would be happy to debate with him, provided he would really take the other side. He must do more than point out the problems and difficulties on my side—he must argue against world federation itself as a solution for war. The gentleman declined. He said there wasn't any debate.

Some declare, for example, that national sovereignty prevents world federation, because no nation would diminish its sovereignty enough to join. Let us see what this can mean.

Outside a nation's own borders, there is no such thing as national sovereignty—meaning inherent supremacy. Within its borders, the nation is, of course, supreme among its subdivisions and citizens. The only touching of this aspect of sovereignty by limited world government is its power to punish national citizens for fomenting international war. In this matter, world government has the supremacy. Yet, I hardly see how this takes any supremacy away from the nation, because so far as I know, in the matter of fomenting international war, no nation now exercises any rule at all over its citizens. If the nations really want war prevented under world federation, the sole sovereignty they would have to renounce would be the power of the nation itself to decide to wage war.

Others argue against a world government to prevent war on the grounds that it would be a negative and repressive government, a mere police state. To go a little deeper is to see that the only repression is of disorder, and that the law and order upheld by government is the necessary foundation for everything positive in social living.

Again, it is widely asserted that the world is not yet ready for world government, even of a limited sort. The critics on this score tell us we must first have long practice in international cooperation through such agencies as a world bank, a world food authority, etc. We need such agencies. But they would be no more capable of upholding the peace than the Universal Postal Union, a thoroughly successful example of world-wide cooperation, has been able to uphold the peace since it was founded in 1878. You cannot maintain the peace with a postman, banker, or grocer. It takes a policeman.

Last are the critics who declare that human nature itself is not spiritually ready, has not yet reached the state of perfection necessary for world federation. I am inclined to agree. Yet was human nature any nearer perfection in 1787, when our Constitution was written; will it be any nearer in 1937? The atomic bomb is not waiting for us to perfect human nature.

PROGRAM FOR ORGANIZATION

With all its shortcomings, the United Nations provides the framework for the working world federation we need. Let us see how the job could be done.

The first step is for some nation to introduce in the General Assembly a motion that the United Nations shall call a world convention to draft a world constitution. Article 109 of the charter provides that "a general conference of the members for reviewing the present Charter" can be called by two-thirds of the General Assembly and 7 out of 11 of the Security Council. That conference would be the constitutional convention—and no single nation can veto it.

At that conference, any alteration of the present Charter can be recommended by two-thirds of the nations represented. That alteration would be a federal constitution for the world—and no single nation can veto a line of it.

Now comes the rub. The next step is to submit that constitution to the nations themselves for ratification. Again under article 109, the alteration shall take effect when it has been ratified by two-thirds of the nations, including all the permanent members of the Security Council. In other words, one nation can stop the rest from having constitutional government.

Now that is neither reasonable nor tolerable. It is a curious fact of history that our 13 original States, as they approached federation, were restrained by exactly the same rule of all-or-none. The Articles of Confederation, under which the Constitutional Convention of 1787 was called, said that any amendment adopted must be ratified by all 13 States. How did our infant Constitution manage to come into effect under conditions so stringent?

It didn't. By a bold and wise stroke, the drafters of our Constitution ignored the Articles of Confederation and wrote the provision into the new instrument that it should be established among the ratifying States when 9 out of 13 had ratified.

The delegates to a world constitutional convention would be just as bold, and just as wise, if they ignored the Charter of the United Nations and provided in the new instrument for its own ratification on more moderate terms. If two-thirds of the nations can write a constitution, it would seem reasonable that two-thirds of the nations could establish it among themselves.

Once this federation is established among a reasonable proportion of the world's nations, it forms an open and easily expansible system. For any nation that did not want to come in at first, there would always be a vacant chair.

FACING THE FACTS

Which brings us to today's constant question: What about Russia?

But that isn't the real question. The first question we must answer is this: What about the people of the United States?

We ourselves are the crux of the problem. Do we want world federation? Will we work for it? Will we lead the way? We had better know for sure what we will do, before we try guessing what somebody else will do.

The Russians are realists. And the only way to deal with realists is to give them something real to chew on. This world has no chance of abiding peace until we Americans see to it that our Government takes the lead in establishing a world order of greater and deeper realism than anything the Russians have to offer.

The Russians, too, are seeking an enlarging order, perhaps a world order. They call it "liberation," but the order they apparently want is an order of sheer Russian rule. In one word: Empire. But an empire of force is no longer genuinely workable, as the Russians themselves prove by the suppressive measures they find necessary to take among every people they have "liberated."

Federalism is not empire. Under a world federation the rule would be world rule, the law world law, arrived at by the voluntary cooperation of all the member nations. Which is exactly the reason for the much greater and more lasting workability—and hence superior realism—of federalism over empire.

We Americans must lead the way to federalism. If our Government spoke up firmly and clearly for an immediate world federation limited to the prevention of war, I am convinced that a huge majority of the world's nations would join us at once, and gladly.

I myself believe Russia would join. You may believe differently. Should Russia delay in joining, it is entirely possible to create a working and all-but-world-wide federation out of the United Nations without her help.

No one pretends that this would be an adequate solution. It would, for one thing, mean two worlds. Yet I wonder if two plainly defined worlds might not be preferable to the multiple, chaotic world we have today. At least the issue would be out in the open. And it would be a clear issue, instead of the myriad of small, sordid issues the world now finds insoluble without that clarity. And the issue would no longer lie between Russia and America, on a plane of dog-eat-dog rivalry, but between Russia with only 9 percent of the world's people on one side, and a federation of most, or very possibly all, the rest.

If we Americans really want an enduring peace for the world we must make this effort toward the only true source of public peace that has ever existed: Justice under law and government. We must speak up for it so that our representatives will hear and will act. One by one, whoever and wherever we are, we must stand up and be counted.

The alternative is the catastrophic destruction of our civilization.

It is better to stand up and be counted than be counted while laid out in rows.

National Coal Association Emits Loud Groans Over Mine Wages But Says Nothing About Coal Profiteers

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. ENGEL of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, pertinent in the coal-cost controversy, from the December 1, 1947, issue of the United Mine Workers Journal:

NCA EMITS LOUD GROANS OVER MINE WAGES BUT SAYS NOTHING ABOUT COAL PROFITEERS

Johnny "Two-by-Four" Battle, secretary of the National Coal Association, is moaning and groaning again about coal miners' earnings. Johnny's background when he was in the railroad yards at a time when railroad management thought that a dollar-a-day section hand wage was enough for any worker doing manual labor, made such a lasting impression upon his stalled mentality that he cannot progenerate with the progress of the times.

We admit that Battle's agents do a pretty good job of alerting the Bureau of Labor Statistics to give the NCA all the publicity aid at the Bureau's command to spread misleading propaganda as to coal mine workers' earnings. But when coal operators and miners get down to cases in wage negotiations the enterprising Battle and the BLS script are invariably discarded in factual considerations.

As an example of the splendid publicity cooperation accorded by the Labor Department, the NCA offered for release November 18 a tabulation by the Labor Department of earnings of employees in various industries which showed that the bituminous coal miners' wages, with 1935 to 1939 as a base, had increased 222.6 percent. The increase shown was based on weekly earnings of $71.25, which included some overtime payments for the sixth day of 8 hours, compared with the 1935–39 workweek of from 3 to 5 days of 7 hours. The $71.25 is all revealing, however, in that it shows that less than one-fourth of the industry could possibly have worked the sixth day although sales prices are based upon working and paying overtime for the sixth day. What's more, the $71.25 average includes mine supervisors and superintendents.

Metropolitan papers in the East failed for some reason to pick up the NCA release, but on the following day the Labor Department came to its aid with a release making the figures official and, of course, coming from a Government agency, metropolitan papers ran it.

The NCA release revealed that a Dr. Walter L. Slifer is now chief sniffer and snooper of the Bituminous Coal Institute, the statistical affiliate of NCA. We cling to the belief that Battle has never gone into the historical background of wage agreements in the bituminous-coal industry with Dr. Slifer. So at the risk of again being denounced for lese majeste at the push-button throne of the NCA secretary, we invite Dr. Slifer to investigate the wage rates prevailing in the bituminous-coal industry from 1920 until 1926, when a large number of the rich owners of coal companies repudiated their signed agreements providing a $7.50-a-day wage base, went nonunion and bankrupted the coal companies, squandered the assets of the stockholders and impoverished coal miners and coal-mining communities.

We would like for the new statistician to investigate the earnings of coal companies from 1925 until 1935, as well as the impoverished conditions prevailing in the coal-mining communities resulting from uneconomic wage rates and cutthroat competition, and compare them with the profits now being made by coal operators of from 50 cents to $3 per ton on bituminous coal sold f. o. b. the mines. If Dr. Slifer will do a little figuring, he will find that the basic wage scale of bituminous-coal miners, based on the current $13.05 basic wage scale, has increased but 74 percent over the $7.50 rate. And if Dr. Slifer will go back and make a comparison of freight rates and retail margins, he'll learn a lot about the big increase in freight rates and margins and how retailers' margins in many instances exceed the cost of coal f. o. b. the mines.

The Journal is receiving a great deal of mail these days from coal consumers complaining about prices and their inability to get stoker coal as well as other grades. Likewise many communications have been received from universities and high-school students. Thus far we have refrained from starting a crusade against excessive profits.

Even newspapermen have been insisting that we give them a break-down of costs in the various fields, freight rates, and retailers' margins. We have told them from time to time that we thought that they could get their information from the Bureau of Labor Statistics, but this branch of the Government does not seem disposed to engage in any industry-wide investigation as to profits, merely confining its studies to wage compilations of about one-third of the industry's most prosperous mines which have the most favorable operating time.

Under the previous director of the BLS a questionnaire was designed to present to the coal companies to ascertain the number of employees not working the full pay periods and the number of mines that were operating less than 5 days a week, but Battle, as secretary of the National Coal Association, promptly advised the coal operators not to divulge this information to the fieldmen of the Department of Labor.

We don't expect nor hope for reform in the method of gathering wage earnings in the coal industry by the BLS, but for the information of the students of the schools and colleges where the Journal is regularly circulated, and to satisfy the curiosity of the newsmen, we have taken current figures published in the Chicago Journal of Commerce (Chicago being the largest coal-consuming market in the world), quoting f. o. b. mine prices on egg-sized coal from four important fields as well as the freight rate and

retail dealer's price. On the basis of these figures we have computed the retailer's margin, the latter exceeding the f. o. b. mine prices in three of the four fields.

Egg coal	F. o. b. mine price	Freight rate	Retail price	Retailer's margin
Pocahontas	$7.00	$3.83	$16.80	$5.97
Eastern Kentucky	5.25	3.63	15.60	6.72
Southern Illinois	4.50	2.44	12.20	5.26
Western Kentucky	4.25	2.64	12.70	5.81

The publicity fling of the NCA directed at miners' earnings, which in effect tries to portray unwarranted pay in a period of dollar-a-pound steak, $3.14 wheat, $15 shoes, $4 shirts, 90-cent cutter, 75-cent eggs, 80-cent bacon, and all else proportionately high, is but another evidence of a business association manned by small fry trying to enslave themselves into greater appreciation of their bosses by keeping alive the false hope that there can be a return to uneconomic slave conditions in American coal mines for which they can claim credit.

The Escape Clause for Benefit of Communists

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. REED of New York. Mr. Speaker, I have before me a Government form headed as "Request for report on loyalty data." It is a very cleverly drawn form. I wonder if some Communist was the author of the escape clause, which is found under No. 11 of form 84A, which reads as follows:

Organizations with which affiliated other than religious or political organizations or those which show religious or political affiliations.

Except for the escape clause the Government already had on file, prior to issuance of form 84A, all information requested on the form, Request for Report on Loyalty Data.

It would be interesting to know to what expense the administration has gone in an effort to determine the loyalty of its employees, which with the escape clause, to which I have referred, made available to Communists, makes the whole thing a matter not only of waste but of stupidity.

It reminds me of the story of the lawyer who went before a judge with his client and pleaded for his client's release on the ground that there was an escape clause in the common law which the lawyer said was a hole that had been worn smooth by the scoundrels who had slid through it.

Under leave granted January 14, 1948, I wish to extend as a part of my remarks, form 84A, Request for Report on Loyalty Data.

Standard Form 84A
Promulgated August 4, 1947, by Civil Service Commission

REQUEST FOR REPORT ON LOYALTY DATA

[This form to be used for incumbent employees and excepted employees where investigation is conducted by agency (part VI—Executive Order 9835)]

To: .....

The following information is furnished for identification purposes on the person named below. Kindly furnish a report on any derogatory loyalty information contained in your files. (The fingerprints of this person are attached.)

1. Full name (initials and abridgments of full name are not acceptable):
.....
(Surname) (Given name) (Middle or other names)

2. Aliases and nicknames ..... 3. Date of this request .....

4. Special numbers known to requesting agency (FBI number or FBI file number, passport number, Army or Navy serial number, seamen's certificate of identification, alien registration number, Social Security number, etc. Specify which): .....

5. Place of birth ..... 6. Date of birth ..... 7. Title of position, occupation, or profession .....

8. Sex: ☐ male; ☐ female. 9. Marital status: ☐ single; ☐ married. 10. If married, give spouse's full name, and date and place of birth .....

11. Organizations with which affiliated other than religious or political organizations or those which show religious or political affiliations:
.....
.....

12. Dates and places of residence for the last 10 years:

Date	Street	City	State

13. Dates, names and addresses of employers for the last 10 years:

Date	Employer	Address

14. This agency has loyalty information report(s) furnished by the agencies indicated below:

Agency which made the loyalty report	Date of report	Remarks

15. This space reserved for return report to agency where no derogatory information is developed: .....

16. Name and address of requesting agency .....

17. Report of derogatory information developed .....

Date: .....

.....
(Name of reporting agency)

The Voice of the People Is Speaking—and How

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. ELLIS. Mr. Speaker, the first four letters in the Voice of the People section of the Washington Times-Herald this morning, are, in my opinion, very significant. The four, out of a total of seven writers, addressed themselves to a common subject.

It is hoped that some of our colleagues and the Administration will take heed and give some consideration to the voice of the people, a voice that has been almost completely ignored for the past 10 or 12 years. Yes, the voice of the people is speaking—and how.

The letters follow:

VOICE OF THE PEOPLE

LINE 'EM UP

There should be two Presidential tickets only in the field this fall, namely, a national ticket and an international ticket. Politics should be forgotten for the time being.

As some of the leaders of the two major parties are inclined to put foreign countries ahead of the United States of America in all things, the voters of the country should be put on the spot as to where they stand.

If they believe in the kind of Americanism that was proclaimed by Washington, then they should vote the national ticket. If, however, they believe that the last crust of bread should be taken from the hands of a hungry American child and sent across the waters and also believe that every American boy able to carry a gun should be sent overseas to help aliens to fight their incessant and never-ending wars, then they should vote the international ticket.

The national ticket should be headed by two men whose records for patriotism and American ideals are beyond reproach, and in this connection there are no two men in public life who are better qualified to head this ticket than Senator TAFT of Ohio and Senator BYRD of Virginia.

The international ticket should carry the names of two outstanding public men, who, judging from their speeches, would scuttle the old ship of state for the benefit of foreign countries.

R. A. BARBEE.

ATTENTION CONGRESS

My Federal income tax withheld amounts to about three times as much money for 1947 as I have been able to save for 1947.

I do not live extravagantly. I do not buy expensive clothing. I do have enough to eat, however, and have enough clothes to keep me warm.

However, I fear for the future welfare of our United States of America. I say, let us not make commitments for European aid for over a period of 1 year at a time.

A. C. OTTE.

FIGURED IT OUT

Based on an estimated population of 140,000,000 in the United States, the $17,000,000,000 sought by Messrs. Truman and Marshall for their so-called foreign relief amounts to approximately $12.43 for each man, woman, and child, or $30.36 a year for the 4 years fixed by those gentlemen as necessary to allow them to change human nature and produce "peace on earth, good will toward all men."

At the same time, in an outburst of warmheartedness, they are willing to forgive us our taxes to the tune of $40 a year so that each of us will pick up annually about $9.64, or slightly less than 3 cents a day.

Such generosity should be compared with that exhibited during the Rooseveltian era when the world was flooded with American dollars and goods.

When will the people wake up to the fact that the Truman-Marshall plan is nothing more than a continuation of the Roosevelt plan to scatter this Nation's wealth and resources to the four winds? Billions for foreigners, but only pennies for Americans. Apparently it is still wrong to be an America Firster.

W. H. SHIELDS.

ATTENTION CONGRESS

The tom-toms have started beating to sell the Marshall plan to the Congress and the American public. Accordingly, it is necessary for the public, in view of the critical situation in which the Nation now finds itself, to abandon its time-honored custom of "letting George do it," and do a little real thinking for itself.

During the last administration the Department of State and the Justice Department were filled with red sympathizers; this is a matter of public knowledge. No real cleaning out of this gang has yet occurred. The money will be wasted and when it is spent Europe will be no better or perhaps worse off than it is today. As to us, with our financial foundations seriously impaired, economic collapse will follow, in which the leftists expect to take us over and deliver us to Moscow.

G. ANDREWS MORIARTY.

Henry Wallace's Third Party

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1948

Mr. REED. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial column entitled "Henry Wallace's Third Party," by Dan Kidney, from the New York World Telegram of January 8.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HENRY WALLACE'S THIRD PARTY

(By Dan Kidney)

Henry Wallace thinks he is running, when he is only "taking a walk." He has been a "lifelong Democrat" since 1928. That was the year he bolted the Republicans to back Al Smith. Mr. Smith later "took a walk," but he never thought he was running.

Old Carl Hagenbeck could have strengthened the Wallace ticket by taking first place. The Hagenbeck-Wallace show was worth the price of admission. Mr. Wallace thinks he is setting up his own big top. Others think he is only carrying water for the Republican elephant.

When Henry heard the call to run for President on a third-party ticket he must have had a couple of his ears of corn to the ground.

Senator GLEN H. TAYLOR had better stick to his horse. The horse might bolt and throw him in a race, but Mr. Wallace is more likely to do so based on past performance.

It will be hard for Henry to convince the Iowa farmers that the Commies can bring them better prices. With their new cars and airplanes, they are perfectly willing to let the Russian rubes get fleeced of their rubles.

Twenty-four hours after he nominated himself for President in Chicago Mr. Wallace went to Milwaukee and made up a seven-point program. He had forgotten to put any points in his first speech. He was too busy accepting his own nomination. That was bound to be pointless.

Palestine

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. JAVITS. Mr. Speaker, the fight of the Jewish people to sustain the decision of the United Nations General Assembly for the partition of Palestine, against Arab efforts to destroy it, requires for its proper consideration such light as is cast on the subject by the following editorial from the New York Herald Tribune of Monday, January 12:

EXPLOSIVES FOR PALESTINE

The statement by the Jewish agency, formally accepting responsibility for the purchase of 200 tons of M-3 demolition explosives from the War Assets Administration for ultimate shipment to Palestine, clarifies some aspects of this mysterious subject. At the same time, it raises a great many more questions than it answers.

Neither the agency nor Mr. Leonard M. Weisman, who assisted in arranging the purchase, admits to any knowledge whatever about the 50 tons of war-surplus TNT accidentally discovered as they were being loaded on the cargo liner *Executor* under the criminal disguise of "machinery." This was not only a patently illegal but an outrageous business, imperilling the ship and the lives of everyone in the communities through which the explosives were handled. It is impossible to countenance this kind of thing, no matter what may be the pressures in Palestine; and if the Jewish agency can furnish no information the Federal Bureau of Investigation will have to get it. And the War Assets Administration will need something more than its sudden interdiction on further delivery of explosives to exculpate itself of the suspicion of gross carelessness in allowing these dangerous tools to be sold off for concealed or unknown purposes.

All this is easy to see. Nothing could do the Zionist cause more damage in this country than the existence of clandestine gunrunning operations illegally shipping arms to Palestine. What is not so easy to see is the proper policy for the United States Government. The State Department has placed an embargo on all arms shipments to the Middle East. This is a simple but more than a little pharisaical solution; it cannot overcome the fact that the Palestinian Arabs are getting not only arms but armed men from the neighboring Arab States, that the British are not successful in maintaining order now and are about to evacuate, and that if Jewish Palestine is to achieve and maintain the independence which this country officially advocates, its people will have to get arms from somewhere.

It is conventional to regard arms as in themselves immoral; Mr. Henry Wallace, for example, has been very vocal in condemning programs which give guns to people when they want plows. This overlooks the fact that when a man really needs a gun he wants it more passionately than he could even want a plow; and the lengths to which the Zionist interests are going in the effort to get explosives here might lead even Mr. Wallace to some second thoughts on the importance of arms in the contemporary world.

Clearly, the question of arming or recognizing Haganah seems in the first instance one for the United Nations Palestine Commission. But the United States cannot simply wash its hands of a matter in which it is so deeply involved. Everyone, so far, has shirked the question of security and defense for the proposed Jewish state, yet in the harsh world of today it is obviously the fundamental question in the whole Palestine problem; and if the other nations will not themselves fight for the Jewish state then they must clearly afford to it the means of fighting for and defending itself.

German Farmer Hard Hit by West Europe Drought

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. ANGELL. Mr. Speaker, the following article is the fifth in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

GERMAN FARMER HARD HIT BY WEST EUROPE DROUGHT—BLACK MARKET AGAIN REALITY—NEEDED GOODS GAINED BY BARTER

(This is the fifth of several articles by Philip Parrish, editor of the Oregonian editorial page, based on his observations during a 7-week tour of Germany, Austria, and England.)

(By Philip Parrish)

But the farmer always has his side of the story. The dwellers in the swarming industrial centers of Germany and Austria may alternately woo and curse the farmer—as all of them are doing under the postwar conditions of calamity—but the farmer is not without his own version, and his roster of wrongs and hardships.

Naturally I anticipated this, since I cultivated a lot of corn in Nebraska as a boy and trained professionally at Oregon State. My cheers would have been the loudest from the gallery if I had been present at the Democratic National Convention in 1896 when the late Mr. Bryan soared into the peroration of his Cross of Gold speech, declaring: "Burn down your cities and leave our farms, and your cities will spring up again as if by magic. But destroy our farms, and the grass

will grow in the streets of every city in the country."

Besides, there had been my sobering experience of 1946, when, in clear weather, I had flown across America—the wide ranges of the West, the generous squares of the Middle West, the adequate rectangles of the East—and on directly over the crowded little strips and wedges of France, Germany, Austria, and Italy, bearing testimony as to how difficult it has been through the centuries to keep alive. And as to how the survivors have quarreled and puzzled over the resources of soil.

COUNTRY VISITED

Anyhow, my program called for breaking away from the schedule and getting off to the country to see for myself. That was managed in Austria where I let the party fly to Trieste without me, and instead took an overnight troop train to Salzburg in the west—scene of the music festival and headquarters of Maj. Gen. Harry (Handsome Harry) Collins, military commander in our zone of Austria.

Seven kilometers (4 miles) up a decent black-topped road which climbs into the Alpian valleys and foothills southeast of Salzburg, one turns in before what appears to be a sizable farmhouse.

It is the farm of Josef Schoenleitner, 51, a 5-foot-5 little man with bent shoulders and rosy cheeks, and his frau, Theresa, 47, hardly 5 feet in heavy boots. He had been a farmhand and she a domestic, but being ambitious they had acquired the place 25 years ago. Despite the ample appearance of the house from the outside—and alterations made during the 25 years—there are only four rooms so far as actual living quarters are concerned. These are on the first and second floors, front. Behind them are the broad central passages for workbenches and storage, and behind these the stable, all cozy under the one innocent-appearing roof. The third floor, even above the living quarters, is entirely haymow and storage place for the products of the fields.

SIX CHILDREN LIVING

Here the Schoenleitners had managed to raise a numerous brood, with six children known to be alive. One son is missing in Russia; another was killed in Italy; there are four girls ranging from 12 to 21; a son of 9 and another of 18—the latter sick in bed but not too sick to wring our hands and be excited over our gifts.

The Schoenleitners are friendly to Americans.

"American soldiers," Frau Shoenleitner told me through Lieutenant Colonel Keller, who interpreted, "were in our house at the invasion. We had to live with neighbors. They took a few souvenirs but not our money."

She literally ran with me to the wardrobe upstairs to show where the money had been kept, and which also holds the family's church clothes.

The farm is about 19 acres. (General Collins, when we described it to him later, thought it a bit above the average for size and economy.)

Only three acres are cultivated—ordinarily wheat, potatoes, and rye; 14 acres are pasture; 2 acres, wood and stream. One might call it a dairy farm, since the main income is from the cows, of which there are seven. Then there are two calves over 6 months, two under 6 months, and a bull; one sheep, five hens, five young pullets, and four cats.

It is the usual practice to send most or all of the cows "am alm" during the summer—that is up to the mountain pasture—where they graze and are jointly tended and milked. But this year Schoenleitner could send only two. It was too expensive. The drought over all of western Europe had dried the grass. So all the cows are very lank and poor, with winter still to get through, and little to feed them.

"Sehen sie!"

MANURE HOARDED

Now we were out in the dark and odorous stable part of the house, with the little barred windows common to all middle Europe, and the cows, sheep, chickens, and cats warmly huddled together. Frau Schoenleitner tromped indifferently and ankle deep along the soggy manure trough to kick one of the cows into getting up.

(Eighty percent of what is fed to farm animals is reclaimable as manure, and without the hoarding of it the peasant agriculture of Europe would fail in a single year. At the Schoenleitners—and their arrangement is typical—the liquid part runs out into a tank under the lowest part of the stable wall. The tank wagons which spread such manure are familiar sights in the landscape. They explain the three crops of grass ordinarily grown even on the clearings high in the mountains, and explain the parklike green of these high clearings.)

The farm, on its record, has been ordered by the Government to deliver 7,000 litres of milk a year. That is the quota assigned. But because of the drought there will be only 6,000. He says 4 litres a day (4½ quarts) are kept for home use.

From something over one-half acre he got 2,000 pounds of potatoes. His wheat patch of between 1½ and 2 acres produced 1,300 pounds from 300 pounds of seed. He got 450 pounds of rye from 120 pounds of seed on a half acre. These crops are not stored away from the house after the American fashion. What remains of the potatoes are in the cellar. The grain is in padlocked trunks in the loft and on the second-floor landing. If I recall correctly, the flour trunk was double locked. Schoenleitner opened it to show me how nearly empty it was.

In the loft was straw along with the hay. The straw will have to be mixed with the hay this year for feed, as well as used for the floor of the stables. A little string of drying tobacco leaves was hung in one corner. (Someone in Berlin had told me the farmers had set out to beat the tobacco market, with every farmer filling his own pipe.)

The potatoes in the cellar were the size of eggs at best, and scrawny. There were a dozen sugar beets, also. Such grain as remained was dry and small from the drought.

Schoenleitner had a workshop in the passageway between the house and stable where, temporarily, he was making brooms to sell. These were not fine enough for houses; but would do for stables and sheds. The broom proper was from the roots of a bush which grows in the mountains. The roots are unusually strong and stiff and straight. He goes into the mountains for the roots, and secures them to the handles in his household factory.

BARTER RULES

Others who are smarter than I, and who have more time for study, will have to decide to what extent the Schoenleitners, and all the other peasants of Austria and Germany, are hiding out on the food collectors—to what degree they deserve the appellation of "rapacious peasants."

This much certainly can be said in their defense, that everything they have to buy is usually obtainable only on a sort of a reverse black market. If the peasant requires a spade, a rake, a yoke, a scythe, a ball of twine, or a gallon of gas he cannot just go to a store and purchase it, even if he has a priority order. The holders of manufactured goods secrete them exactly as the peasant hides his food. The peasant must deal under the counter. All American officials admit the system is universal. And they have little hope of breaking it up until there is a firm currency—some way in which business can be done by means of money rather than through direct exchange of goods and services.

I deliberately omitted mentioning that the Schoenleitners were just finishing a new storage barn aside from the house. The shakes and most of the lumber were handhewn. Nevertheless, it was a building, and down in Salzberg no one could build except the butcher and baker.

So when we started the drive back down the rainy road, one of my companions said most sensibly:

"We might as well be realists. They have wanted that barn for 25 years and couldn't have it before."

I judge the Schoenleitner place was typical enough. Of course, as we drove on out of the Alpian foothills across the Danube valley to the Rhine, and finally down the Rhine valley, the individual farm disappeared. There was now the usual village arrangement, where the farmer lived in a community with his fellows and walked out to tend his strips of land, often widely separated. But the amount of land was about the same, the same restriction to hand labor, the same concern with the individual grain of wheat.

FIELDS DREARY

And everywhere—now that it was December—the farmer was indoors cuddling his oxen and his chickens. The frigid fields were empty to the horizon—as empty as a midwestern landscape in winter. It was a startling contrast with October—late harvest time—a year ago, when the country roads of Germany were busy as city streets, with everybody carrying something, or pushing a cart. In December the harvest had been distributed—as little as possible to the official collectors, as much as possible to the hungry folks from the city who came bearing their hidden possessions. Now the peasant was preparing for a new year—hoping that he might have seed, fertilizer and and pesticides from America early enough for it to do him some good—hoping that he might not have to slaughter more of his stock for lack of feed. His production was, roughly, somewhere around half of what it had been in the prewar years of adequate fertilizer, good seed and a nice balance between crops and animals. And he dreamed of restoring that production both for his own profit and the support of others.

Nor is it difficult to fit his dreams into the problem of the people of the United States, once one grasps certain fundamental facts.

The realities of the situation are as follows:

SOVIET GETS CROPS

In the actual and ideological division of Europe at the end of the fighting, Russia, as a result of geography, got the predominantly agricultural part. Almost everything behind the iron curtain is agricultural, including the Russian zones of Germany and Austria. And this advantage, so far as basic food needs are concerned, has been emphasized by nature. There have been good crops to the east of the curtain and poor crops to the west, almost exactly along the line.

This would be a serious enough situation for highly industrialized western Europe under the best of circumstances, but Russian forethought and ruthlessness have compounded the difficulties. Some 6,000,000 or more Germans have been expelled to western Germany from the German lands east of the Oder, assigned to Poland, and another group of close to 2,000,000 has been expelled from the Sudetenland by the Czechs.

Western Germany was never even 80 percent self-sufficient so far as agriculture is

concerned. Now there is a greatly swollen population; now the neglects of war have destroyed much of the fertility; seed, fertilizer, and implements are short; drought has superimposed its cruel injury.

Under these circumstances, only the United States has been able to prevent utter collapse and utter tragedy. The rest of western Europe, including Britain, has been short also, and concerned with its own survival. And though contrary to public assumption, there has been no world-wide deficit of food production as compared to prewar totals; this has given the United States little relief in its support of the one true area of underproduction, western Europe; for the sufficient reason that though the world is producing as much as it did before the war, world population has increased by 200,000,000 in the intervening years, and only the United States can contrive surpluses to meet the local European need. Indeed, even in our case the sacrifice sends our prices soaring and fills the people with the fear of runaway inflation.

UNITED STATES MUST HELP

I do not know of anything to do but give and pray.

What we need to pray for is that United States itself does not suffer crop failure this coming year or the next year, and that if it does these do not coincide with a continuation of the droughts in western Europe. Indeed, even a break in the record crops the United States has been producing—a drop back to normal—would occasion the most violent world repercussions. And if we had a run of droughts such as those of the 1930's, coming prior to the recovery of western European agriculture, Malthus would turn over in his grave and cry, "I told you so."

We need to pray also that the American people come to a clearer realization of what they are doing, and why.

They are trying to keep western Europe alive until that area can restore its industry and its soil and live by its own efforts. They are doing this as a matter of self-interest—because anything else would mean western European confusion, permitting Russia to expand to the Atlantic. They are doing it also because they are a decent people with charity in their hearts.

AID SEEN GAMBLE

But it is a race against time, and a gamble.

If the breaks of nature are against us, millions will starve in spite of us. The only sensible thing is to get our seeds and fertilizer and implements and insecticides to the scene early enough to mean the maximum for the planting and the harvest.

We are taking a long chance if we let a situation continue where a single month of American drought could upset the whole order of the Old World, and bring what is left of civilization cracking down around our ears.

Induction of Judge Rabin

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. LYNCH. Mr. Speaker, on January 6 last, our former colleague Hon. Benjamin J. Rabin, who resigned from the House of Representatives on December 31, 1947, was inducted as a justice of the Supreme Court of the State of New York. He had been elected as a justice of the supreme court in the general election held the previous November 4 for a full 14-year term.

Several hundred of Judge Rabin's friends were present at the induction in the spacious courtroom, designated as special term, part I, in the Supreme Court Building, Foley Square, New York City. The ceremonies were presided over by Justice Bernard Botein, with Justice David W. Peck, presiding justice of the appellate division, welcoming the new justice to the bench on behalf of the judiciary. As a colleague of Judge Rabin's in the House of Representatives, I was invited to address the court on the happy occasion. I am including herein, by unanimous consent, an extract from the New York Law Journal of January 9, 1947, which reported the proceeding:

Justice BOTEIN. As you all know, in recent years Justice Rabin has been a Member of Congress. I understand that the joy of his fellow Congressmen, upon his elevation to the bench, is tinctured only by regret at his leaving the Washington scene. I shall call upon an outstanding member of the New York delegation in Congress. He is no stranger to court rooms, being a distinguished member of our bar. In fact, if memory serves me right, he was a judge himself in this city for only too short a period of time. Will the Honorable WALTER LYNCH step forward, please.

Congressman LYNCH. Your Honors and friends of Judge Rabin, in the House of Representatives at Washington, encomiums, such as you have already heard and such as you will hear, are spread on the minutes of the session under the 1-minute rule, but generally, the Speaker is somewhat indulgent and grants leave to extend one's remarks in the RECORD. I hope that the Presiding Justice will be somewhat indulgent with me although I do not anticipate taking very much time.

It is a keen pleasure for me to participate in these induction ceremonies of my good friend and colleague, Judge Rabin. The rapid advancement of Judge Rabin may well have been presaged in the record that he established in World War I when he enlisted as a mess attendant and, after service in the Navy, was the recipient of the honor of a commission in the United States Navy. Having later completed his law school and practiced law, I think he now goes on the bench of this great court with more of a breadth of understanding and a wider background than any other judge, at least in my 30 years' experience before the bar. I say that for this reason: that he has served both the administrative and the legislative sections of our Government. As counsel and as commissioner of the State mortgage commission he gained a wealth of experience and won the complete confidence of thousands upon thousands of people who had their all invested in real-estate securities. And when he left and came down to the Congress of the United States he was greeted with open arms by the men who were then representing the various districts in the House of Representatives. He served for 3 years on the very important Committee of Interstate and Foreign Commerce, and it was only a short time after having been appointed to that committee—I have to take some little credit in securing his appointment as a member of the Ways and Means Committee—when I was told by the chairman of the Interstate and Foreign Commerce Committee that never in his long years as a Member of the House had a new Member shown such initiative, such reliability and such devotion to the work of the committee as Representative Rabin was then showing.

And so it is with a great deal of regret that we in the House, especially those of us in the Democratic delegation from New York, see him leave the legislative halls of Washington to take his place on the bench.

As a token of the regard of the Members of the House of Representatives, and in particular as evidence of the personal admiration with which Judge Rabin was held by the Speaker of the House, and by his colleagues in the House, I have been asked by the Speaker of the House, the Honorable JOSEPH W. MARTIN, Jr., of Massachusetts, to present to Judge Rabin this autographed gavel which Speaker MARTIN wielded in the determinations of the House of Representatives of which Judge Rabin was so distinguished a Member in the Seventy-ninth and Eightieth Congresses. [Applause.]

(Gavel handed to Justice Rabin.)

Justice BOTEIN. Thank you, Congressman. Judge Rabin receives the gavel with added alacrity because in his capacity as a justice he takes judicial notice of the fact that Speaker MARTIN is a Republican.

Can We Make the United Nations Work?

EXTENSION OF REMARKS
OF
HON. HUGH A. MEADE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. MEADE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following radio talk given by me over Station WBAL in Baltimore:

In many parts of the world today, thoughtful men and women are pausing to survey the progress and appraise the prospects of the United Nations organization.

With the war approaching its end in 1945, the United States and other major powers convened the nations of the world in a conference at San Francisco where a wartime organization of the nations fighting the totalitarian aggressors, was made a permanent organization. Some 50 nations of the world participated in the drafting and ratification of the United Nations Charter. We all recall the high hopes and aspirations expressed at those solemn ceremonies, the steps which have been taken to provide a permanent home for the United Nations, the secretariat and the equipment needed for the beginning of its work. What then, has come about in such a brief time to dash the hopes of so many who sincerely applauded the beginning of the United Nations organization? There is talk of irreconcilable differences in viewpoints; clashes of ideologies and conflicts of opinion that make agreement on anything impossible. I consider such talk malicious and irresponsible. When and where and for how long has there ever been unanimity of opinion between 50 nations or even 5 nations, for that matter, except in time of war? When was there ever a time when there was not on this planet the widest divergence in opinions, thoughts, aspirations and ambitions? Because these differences exist, as they have always existed through the centuries, are we to abandon hope that we can resolve these differences?

As we all know, the American Revolution began in 1776 but the Constitution of the United States did not come into existence until 11 years later and it was not accepted by the American people until 2 years after. Despite the unanimity with which we accept its principles today, they were adopted by our forefathers only after one of the most discouraging and bitter political struggles in our history. Some of the highlights of that struggle acquire peculiar significance

when we reflect upon the fact that the Charter of the United Nations has been adopted by 50 nations and and that the United Nations is a going organization and that only 2 years after it was first convened.

It was difficult enough to devise a system of laws such as our Constitution which would force all individuals of one country to respect freedom and the rights of all other nations * * * such a thing was unheard of, not only as recently as the adoption of our Constitution but even as late as 50 years ago. Up until then, there had been little contradiction to the implied right of the strong to gobble up the weak * * * the supremecy of force over international law. There is little precedent to guide the United Nations in the building of an international code of laws. Twice within our lifetime we have witnessed the breach of all international decency by cunning and power-mad men. Only once before in history has there been an attempt to create an international order based on binding law, and all of us saw the League of Nations collapse into utter futility after its short life of only 20 years. But progress toward the goal is being made, faltering as the forward steps may be. It is only fair to say that the United Nations is a good bit further along than was the League of Nations, and we were never members of the League of Nations. It is impossible to overestimate the significance of that difference.

It is true that 2 years of United Nations' deliberations have put the spotlight on grave imperfections in its machinery. Prolonged and bitter discussion has given world-wide publicity to serious and mounting differences between the great powers. There is talk of war, of withdrawals from the United Nations, of expulsion of members and predictions of its rapid disintegration and decay. I discount most of these heated assertions.

Unfortunately, no concrete program has been offered by the United States under which the almost unbelievable moral and physical power of the United States can be brought to bear inside the United Nations to work for solutions to the most serious problems. Nor has any other nation, great or small, come forward with a constructive and practical suggestion for resolving the vital differences which now plague the world.

The differences which are being encountered with Soviet Russia are certainly troublesome. To ignore them would be foolish, to overemphasize them would be dangerous. Maybe it serves a useful purpose for the Russians to have a place to blow off steam. I believe our reluctance to assume international leadership stems from the widespread failure on the part of the American people to fully understand the unique position the United States now occupies in any world gathering. We are today the most powerful Nation in the world. Because of the fact, I think it is no exaggeration to say that the largest part of the world is looking to us for leadership in economic affairs, in industry, and in almost every phase of international activity. The decisions that you and I will be called upon to make in the next few months may well shape the course of world history for decades to come. They may well spell the difference between an uneasy truce over an indefinite period, followed by hostilities * * * or * * * they may mean the beginning of a new and fruitful era of peace for all the world. If we accept the leadership, then we must also accept the fact that it will take us along a path where new responsibilities and pitfalls will be awaiting us around every corner.

At a period in history when forthright resolution is demanded for us, we have only just begun to examine the way ahead. At a time when the whole world is looking to us for guidance, we stand hesitant and undecided * * * and it is probable that we shall appear even more hesitant in the eyes of the watching world in the months immediately ahead. As we move toward historic debate in Congress as to the role the United States shall play in the United Nations and toward a full discussion of our foreign policy, one great point in that debate will be the question: "Can we make the United Nations work?"

I firmly believe we can make the United Nations work. I believe we must make that job a major national purpose. I believe we can make our largest contribution by adopting and implementing a foreign policy for work both within and without the United Nations, and I believe that foreign policy should have two objectives—peace and production.

If we want to make the United Nations work, the first step is to convince the world by every means at our command that the United States is on such a firm basis of economic stability that it can carry out any and all promises and commitments that it may make. For unless we are on a sound economic basis at home, we shall have little influence abroad.

There is a shortage of goods throughout the world today. Because of these shortages, people who work cannot buy the things they need with their wages, so there is consequently a falling off of work. We have a glaring example of such a condition in the coal crisis in Britain. It is apparent, too, in the agriculture of most of the countries in Europe. The farmers find no incentive to produce when they cannot exchange their products for the things they need. Owners of plants damaged by the war, cannot get the steel, cement, and new machinery they need for rebuilding.

A major and tragic shortage everywhere in Europe is coal and without coal, you cannot have steel. The pressing need for food in western Europe is familiar to all of us.

There is only one place where these people can get much of anything in quantity and that is in this country. Thus, the financial calculations of the various governments are continually being thrown out of balance. The best example of that is our export balance. We are currently exporting goods and materials at the rate of $20,000,000,000 a year. We are importing only about seven or eight billion dollars worth of European goods. Two-thirds of the problems now facing the world stem from the fact that the United States is not buying enough abroad to make dollars available for the European countries to buy from us. And what is true of Europe is true of most of the other countries in the world. Thus, we come face to face with the problem that we shall either have to increase our purchases abroad or we shall have to lend or give other countries the things they need to reconstruct their productive economies.

What I propose then is:

Let the United Nations adopt as its foreign policy the objectives of world peace and world production.

Let us resolve to work within the United Nations with every means at our command and with the firm determination to achieve the greatest measure of success that we can possibly obtain from the workings of its international machinery.

Let us go steadfastly before the court of world opinion to discuss any and all issues that may arise and press for solutions or compromise.

Let us provide inspired leadership to take positive action on all fronts to raise the levels of world production, so that the principal causes of discontent and unrest can be removed.

Let us show a willingness to tighten our own belts and help the nations that are willing to help themselves.

Let us leave the door of the United Nations open at all times to any and all nations who sincerely want to demonstrate their good will.

If we can succeed with such a program, I firmly believe we shall have won the peace and that the United Nations will have become a permanent success. That, to me, is the best New Year's resolution the American people can make.

AAA

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a summary of agricultural work in my district by Ralph Hudspeth, Chairman of the Agricultural Planning Committee of the Third Congressional District of Arkansas. Mr. Hudspeth lives at St. Joe in my district, and he is one of the upstanding farmers and farm leaders of Arkansas.

The summary follows:

At our meeting at Harrison, Ark., on December 22, 1947, the Agricultural Planning Committee of the Third Congressional District in Arkansas are passing on to you our thoughts for your consideration and action.

The interest in the welfare of agriculture on the part of our National Government evidenced by progressive legislation dealing with farm problems is greatly appreciated by the farm people. We find the people of this area are concerned with the conservation of humans as well as the soil. We realize a healthy, vigorous people cannot subsist on a land that has been allowed to deteriorate, erode, and become depleted. The two are closely connected and to preserve our people we must keep our soil in good repair.

The most important objectives for agriculture is the conservation of our people, soil, and water resources. If we expect to continue on a sustained-yield basis we must use our national resources intelligently. This is increasingly important at this time when agriculture is making an all-out effort to produce great quantities of food and fiber to alleviate suffering in foreign countries.

To maintain our way of life and to continue to support foreign aid it is essential that our National Government assist to a greater extent soil conservation through agricultural conservation practices.

The cost of controlling erosion as compared with the cost of continuing under the handicap of its destructive forces has been amply demonstrated. In the past, billions of dollars in erosion damage alone has been suffered by American soil. The cost to repair the damage of erosion is greater than the cost of preventing it. It is the responsibility of our National Government to make sure sufficient funds are made available so that conservation practices can be carried out in sufficient quantity to prevent erosion and to rebuild our soils to their original productivity.

It is false economy to reduce the agricultural conservation practice assistance below $300,000,000. We recommend that $500,000,000 be appropriated for conservation practices for the 1948 program year and as long as the emergency exists in foreign countries. This is only about one thirty-fourth of the proposed foreign-aid relief bill or 1.3 percent of our national income. Three hundred million dollars is not too great an amount for our National Government to assist in conserving the Nation's soil annually in normal times.

We are very much impressed with your testimony proposing a long-range agricultural program before the congressional committee. We agree with you that our soil requirements still call for double, five times, and even greater increase in the use of minerals and conservation practices; however, we realize these requirements cannot be met without our National Government fulfills its responsibility in making sufficient appropriations—we recommend $500,000,000—for agricultural conservation practices.

We are asking you as a representative of national agriculture to inform our President as to the needs of sufficient funds for conservation practices in 1948 and future years.

Date With Uncle Sam

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. TEAGUE. Mr. Speaker, I believe it will be of interest to our farmers who file their declarations of estimated income on income tax Form 1040ES, to read the following article before they send in their final income-tax return due about March 15, 1948.

Under leave to extend my remarks in the RECORD, I wish to include an article written by Malcolm Orchard entitled "Date With Uncle Sam," which appeared in his column, This Business of Farming, in the January issue of the Southern Agriculturist magazine:

DATE WITH UNCLE SAM

(By Malcolm Orchard)

Farmers have a tax date with the Treasury Department's internal-revenue service soon. Unlike a lot of farm jobs, this one cannot be postponed until some convenient date in the future.

The Federal tax laws require that all farmers with a gross income of $500 or more for 1947 shall file either a completed return, or a declaration of estimated income on or before January 15, 1948. With farm prices at one of the highest levels in history, few will fail to meet the requirements for filing returns this year.

If you choose to file a completed return, you are through with your tax chores for the year on January 15. If you elect to use the declaration method, you will have a second date to remember, the filing of a completed return prior to March 15.

Many farmers prefer to file their declarations of estimated income on Form 1040ES, then follow up with a final return on Form 1040 any time between January 15 and March 15. This method has the advantage of giving more time to assemble data and work up records to back up claims for deductions, if the return is ever checked.

No figures go with the declaration. Just add up your gross income for the year, determine your deductible expenses and add to this your allowable depreciation. Take the total of expenses and depreciation from your gross income and send a check for your estimated tax in full with declaration.

The Government is more lenient with farmers than with others in the guessing game that declarations of estimated tax have brought about. If a farmer guesses within 33⅓ percent of his correct final tax, there is no penalty when he pays the balance due prior to March 15. Other classes of taxpayers must be within 20 percent of the correct tax to avoid penalties.

Tax rates and personal exemptions are the same as last year. The lowest combined normal and surtax rate is 20 percent on your adjusted gross income after personal exemptions are deducted. This rate applies on the first $2,000 of taxable income, then rates range up to 91 percent on income in excess of $200,000. (See your tax instructions which come with your return forms.)

The personal exemption is $500 for the taxpayer and a like amount for each member of the family dependent upon the taxpayer for support. To be a dependent, the person must have an income of less than $500 for 1947. Age does not enter into the establishment of dependency.

Most farmers use the cash basis in making their returns, and must file Form 1040F with their final return. Form 1040F itemizes the farmer's income from all farm sources, and lists his expenses for labor, repairs, fuel, feed, and all other operating costs. Few farmers choose the accrual basis, chiefly because it requires more detailed record keeping and inventories.

Many farmers could save money by more careful handling of their allowable depreciation. You are permitted to charge off, at various rates approved by the Treasury Department, all machinery, barns, tenant houses, fences, work stock, breeding stock, and other equipment that enters into the production of farm income.

The straight-line method is usually used in accumulating farm depreciation. By this method, if you buy a tractor and equipment in 1946 at a cost of $2,000 and estimate the useful life at 10 years, you will take depreciation of $200 in your return each year for a period of 10 years.

If you have been careless about your depreciation schedule, it might pay you to take a new inventory of your farm property. If you owe any tax at all, each $100 in allowable depreciation will save you $20.

And don't forget that tax date, January 15. The penalties for failure to keep it are such that it will pay to remember.

Tribute to Dr. Abba Hillel Silver

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. JAVITS. Mr. Speaker, on the occasion of the departure for Palestine of Dr. Abba Hillel Silver, head of the American Section of the Jewish Agency for Palestine and chairman of the American Zionist Emergency Council, my distinguished colleague and friend the Honorable IRVING M. IVES, Senator from New York, delivered a memorable address at a testimonial dinner tended to Dr. Silver at the Hotel Astor in New York City on Monday, December 29, 1947, which follows:

We have come together for a purpose which I know gives pleasure to each and every person in this room. We are paying homage to a great man—a leader who has won a new place of dignity for his people among the nations of the world.

This event is gratifyingly unique in one particular respect. We have had occasion to honor Jewish leaders before this evening—for their noble efforts, for their strivings, for the great cause which they represented and which we hoped would one day be victorious. But tonight we do more than honor a leader and his cause. We come also, at long last, to hail an historic victory for that cause and to cheer the imminent establishment of the Jewish state. There is deep satisfaction for me, ladies and gentlemen, in the fact that I can come before my Jewish friends tonight, not to add my vote in protest against one of the greatest wrongs in history but to share in the exaltation over the United Nations' decision on Palestine and to honor the man who led the Jewish cause to that great victory.

Without entering into the pros and cons of that eternal question, whether men are, in fact, the makers of history or merely the instruments of history, I believe it can be said tonight that the man whom we honor—Dr. Abba Hillel Silver—provided that brilliant leadership, that statesmanship, and those policies without which the United Nations' decision favoring a Jewish state would not have been achieved. During the past year the Jewish people was confronted with one of the greatest challenges of all time. And if a people is to meet a challenge effectively and to overcome a long succession of crises, it requires not only the high resolve and moral stamina which the Jewish people possesses in abundance but also courageous leadership. Dr. Silver is living proof that, despite 2,000 years of national homelessness and dispersion, the Jewish people is able to produce leaders of the highest caliber.

It is unfortunately true that the Jewish people's struggle did not end with the United Nations' decision. Many trying days are ahead, during which the Jews of Palestine must establish their state under the most difficult circumstances, confronted by enemies seeking to destroy Jewish national life even before it is fully reconstituted. It is clear, ladies and gentlemen, that our task—yours and mine—is not yet over. While I have every confidence in the readiness and ability of the Jews of Palestine to defend their statehood, I trust that they will not have to do so with their bare hands. We hope that the Arab leaders will cooperate with the decision of civilized mankind and abide by their obligations as members of the United Nations.

If, however, attempts are made to destroy the Jewish state by force, then it becomes the civilized world's sacred responsibility to provide the Jews with the assistance necessary for the defense of their country. In the coming critical months we shall look once again to you, Dr. Silver, for that inspiration which has strengthened the Jewish cause in its other moments of crisis. You have led the Jewish people to its political triumph and now an equally heavy burden—perhaps an even heavier burden—has fallen on your shoulders. You and your colleagues in the Jewish agency and in the leadership of American Zionism must now work to translate the United Nations' guaranty into an established fact. I, for one, have great confidence that once again you will meet the challenge and also that the American people will not be lacking in the support and the moral encouragement that you will require.

During the past 4 years, while the Jewish people's struggle for statehood was mounting toward its climax, a strong bond of friendship was established between the American people and the Jewish National Home. May that bond be a lasting one, and may our country and the Jewish state be forever united in ties of deepest amity and cooperation.

It is my fervent hope that the relationship between the two Governments will be such as to encourage the Jewish state to look to us for the helping hand it will need during its early years, and that we, in turn, will stand ready to extend that support. I know how highly American concepts and American methods are valued by the Jews of Palestine today, and this is, indeed, a happy augury for

the future of both countries. I believe, too, that we may have occasion to learn something from the Jews of Palestine and that the democratic society which they have built in the Holy Land will serve to strengthen those principles upon which our own country has been built.

In this respect, too, we can derive inspiration from Dr. Silver, for he is preeminently representative of the very best in both Americanism and Jewishness. To me Dr. Silver represents the synthesis of two great cultures, of two great peoples—the successful blending of the lofty and prophetic concepts of Judaism, the indomitable will and determination of the Jewish people, with the American democratic tradition and the American way of life.

Tomorrow Dr. Silver leaves for Palestine, where he will see the fruits of his labors in the faces of the hard-working and proud future citizens of the Jewish state. I know that he will derive strength from them, as they will from him. I know, also, that all of you join me in wishing him Godspeed and many years of leadership in the great cause with which his name is forever linked.

Important Issues Are at Stake in the Strike of Cafeteria Workers Against Government Services, Inc.

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the RECORD some material bearing directly on the strike of the cafeteria workers' union against Government Services, Inc.

I am not attempting here to discuss the merits of the charges of Communist leadership and inspiration leveled against the union, nor the countercharges of racial bias made in turn against the detractors, nor even to judge issues in the strike.

What I am doing is to complete the record, and to show that Government Services, Inc., in its quasiofficial status, is placing the American Government in a highly embarrassing position of refusing to comply with a duly enacted United States statute by collective bargaining with the chosen agent of its employees, and by strike-breaking tactics similar to those followed by the NAM members who have fought the National Labor Relations law since its inception.

BOGUS ISSUES RAISED

The fact is that in the eyes of many employers, whom I consider short-sighted in their policies, the union is damned if it does or does not bring itself under the jurisdiction of the Labor Relations Board.

The cafeteria workers union elected not to bring itself under the jurisdiction of the Board in accordance with a policy of the company, GSI, which dates back to organization of the union and recognition of its position as bargaining agent in 1938.

In other words, the company had stipulated that it would deal with the union only if it did not avail itself of the Board machinery.

But when rising costs of living made the already small wages of the workers shrink to less than subsistence standards GSI refused to meet with the union—the recognized bargaining agency—to discuss wages, hours, and working conditions unless it did bring itself under the Board. In other words, this strike is not a strike for higher wages only in the sense that the company has refused to bargain collectively on wages.

Government Services, Inc., a private corporation enjoying the privilege of carrying on business on Government property, is affiliated with the National Association of Manufacturers as a member in good standing. It is following the methods of the NAM.

It is using all the dodges provided in the Taft-Hartley Act to harass, discourage, and control unions, and provides another good reason for the repeal of this unjust act.

ISSUES CLEARLY SET FORTH

The red herring of crying red at the union leadership cannot hide the anti-union tactics of the company, nor obscure the fact that the accounting methods of the company are still under scrutiny by the Committee on Civil Service of another body.

The first insertion of material is a strongly-worded letter addressed to the President by Mr. Philip Murray, president of the Congress of Industrial Organizations, which sets out the issues at stake so clearly that it makes anything I can say on this floor redundant.

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., January 8, 1948.

The PRESIDENT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: I am writing to acquaint you with a deplorable situation which exists here in Washington, D. C., at the present time. I am referring to the activities of Government Services, Inc., in forcing a strike upon 1,500 members of a CIO union by flatly refusing to meet with them. GSI and this local union have maintained contractual bargaining relations continuously during the past 10 years although this relation has always been a reluctant one on the part of GSI.

Upon the expiration of the last contract on December 31, 1947, the corporation refused even to meet with the union representatives to discuss a new contract. The ostensible reason given is that the officers of the union have not filed the affidavits and financial statements of the Taft-Hartley Act. As of course you know, the filing of such information is mandatory only if the union elects to utilize the services of the National Labor Relations Board. Since this is not the case in the present instance, there is no moral or legal compulsion for the union to file for such utilization. Were any further proof necessary, I could cite the fact that a private corporation which operates similar cafeterias in the Pentagon Building has just signed a contract with the same union for the coming year, without raising any false legalistic issues of this kind. In the case of GSI, however, there was no alternative available to the union members but to leave their posts at the end of the year.

There are several special issues involved in this problem which should be brought to your attention. GSI is a nonprofit corporation all of whose trustees are officials of the Federal Government. In fact, the Government receives 50 percent of the net gains, so that the belligerent and unfair actions of the corporation reflect unfavorably upon the Government of the United States itself. The corporation's actions include the distribution of a pamphlet to all of its employees which is of a union-breaking character virtually unequaled in my long experience.

Further discredit is reflected upon the Government by the conduct of the Federal Works Agency which is responsible for the maintenance of the cafeterias. Not only has the Federal Works Administrator refused to close down the cafeterias, which would be the normal action of a responsible agency, but he has used the Federal building guards, who are Government employees, to escort strikebreakers to and from the cafeterias.

The situation is causing both tremendous inconvenience to 80,000 employees who normally eat in these cafeterias and a considerable loss of efficiency of the Government agencies themselves. It is little wonder, therefore, that public opinion in the District of Columbia has been greatly aroused against GSI. The Washington Post said this morning in its editorial columns: "But in this case, GSI, although it has long recognized the union's authority to represent the cafeteria employees, seems to have seized upon the affidavit clause as a convenient union-busting bludgeon." And this follows a similar editorial stand taken by the same newspaper on January 6, 1948.

May I also call to your attention the fact that all of the striking members are Negro workers and that therefore, the issue has aroused considerable feeling in the Negro community of Washington, which has the greatest interest in the fate of 1,500 of their brethren. Repercussions of this aspect of the problem have already spread widely throughout the country.

I would be remiss in the performance of my duties if I did not remind you also that the average take-home pay of the workers involved in the present dispute amounts to $21.91 per week for full-time work. This I regard as a disgraceful situation and the proper way to have it corrected, Mr. President, is to provide opportunity for this organization to engage with the representatives of the GSI in the spirit of good faith looking toward the attainment of an amicable and mutually satisfactory collective-bargaining contract.

I urge, Mr. President, that you take at once the steps necessary to insure that the Government cease its partisan intervention into the situation; that the Government proceed at once to demonstrate its impartiality by convening a collective bargaining conference at the earliest possible moment; that the Government officials who are members of GSI's board of trustees be made acquainted with their responsibilities as Government officials and further to refrain from union-busting activities and that they be required to meet with the representatives of this union.

I am certain that such steps will lead in a very short time to a complete solution of the problem.

Sincerely yours,

PHILIP MURRAY,
President.

CIO POSITION ON TAFT-HARTLEY ACT

The second insertion is a statement made by Mr. Murray setting forth the general position of the CIO on the Taft-Hartley Act.

STATEMENT BY PHILIP MURRAY AT THE NATIONAL CIO CONVENTION OCTOBER 14, 1947, AT BOSTON

Immediately after its passage, in the latter part of June 1947, the executive board of the national CIO met in the city of Washington, and there, for an entire day the whole Taft-Hartley structure was reviewed, not only by our general counsel but by many members of our board. The question arose

as to what the policy of this organization would be with reference to either fighting or qualifying it. I stated to the members of the board on that date that it was not my purpose, as president of the United Steelworkers of America, to either file or comply, that I had some personal convictions that ran very deep in matters of that description, and that unless the members of my own executive board, namely the United Steelworkers Executive Board, changed my mind about that, I was determined to neither sign nor file.

My reason was not confined alone to the provisions of the act to which General Counsel Pressman made deferences this afternoon. I stated I was unwilling to file an affidavit that I was not a Communist. That is a matter of principle. I do not know why the Congress of the United States should require me to do that, as a citizen. I think the Congress is very presumptuous, because I think if they could do that to me about this question of communism, they could do it with any other citizen about any other kind of issue. Whilst that was not the single and sole reason for my refusal to file or qualify, it nevertheless was important, extremely important to me, as a citizen of the United States of America. I shall not attempt to explain the manifold reasons upon the importance which I attach to that principle. I think it is sufficient for me to say that this is the reason, the reason that I have explained. It is reasonable to assume that if a man is required to file an affidavit of this description, the Congress that enacts legislation of that kind can readily enact a law which says to a labor leader, "What are you, a Catholic, Protestant, or Jew?" He might ask that same question of the business interests of this country, the small and the large businessmen, who have varying degrees of political belief. Why did not this Congress incorporate in this legislation a provision asking a member of a union holding office if he is a member of the Ku Klux Klan? They did not do it. Or the Silver Shirts, or the Black Shirts, or any other type of organization. The Congress did not do it. The Congress had in mind a diabolical piece of work, extremely discriminatory in nature, and revolting to a citizen who believes in decency, and in justice, and in freedom.

Those are my personal convictions about the matter.

POST EDITORIAL POSITION

Following are two editorials from the Washington Post discussing the rights of the strikers and the issues at stake:

[From the Washington Post of January 8, 1948]

BANNING CONCILIATION

The mischief hidden in the Communist affidavit provision of the Taft-Hartley Act is made manifest by the current strike in the GSI-operated Government cafeterias. The newly established Federal Mediation and Conciliation Service, which ought by every consideration of common sense to be working earnestly to bring the disputants into agreement, is barred from any participation in the affair whatever. No one can blame Cyrus Ching or his agency for this apparent abdication of responsibility. Mr. Ching is on incontestable ground in asserting that the agency will not make its facilities available "where it appears, in a labor dispute, that the employer does not accept the authority of a union to act for the employees." The mischievousness of the Communist affidavit clause lies in the pretext it affords employers capriciously to deny the authority of a union when the union has failed, for whatever reason, to affirm that it has no Communist officers.

This appears to be precisely what the GSI management has done in respect of Local 471 of the United Cafeteria and Restaurant Workers Union. As we observed the other day, the fact that the officers of the union have not signed the affidavit seems to us to be irrelevant to the issue in the strike. The union is not complaining to the NLRB or seeking its protection and, of course, the signing of the affidavit is not a prerequisite to ordinary negotiations between unions and management. But in this case, GSI, although it has long recognized the union's authority to represent the cafeteria employees, seems to have seized upon the affidavit clause as a convenient union-busting bludgeon.

Mr. Ching cannot, to be sure, attempt to persuade GSI or any other employer to refrain from using a weapon which Congress has made available. The pity, and irony, of the situation is that irresponsible use of this weapon makes it impossible for the Mediation and Conciliation Service to find any way consistent with the law to fulfill the function for which it was created—that is, to settle disputes. As usual, the public, in its role as innocent bystander, including some thousands of Government employees, will be the loser.

[From the Washington Post of January 6, 1948]

GSI STRIKE

Whether the officers of Local 471 of the United Cafeteria and Restaurant Workers Union have signed the anti-Communist affidavit provided by the Taft-Hartley law seems to us to be irrelevant to the issue in the strike of 1,500 cafeteria workers against Government Services, Inc. The fact that the officers have not signed will be, to be sure, a black mark against the union in the estimation of many persons, including ourselves. It will seem to corroborate the charges that the local's parent union, the United Public Workers, is Communist-dominated. However, judging from the statement of Maj. Gen. U. S. Grant, 3d, president of GSI, GSI is making use of this reaction to support its refusal to bargain with the union.

The fact is, however, that the anti-Communist affidavit is required only for certification by or recourse to the National Labor Relations Board. It does not apply to ordinary negotiations between union and management. Actually, Local 471 never has been formally certified by the NLRB, either before or after the advent of the Taft-Hartley law. An informal election conducted by the Government originally confirmed Local 471 as a bargaining agent because of GSI's contention that its position as a quasi-governmental agency made the Wagner Act inapplicable. Thus GSI's insistence that certification be a prerequisite to bargaining in this case represents a complete switch from its previous stand.

Whether the union's demand for a 15-cent-an-hour raise and adjustment of working conditions is excessive we are not prepared to state. The employees represented are in the lowest wage brackets, as exemplified by the average weekly take-home pay of $21.91 cited by the union, and hence are particularly vulnerable to the squeeze of inflation. In any event, it seems to us that an acceptable settlement on this score should not be difficult if GSI were to forego its legalism and make a real effort to get together with the union. On this point it is significant that the union already has concluded an amicable agreement with the operators of the Pentagon cafeterias and is in the process of reaching a similar agreement at the Department of Agriculture.

The remainder of this material consists of telegrams in support of the union sent by various persons to officials of the Government:

JANUARY 7, 1948.

Maj. Gen. PHILIP B. FLEMING,
Federal Works Administrator,
Washington, D. C.:

We urgently call your attention to a developing health menace arising out of Government Services, Inc., hiring of strikebreaker to handle foods being served to thousands of Government workers. These strikebreakers are being placed in kitchens to prepare and handle foods and beverages without any health examinations whatsoever. GSI is making no effort to determine whether any strikebreakers are sick or have any communicable diseases. Continued operation of the cafeterias under such health hazards endangers the safety of all Government employees. Does the Federal Works Agency wish to be a partner to GSI's dangerous hiring policy? We urge you to close all GSI cafeterias at once as the only way to guarantee full protection to Government workers who patronize the cafeterias.

MAX ROFFMAN,
Regional Director, United Public Workers, CIO.

JANUARY 7, 1948.

President HARRY S. TRUMAN,
White House, Washington, D. C.:

We, the undersigned, are deeply concerned with the social and economic effects of Government Services, Inc., refusal to bargain with Local 471, CIO, to adjust wages and working conditions of its low-paid employees.

We and the Washington community are disturbed by the Government's failure to intervene in the situation and, by inactivity, allowing itself to be used in the company's attempt to break an important union of Negro employees.

Mr. President, we call your attention to this vital situation which affects the welfare of a substantial portion of the community. We urge you to use your good offices to induce this company which operates on properties of the United States Government, to bargain in good faith and in the American way with the union of its employees.

Mrs. MARY CHURCH TERRELL,
Past President, National Association of Colored Women.
Rev. W. H. JERNAGIN,
Fraternal Council of Negro Churches.
Dr. JOSEPH L. JOHNSON,
BELFORD V. LAWSON, Jr.
Dr. E. FRANKLIN FRAZIER.

ADRIAN FISHER,
United States Department of Commerce:

In event of strike by GSI employees urge that proper officers of Commerce Department order cafeteria closed until settlement is reached. General Grant announced intention "to replace those who do not report for work" shows that management will resort to the use of strikebreakers. The property of the Government of the United States must not be used as a battleground by those who wish to wreck trade-unions. A solution should be reached more quickly if unfair tactics have no support from Federal agencies.

CLARENCE MITCHELL,
National Labor Secretary, N. A. A. C. P.

Maj. Gen. PHILIP B. FLEMING,
Administrator, Federal Works Agency:

We demand you close Interior Department cafeteria immediately in accordance with Acting Secretary's request, particularly since you have no authority to refuse such a request from the head of an agency. Obviously, you have taken the side of GSI in its union-busting efforts. We also demand you close all GSI cafeterias. By permitting operation you are placing the Federal Government in the disgraceful position of a strike breaker.

RICHARD BANCROFT,
President, Local 471.

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., January 3, 1948.

The following telegram was sent today to Gen. Philip Fleming, Federal Works Administrator, by Allan Haywood, vice president and director of organization of the CIO in

regard to the dispute at Government Services, Inc.:

"I am advised that a strike among employees in Government cafeterias is imminent Monday morning. A letter to employees by Gen. U. S. Grant, representative of GSI, declares for a union-busting policy and should be condemned by every Government representative and agency. Other Government cafeteria services have negotiated settlements with the union. This dispute, too, could be settled in the same manner. I respectfully request you to stop these union-busting practices, bring about proper collective bargaining, and oppose operation of cafeterias with strikebreakers. The CIO will support these employees in their efforts to preserve their union. We will join with you in bringing about settlement by negotiation, conciliation, or arbitration. Respectfully request telegraphic reply."

Senator C. Wayland Brooks' Remarks on the Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which was made by Hon. C. WAYLAND BROOKS, the senior Senator from Illinois, on America's Town Meeting of the Air on January 13, 1948. I heard this broadcast and hope that many others did also. I believe that it would pay the Members of Congress to read Senator BROOKS' remarks and give consideration to them.

The statement follows:

The so-called Marshall plan was no plan at all. It started as a speech made at Harvard on June 5, 1947. Since then it has gone through several successive steps, each of which has been fully propagandized to sell the American people that this is finally the plan to save Western Europe and provide the basis for prosperity, plenty, and permanent peace.

It takes its place alongside of its little brothers, the Bretton Woods plan, the International Bank, the International Fund, the British loan, and the Greek-Turkish loan. These, too, were to solve the problem of a distressed world, except this one is bigger and costs much more money.

The 16 European countries grabbed the idea and met in Paris. The President appointed three committees to report on aid. The European Nations Committee met with our State Department and the figures were announced. Up to a few days ago it was merely a figure apparently based upon a budget deficit between exports and imports. The 16 countries added up the imports they wished to have and subtracted the exports they think they can ship, and then they hand us a bill for the difference. That bill amounts to $22,000,000,000 over a 4-year period.

Is this a loan? Of course not. Those so-called loans are in effect gifts, for none of these nations can hope to repay such huge sums any more than they could after the First World War; nor can England repay the $3,750,000,000 she received for 3 years' necessities and spent almost in its entirety in the past 1 year.

The American committees and State Department have scaled down the figure to approximately $17,000,000,000, but that does not include the $800,000,000 each year we must pay to feed the German population in the American zone, or the approximately $500,000,000 we must spend to feed the people in the British zone when we fully take over the British obligation in the future.

Will this vast sum add to inflation here and increase prices? Certainly it will. First, the money must be provided by increased taxes the same as the other sums of billions we have scattered so freely around the world in loans, grants, and other forms of liberal generosity, since the war. This plan alone will add approximately $500 in increased taxes to every average family in the United States. These billions of dollars like the others will find their way back to compete in America with our own large demand, and force our prices still higher. These dollars will compete in America for grain, scrap iron, coal, petroleum, farm machinery, mining equipment, transportation and transportation equipment, and many other articles and basic raw materials already in short supply.

In 1947, under the Truman administration, we exported from America at the rate of $19,000,000,000 worth of goods and services, while we imported only $8,000,000,000 worth of goods and services. There can be no doubt but that this tremendous rate of exports played a material part in the increased prices we have had in 1947. This is particularly true in the case of wheat, affecting the whole food price scale. Whenever the Government announced a larger export figure the price of wheat went up. The Government demand for export of large amounts of the other items that made up the unprecedented excess of exports over imports added to the price, and at the same time added to the tax load of our people, which in turn reflected in wage and price rise again.

This will lead to continuing high or higher prices and the demand for rationing and price controls. The President has already asked for unlimited power to impose controls to be used in selective form. Make no mistake about it—once rationing and controls go on in peacetime in America, the time will never come to take them off, and we will ultimately be dragged down to the depths of European despair instead of helping them rise by work and production so they can shake off their chains of controls that bind them today.

Should the Marshall plan be adopted in its present form? It should not. We should not attempt to subsidize socialist governments that foster and follow policies that stifle individual initiative and retard production. Money will not cure the ills of Europe. Work and production constitute the medicine so badly needed in a sick world.

The solution of many of the problems of the European countries rests with their own governments. They must balance their domestic budgets; they must change their socialistic planning, bureaucratic controls, false currency values to pave the way to allow hard work and efficient production to aid them in real recovery. As long as those socialist governments believe that America will continue to make up their deficits they will continue their bad practices, and any or all aid we give them, no matter how many billions of dollars are involved, will be, in fact, "Operation Rat Hole."

We should start, if at all, with the basic production of food, coal, steel, and transportation in Europe. These constitute the basis of all other forms of production.

Our money and our help should be administered by patriotic American experts now employed in productive enterprise in labor, agriculture, and industry. Europe needs leadership in production more than anything else—production will form the only lasting bulwark against the spread of the misery of communism.

We should provide that leadership with any of the other essentials we provide to make progressive work and production possible. This leadership should come from American experts administering a separate organization for this purpose and not be manned by political hangers-on around Government departments and bureaus.

It should be on a yearly investment basis only, and its continuance should be determined upon the basis of the increased production in each country concerned.

We have no right to pile the mistakes of tomorrow upon the mistake of yesterday. We have no right to vote away the liberties of the American people. We have no right to vote away their finances unless the recipient people will cooperate with hard work and production to provide the goods their own people so badly need.

The Herter Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. KEATING. Mr. Speaker, fortunate indeed is a body of men which numbers among its leaders a man of the clear vision, devoted purpose, deep patriotism, and extraordinary ability which characterizes our distinguished colleague from Massachusetts, the Honorable CHRISTIAN A. HERTER.

Much argument has been advanced regarding the alleged unconstitutionality of the Herter bill, H. R. 4579, providing for the administration of foreign aid.

Representative HERTER's letter to the editor of the Washington Post answering this argument is deserving of the thoughtful attention of the membership. Under leave to extend my remarks, it is included below:

HERTER BILL

A COMMUNICATION

I have read your editorial of January 7, entitled "President's Power." The gist of the editorial is that the Herter bill for foreign aid would invade the constitutional prerogative of the President because it provides that a portion of the foreign-aid program shall be carried out by an independent agency rather than by the Department of State.

The argument made in the editorial seems to me to rest exclusively on the premise that the agency provided for in the Herter bill is to be an agency independent of the President. A knowledge of what an independent agency is under Federal law, or even a casual reading of the Herter bill itself, would show that this premise is incorrect.

When Congress creates an independent agency, as it has done many times, it is merely saying that the new agency is not to be in any existing agency. This does not mean, however, that the new agency is not under the control of the President. Under the Constitution all of the Executive power is lodged in the President, and the various executive agencies are merely arms of the President. The President's control over such agencies can be made effective in many ways, the most dramatic of which is the power of removal. Only in the case of independent agencies vested with quasi-judicial functions can Congress place any limitations on this removal power.

The Herter bill does not in any way seek to limit the President's control. On the contrary, its provisions throughout recognize the duties, powers, and responsibilities of

the President in the field of foreign relations. The bill, in section 11, creates a Foreign Aid Council consisting of the heads of the various departments and agencies (including the Department of State and the Emergency Foreign Reconstruction Authority provided for in the bill) participating in the foreign-aid program "to advise and consult with the President with respect to the establishment by him" of the programs of aid and of policies in connection therewith. The Secretary of State would be the Chairman of this Council.

The executive director of the Foreign Aid Council, who is also the chairman of the board of the Emergency Foreign Reconstruction Authority, can issue directives in execution of the President's program and policies only with the approval of the President (sec. 11, c).

The stated purposes and objects of the Emergency Foreign Reconstruction Authority itself (this being the independent agency about which the editorial complains) are, as set forth in section 20 (b), to "assist the Foreign Aid Council and its executive director in the performance of their respective functions" which have just been described—namely, to assist the President and to execute, with the approval of the President, programs and policies of foreign aid that have been established by the President. It is only in furtherance of these purposes and objects and in execution of such programs and policies that the authority has power to make arrangements with foreign countries (sec. 20 (b) (1)). The authority is required by section 20 (i) to make a report to the President every 3 months.

The chairman of the board of the authority, as well as its other directors, are all appointed by the President and can be removed by the President at any time for any reason, good or bad, or for no reason.

The editorial made mention of what it characterized as the enormous power of the authority to determine, prescribe and conclude the arrangements under which various commodities would be furnished to foreign countries. As I have previously indicated, this power can be exercised only in furtherance of the authority's stated objects, which are to execute, with the approval of the President, programs and policies of foreign aid established by him. There certainly is no constitutional requirement that arrangements of this character with foreign countries be negotiated and concluded by individuals who have the status of officers or employees of the Department of State rather than of some other agency in the executive branch of the Government over which the President has as much if not more control. If there were, much of what was done under lend-lease was done unlawfully.

For example the arrangements with Great Britain under which approximately 300 Liberty ships were turned over to Great Britain in the early part of the war were negotiated and concluded on behalf of the United States not by the Secretary of State or by one of his subordinates, but by Admiral Land, the War Shipping Administrator. The Lend-Lease Administrator, and not the Department of State, was the operating agency which performed the function of implementing the various master lend-lease agreements.

Arrangements are constantly concluded with foreign governments by the Export-Import Bank for loans. So it is not at all unusual for agencies other than the Department of State to make arrangements with foreign countries, of the general type contemplated.

Furthermore, the bill does not in any way foreclose the negotiation of agreements with foreign countries through the Department of State or its agencies if this proves desirable, and specific provision is included in the bill—section 20 (h)—to give the new agency authority to utilize the services of any department of the Government with the consent of the head of the department.

All of the foregoing indicates that the Washington Post editorial is stating a legal conclusion on the basis of facts which do not exist. While the writer of that editorial asserts that one has only to read the Constitution to see how unassailable his position is, it would seem to me more logical to read the provisions of the bill first. The emergency foreign reconstruction authority provided for in the Herter bill is not independent of the President at all and is an independent agency only in the sense that it is not a part of any other Government agency. Moreover, its sole power is to execute, with the approval of the President, programs and policies of foreign aid established by the President himself.

The Herter bill represents the unanimous recommendations of the Select Committee on Foreign Aid. It was drafted with the assistance of Allen W. Dulles, a distinguished lawyer and chairman of the committee on international law of the New York County Lawyers Association, and Gerald D. Morgan, also a distinguished lawyer, who for many years was assistant legislative counsel of the House of Representatives. I have consulted them regarding your editorial, and they both concur in my reply.

CHRISTIAN A. HERTER,
Representative from Massachusetts.
WASHINGTON.

Address of Hon. Henry A. Wallace

EXTENSION OF REMARKS
OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Henry A. Wallace announcing his candidacy for the Presidency reprinted from the New York Times of December 30, 1947:

For the past 15 months I have traveled up and down, and back and forth across this country. I have talked with half a million people in public meetings and with thousands in private gatherings. I have been working for, and I shall continue to work for, peace and security in America, grounded on a foundation of world peace and security.

Everywhere in the United States today, among farmers, workers, small businessmen, and professional men and women, I find confusion, uncertainty, and fear. The people do not ask, "Will there be another war?"—but "When will the war come?"

Everywhere I find that people are spending so much for food and rent that they cannot afford their customary services from the doctor and dentist. They do not ask, "Will there be another depression?" but "When will the depression start?"

Peace and abundance mean so much to me that I have said at a dozen press conferences and in many speeches when asked about a third party, "If the Democratic Party continues to be a party of war and depression, I will see to it that the people have a chance to vote for peace and prosperity."

To those who have come to me asking the conditions of my adherence to the present Democratic administration, I have said, "Let the administration repudiate universal military training and rid itself of the Wall Street-military team that is leading us toward war."

ANSWER OF THE DEMOCRATS

I have insisted that the Democratic administration curb the ever-growing power and profits of monopoly and take concrete steps to preserve the living standards of the American people. I have demanded that the Democratic administration cease its attacks on the civil liberties of Americans. In speeches in the North and in the South at nonsegregated meetings I have stated the simple truth that segregation and discrimination of any kind or character have no place in America.

My terms to the Democratic high command have been well known.

By their actions and finally by their words, they have said: "Henry Wallace, we welcome your support but we will not change our policies."

In answering me, the Democratic leadership also gave its answer to millions of Americans who demand the right to vote for peace and prosperity. Thus, the leadership of the Democratic Party would deprive the American people of their rightful opportunity to choose between progress and reaction in 1948.

So far as the Republican Party is concerned, there is no hope—as George Norris, Fiorello LaGuardia, and Wendell Willkie long ago found out.

When the old parties rot, the people have a right to be heard through a new party. They asserted that right when the Democratic Party was founded under Jefferson in the struggle against the Federalist Party of war and privilege of his day. They won it again when the Republican Party was organized in Lincoln's time. The people must again have an opportunity to speak out with their votes in 1948.

PLEA FOR A 1948 PEACE VOTE

The lukewarm liberals sitting on two chairs say, "Why throw away your vote?" I say a vote for a new party in 1948 will be the most valuable vote you ever have cast or ever will cast.

The bigger the peace vote in 1948 the more definitely the world will know that the United States is not behind the bipartisan reactionary war policy which is dividing the world into two armed camps and making inevitable the day when American soldiers will be lying in their Arctic suits in the Russian snow.

There is no real fight between a Truman and a Republican. Both stand for a policy which opens the door to war in our lifetime and makes war certain for our children.

Let us stop saying, "I don't like it but I am going to vote for the lesser of two evils."

Rather than accept either evil, come out boldly, stand upright like men, and say so loudly all the world can hear—

"We are voting peace and security for ourselves and our children's children. We are fighting for old-fashioned Americanism at the polls in 1948. We are fighting for freedom of speech and freedom of assembly. We are fighting to end racial discrimination. We are fighting for lower prices. We are fighting for free labor unions, for jobs, and for homes in which we can decently live."

We have just passed through the holiday season when every radio and every church proclaimed the joyous tidings of peace. Every year at this time the hearts of the American people swell with genuine good will toward all mankind. We are a kindly, well-meaning people.

But the holiday season soon passes and one of the first items on the agenda of the new Congress is universal military training. I say the first political objective of progressives is the defeat of this bill, which would deliver our 18-year-olds over to the Army and cost the Nation $2,000,000,000 a year.

WAR PREPARATION IS SEEN

The American people read of the fantastic appropriations that are being made for military adventures in Greece, Turkey, China—and billions for armaments here at home.

Slowly it dawns on us that these newspaper headlines have stepped into our every-day lives at the grocery store when we pay $1 for butter, 95 cents for eggs, and 90 cents for meat.

We suddenly realize that we can't have all the people of the world getting ready for the next war without paying for it in our daily lives with less food, clothing, and housing. War preparations create record profits for big business, but only false prosperity for the people—their purchasing power shrinks as prices rise, their needs go unfilled, and they are burdened with new debts.

Yes, corporate profits are over three times what they were in 1939, but every family is paying for our war policy at the grocery store.

Two years ago I denounced those who were talking up World War III as criminals. Of course, the bulk of our people are not criminals, but it is possible for a little handful of war mongers to stampede them. As Mark Twain long ago pointed out:

"The Nation will rub its sleepy eyes and try to make out why there should be a war and will say, earnestly and indignantly, 'It is unjust and dishonorable and there is no necessity for it.' The handful will shout louder * * * and now the whole Nation * * * will take up the war cry and shout itself hoarse, and mob any honest man who ventures to open his mouth, and presently such mouths will cease to open. Next the statesmen will invent cheap lies, putting the blame on the nation that is attacked, and every man will be glad of those conscience-soothing falsities."

STAND ON RESTORING EUROPE

This pattern as Mark Twain saw it 50 years ago is repeating itself on a scale so vast as to threaten the destruction of humanity. The rich monopolists have always been more ready to sacrifice their sons than their money, but now they have reached the point where they are willing to sacrifice both for the sake of world control.

It just doesn't make sense. The time has come for a new party to fight these war makers. We say that peace is mandatory and that it can be had if we only want it.

Universal military training is the first decisive step on the road toward fascism. We shall fight it to the limit and all Congressmen who vote for it.

A new party must stand for a positive peace program of abundance and security, not scarcity and war. We can prevent depression and war if we only organize for peace in the same comprehensive way we organize for war.

I, personally, was for the humanitarian aspects of the Marshall plan long before it was announced. Because I saw the postwar need of helping human beings, I was accused of wanting a quart of milk for every Hottentot.

I pushed for help for Greece against the opposition of the administration 8 months before the Truman doctrine was announced. But I have fought and shall continue to fight programs which give guns to people when they want plows.

I fight the Truman doctrine and the Marshall plan as applied because they divide Europe into two warring camps. Those whom we buy politically with our food will soon desert us. They will pay us in the base coin of temporary gratitude and then turn to hate us because our policies are destroying their freedom.

We are restoring western Europe and Germany through United States agencies rather than United Nations agencies because we want to hem Russia in. We are acting in the same way as France and England after the last war and the end result will be the same—confusion, depression, and war.

FOR UNDERSTANDING WITH RUSSIA

It just doesn't need to happen. The cost of organizing for peace, prosperity, and progress is infinitely less than organizing for war.

We who believe this will be called Russian tools and Communists. Let the fear mongers not distort and becloud the issues by name calling. We are not for Russia and we are not for communism, but we recognize Hitlerite methods when we see them in our own land and we denounce the men who engage in such name calling as enemies of the human race who would rather have World War III than put forth a genuine effort to bring about a peaceful settlement of differences.

One thing I want to make clear to both Russia and the United States—peace requires real understanding between our peoples. Russia has as much to gain from peace as the United States, and just as we here fight against the spreaders of hate and falsehood against Russia, the Russian leaders can make a great contribution by restraining those extremists who try to widen the gap between our two great countries.

I insist that the United States will not be fully secure until there is real peace between this country and Russia and until there is an international police force stronger than the military establishment of any nation, including Russia and the United States.

I am utterly against any kind of imperialism or expansionism, whether sponsored by Britain, Russia, or the United States, and I call on Russia as well as the United States to look at all our differences objectively and free from that prejudice which the hate mongers have engendered on both sides.

What the world needs is a United Nations disarmament conference to rid humanity for all time of the threat not only of atomic bombs but also of all other methods of mass destruction.

DECLARATION OF CANDIDACY

It happens that all of my mother's and three-fourths of my father's ancestors came to this country before the American Revolution. I love the Americanism I was taught to respect in the public schools of Iowa half a century ago.

That Americanism was betrayed after World War I by forces which found their origin in monopoly capitalism, yellow journalism, and racial bigotry. Today there is a greater menace than ever before—a menace more serious than has ever confronted the human race.

That menace can be met and overcome only by a new political alinement in America which requires the organization of a new political party.

To that end I announce tonight that I shall run as an independent candidate for President of the United States in 1948.

Thousands of people all over the United States have asked me to engage in this great fight. The people are on the march. I hope that you who are listening to me tonight will lead the forces of peace, progress, and prosperity in your communities and throughout our country. Will you let me know that you have come out fighting against the powers of evil?

We have assembled a Gideon's army—small in number, powerful in conviction, ready in action. We have said with Gideon, "Let those who are fearful and trembling depart." For every fearful one who leaves there will be a thousand to take his place. A just cause is worth a hundred armies.

We face the future unfettered by any principle but the general welfare. We owe no allegiance to any group which does not serve that welfare. By God's grace, the people's peace will usher in the century of the common man.

Program of Special Conference of National Association of Letter Carriers

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose the adopted program of the special conference of the National Association of Letter Carriers, which has just concluded a 2-day meeting in Washington. This conference, presided over by Hon. William C. Daugherty, president, was attended by more than 700 delegates from 45 States. Included on their program were Representative EDWARD H. REES, chairman of the House Committee on Post Office and Civil Service; Hon. Donald Dawson, administrative assistant to the President; and Hon. Jesse M. Donaldson, Postmaster General.

PROGRAM

1. Since the inception of the National Association of Letter Carriers in 1889, the organization and its membership have established an unblemished record of sustained loyalty to the Government of the United States; 78,000 members of this association stand shoulder to shoulder with millions of like-minded American citizens in condemning communism, and all other forms of subversive activities.

We hereby reaffirm our faith in our democratic form of government, and we reiterate our pledge of continuing and unswerving loyalty.

2. Endorse the Langer-Chavez-Stevenson liberalized retirement bills, S. 637 and H. R. 4127.

Instruct our national officers to continue their best efforts to have this meritorious legislation enacted into law early in the second session of the Eightieth Congress.

3. Urge the Eightieth Congress to enact legislation immediately which will grant letter carriers an upward wage adjustment to enable them to cope with prevailing chaotic economic conditions.

4. Endorse the Morse-Aiken-Hartley bills, S. 1867 and H. R. 4650, both of which provide for increased benefits under the United States Employees' Compensation Act (specifically computing benefits on basis of 75 percent of $3,000 in lieu of present computation of 66⅔ percent of $1,800).

Both bills propose: "That the monthly compensation for total disability shall not be more than $225, nor less than $112.50, in which case his monthly compensation shall be the full amount of his monthly salary. The monthly compensation for partial disability shall not be more than $225."

5. Endorse the Langer-Butler bills, S. 205 and H. R. 1322, both of which provide for 26 days' annual and 15 days' sick leave per annum to postal employees in the field service.

6. Endorse the Teague bill, H. R. 2985. This measure relates to the appointment of veterans of World War II in the field service of the Post Office Department. It is designed to grant full credit to such veterans for all time served in the military or naval forces in determining salary grades.

7. Endorse the Hagen bill, H. R. 4781, which will reclassify village delivery carriers into the city delivery service.

8. Endorse the Langer-Cole bills, S. 203 and H. R. 1186. Both are to allow 2 cents per mile additional equipment allowance for rural carriers.

Note: S. 203 passed by Senate June 23, 1947, amended to grant 1 cent.

9. Instruct our national officers to continue their best efforts to have the following general legislative proposals enacted into law at the earliest possible moment:

S. 58 (Mr. LANGER); H. R. 738 (Mr. REES) and H. R. 1613 (Mr. GEARHART): To allow tax exemptions on annuities.

S. 202 (Mr. LANGER) and H. R. 1187 (Mr. COLE): To classify rural delivery substitutes under civil service.

S. 204 (Mr. LANGER) and H. R. 1188 (Mr. COLE): To grant $1 per hour additional to rural carriers serving on Burch heavy routes.

S. 635 (Mr. LANGER): To adjust compensation of substitutes who have had continuous service since July 1, 1945.

H. R. 682 (Mr. CLASON): To provide for retirement after 25 years of service, irrespective of age.

H. R. 696 (Mr. SIKES): To provide optional retirement at 60 years of age, with at least 25 years of service.

H. R. 1271 (Mr. STEVENSON): To provide five tours of duty for rural carriers.

H. R. 1272 (Mr. STEVENSON): To correct longevity grades 12, 13, and 14, by allowing credit for all past service in lieu of present 3, 5, and 7 years.

H. R. 1323 (Mr. BUTLER): To establish an 8-9 hour law in the P stal Service.

H. R. 1551 (Mrs. ST. GEORGE): To grant $100 annual uniform allowance to letter carriers.

H. R. 1587 (Mr. CORBETT): To grant substitute postal employees time and one-half for overtime.

H. R. 1622 (Mr. JONES): To grant 90 minutes compensatory time for each hour of service on any compensatory day.

H. R. 1876 (Mr. FARRINGTON): To grant 25 percent wage differential to postal employees in the Territory of Hawaii.

H. R. 2050 (Mr. HAGEN): To provide credit for salary purposes to all carriers advanced from the status of village carriers.

H. R. 3571 (Mrs. ROGERS): To create a United States Civil Service Board of Appeals.

H. R. 2114 (Mr. SHAFER): To provide for 30 years optional retirement.

H. R. 4305 (Mr. FERNOS-ISERN): To provide a 25 percent wage differential for postal employees in Puerto Rico.

10. Declaration of postal policy: It has become common practice on the part of many to consider the Post Office Department as a business. In measuring the success or failure of postal operations, observers are prone to gage success by the presence or absence of the so-called deficit. Unfortunately, such thinking completely obscures many vital facts.

The postal system is basically and fundamentally a service. In early colonial days several attempts were made to operate a postal system for the purpose of personal profit. All such attempts failed. The young American Nation determined from these colonial failures that a postal system to be successful must be operated by the Government, with service as the one and paramount objective.

The Post Office Department is operated to give good mail service to the American people. Mail service and facilities are provided in every nook and corner of the United States. Such operations are established regardless of any consideration of profit. In fact, there are approximately 42,000 post offices, 20,000 of which conduct their operations at a loss. Do our competitive business organizations maintain comparable service? Of course not. Express companies, telegraph companies, and other public services maintain offices and service only where such operations produce a profit.

Third Assistant Postmaster General Joseph J. Lawler recently stated: "It has long been the policy of Congress to extend special below-cost rates to certain classes of mail and to provide facilities and service for the benefit of the general public regardless of the fact that the charges for such services and facilities do not cover the cost of their maintenance."

The only universal service in America today is the postal service. Millions of people do not have electricity; millions live without running water; millions live without telegraph and telephone service or facilities; millions do not have ready access to public transportation. But every American citizen is provided with mail service. It is the one and only universal service in the United States.

Those in charge of postal operations have the responsibility of requesting sufficient funds to operate the Post Office Department properly. Congress has the solemn obligation of providing adequate funds to furnish good service. Unfortunately, under our present system, the officials of the Post Office Department are required to estimate how much money will be needed almost 2 years prior to the period when the funds will be available. This estimate then goes to the Director of the Budget, and finally emerges in the President's budget message. Exalted economic prophets have proven dismal failures in anticipating economic trends. Under the circumstances it is rather absurd of us to expect postal administrators to be omnipotent forecasters. If the needs of the service are greater than anticipated, the public in all likelihood will receive inferior mail service.

In the matter of planning expenditures the Post Office Department is in a somewhat different position than other departments of government. Other departments can plan their activities and gage their expenditures accordingly. The Post Office Department cannot do this. It has no control over the volume of mail. It must deliver all the mail. It has no control over the area of delivery—if people move, the mail must move with them. Poor guessing and inadequate appropriations can result in only one thing and that is an inferior postal service. Congress should recognize these facts and when necessary vote adequate supplemental appropriations to maintain a first-class postal service.

There is an erroneous impression in Congress and among the public that the Post Office Department consistently operates at a loss. It can be readily demonstrated by available evidence that the Post Office Department over a period of years has actually operated at a profit. Misinformation to the contrary should be speedily dispelled.

Unfortunately since 1940 the Post Office Department has not reflected the credits authorized by the Kelly Act of 1930 and has never considered these credits in any cost ascertainment reports. The items included under the Kelly law contain the expenditures of Government departments for mail carried free of charge. The Post Office Department should be credited with payment for this mail either by a transfer of cash or credits from the Departments involved, and this expense should be allocated to the various departments of Government who use the postal service as a part of their operation.

It is true that even with the credit allowance provided by the Kelly Act, there are individual years, such as 1946, when losses are shown. It is also a fact that when all the years 1930 to 1946, inclusive, are examined, and the Kelly Act credits are included, that the Post Office Department shows a cumulative profit of $304,247,315. During the war period, the expense of handling mail for the Armed Forces was also absorbed by the Post Office Department without recompense. The Post Office estimate of the revenues they would have received for this service at regular postage rates is $168,000,000 for the fiscal years 1942, 1943 and 1944. No estimates have been made for 1945 or 1946.

We should at this point pause again to point out that every single function of the Post Office Department has been instituted by Congress with the sole motivation of providing service to the American people. Profit has never been a consideration. Perhaps it is because the operations of the Department have been so successful that the fundamental purposes of the post office system tends to be lost in a maze of accounting. It is true that in the past there have been years when the Postmaster General's reports have shown deficits and years when they have shown profits, but the figures for the 17 years just quoted do not support the contention that the Post Office operates at a loss, and we believe that in fairness to the Post Office, to its employees, and to its patrons accounting and cost keeping should be handled in a manner that will give a true picture of expense and income. To do this properly, the credits allowable under the Kelly Act would have to be extended to include many additional items.

If we project the trends of postal revenue and expense from 1930 to 1946 until 1957, we find revenues increasing substantially faster than expenses, this indicating that consistent increases in volume of business are more important as a means of absorbing expense increases than would be the increasing of rates, which would certainly tend to divert volume to other methods of delivery.

One hundred and seventy years of operation have definitely demonstrated two vital factors in successful postal operation: (1) greater volume promotes lower unit cost and more economical operation; (2) the reduction of the number of times a piece of mail is handled reduces the cost of operation. The best and most inexpensive way to handle mail is to deliver it immediately. Delayed appropriations and curtailed service are more costly in the final analysis. Adequate appropriations and good service promote efficiency in operation.

In this analysis we have made no attempt to estimate the cost to the American people in poor mail service. The cost of delayed mail to businessmen and individuals is enormous. The American people are entitled to and should demand good mail service.

We have not attempted in this study to show all of the operations that are conducted by the Post Office Department on a free or less than cost basis. Before closing, however, we want to briefly point out the major role that the postal service has played and is continuing to play in the development of the American Nation.

The Post Office Department developed our system of roads through the construction of post roads. Through preferential payments to railroads the postal service has kept many branch lines in operation. The Post Office subsidized the development of the merchant marine and the air industry. Yes, indeed it was communication in the garb of the Post Office that took transportation by the hand and conducted it to its present advanced state of development. It was the twins of progress, communication and transportation, that sped our country on to great expansion. What is the purpose of this policy, profit or service? Service and service alone must be the paramount purpose.

11. That this conference go on record requesting immediate action on the part of the Post Office Department, the Bureau of the Budget, and the Congress of the United States to provide proper equipment, supplies, and quarters to conduct the business of this

great institution. In particular the motor-vehicle equipment of the postal service requires immediate attention. The trucks now in use in the Department are almost entirely unsafe, antiquated, and detrimental to the health of the men who operate them as well as a menace to people on the streets. It is pertinent to observe that the trucks now in operation have an average service of 15 years and are in use 16 hours per day. The Army trucks now in use by the Post Office Department are a threat to the life and limb of the men who are required to climb in and out of them in the collection and delivery of mail. Vigorous steps must be taken to provide immediate replacement.

The prevalent shortage of keys, straps, sacks, storage boxes, cases, and, in short, all equipment make the delivery of mail difficult in the extreme. Efficient service cannot be maintained without proper supplies.

Post-office quarters are in a deplorable state. The unprecedented volume of mail has practically every post office and station in the United States bursting at the seams. Proper handling of mail is impossible under the present circumstances. The cost of the delivery of mail is greatly increased because of this congestion. Poor toilet facilities, poor ventilation, and poor lighting are a menace to the health of postal employees. The dictates of good service, the demand for efficiency, and the welfare of the men make correction of these conditions imperative.

We, the representatives of the letter carriers of the United States, by unanimous action request the Post Office Department, the Director of the Budget, and the Congress of the United States to correct these conditions to the end that the efficiency of the Post Office Department be restored to an economical basis, and that the health and welfare of the employees be protected.

Even in Rhode Island They Feel the Ill Effects of the New Deal Agricultural Approach

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, most people realize that the President has the power, authority, and money to control prices whenever he wishes to assume the responsibility of doing so. The fact that chickens and eggs are bringing 50 to 60 percent of parity, no doubt, accounts for the following statement found on page 146 in the Sunday, January 11, New York Times. Inquiry by the reporter about President Truman's speech brought forth the following statement, and I quote:

Fred Bascombe of Bonnie Brook Farm, Cumberland, R. I., chairman of the northern Rhode Island soil conservation district, said: "I didn't pay any attention to Mr. Truman's message. We farmers are not interested in what he says, only in what he does. This administration is not interested in the plight of the dairy or poultry farmer. We've been taking it on the chin so long we're no longer interested in speeches."

Mr. Speaker, the Steagall amendment sounds good come election times, and reads fine, but little attention is paid to its provisions by the present administration.

Security Suckers

EXTENSION OF REMARKS
OF
HON. CLAUDE I. BAKEWELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. BAKEWELL. Mr. Speaker, during the war we as a Nation were security conscious lest information of a helpful nature be given through inadvertance to the enemy. Since the termination of hostilities, however, certain Americans have revived the practice of competing with one another to reveal strategic information. This is an alarming situation, especially when we recall the stories concerning the atomic-bomb spy ring in Canada. The national emergency has not terminated. There is adequate legislation on the books to cover these instances. Let the Department of Justice do its duty. One conviction will be a more effective deterrent than all the words which we could utter here in a week.

Under leave to extend my remarks, I wish to include herein the following editorial which appeared in Armed Force, formerly the Army and Navy Bulletin, of January 3, 1948:

SECURITY SUCKERS

We are a very generous Nation. We give away food. We give away clothing. We help others with our money and our resources. In no field, however, are we quite as generous as we are with our military secrets. Any agent who collects money from a foreign government for spying services rendered in America is an overpaid fraud.

Why should impoverished foreign governments pay money to agents when all they have to do is to subscribe to some of our publications? Much cheaper; and, actually, they get information almost as complete in detail. Last week, for example, any foreign government interested in determining whether man could fly in aircraft at speeds exceeding the speed of sound—a rather important military question—could have saved about 5 years in research and experiments simply by reading one of our leading aviation weeklies.

New aircraft designs? Location of armaments? Rearward firing guns? Performance characteristics? No agent need apply. Just read your magazines. Strangely enough, this wholesome generosity of ours does not seem to be paralleled by other nations. Even our friends, the British, for example, have not splashed the front pages with their aircraft and ordnance secrets. The fabled "iron curtain" which Russia has placed in front of its civilian activities is transparent as a department store window compared to the amount of military information which leaks out of the Soviet.

Somehow, the security consciousness which was successfully instilled in millions of civilian and military personnel during wartime has rapidly been dissipated in peacetime. Our military leaders are deeply perturbed. Offically they have no authority over anything except the regular establishments, which have not been completely blameless in this matter of leaking out information. Most of the serious breaks, however, have emanated from sources presumably beyond the reach of official discipline.

If the Air Force ever confirms the report that one of its planes has passed the sonic barrier it will be one of the most important developments in aviation since Wilbur Wright hedgehopped across the sand dunes at Kitty Hawk. It will also be a perfect example of the type of secret which should not be broadcast to the world until the military and naval leaders responsible for our Nation's defense decide that to do so will not endanger national security. Armed Force staff members heard unverified reports about supersonic flights more than a month ago, but we feel no particular sense of nobility for not having published them. Frankly, the present international situation has convinced us that right now is a splendid time to clam up.

(EDITOR'S NOTE.—The above editorial was set in type prior to the holiday development wherein the Air Force turned over to the Justice Department an alleged violation of national security by the magazine Aviation Week, which recently claimed that the USAF's XS-1 had passed the sonic barrier. Armed Force is gratified by the courage of Air Force leaders in taking this drastic step and hopes that it will lead to a clarification of security needs.)

Progress of the Foot-and-Mouth Campaign

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Representative GEORGE W. GILLIE, of Indiana, chairman of the special House Subcommittee on Foot and Mouth Disease, before the forty-eighth annual conference of the Veterinary Alumni Society, University of Pennsylvania, at Philadelphia on January 6, 1948:

I suppose you might say that my purpose in being here today is to try to teach a bunch of old dogs some new tricks. For a good many years we of the veterinary profession have said that we could not live with foot-and-mouth disease. We haven't learned any of the tricks of living with this disease because all our planning, all our thinking, has been in terms of eradicating it every time it made its appearance on this continent.

Gentlemen, we are going to have to learn some new tricks. Foot-and-mouth disease is on the North American Continent. It is firmly established. It is going to be here for a long time—certainly for years, perhaps for a generation, possibly from now on.

So, whether we like it or not—and I, for one, frankly admit that I do not like it—we have got to learn the tricks of living with foot-and-mouth disease, if not actually in the United States, at least on the North American Continent.

Most of you here are as familiar as I am with the history of foot-and-mouth disease in this country. Some of you—like myself—have had your own unforgettable personal experience with it. I'm sure it isn't necessary for me to tell you anything about the past history of the disease nor of its dreadful effect on the livestock industry of any country where it becomes prevalent.

The main question before us today is what are we going to do about the outbreak that has now established itself in Mexico? I want to review just enough of the history of that outbreak to bring us up to date and to give us the necessary background for an analysis of the existing situation in Mexico.

Here are the facts as we know them.

On December 26, 1946, the Bureau of Animal Industry, in Washington, received word that foot-and-mouth disease existed in Mexico. The report was made by veterinarians of our own Bureau who had been sent to Mexico, at the invitation of Mexican officials, to assist in the diagnosis of the suspected outbreak.

It was assumed that the disease was brought into Mexico by Zebu bulls from Brazil, which had been imported into Mexico in violation of the Mexican-United States sanitary treaty. Notice that I say it was "assumed" the disease came in by way of these Brazilian bulls. There are some rumors to the contrary in Mexico, and I will refer to them a little later on.

According to our reports, however, the disease was first discovered in a herd near Vera Cruz in which there was one of these Brazilian bulls. The bull itself did not have the disease at the time of the first outbreak.

As soon as the disease was reported, the Mexican-United States border was closed and veterinarians from our Bureau of Animal Industry began informal cooperation with Mexican authorities in laying plans to combat the outbreak.

It was discovered that the disease had already spread to practically all the states of central Mexico—from the Gulf to the Pacific. It wasn't established everywhere throughout those states, but there were local centers of infection scattered clear across central Mexico.

Quarantine lines were set up in an effort to confine the disease. These were manned by the Mexican Army. There were two kinds of quarantine lines—the permanent lines north and south of the generally infected area, to keep the disease within that general area—and the more or less temporary lines which were established within the generally infected area to try to keep the outbreaks localized.

Early in February of last year the Department of Agriculture came to Congress with a request for authority, and for money, to cooperate with the Government of Mexico in efforts to stamp out the disease. That request was promptly granted.

The Committee on Agriculture of the House had already set up a subcommittee on foot-and-mouth disease, of which I had the honor to be named chairman. The Senate Agriculture Committee had set up a similar subcommittee under Senator BUSHFIELD.

With these two subcommittes already on the job, it was only a matter of days from the time the Department of Agriculture came to us until we had provided them by law with both the legal authority to operate in Mexico and the money they requested to start the job with. Incidentally, I would like to say here—and I believe the officials of the Bureau of Animal Industry will bear me out fully in this—there has never been a time since this outbreak was first reported when the program has been held up for 1 minute by the failure of Congress to take prompt and effective action in providing both funds and authority.

In fact, I think the record of Congress as far as foot-and-mouth disease is concerned pretty well disproves the idea that the processes of democracy are necessarily slow and cumbersome. It was less than 3 weeks from the time the Department of Agriculture first requested authority to go into Mexico until Public Law 8, granting that authority, had been passed by both Houses of Congress.

Late in June, when it looked as though the program might have to stop for the first few days of July because the regular appropriations for the new fiscal year were not going to be available, the Department appeared before the House Appropriations Committee and within a matter of hours a special appropriation of $1,500,000 was provided to keep the program going until the regular appropriation came through.

The same kind of speedy action was apparent in Congress when the Department of Agriculture recently announced abandonment of its slaughter program. Although we had only 1 day's notice that the slaughter program was to be terminated, our announcement of a hearing on the subject was released to the press within 30 minutes after the Department's own announcement of the termination of its previous program.

As far as the House Committee on Agriculture was concerned, we could have started hearings the next day. Most of our witnesses had to come from hundreds or thousands of miles away, however, so we gave them 5 days' notice and started our hearings on Wednesday of the following week, December 3.

The committee met almost continuously throughout Wednesday, Thursday, and Friday of that week. Friday noon we finished the public hearings. That afternoon we had a series of private hearings in which we questioned one at a time several of the key witnesses who had appeared at the public hearings. We wanted to do this because we knew that there were some matters involved here which could not be discussed fully in public—and we wanted to get the whole story for our guidance before we took any action.

For the benefit of those who might have been aware that this private conference session took place—and may have wondered what was disclosed there—let me state that in no case did the facts or opinions expressed by the witnesses in their private conference with the committee vary in any material detail from the testimony they had given publicly. The transcript of that testimony—the public testimony—is now being printed and is available to anyone who is interested as soon as it is ready. If you want a copy, write to the clerk of the House Committee on Agriculture and ask that you be sent a copy of the hearing as soon as it is received from the printer.

After hearing all those who had indicated any desire to express themselves on this subject—as well as those who had been requested by the committee to appear—the committee worked late Friday night outlining its report and recommendations. Saturday morning it met in my office and formally approved the report. Saturday afternoon copies of the report—and the recommendations as to our future policy regarding the fight against foot-and-mouth disease—were delivered personally by the committee's staff assistant to the men in the Department of Agriculture and the State Department who were scheduled to meet the next day with Mexican officials to work out a new program and agreement.

Thus—let me repeat—in a matter of exactly 10 days from the time the Department of Agriculture announced the abandonment of its slaughter and eradication program, the House committee assigned to that subject had announced and held a public hearing, had drawn up and agreed upon its report and recommendations as to future policy, and had transmitted those recommendations to the executive departments responsible for carrying out the program. Does that sound, gentlemen, as though the processes of democracy are cumbersome and slow?

By the first of last April, American men and equipment were moving into Mexico. By the middle of June the slaughter and burial program was in full swing. By the end of November, when the slaughter program was stopped, more than 500,000 cattle had been slaughtered. In spite of this, the disease had continued to spread within the infected area.

It was still confined to the same general area in central Mexico, but it had flared up in scores of new communities and new herds within the area. When the program was getting under way, Mexican and American officials estimated that it might be necessary to slaughter some 1,500,000 or 2,000,000 cattle in order to eradicate the disease. By the end of November it had become obvious that it would be necessary to kill and bury virtually every cloven-hoofed animal in the infected area. That would mean the destruction of five or six million cattle and perhaps that many sheep, goats, and hogs.

That would mean the killing of about half the livestock population of Mexico. A complete eradication program would have meant that whole states would have been left, for a time at least, with no livestock whatever—no cattle, no hogs, no sheep, or goats.

The Mexican Government decided that it was impossible to carry out an eradication program of that magnitude—impossible economically and impossible politically. It is a decision that I don't believe we can quarrel too much with. I doubt very seriously if we could carry out an eradication program of that magnitude in the United States.

Naturally, operations in Mexico can be carried on only with the approval and cooperation of the Mexican Government. So when that Government decided that the situation had reached a point where it was impossible to continue with the eradication program, our officials had no choice but to comply. We were left with two alternatives—either continue in Mexico with a program acceptable to the Mexican Government and to us—or withdraw from Mexico and prepare to fight the disease in the United States.

That was the situation with which we were faced when we opened our hearing, just about a month ago, in Washington.

After considering carefully all available evidence—and listening to every suggestion—our committee unanimously adopted recommendations outlining a policy which we believe is the best that can be adopted. We transmitted these recommendations promptly to the Department of Agriculture and the State Department, as I described earlier, and they were made the basis of the new program which is now going into operation.

There were seven of those recommendations, but the basic policy—the only basis on which I believe it is worthwhile to continue in Mexico—is stated in recommendation No. 2. This recommendation reads:

"It shall be understood definitely by all participants that the program now undertaken is not an abandonment of the effort to eradicate foot-and-mouth disease from this continent but is merely a postponement of that effort until it can be undertaken and accomplished in a manner which is more acceptable to the Mexican people and tolerable to the Mexican economy."

In other words, gentlemen, we have not given up the fight against foot-and-mouth disease. We have been defeated in the first battle of the war. There's no use in us trying to kid ourselves about that. In our first battle we have been handed a serious defeat. But I can remember another war—not so long ago—in which we didn't do so well in our first few battles.

We are no more inclined to give up the war against foot-and-mouth disease merely because we have lost the first battle than we were to give up the war against Japan because they got the jump on us at Pearl Harbor.

In Mexico we have met a rousing defeat in our first battle. But we have fallen back in good order—our lines are intact—and we are ready to give battle again along lines that we believe will bring us eventual victory.

The strategy of our campaign from here on is outlined in the first recommendation of the committee. Let me read it:

"The campaign against foot-and-mouth disease in Mexico shall be conducted on the following basis: First, an all-out effort by

both countries to hold a quarantine line immediately north of the present infected area, including a sterile zone as wide as possible south of such line in which all infected and exposed animals will be subject to immediate slaughter and burial, in order to prevent the spread of the disease into northern Mexico and the United States;

"Second, extension and enlargement southward of that sterile zone as rapidly as circumstances will permit, with vaccination being employed by the Commission only as an adjunct to quarantine."

There is the plan that we believe is the best that can be worked out under the circumstances. First, hold the quarantine line north of the infected area. Second, work southward from that line eradicating the disease—by slaughter and burial—county by county, township by township, as rapidly as we can.

And in the meantime—and I think this is very important—put our best available scientists to work on the job of trying to find a scientific remedy for this situation.

Why do I think this plan holds our greatest hope of success? Why do I think this quarantine line can be held when we have always felt that it is virtually impossible to hold a land quarantine against foot-and-mouth disease? Let's analyze the situation. And like good generals, let's consider not only the probable results of our future moves, but let's also analyze the factors that contributed to our earlier failure.

First, what were the factors that contributed to the failure of our first eradication program?

The first factor that contributed to our downfall, I think, was the difficulty of the terrain in central Mexico. A glance at a road map of Mexico will show you that there are very few paved highways. If you have traveled through central Mexico—as our committee did last summer—you know that in most sections there are not only no highways—there are no roads whatever.

Mexico is still a primitive country—except for the few large cities. Out in the country 99 percent of the travel is on foot or on the backs or burros. You don't need roads for that kind of transportation—and in most rural areas of Mexico roads as we know them simply do not exist.

The lack of roads hurt our campaign in two ways. In the first place, it rendered transportation of our heavy digging and disinfecting equipment difficult, if not actually impossible. In a campaign where we were attempting to operate simultaneously and at high speed over an area 450 miles long and 250 miles wide, the difficulty of the terrain presented an almost insurmountable handicap—and, by itself, might have been sufficient to beat us.

But the lack of roads hurt us in another way, too. It made our interior quarantine lines—those thrown around local outbreaks to prevent the disease spreading to nearby herds—it made these quarantine lines almost ineffectual. Mexican soldiers could guard the roads—and they did guard them. On its trip in Mexico our committee passed scores of such quarantine lines and road blocks along the highways.

But where there was one Mexican using the roads to get from place to place, there were fifty or a hundred using the paths and trails that wind up the score across every hill—or simply striking out across the fields. Where farms are small, the countryside is thickly settled, and villages are close together—you don't use the road when you go over to visit your neighbor—even if there is a road. You cut right out across the field.

The Mexican army had, I suppose, thousands of miles of these interior, local quarantine lines. They couldn't possibly have a soldier every 50 feet along every one of those lines. The best they could do was to guard the roads and the main paths. And, as one of our witnesses put it, that is about like trying to keep ants out of your house by putting a domino between your house and the ant hill. So the second way in which the terrain and the geography hurt us was by making the interior quarantine ineffective.

A second big reason for the failure of our campaign, as I see it, was the character of the agriculture in the infected area. In the main, central Mexico is an area of small farms. There are a good many dairy herds, principally around Mexico City. There are a few large ranches, mostly over in the area toward Vera Cruz. But in general, central Mexico is a land of small villages, small farms, and small landowners. The typical farm contains only a few acres. It is operated by one man and his family with a yoke of oxen. Every family has, besides its oxen, its goats and probably a milk cow and maybe a hog or two.

Those in charge of the eradication program found that it was almost impossible to clean out an area and get all the susceptible animals. You would get most of them; yes. You would get oxen by the score, goats and sheep by the hundreds, some milk cows, and some hogs. But you can hide a milk cow in the woods. You can put a hog or a goat under the bed, or on top of a flat-roofed adobe house—and have him well out of sight. Our men would kill everything in sight, cover over the pit, and come back a week later and find animals by the score placidly grazing on the very ground they had cleared.

Hiding animals out when the eradication squad came around, or driving them over the mountain to leave with cousin Manuel in an uninfected valley, was, of course, merely an indication that Jose—the average Mexican farmer—simply didn't understand what the campaign was all about. He hadn't been thoroughly sold on the program. He didn't understand why he should cooperate 100 percent with the government men who were coming around to kill his animals.

Basically, lack of cooperation on the part of the Mexican farmers themselves was the one big reason for the failure of the slaughter campaign. With their full cooperation, the other difficulties might have been overcome. Without it, I don't think the job could have been done even if there had been no other handicap whatever.

In some places this lack of understanding and cooperation on the part of the Mexican farmers merely took the form of hiding out some of their animals, or failure to report an outbreak. In other places there was open and bitter resistance to the campaign.

Part of this was due to mere lack of information—and I don't think any of us realized when this program was started how extremely difficult it was going to be to get information about the program—just plain, factual information—to the Mexican peons. Those little farmers don't have radios, they don't have newspapers. Most of them don't read nor write. And many of them don't even speak Spanish. Most Mexican farmers are Indians and lots of them can't even understand Spanish.

Those of you who have had any experience trying to get American farmers to cooperate in the eradication of foot-and-mouth disease, or in any similar campaign where you had no difficulties of language or illiteracy to contend with, will understand, I think, of trying to convince unlearned Mexicans that they should cooperate 100 percent with this program.

In addition to these difficulties, however, there is no doubt in my own mind but that poor public relations on the part of those conducting the campaign also contributed to the lack of cooperation among the farmers. I don't mean poor publicity—I mean public relations in its broadest sense.

I don't think there was a sufficient effort made to reach the farmer through the means of communication that he does understand, by word of mouth education, by working through the village mayor and political boss, and through the parish priest. I think a little more careful attention to this kind of an educational program in communities where an eradication program was scheduled would have helped. But I doubt if it could have been carried out simultaneously over the tremendous area where the disease was found to exist.

On its visit to Mexico the committee saw other examples of poor public relations. When we were there we saw animals being killed with a .22 caliber pistol. With the residents of the whole community lining the sides of the pit—including, of course, the owners of the animals being killed—we saw dozens of animals half dead, writhing in pain while they were shot time after time with that puny little weapon. Those animals are dear to those people. From long association many of them become almost like members of the family. When word of scenes like that spread to the next village it was an almost certain guaranty that there would be something less than an enthusiastic welcome when the eradication squad reached there.

Failure to have mules on hand to replace slaughtered oxen was also poor public relations. We saw farmers whose oxen had been killed who had been waiting 6 or 8 weeks to get the mule he had been promised. In the meantime his fields were unplanted or were growing up in weeds * * * and the corn and beans that were to feed the family this winter were not being grown. That sort of thing didn't make the farmer any more cooperative.

Another thing that turned out to be an important factor in determining the Mexican farmers' attitude toward this campaign was politics—just plain old politics. They have politics in Mexico just as we have in this country. And, just as in the United States, when there is a party in control of the administration, there are one or more parties who are out and would like to get in and who seize upon every opportunity to make political capital out of the problems faced by the administration. Just as in this country we have seen high prices, rationing, and similar problems seized upon by opposition political parties in an effort to embarrass their opponents politically, so in Mexico the campaign against the foot-and-mouth disease was used by opposition political parties in an effort to make political capital and to discredit the administration.

As in this country, this political propaganda was carried on through every medium—through the radio and press and in a word-of-mouth "whisper campaign" in the rural areas. In Mexico the "whisper campaign" was particularly effective.

An interesting rumor which was started and spread by those trying to make political capital of the situation was the report that foot-and-mouth disease was not new to Mexico but had existed there for a great many years. "This is not a new disease," the peons were told. "The affliction they call foot-and-mouth disease is the same as that disease with which you are all familiar, 'the flying herb,' which you have had among your cattle for many years. This whole campaign is merely a trick on the part of the administration and their Yankee friends to destroy the agricultural economy of Mexico."

Thus ran the argument advanced by those making political opposition to the program. They brought out some evidence to support their propaganda. This point of view was presented to the committee by one of the witnesses at our recent hearing. There is enough factual basis for the contention to permit this kind of argument to have a considerable effect upon the farmers of Mexico. There was an outbreak of foot-and-mouth disease in the southeastern part of Mexico

in 1925 and 1926. Although it is believed that this outbreak was eradicated completely, there has been a disease called flying herb, which has been prevalent in Mexico for the past many years, and which, although it is not foot-and-mouth disease, has symptoms very similar to the more serious malady.

This was not the only type of propaganda used in the political campaign against the eradication program, but it is typical of the kind of opposition the program encountered in certain places, and there is no doubt that this opposition had a considerable effect in preventing the all-out cooperation of the Mexican farmer.

Strangely enough, the disease itself played into the hands of those opposed to the program and made more difficult the job of trying to convince the unlearned Mexican farmer to cooperate with the eradication campaign.

The disease in Mexico is caused by the type A virus and is at present a remarkably mild form of the disease. Since it is caused by a virus, it is impossible to tell when it may become hotter and more malignant, as virus diseases can do almost overnight. Up to the present time, however, there is no denying that the disease has been present in Mexico in a rather benign form. The mortality rate among cattle has been extremely low. Even calves and small animals have recovered from the disease. Recovery among older animals seems to be virtually complete when the disease has run its course, and in many cases even milk cows are not too seriously affected. The disease has been present to only a slight degree in hogs, goats, and other susceptible animals.

All this, of course, has added tremendously to the difficulty of convincing the Mexican farmer that he should cooperate in this program. It is not too difficult to obtain the cooperation of a man whose animals are desperately sick or dying before his very eyes, or if they have had the disease and recovered but have been rendered virtually unfit for any further use. It is much more difficult to convince him that he should cooperate if he sees that the effect on his own animals is relatively mild.

These are not all the factors which contributed to the failure of our wholesale eradication program, but I believe they are the most important, and I think you will agree with me that our failure is not exactly surprising when all these circumstances are taken into consideration.

Now, let's turn to an analysis of our revised strategy. Why do I think that the program the committee has outlined now has a chance of success where our previous program failed? There are two big reasons: First, the scope of our activities will be much more limited. Obviously, one of the things contributing to the downfall of the first program was the very size and scope of the undertaking. Second, many of the factors which worked against us in our original program will be working in our favor in the strategy we have outlined for the future. I will mention a few of these factors as we try to analyze the situation with which we are now faced.

Let's answer first the basic question: Why do I think we can hold the quarantine line north of the infected area when history indicates that no land quarantine has ever been 100 percent successful against foot-and-mouth disease? I hope that I am not indulging in wishful thinking, but I sincerely believe that if all of us—those from both countries—work together, as I believe we will, to maintain this quarantine the line can be held.

In the first place, the difficulties of terrain, the lock of roads and other transportation facilities, and the geography of the country itself seem to me to be in our favor in efforts to hold this northern quarantine line. Where all of these factors worked against us under our original program, I believe that they will be working for us under our revised program.

There are only a few highways and railways north and south across the main quarantine line. That line, as I think you know, runs from the vicinity of Tampico on the Gulf coast almost straight west to a point north and west of Guadalajara and then angles southwest to the Pacific coast. There are only three or four highways and railroad lines across this quarantine line. All north-south traffic that is going for any distance follows these main transportation arteries and these, of course, can be adequately patrolled. The quarantine line is being laid out so that it takes advantage of natural barriers such as rivers, mountain ranges, and other geographical features. The paths and trails run across these mountain ranges just as they run across the interior of the infected area, of course. But the traffic on these trails and byways is not through traffic. It is the village-to-village and neighbor-to-neighbor kind of traffic that is not going to transport the disease very many miles even if it goes on uninterrupted. This kind of traffic was fatal to our local quarantine lines inside the infected areas, as I pointed out previously, but it will hold relatively little danger, it seems to me, for our major quarantine line which is to prevent the spread of the disease from central Mexico into northern Mexico and the United States.

I believe that the agricultural economy of the country, which worked against us in our earlier program in the manner I have described, will be all in our favor in our efforts to hold this quarantine line. As I have mentioned, central Mexico, where foot-and-mouth disease is now established, is a land of small farms and many small villages. The people are poor and usually own only a few animals each. In that part of the country there are almost no ranges and there are very few beef cattle produced. North of the quarantine line, on the other hand, we have the beef cattle and open range area of Mexico. In northern Mexico is some of the best range land on the North American Continent. There are also some of the largest ranges in the world and some of the finest herds of beef cattle. In contrast to central Mexico, the cattle in the northern part of the country are primarily those in large herds belonging to wealthy and highly educated land owners who are fully aware of the menace of foot-and-mouth disease. In contrast to the people of central Mexico, those in northern Mexico are 100 percent behind the program to control and eradicate this disease. The big ranch owners in that part of the country have been the most active of any Mexicans in working to make this program a success.

The quarantine lines run almost exactly on the natural dividing line between the range lands of the north and the small, thickly populated farm lands of the south. The ranchers of the north know that it is to their own advantage to keep this disease out of their part of the country, and I think that we can be assured that our quarantine troops will have the backing not only of the influence and political support of the people in northern Mexico, but will also, very probably, have the physical assistance of the armed guards that most of these big ranchers maintain, to help in enforcing the quarantine line. In other words, by the very nature of our new operation we will be working with the wholehearted support of the people who can make it a success, rather than having to combat the indifference or opposition of the people whose cooperation is necessary as was the case under the previous program.

Another factor which will help us in holding the quarantine line in the north is that there is virtually no transportation of livestock of any kind from south to north in that part of Mexico. The large cities in Mexico, and a large percentage of the population of the country, are located in the central area where the disease now exists. That part of the country is a deficit area as far as livestock and livestock products are concerned. They don't produce enough for their own use so that there is a constant importation from northern Mexico and virtually no movement of livestock or livestock products from central to northern Mexico. There is so little traffic from south to north across this quarantine line, that in spite of the ineffectiveness of the quarantine which has previously been maintained, and in spite of the tremendous spread of the disease within the infected area, there has been no substantial spread of the disease across the north quarantine line. With the holding of a reinforced quarantine as our first major objective, I believe it will be entirely possible to prevent any spread northward across that line.

Most important in holding the quarantine line, however, is the fact that this will not be a mere line drawn on a map nor a mere single row of guards blocking highways at one point. South of the quarantine line there is to be a sterile zone, which will be, according to our recommendations, as wide as practicable. The quarantine line is now in many places 40 or 50 miles north of the nearest infection. At no point, as far as I am aware, is the disease actually existent right up against the quarantine line. In other words, there is a sterile zone already in existence for some miles south of the present quarantine line. This area, now disease-free, will be maintained and guarded by a second quarantine line to the south of that disease-free area. Every effort will be made to keep the disease from entering this sterile zone and any outbreaks which do occur there will be immediately eradicated by slaughter and burial. If this part of the program is carried out, it will prevent the disease from approaching within the immediate vicinity of the quarantine line, so that there will be almost no danger of local traffic carrying it across.

As it becomes possible to resume eradication operations these operations will be conducted so as to push the sterile zone continuously further and further south. In other words, we will start with a municipio, or a county, which is immediately south of the present sterile zone. It will be quarantined off. All infected and exposed livestock in that municipio will be slaughtered and buried. As soon as possible they will be replaced by new livestock. Then when we know that the area is clean and free of the disease, we will take another "bite" out of the infected area, moving the secondary quarantine line farther south and still further enlarging the sterile zone between the disease and our main quarantine line.

Knowing that our public relations have been poor in the past, we will see that the groundwork is laid carefully for the county-to-county eradication program that we will carry out in the future. The farmers in the area concerned will be solidly sold on the program before it is undertaken. With plenty of machinery on hand, animals will be disposed of promptly and their owners will be indemnified immediately. Mules will be on hand to be delivered to the farmer the day his oxen is killed. There may have to be relief food distributed for a period to take the place of livestock products which will not be available during the time the program is being carried out. In other words, in conducing this new campaign everything must be done to demonstrate dramatically to the Mexican farmer that it is to his advantage to have this disease eradicated from his community. By the time this has been done in two or three or a half dozen municipios, I believe we will find the job of education becoming progressively easier, so that as we

move farther south into the disease area we should have less and less trouble obtaining the cooperation that is so necessary.

That, gentlemen, is the strategy on which we expect to proceed in continuing this fight against foot-and-mouth disease. I have analyzed as best I can the factors which I believe contributed to our earlier failure and those which, it seems to me, hold out much encouragement for the success of our new program if it can be carried out as we have recommended.

There is one other important factor which I have not mentioned. That is the factor of research. Our committee has recommended, and I am sure the Bureau of Animal Industry intends to embark on, an intensified and greatly expanded program of research into the control and eradication of this disease. I am sure they will find improvements that can be made in our present methods. I am hopeful that they will make such progress that even before we have eliminated the disease from Mexico in the manner I have outlined they will have found some new method which will greatly facilitate the work.

There is another factor which is very important—the cooperation between our Department of Agriculture and the Mexican Government. Thus far that cooperation has been of the highest caliber. The present administration in Mexico has been and is today wholeheartedly and completely behind this program. I am sure that no one was more disappointed or more reluctant to give up our first control program than were those officials of the Mexican Government who were responsible for that Government's policies. I am sure we can count on their cooperation in the future, and if we have that, I believe we can do the job we have set ourselves to do.

Joseph K. Colton

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a recent article from the Gardner (Mass.) News announcing the retirement of my esteemed friend, Joseph K. Colton, for many years editor of that outstanding publication. Mr. Colton's career has been notable and his contributions to his paper, community, State, and Nation magnificent. I wish for him many happy years of retirement—a wish shared, I know, by all his friends and his legion of admirers, well-wishers, and a grateful public.

JOSEPH K. COLTON, WIDELY KNOWN EDITOR OF THE NEWS, ANNOUNCES HIS RETIREMENT—MEMBER OF STAFF 36 YEARS, RELINQUISHES POST BECAUSE OF HEALTH—ACHIEVED WIDE FAME AS VERSE WRITER—A. J. ABBOTT IS SUCCESSOR

Joseph K. Colton, managing editor and city editor of the Gardner News since 1928 and a staff member for 36 years, dean of the city's newspapermen and one of the most widely known men in the profession in the State, today announced his retirement from active work with the publication. His successor is Alfred J. Abbott, a member of the editorial staff for 16 years.

Although he is giving up the daily grind of a modern newspaper office because of his health, Mr. Colton, or Joe as he is known to his associates and to most readers of the News, will continue to contribute his widely read verses and other features when the occasion requires.

A newspaperman all his adult life, even before his graduation from Springfield Tech High School, his association with the profession covers a span of 43 years, having worked for the Springfield Union and Holyoke Transcript before being induced to come to the city by the late S. Walter Rogers, business manager of the News for many years.

Mr. Colton is directly responsible for the excellent standing of the publication among New England newspapers. His unfailing courtesy and understanding and unquestioned ability, his fair treatment with the city's best interests always uppermost in his mind instilled public confidence and trust that is vital to the success of any newspaper.

Quiet, friendly, and unassuming but forceful when necessary, Mr. Colton has built up a wide acquaintance and friendships among newspapermen and others throughout New England and elsewhere. His retirement will be felt keenly by the thousands of readers and his admirers.

Although his principal contributions were to the well-being of the News, his efforts were recognized by many columnists and other papers throughout the country. For some years, he was Gardner district correspondent for the Boston Globe, which featured on page 1 many of his holiday verses as well as numerous other articles, humorous stories, and sports features.

His verse, The Flag, was reproduced in countless papers and magazines; he provided John Kieran, former New York Times columnist, with material for a series on Lou Little, Columbia football coach, and Rabbit Maranville, with whom Mr. Colton played baseball at Springfield Tech High. Bill Cunningham has used Mr. Colton's rhythmic verses on several occasions in his column and his hundreds of features and editorials in the News have been clipped and collected by hundreds of readers.

One of the results of his verse writing in which Mr. Colton takes great pride is the custom of children in the schools of the city to recite his verses in assembly programs on holidays such as Memorial Day, Independence Day, Christmas, and Thanksgiving.

Gardner High School can thank Mr. Colton for the name "Wildcats" which identifies the school's sports teams. In the regime of Don Bennett back in the twenties, Mr. Bennett, quite a hunter, returned from a trip with a wildcat as a prize. Mr. Colton then and there decided that "Wildcats" would be a proper name for Bennett's lads, and "Wildcats" they have been ever since.

In the same field of sports, the retiring editor was responsible for a "Gardner-Fitchburg" letter in the Boston Evening Globe every year before the annual football game between the two rivals that attracted considerable attention and gave the local team a great deal of publicity throughout the State and New England.

LONG CAREER

Starting his writing career when a junior in his school as correspondent for the Springfield Union, he later went to Holyoke as Union representative in that city after which he obtained a position as reporter for the Holyoke Transcript. He joined the News staff in 1911 and was appointed editor in 1928.

In 1918 he entered the United States Army and was honorably discharged the following year. While in the service he wrote many verses for the newspaper at Camp Hancock, Ga., which he later published in book form under the title "Jimmy Boy, Recruit, and other verses". He is a charter member of Gardner Post American Legion and was the post's first historian.

Always remaining in the background, his name seldom appearing on the list of committees, Mr. Colton nevertheless has wholeheartedly supported every worth while community project and charitable drive held in the many years of his work at the city desk. His willingness to cooperate and his generous use of space to help others has endeared him to the many who have the pleasure of knowing him and coming in contact with him through the years.

The best wishes of his associates and his countless friends go with Mr. Colton in his retirement.

Mr. Abbott, his successor as managing and city editor, is a graduate of Gardner High School in the class of 1927. He attended New York University and joined the News staff in 1931 as a proofreader. He later was shifted to the news gathering and editing department and with the retirement of Mr. Colton takes over the full duties of the editor.

In that position he will carry on a long-established policy of the News, to supervise the gathering and publication of the news of the city and neighboring towns, and news in general, insofar as is humanly possible and with fairness to all.

What Congress Is Doing

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before the Toledo Federation of Women's Clubs:

My good friends, even with your much-talked-of feminine intuition, I doubt if any of you have any idea how glad I am to be here. Not only am I enjoying myself immensely with so many charming and beautiful ladies gathered together for the sole purpose, I am sure, of listening to me, but I am also glad to be here because this organization is, and has always been, a source of pride and inspiration to me.

I wonder if you realize that among men there is no exactly comparable organization in Toledo, or anywhere else. There is, to my knowledge, no example of a large number of men, belonging to different organizations with varying interests and purposes, who meet regularly, carry on business, and work together for the welfare of the community as a whole, completely forgetting or submerging their differences, or reconciling them if reconciliation is necessary. It is an indication of the intelligent and reasonable attitude of American women today. I congratulate each one of you. I hope you realize the importance of your membership in this group, and that you make every effort to transmit your ability to work together for the common good to those around you, to your children, your friends; yes, even to your husbands.

I realize the seeming hopelessness of teaching sweet reasonableness to husbands. I must say, in the defense of husbands, however, we usually behave better outside the home than in it, if there's any comfort in that.

Actually, I believe the women of the world can, and will, be the most powerful force in achieving world peace and world understanding. Once the women make up their minds they want peace and understanding more than anything else, no mere man, no group of mere men, will keep them from getting it. What I am saying is not just blarney. It is true, whether you like to think so or not.

"Never underestimate the power of a woman" is more than an advertising slogan for a Philadelphia newspaper. It is a fragment of the wisdom of the ages. And don't sit there beaming at me so sweetly, you all know it's the truth.

But it is high time we stopped talking about you, because you didn't come here to be insulted, or analyzed, or even patted on the back You came to hear what a Congressman thinks Congress is doing. At least, you came to find out what a Congressman will say he thinks Congress is doing.

Now, there are always many versions of what Congress is doing. At the present time there are not only the interpretations given by the Republicans and the Democrats, not to mention the Wallacites. There are also the reactions of Americans, which differ in many instances from the ideas held by people of other nations who find their very lives affected by what goes on in the Senate and the House of Representatives in Washington.

In this country there are the Government workers in vast executive agencies, in and out of Washington, who may have a job or not, depending on what Congress is doing or what Congress does. There are the constituents who elect a Senator, or more particularly a Representative, and expect him to vote exactly as they would vote on each issue.

There are those who say Congress is doing nothing. They are equaled in number, sound and fury by those who insist Congress is doing too much! The first group says Congress is neglecting its duties. The second holds that the legislative branch is going far beyond the bounds set for it by the Constitution. They accuse Congress of exceeding its powers, of taking over the work of the executive branch, the judicial branch, and State and local governments.

These are the quantitative assessments of congressional activities.

The qualitative judgments vary just as widely. On the one hand we hear that the Congress is bent on destroying free enterprise. Not long ago I was accused of being in sympathy with the Communists. A constituent recently complained bitterly to me saying the Congress was obviously controlled by Jews. I didn't ask him about Mr. RANKIN whom he undoubtedly regards as the one free, upright Member of the House. On the other hand, the Congress is regarded by many advanced thinkers as quite out of date. If not that, it is the tool of the Chamber of Commerce, the National Association of Manufacturers, the Catholic Church, or the Ku Klux Klan. Congress has often been castigated as subservient to organized labor.

The man who said, "I don't care what they say about me, so long as they don't ignore me," would have been happy as a Congressman. What the Congress and its Members are doing invariably evokes comment. Everybody wants Congress to do something, but nobody ever likes what it does for very long at a time. I recently discovered the Library of Congress owns seventy-odd books lambasting Congress, but has been able to discover only one openly in favor of it. During the last 4 years there has been exactly one request for the book defending the legislative branch, while the eight volumes defending Jesse James are in constant demand.

This is no new situation. Walt Whitman defined what he called "the never ending audacity of elected persons." Mark Twain said his greatest fear was that he might become "that lowest form of human creatures," a Congressman. No wonder the sensitive soul who came to Congress full of idealism and determination to save the Nation in its hour of need sometimes falls into the mood of the old song, "I care for nobody, no, not I, and nobody cares for me."

Fortunately most Members of Congress have developed epidermis closely resembling the hide of the elephant. Perhaps the long-suffering elephant and the tough little donkey are particularly suitable emblems for political parties. It takes a thick skin to protect a legislator from the murderous barbs of criticism hurled at him. He must also guard himself from being engulfed in the enervating waves of adulation which pass over him infrequently, but which might lull him into a false sense of security, self-righteousness, or complacence. It is essential for a Congressman to be able to stand up under the torrents of abuse which fall on him, but perhaps even more important that he not stop work and begin celebrating when someone gives him a pat on the back. Congressmen have been known to break into tears of gratitude, actually go to pieces, when thanked or complimented for their work in Washington. The shock was just too much for them.

But, after all, I am not here to talk about what people think Congress is doing. I could give hundreds of examples, and then you could lecture me for awhile, since there are probably as many ideas on that score as there are distinguished women in this audience. I am here to give you my version of what Congress is actually accomplishing at the present time.

If we are to be scientific about our discussion, we must first stop and think, "What is Congress supposed to be doing?" I am not talking about just this Eightieth Congress now back in session. I mean any Congress. Strangely enough, many people, when asked what Congress is supposed to be doing, will reply "Pass laws."

The trouble with that answer, of course, is that it doesn't go far enough. It isn't wrong. It's incomplete. What laws? Dealing with what people, what situations? What are the limitations, other than the brain power of the individual Members?

Let us review the powers of Congress, which are the same today as they were when we studied civics back in high school. Only when we have in mind what Congress is permitted to do, and expected to do, can we judge whether or not the legislature is doing a good job.

We must remember, first of all, the provision of the tenth amendment, that the powers not delegated to the United States, nor prohibited to the States, are reserved to the States or to the people.

The Congress has the power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and the general welfare of the United States, but all such levies must be uniform throughout the States.

The Congress may borrow money on the credit of the United States. It may regulate commerce with foreign nations and among the States, also with the Indian tribes. It is empowered to establish uniform rules of naturalization, and make laws on the subject of bankruptcies, to coin money, to determine its value, to set the value of foreign coin, and to fix the standard of weights and measures. It determines the punishment for counterfeiting the securities and current coin of the United States.

The establishment of post offices and post roads, the promotion of science and the useful arts by securing patents and copyrights, the punishment of piracies, felonies on the high seas, and offenses against the law of nations, all these are within the power of the Congress.

The declaration of war, the raising and supporting of armies, the provision and maintenance of a navy, the calling forth of the militia to execute the laws of the Union, suppress insurrections and repel invasions, these are some of the responsibilities of the Congress. In addition, the Congress is empowered to make all laws necessary and proper for carrying out its explicitly stated powers, as well as all other powers vested by the Constitution in the Government of the United States, or in any department or officer thereof.

In addition, of course, the Constitution provides that all bills for raising revenue shall originate in the House of Representatives. No money may be drawn from the Treasury but in consequence of appropriation made by law.

As they are stated in the Constitution, these acts are within the power of the Congress. They are not listed as duties. However, since no other body has the power to act in these matters, Congress, by implication, is duty bound to use its power when the welfare of the Nation depends upon some action being taken in these various fields.

Now with these powers, what is the Congress doing?

It is facing and preparing to act intelligently upon the two major problems affecting the people of this country today.

The first problem, and the most difficult and delicate one by all odds, is the maintenance of a stable world in which the people of the United States can live freely and confidently at peace with the people of other nations. There is little doubt, I believe, that peace and freedom depend upon economic stability in western Europe. The future of our foreign relations there and to a large extent, throughout the world, depends on what we do about helping the friendly European nations rehabilitate themselves in order to make the speediest possible economic recovery from World War II. The European recovery program is the base from which discussion of this problem begins. What Congress does will depend upon what the people of this country want. I believe you and the majority of my own constituents want to prevent human suffering now and later, if it is within your power to do so. I believe you want safeguards against graft and corruption in the use of money and materials intended for that purpose either here or abroad. I think you want to aid, not subsidize. I believe this is still a Christian Nation in which the vast majority of people try to live by the Golden Rule of Jesus, "Do unto others even as you would have others do unto you." If I am wrong, you and the rest of the people of the Ninth District will waste no time in telling me so.

The second major problem Congress is facing has many sides, and many prophets. Inflation is part of it. High taxes are another part of it. It is a close relative of the first problem, for high prices in this country are certainly in part a result of the tremendous amount of material being manufactured for use outside this country. The housing shortage is tied into the same pattern, and so are strikes and labor-management problems.

I believe Congress will attack this problem at the root, which is wild, uneconomical Government spending of the appeasement type. When things look bad, raise taxes, spend more money, and make the people think they are getting something for nothing.

Congress is facing the facts. It is reducing Government expenditures wherever the general welfare of the whole people will not be adversely affected. It is cutting out duplications, and they are thick as bees 'round a honeypot in the vast bureaus and agencies now operating in this country. Appropriation bills will no longer be gold mines for the departments. They will be sufficient to meet their real needs, and with the padding gone, the departmental budgets really have a new look.

The Congress will then be able to reduce taxes, perhaps by as much as three billion, or even four billion dollars. I have a feeling this will be the right time in Mr. Truman's estimation, to sign the bill.

These are the immediate problems which keep the Members of Congress busy all day, and sometimes awake all night. Besides, there are preparations for legislation which will come up in the future. Committees are meeting daily, holding hearings, talking over proposed bills, sifting reports, statistics, and

testimony, getting ready the documents which may become law or may be only the pioneer effort smoothing the way for legislation to be enacted 2, 3, or 5 years from now. During the special session I introduced a new veterans' housing bill, the fate of which will not be determined for some time. Almost every Member of Congress is working constantly either in committee, on correspondence, on the floor of the Senate or the House, or in conference with constituents or individuals who have information of value in preparing or voting on current measures.

I have listed the specific things Congress is doing today. From a long-range point of view, Congress is doing a great deal more, even, than I have described. If I were not convinced that the Congress served this greater, broader purpose, I would not consider my work there worth the headaches and heartaches it costs every conscientious Member, for Congress is trying to maintain its own sanity in the face of constant attack from special interest and pressure groups.

Congress is representing the individual citizens of the communities of this country who could be called the man on the street.

Congress is working constantly and tirelessly to give the people the kind of government they want. Congress is going to succeed, in spite of the almost overwhelming tide of pressure groups and special interests. The people want the American voluntary way of life, but only the people can make it work.

Congress is giving the people of the whole United States a voice in the Government. It is the safeguard against the bureaucrat, the demagogue, the rabble-rouser. Congress has always represented the whole people, and let us pray that in this great Nation of ours it always will.

Public Power Lauded

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. WELCH. Mr. Speaker, under leave heretofore granted, I include as part of my remarks an article by Ruth Finney entitled "Public Power Lauded," which appeared in the San Francisco News of January 7, 1948, as follows:

PUBLIC POWER LAUDED

(By Ruth Finney)

WASHINGTON, January 2.—Public power got an unexpected good word today from Henry Luce's $1-a-copy magazine for businessmen, Fortune.

The January issue discusses the current power shortage at some length and concludes:

"Even while this power crisis has been developing, a purblind Congress has been hacking away at Federal power projects, cutting even maintenance funds below the bone, and decimating the staffs of power authorities. Some of the ancient antagonisms to publicly owned power have revived, and some private utilities are not without a hand in turning the clock back. As reported by Joseph and Stewart Alsop, newspaper columnists not of the radical stripe, one Senator remarked that around Washington early last summer you could not take a deep breath without getting a lung full of utilities' lobbyists. But the old cry that federally financed power is forcing free enterprise out of existence is hardly reflected in the $5,000,000,000 or so that the private power industry is committed to risk on the next turn of the United States economic wheel. In fact, this sum represents generating capacity greater than all Federal projects combined, and will cut the percentage of Federal power back to what it was in the middle thirties, before the biggest New Deal projects came in."

The article goes on to say that timing of Federal expenditures is important and that equipment manufacturers are loaded beyond capacity with orders from private utilities. But it continues:

"Nevertheless in the present tense situation, there seems no justification for some of the vindictive cuts made in land reclamation and power authority funds. Transformers at Bonneville are so hard pushed that they must be sprayed with a fire hose to cool them. Yet Bonneville last year had its budget cut from $26,000,000 to $8,600,000, a sum so inadequate that even the president of Puget Sound Power & Light, a competing private utility, pronounced it 'shocking.' This failure to extend or even to maintain Federal power projects threatens the Northwest's lusty new industrial development and has the West up in arms again.

"It may be well to recall that without the great blocks of Federal hydroelectric power that came into being through the late thirties, the war would have lasted much longer. For without big blocks of cheap power, the fantastic aluminum and magnesium schedules could never have been met, and the United States would never have been able to pile the atomic-bomb program on top of all the orthodox needs for power in wartime. The same situation faces the United States in winning the peace. All the most advanced industries, such as light metals, electrometal-surgical alloys, chemicals, aeronautics, and atomic fissionable materials, are tremendous users of power.

"One supersonic wind tunnel, vital in solving problems of supersonic flight, alone takes up to 100,000 horsepower. In the big economy that the United States is now building, the country cannot have too much power."

The President's Program for Making Democracy Work at Home Is Inspiring

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. KLEIN. Mr. Speaker, I listened with enthusiastic approbation, tempered only with reservations as to some phases of our official bipartisan foreign policy, to the address by President Truman last Tuesday.

It was with great interest that I found in the New York Post, a daily newspaper which has stood for democratic action for more than a century and has helped shape the thinking of four generations of Americans, an analysis of the state of the Union message which reflected my own emotions, written down and crystallized in the atmosphere of the Post editorial room.

I am inserting in the RECORD the editorial by my good friend, Ted Thackrey, who is editor and publisher of the Post, with pride and pleasure, and with the hope that Members will find opportunity to read it through for its good sense and enlightened approach. Millions of Americans will echo my own applause.

The editorial is as follows:

STATE OF THE UNION

(By T. O. Thackrey)

The President's program for making democracy work at home, outlined in his report to Congress yesterday, is little short of inspiring.

Unfortunately, the same can hardly be said for his foreign policy, except for his earnest plea for support of the European recovery plan.

At home, the President is committed to the progressive advance of democracy; not by allying himself to its enemies, but to its friends.

Indeed, though the voice was that of the man from Missouri, the spirit of this aspect of his report on the Union was unmistakably that of Franklin Delano Roosevelt. It was a bold challenge to reaction; forthright, specific, and without a single indication of the wavering so disheartening at an earlier period of his administration—the period of trial and error, mostly error.

Abroad, however, we continue to neglect the friends of democracy, while in Greece and in China we have allied ourselves to fascism. Indeed, the President called upon the Congress to increase the flow of American arms and men to shoot down Greek and Chinese citizens in revolt against the oppressions of their government.

Perhaps the saddest aspect of this tragic mistake is the fact that the only enthusiasm shown by the Republican-dominated Congress was for this aspect of the President's report, and this aspect alone.

Our excuse is that communism is on the rise in each of these unhappy countries, and that communism is antidemocratic; but we have failed to ask whether communism is any more antidemocratic than the governments we support; indeed we have failed dismally to consider the fact that our alliance with reaction has driven despairing democrats and liberals into the arms of communism—and that food, work, and political freedom are the allies of democracy—not bullets.

We say we are intervening for peace * * * but we are hastening the day when our national commitments are certain to collide with Russian national commitments in a clash of arms rather than a clash of ideologies or economics.

It will hardly be enough to determine then who fired the first bullet or which armed force was the initial aggressor.

And yet, all of the means to obtain peace in Greece and in China may be found by reshaping our foreign policy on an international basis within the framework of the United States.

Secretary of State Marshall, or the President of the United States himself, at such a grave moment in history, should boldly appear before the Security Council as well as the General Assembly to demand that the United Nations begin at once to assume the responsibility for maintaining the peace for which it was primarily founded.

They could, and should, make it clear that we are not merely willing, but desirous, of turning over to international authority, our "peace-making" commitments; that we will supply the means, and if necessary, the power to enforce United Nations decisions.

We should make it clear, as well, that every veto of action by a member of the Security Council will serve only to prolong and deepen our commitments on a national basis, and bring the risk of catastrophic world war that much closer.

There can be no doubt that if our approach is prompt, our intentions clear, and our determination to forge international agreements to replace national military adventure is undaunted by boycott or veto, we shall win a peaceful world, and advance the cause of law against chaos.

Until those steps are taken, even adoption of the progressive steps advocated by Mr. Truman will scarcely save a democratic world at home or abroad.

It is true, of course, that each failure of the Congress to enact the President's domestic program will weaken, if not destroy, our power to help ourselves, let alone others.

Repeal of the Taft-Hartley Act, continuation of our tax revenues by shifting the burdens from the least able to pay to the most able; a 75-cent-an-hour minimum wage; credit restriction; price-wage controls; national health insurance; Federal aid for schools; new vast Government projects for cheap power; advanced guarantees of civil rights: these are indeed measures for democracy, vital measures.

They will come because they must come—if we are wise enough in our foreign policies to gain the peaceful world in which they will have meaning.

Fuel-Oil Shortage

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE WHITE HOUSE,
THE ASSISTANT TO THE PRESIDENT,
Washington, January 14, 1948.

The Honorable EDITH NOURSE ROGERS,
United States House of Representatives.

MY DEAR MRS. ROGERS: The President has referred to me a copy of your telegram of December 6, 1947, which you kindly telephoned to the President's office on December 18. According to our records, the original telegram which you sent to Key West apparently was not received. I assure you that the problem raised in your telegram has received full attention.

Many steps have been taken to alleviate the oil situation in the last few months. Last October 1, when the impending domestic shortage of oil transportation facilities became evident action was taken to break out of lay-up and recondition at Government expense the 26 Mission-type T-2 tankers and 24 militarized T-2 type tankers remaining in the laid-up fleet. The Maritime Commission and the Department of the Navy acted with admirable speed, and since then these tankers are reentering active service as rapidly as they can be repaired in available yards. These 50 tankers are to be used in the Navy service, but they will release commercial tankers, now in Navy service, for the commercial trade. These are in addition to 100 tankers the Maritime Commission withdrew from lay-up and reconditioned earlier in 1947 to relieve the increasing demand for petroleum products. The Maritime Commission has also sold 55 Liberty tankers for repair and use by private operators. All usable laid-up fleet tankers are now either in operation, in repair yards being readied for operation, or have been sold to private operators for repair and operation.

The Coast Guard has cooperated in meeting the emergency by raising the permissible load line on tankers to increase carrying capacity. To increase barge movements of petroleum products and other essential commodities, the upper Mississippi was kept open 2 weeks longer than usual this fall and the Illinois River is being kept open all winter. The Office of Defense Transportation has, for many months, promoted vigorously a voluntary freight car production program, with emphasis on tank cars. This program is now very close to its goal of 10,000 freight cars per month.

It now seems probable that as soon as, or possibly before, these Government-owned tankers are all in operation, which should be in mid-February, the limiting factor on the movement of petroleum products in the United States will be basic supply, not transportation facilities.

The foreign sale of tankers was negotiated and approved in May and June, 1947, when American oil companies indicated no intention or interest in buying further tankers, and was made to alleviate the world petroleum transportation shortage. That is, at that date the only apparent method of getting these reserve fleet, commercial type tankers into use was through a sale—foreign. Tankers sold to a foreign country help the United States situation by relieving those countries of the necessity of relying on United States operators to supply their needs. The number of tankers under the United States flag is and has been more than adequate to meet all United States needs—if they were all used in the United States service.

Since the return on July 1, 1947, of petroleum products to the positive list of materials subject to export control, exports of major petroleum products have been subject to rigorous screening and limitation by the Department of Commerce, except for shipments to Canada. At present the United States is importing more petroleum and petroleum products than it is exporting.

Pursuant to the Hyde Park agreement, shipments of all commodities to Canada have not been subject to export control at any time during and since the war. However, negotiations with the Canadian Government have resulted in an agreement whereby the Canadian Government is limiting imports from the United States during the month of January to a daily rate equal to 50 percent of the daily rate of imports during the first quarter of 1947. Also, during this month, the Canadian Government will review their supply and inventory position, in cooperation with appropriate United States officials, to determine the appropriate percentages for February and following months which would result in Canadian needs for the fuel season being met on a basis of parity with American consumers.

The demand for petroleum products, and in particular fuel oil, has increased tremendously since the end of the war. The increase has been far greater than any of the forecasts made by the industry. There apparently is no possibility this winter of increasing supplies to the level needed to meet all demands in full, unless consumers can be persuaded to reduce their consumption significantly below the current level of demand.

Several important steps have been taken to secure voluntary cooperation for a rationing program. Through the National Petroleum Council, an industry organization created by the Secretary of the Interior, and the American Petroleum Institute, a petroleum conservation campaign has been launched covering the entire United States, except for the west coast and the Gulf States. The Council is also studying possible industry agreements and plans of action for distributing scarce petroleum supplies, in accordance with the provisions of Public Law 395.

At the suggestion of the Department of the Interior, emergency fuel coordinators are being appointed by the governors of the affected States. Later this week, the Department of the Interior is holding a meeting of these coordinators, their industry advisers and other representatives of the industry to discuss methods of facilitating equitable distribution and of preventing or mitigating cases of acute hardship.

If I can be of further assistance to you, please call upon me.

Sincerely,

JOHN R. STEELMAN.

Houses Falling Apart, Vets Charge—Call on Representative Davis for Backing

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. DAVIS of Georgia. Mr. Speaker, I desire to bring to the attention of Congress from the floor of the House a matter of much interest to the veterans of the fifth district of Georgia which I represent. When I returned home in December after the extra session of Congress adjourned, State Commander Joe Crespi of the AMVETS, and Housing Committee Chairman Bill Bowdoin, requested me to accompany them and a group of veterans on a visit to inspect some houses purchased by veterans in a subdivision in the suburbs of Atlanta. In this particular subdivision 192 houses have been erected, and practically all of them have been sold to veterans. The warranty deeds conveying the title to the houses which I examined contained the provision that for a specified period the property conveyed can be sold only to veterans.

An inspection of property disclosed that the lots themselves, although small, are rather good lots, the streets are well laid off, and there are a number of trees in the subdivision, which has practically all city conveniences.

My information concerning the houses erected on these lots is that they were originally erected as part of a Government housing project at Portsmouth, Va., in 1942, and were used as defense housing so long as there was need for them; that when that need ended they were sold, were knocked down and brought to this subdivision and reerected.

The houses have four rooms and bath. There is no subflooring and no storm sheathing. The inside walls are of composition board. The floor sleepers are 2 by 6's, and they are not set into the sills, but simply rest on cleats nailed to the sills, with a nail approximately every 30 inches. These houses are underpinned with cement blocks, and each house has a small porch.

The houses were sold at prices ranging from $6,250 to $6,950, I was told.

Bob Lewin, a reporter for the Atlanta Constitution, was one of those inspecting the houses, As a result of the inspection, he wrote an article describing the houses, and giving the contentions of the veterans on the one hand, the developers of the subdivision, and the appraisers who valued the houses on the other hand, and setting forth the observations of the AMVETS officials who sponsored the inspection. Under leave previously granted I insert herewith this newspaper article:

HOUSES FALLING APART, VETS CHARGE—CALL ON REPRESENTATIVE DAVIS FOR BACKING

(By Bob Lewin)

Some of the veterans who bought homes in the Georgian Hills subdivision have called on Representative JAMES C. DAVIS, of the Fifth District, to help solve their problem of having gotten houses which they say are "falling apart."

Faced with the high prices of new housing, veterans snapped up offerings in the 190-home subdivision, created with prefabricated houses used during the war on a Government project in Virginia.

The houses were bought by a contractor, knocked down, transported to Atlanta and reassembled on new foundations in the subdivision, created for the special purpose. They paid from $6,250 to $6,650 for the four-room, bath, and porch houses. The Government, at the end of the war, sold the houses from original sites at $650.

DAVIS, one of a party of six, toured the 190-home subdivision, near Chamblee, shook his head in dismay, and said he didn't know what could be done.

"I'm not an expert on housing," he said, "but the houses I've looked at don't seem to be worth the money paid for them. Of course, they're second-hand homes, and you can't expect to find the same conditions you would in a new home".

Headed by Joe Crespi, Georgia State commander of AMVETS, the irate homeowners banded together and leveled blasts at the Veterans' Administration, VA housing appraisers, and the Federal Emergency Housing project.

Complaints lodged by 12 to 15 of the vets stated that walls were cracking, floors were sagging, doors were pulling away from their jambs, kitchen cabinets were coming off, and paint was peeling from the outside of the houses.

"We paid $18.50 to appraisers certified by the VA to come out here and look at these homes, and they let us down all the way," said Hilton Moore, commander of the new Georgian Hills AMVETS post.

A poll of several of the VA appraisers who certified the homes revealed they felt the vets got their money's worth. The appraisers, all of whom are with large Atlanta concerns, and have had over 25 years' building experience, said they O. K.'d the homes because of the desperate housing shortage and the low prices.

Ben Burgess, one of the appraisers, said: "The materials that went into these houses are some of the best available. The framing is better than you can buy today anywhere. They were built well to start with, and some were entirely reconditioned, because they were about 4 years old. I still think we gave a fair appraisal."

J. S. Shaw, another appraiser, said: "There's not a perfect house built. Some things are bound to happen. I think we appraised the homes fairly, and still think the veteran got as much as they could for the money paid."

O. H. Werner said, "It's one of the best buys in this district, in a lovely section."

Perplexed by not knowing where to turn, the vets charged the Federal Emergency Housing project with neglect in allowing the homes to be shipped so far. They said this caused undue wear and tear.

"I can't deny that in some cases there was careless work," said Edward A. Judge, vice president of the Georgian Hills Co., "But we tried to remedy these faults wherever we could. Some of the faults just can't be fixed."

Home owners in the subdivision admitted they had been fully warned about the homes before they were purchased, and that there had been no misrepresentation.

"We knew they were second-hand, 4-year-old homes," they said. "But we didn't expect the houses to fall apart, and we don't want the company to pull out and leave us with a load of repairs to make ourselves."

Judge, who has supervised the project since it was taken over from the Henry C. Beck Co. in a deed in lieu of foreclosure, said his company has lost money on the deal.

"Our books are open," he said. "The houses cost about $650. We paid Henry Beck Co. $3,840 for dismantling, transportation to Atlanta, and reerection. That comes to about $4,500. We spent about $1,700 on the lots. They were raw land. Today they have paving, lights, water, sewerage, landscaping and gas. And we didn't get a penny rebate from the county. Figure it out for yourself. In addition, there were extras, like tile, porches, chromed fixtures and so on."

At a veterans housing meeting held December 2 in the Fulton County courthouse, Bill Bowdoin, State housing chairman of AMVETS, lashed out at what he termed "the reputable and competent men" who allowed an appraisal figure price of $6,250 to $6,650 to be put on the homes.

Bowdoin says he has been told the houses could be built for about $5 a square foot. This would amount to about $3,250, and would include subflooring, storm sheathing, doors on closets, and novelty weatherboarding. The subdivision houses do not have the above features.

In a statement issued last year, C. Arthur Cheatham, director of veterans' service for Georgia, said:

"Georgia veterans have lost between $1,500,000 and $2,000,000 so far through faulty construction of postwar homes built with GI loans. But there isn't a great deal either the State or the VA can do, and that is why it is so important that veterans think not twice, but three or four times, before they go ahead and build homes these days."

Chief source of the trouble, according to Judge, has been the bad weather, and the sudden change from the long wet spells to the cold dry spell. Floor furnaces, delivering hot air into the homes, have caused warping and expansion.

The veterans, however, lay the blame on slipshod construction, and refer to the workmanship as deplorable. They point to an outside kitchen stairway supported by only one concrete brick laid loosely in the dirt.

"Look at that," they say. "One rain, and the whole stairway will collapse."

They point to cracks in the flooring, with cold air coming through, and the ground visible underneath. They point to fireproof insulation wrapping that burns.

And according to Crespi, they're not going to stop pointing, and they're not going to stop raising their voices until someone, somehow, can do something about it.

Mr. Speaker, as the controversy concerning these houses has proceeded, another Atlanta paper, the Atlanta Journal, on Sunday, January 11, contained an article carrying a further statement by AMVETS State Commander Joe Crespi, and also a statement by Veterans' Administration loan guaranty officer for Georgia, Robert J. Taylor.

I insert this article herewith:

CRESPI CRITICIZES HOUSE APPRAISING—AMVETS CHIEF SAYS SYSTEM NEEDS CHANGE IF PHYSICAL CONDITION OF BUILDING IGNORED

Joe Crespi, AMVETS State commander, expressed surprise Saturday at a statement by Veterans' Administration officials that the VA guarantees loans—not houses.

Robert J. Taylor, VA loan guaranty officer for Georgia, advised veterans Friday to see for themselves whether a house is well built and if they do not know enough about it to judge, to get the opinion of someone who does know.

"Since the veteran pays to the VA the appraisal fee which is later paid to the appraiser for the veteran, it seems to me that the latter is already employing someone to look after his interests," Mr. Crespi said. "When a house begins to show serious signs of material defects which could not have been detected by the buying veteran, in the space of weeks from the date of purchase, then I say that the lists of appraisers be revised or investigated."

According to Mr. Taylor, the appraiser who is paid by the veteran, only determines if the price of the house is in line with present market conditions. He said that the VA is essentially a credit organization that guarantees the loan and thereby improves the veteran's credit rating for the loan.

"The veteran needs a place to live, and whether he likes it or not, is compelled to buy it," Mr. Crespi declared. "Having paid for the service of appraisal he should be protected.

"Under the present VA system, the so-called veteran appraiser merely 'judges' according to the market and the cost in general of a home. Certainly no attention is being paid to homes of shoddy make-up or design when the stamp of approval is placed in the careless manner that it is. Thus the veteran buyer, the Government, and the lending agency are all three victims—the first being the less able to stand the loss.

Mr. Speaker, the troublesome point in this controversy seems to be that the veterans who purchased these houses thought that they were being protected by the Veterans' Administration appraisers against defects which later showed up in the houses, while the appraisers, according to Mr. Taylor contend that it is the responsibility of the veteran purchasers themselves to determine whether a house is well built, and that the responsibility of the appraiser is only to determine if the price of the house is in line with present market conditions.

I believe that additional protection will be afforded veterans if legislation is adopted, or regulations promulgated, which will require the appraiser in every instance to furnish a statement concerning the construction of the house along with the appraisal report, for the use of the purchaser, and in that statement direct attention to any faulty construction, and to items which subsequently may cause dissatisfaction, as was the result in these particular cases. Many purchasers of homes are not familiar with details of construction, and are not in position to discover for themselves defects of construction. I urge that proper action be taken to afford further protection to veterans and to prevent occurrences of the kind complained of in these newspaper articles.

Help Finland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a recent excellent editorial from the Bos-

ton Traveller on the subject of the Finnish debt:

HELP FINLAND

Finland is as sorely stricken a country today as any on the face of Europe. It has lost many of its farms, its homes, its resources, its wealth but it still keeps all its honor. This very month it met as always its debt payment of $156,000 to the United States.

Finland is outside the Marshall plan but it is inside the circle of humanity. If we can be generous to every other nation, why not be generous to the one nation that has always kept faith with us? Why not cancel the Finnish debt?

Service in War and Peace

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Independent, of Elizabeth City, N. C.:

SERVICE IN WAR AND PEACE

The busiest men in town these days are aviators and crewmen of the United States Coast Guard air station.

In the past few days the men of the air station have:

1. Delivered lines by helicopter from the grounded trawler *Charlie Mason* to two Coast Guard vessels off Ocracoke in an unsuccessful effort to get the ship floated again.
2. Carried a doctor to Hatteras to treat a sick man there.
3. Rescued a Navy pilot from the water almost before he had a chance to get his clothes wet after he had crash-landed into the Albemarle sound.
4. Successfully delivered life-saving rabies serum to a merchant vessel crewman aboard a ship 150 miles off Hatteras, at night.
5. Attempted to save another life of a Navy pilot by patroling waters of the Albemarle sound after the pilot had crash-landed.
6. Assisted in the air work necessary to bring a Coast Guard cutter into contact with a disabled tanker off the coast in the vicinity of Frying Pan Shoals.

Next week President Truman will present his budget figures to Congress. How the Coast Guard will fare in his requests, we have no way of knowing, but we do hope our friend, Congressman HERBERT C. BONNER will fight tooth and nail to see that the Guard's budget is not subjected to the usual snipping by Congressmen who are not familiar with the work the Coast Guard does. Maybe if the solons who delight in limiting financially the effectiveness of the Coast Guard could be given a review of the activities just at the Elizabeth City station, their minds would be changed.

On our front page today are two pictures which testify to activities of the Coast Guard in other areas. One shows sea operations and the other shows air operations. We are printing those to demonstrate to local readers that the Guard service is just as active on other fronts as it is on our own, and there is no reason to expound at great length on local operations.

Coast Guard mercy missions are legend among the people of the Albemarle.

We hope that Congress will review these matters of the Coast Guard and stop looking on it as a little brother to the rest of the services, deserving only the hand-me-downs. Coast Guardsmen during the war fought just as effectively and died just as dead as Navy men, Army men, or Marines. In time of peace it seems that the Coast Guard is the only service that has any outstanding record of actual benefit to the people in their daily lives. The rest are gearing themselves for specialized service in time of war.

During the war when the Army and Navy said they were too busy to fuss with helicopter operations, the Coast Guard took the rotary-wing infant and made a grown-up man out of it. Now the other services are profiting by Coast Guard development of the helicopter.

We think the guardsmen deserve extra consideration for their peacetime service, and we believe Congress should be educated to the point where they will harbor the same belief and so that when the budget scissors start snipping they will cut only the figures of these agencies of the Government (and politics) that are of no use to the people.

Newspaper in Great Dairy State of Wisconsin Speaks Up for Modification of Taxes on Oleomargarine

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 8, 1948

Mr. HAYS. Mr. Speaker, when the Milwaukee Journal, one of Wisconsin's leading newspapers, complains about taxes on oleomargarine that makes news. The Journal article follows:

A Milwaukee housewife, who finds it impossible to provide near-dollar butter for a family of six on a meager budget, asks three questions about oleomargarine:

Why is it impossible to buy in many Milwaukee stores? Why, when you can get it, is the price so much higher than in Illinois? And why don't the manufacturers color the margarine themselves and save the housewife a messy job?

The reason many Milwaukee stores do not sell oleo is that, to do so, they must have both a State and Federal license. The State license costs $25; the Federal, $6. A store has to be sure of selling considerable oleo before it buys these licenses.

The reason the price is higher here than in Illinois is that Wisconsin has a tax of 15 cents a pound. Furthermore, a wholesaler, in addition to paying the Federal license fee of $200, must pay a Wisconsin license fee of $500. The high State fee, added to the high tax, means a considerable boost in price.

The reason oleo comes to the consumer white lies in the fact that there is a special Federal tax on colored margarine. There are also special fees for wholesalers and retailers of the colored product. The Federal tax on white margarine is one-quarter cent a pound. The tax goes up to 10 cents a pound if the margarine is yellow.

The Federal license for wholesalers is $200, if they sell only white oleo; if they sell the colored, the fee is $480. The Federal retail license similarly goes up from $6 to $48.

The way to get manufacturers to color their margarine at the factory is to get the special Federal tax and license fee repealed. The way to get cheaper oleo available in more places is to get both the State and the Federal taxes and license fees largely reduced or removed altogether.

Mr. Speaker, these facts provide ample evidence that the proposals for modification of oleomargarine taxes involve simple principles of economics and free enterprise.

A Series of Student Guest Editorials

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. ANGELL. Mr. Speaker, the Oregon Daily Journal, published in Portland, Oreg., in my district, is publishing a series of student guest editorials, as explained in the editorial included below as a part of my remarks. Believing that the views of these young people are worthy of a wide circulation, I include an editorial entitled "Freedom for All," by Atwood Jones, student of Jefferson High School in Portland:

A SERIES OF STUDENT GUEST EDITORIALS

The attitude taken by all-too-many adults that high-school students are primarily interested in football games, parties, fads, and loafing around the corner drugstore is a serious reflection on the understanding and knowledge of grown-ups.

As a matter of fact, most high school students do more serious thinking upon the problems that beset us than do many adults. It is true they may lack the experience of grown-ups (time will give them that), but it also is true they approach problems with fewer prejudices and less selfishness than many of their elders.

Today in the guest editorial column the Journal runs the first of a series of editorials written by Portland high school students. These editorials represent the best thinking of the students—and it's pretty good. The writers choose their own topics and the winners are selected by student judges.

The problem of racial prejudices as discussed by Atwood Jones is an old and difficult one. We aren't born with such prejudices. How do they grow up within us? Read the editorial by Editor Jones. You answer him in your own mind and own conscience.

[From the Oregon Daily Journal, Portland, Oreg., January 5, 1948]

TODAY'S GUEST EDITORIAL

FREEDOM FOR ALL

(By Atwood Jones, student, Jefferson High School)

(EDITOR'S NOTE.—The following editorial selected as the best by a jury of Jefferson high-school students, is the first in a series of guest editorials by Portland high-school students. The students pick their own subjects, and no suggestions or deletions are made.)

Democracy is one of the most abused words in the world today. Webster defined it as "the rights and privileges of private freedom for all." Thus each individual should have equal rights for life, liberty, and the pursuit of happiness. In a democracy every human being is so important that his value to society cannot be measured in nonhuman terms.

If America had freedom for all, Negroes would not have to attend separate schools in the South and be taught by teachers whose salaries are, in comparison with those of white teachers, a disgrace to humanity. Here

is a brief comparison prepared by the National Education Association for the school year of 1943–44. In Mississippi white teachers were paid, on the average, $1,107, whereas Negro teachers received $342; in Texas white teachers received $1,349 compared with $946 for Negro teachers.

The Negroes have been legally free from slavery about 75 years. In this interval, in spite of handicaps, disadvantages, and many set-backs, the Negro has given much to American culture. Most people are familiar with the names of such great Negro athletes as Joe Louis, Jesse Owens, and Jackie Robinson, or have heard the remarkable singing of Dorothy Maynor, Paul Robeson and Marian Anderson. Probably few people, however, know that Mary M. Bethune, educator; Ernest Wilkens, Jr., mathematician; and Dr. Perry Julian, research chemist, have made equally great contributions to our American culture.

Recently, theatergoers enjoyed an unusual treat in the music of the Portland Symphony Orchestra which accompanied Miss Carol Brice. Her magnificent performance was roundly applauded by the audience, but as a guest of the City of Roses she was not welcomed with similar hospitality. This great singer was refused service at two of Portland's well-known restaurants because she was a Negro. Even after she explained that she was a guest soloist with the Portland Symphony, Miss Brice was still denied service.

Prejudice such as was experienced by Miss Brice not only works a hardship on those it is directed against, but it also works harm on those who practice it. People who allow themselves to be controlled by hatred of others on the basis of race, creed, or color cannot themselves enjoy the full meaning of freedom.

Americans must eliminate from their own country prejudices, segregations, and discriminations before they criticize other nations for their failure to provide for full political and economic freedom.

Butter Versus Oleomargarine

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. ROBERTSON. Mr. Speaker, naturally with the high price which prevails today on butter, the question is being pressed hard by the people manufacturing oleomargarine as a substitute for butter.

Senator FULBRIGHT has announced his intent to introduce a resolution calling for rescinding of all Federal taxes and license fees on manufacture, sale and coloring of oleomargarine. It seems to me that this is a matter which deserves at least considered judgment before action is taken by the Congress.

Mr. Speaker, under unanimous consent, I include herewith a letter signed by John Burnham, executive secretary of the North Dakota Dairy Industries Association:

NORTH DAKOTA DAIRY
INDUSTRIES ASSOCIATION,
Fargo, N. Dak., December 29, 1947.

Representative CHARLES R. ROBERTSON,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: There is one matter which, I feel, should be brought to the attention of the North Dakota congressional delegation. Senator J. WILLIAM FULBRIGHT, of Arkansas recently made, on the Senate floor, a spirited attack on the dairy industry, more particularly on the butter industry. He announced (CONGRESSIONAL RECORD, Dec. 18, 1947, pp. 11590 to 11593, inclusive) his intent to introduce a resolution calling for rescinding of all Federal taxes and license fees on manufacture, sale, and coloring of oleomargarine.

Senator FULBRIGHT, a Rhodes scholar and university president, makes very convincing his argument that:

1. To make it easier for the public to buy 35-cent oleomargarine instead of $1-per-pound butter would ease the rising living costs of consumers;

2. It would release more milk for other uses, such as fluid milk, cheese, and dried milk powder.

3. The butter industry has no right to enforce its belief that use of yellow coloring should be denied by law to a competitor of butter.

4. Oleomargarine today is as nutritious and pure as butter, and should not be penalized as an inferior product.

Those arguments seem unanswerable until one studies them awhile, but first a little background on North Dakota's dairy industry:

There are 475,000 milk cows in the State, with milch cows on 58,853 of the State's 59,650 farms. Milk production is 1,900,000,000 pounds, and the State produces between forty-eight and forty-nine million pounds of butter annually, making the State seventh in butter production. Leaders are Iowa, Minnesota, Wisconsin, Nebraska, Illinois, and Missouri, in that order.

With a relatively sparse population, North Dakota has no large fluid milk markets, and its cheese production is a small 155,000 pounds annually.

Now, to answer Senator FULBRIGHT, from the viewpoint of North Dakota's dairy industry:

First of all, North Dakota milk is produced largely from small herds on farms spread widely apart. Milk is separated on the farm and the cream is sent to processors for making butter. That type of milk production is entirely different from the highly concentrated production in Minnesota, Wisconsin, parts of Iowa, and New York State.

That production could not profitably be picked up as whole milk by trucks for processing in a condensary, dried-milk plant, or for fluid milk production. Butter is the one outlet feasible for North Dakota milk. To let down the bars on a vegetable-fat competitor would be a serious blow to this State's dairy industry.

Secondly, to maintain this butter industry in North Dakota is exceedingly important at this time. We have had years of high production of flax and cereal grains, a trend toward large, mechanized grain farms. You, Congressman ROBERTSON, realize that a postwar trend to diversification and balanced agriculture is imperative to build up our soil, to give a dry-year living to the farm family, to bring security to this farm family.

Thirdly, oleomargarine is produced largely by five or six large companies which have virtually a monopoly on its production. In all fairness, isn't the security of the agriculture of a dozen States more to be considered than the profits to half a dozen corporations? And, too, hasn't the Federal Government spent enough in soil-building practices so that it should not itself be the instrument for destroying the best soil-building practice of all—the maintenance of livestock on our farms, with organic matter restored to the soil?

Fourthly, butter even at $1 per pound is not out of line with the prices of other foods, household conveniences, automobiles, clothing, and other necessities of living. Why make a scapegoat out of butter alone? The very fact that the number of dairy cattle in the Nation and in North Dakota has declined steadily (6 percent in the Nation from January 1, 1946, to January 1, 1947, and a 7-percent decline in the same period in North Dakota) testifies to the fact that the dairy farmer is not making an outrageous profit. If he were, he'd milk more cows instead of less.

And lastly, I believe that the wage scales in industry today make $1 butter much less of a hardship than Senator FULBRIGHT suggests. The farmer and the laboring man in America's cities should both realize that a time of full employment for one is a time of good prices for the other, and conversely that time of low wages and unemployment means low prices for farm products.

I believe I can speak for more than 58,000 North Dakota dairy farmers, as well as for our 130 milk plants, in saying that we are watching alertly what becomes of this oleo attack on the butter industry.

Very truly yours,
NORTH DAKOTA DAIRY INDUSTRIES ASSOCIATION,
JOHN BURNHAM,
Executive Secretary.

Resolutions Adopted at 1948 Annual Meeting of National Council of Farmer Cooperatives

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday; January 15, 1948

Mr. HOPE. Mr. Speaker, the National Council of Farmer Cooperatives has recently concluded its 1948 annual meeting in Chicago. This great farm organization, through its member groups, represents some 2,500,000 American farmers.

I am sure that the resolutions adopted at this meeting are of interest to all Members of Congress and, under leave to extend my remarks, I include them herewith:

RESOLUTIONS ADOPTED AT 1948 ANNUAL MEETING OF NATIONAL COUNCIL OF FARMER COOPERATIVES

The following resolutions were adopted at the 1948 annual meeting of the National Council of Farmer Cooperatives at Chicago January 5 to 9.

Policies adopted by the national council remain in effect until rescinded or superseded by subsequent action. Therefore, these resolutions constitute an addition to established policy. They are in no sense a complete statement of such policy.

FOREIGN AID

The national council recognizes the needs of people of war-stricken areas and the necessity for the United States to assist in the alleviation of suffering and in the rehabilitation of production and industry.

We urge that in such effort it be the policy of the United States to encourage maximum self-help within countries and that our major emphasis be in helping the peoples of such countries to help themselves.

CURRENCY EXCHANGE FOR FOREIGN SALES

In bringing about a restoration of markets for agricultural products, ways and means must be developed for the private sale of such products in exchange for local currencies.

To that end export corporations, both public and private, should be organized and en-

couraged with facilities for handling such foreign currencies over a long-time period and making available to exporters some immediate return in domestic currency. The development of such a program should be coordinated with the foreign-aid program and the private sale of export commodities should replace Government handling as rapidly as circumstances will permit.

PURCHASE PROGRAM FOR FARM PRODUCTS

The National Council of Farmer Cooperatives urges that farm products in surplus supply, either raw or processed, be included in purchase programs under aid or relief programs that may be established by Congress.

INFLATION CONTROLS

We believe that the most effective brake on inflation is high production by each segment of our economy and an informed people practicing self-discipline in buying in their own best interests.

We believe that free markets and full production provide the basic guidance for allocating material for production and consumption in an expanding economy rather than rationing and price control.

To be effective, efforts to control inflation must be supplemented by sound monetary, credit, and fiscal policies, and economy in public spending. During the period of extensive foreign aid, we recognize the need for continued export controls over certain scarce items.

UPGRADING THE AMERICAN DIET

It shall continue to be council policy to support upgrading of the American diet through research, education, merchandising, improved marketing techniques, promotional campaigns and the production of ample supplies of foodstuffs of superior nutritional quality.

The council believes improvement in the American diet is one effective way of preventing burdensome farm surpluses. In the long run the best food supply can be produced by the voluntary efforts of farmers operating in a sustained or increasing market.

AGRICULTURAL CREDIT

In keeping with the established policy of the national council, we recommend that the farmer cooperatives of the country take steps to acquire ownership of the banks for cooperatives and pledge our support to any plan which is within the resources of the farmer cooperatives to carry out. During the time ownership is being acquired by farmers and farmer cooperatives, Government capital should not be withdrawn so rapidly as to impair or endanger adequate credit service by the banks.

We approve the general principles of the plan developed by the joint committee representing the National Grange, the American Farm Bureau Federation, the National Cooperative Milk Producers Federation, the National Federation of Grain Cooperatives, and the national council, which plan makes it legally possible to gradually replace the Government capital in the banks for cooperatives with farmer and farmer cooperative capital.

COMMODITY CREDIT CORPORATION CONTRACTS

We recognize the substantial benefits that have accrued to agriculture through Government support loans against various commodities which have been administered for the most part through Commodity Credit Corporation pursuant to contracts between Commodity Credit Corporation and borrowers, including farmers' cooperatives.

We do feel, however, that the contractual provisions between Commodity Credit Corporation and various farmers cooperatives providing for such loans, and the administration of these loans, have resulted in the exercise by Commodity Credit Corporation of unwarranted authority in the administration of the internal affairs of such cooperatives.

We believe that, in these contracts and in such operations, Commodity Credit Corporation should be concerned only with the safeguarding of its funds. We do not believe that the legislation authorizing these support loans either provides a mandate or gives authority to Commodity Credit Corporation to interfere in any way with the internal affairs of farmer cooperatives involved.

We believe that these borrowing cooperatives, like all farmer cooperatives, should be owned, controlled, and managed by their farmer members and that anything in the contracts mentioned or in administrative action which takes away this independence is unwarranted by legislative intent, is contrary to true cooperative principles, and is highly objectionable and dangerous to the public interest.

SECTION 32 FUNDS

The national council reiterates its policy that section 32 funds of the Agricultural Adjustment Act should be used only for purposes of expanding the utilization of farm products as provided in the act, and that unexpended balances remaining at the end of any fiscal year should be retained in the fund for use in subsequent years.

RESEARCH AND MARKETING

With respect to the Research and Marketing Act of 1946 the council recommends:

1. The appropriation for the 1949 fiscal year of $19,500,000.

2. In administering the marketing and research program, the United States Department of Agriculture should clearly outline its objectives and over-all policies so that proposed projects can be appraised on their merit as a part of the general research and marketing program.

Priority in the allocation of funds should be given to projects dealing with marketing and utilization, including new uses, marketing efficiency, marketing margins, quality improvement, consumer preference and human nutrition, and to urgent projects in production such as insect control and plant disease.

3. The appointment of a majority of producer representatives (including farmer cooperative representatives) on all committees.

4. A policy utilizing existing public research agencies insofar as practicable in the allocation of funds. Contracts should be made with private agencies when such is advantageous from the standpoint of time, economy, or quality of work.

RURAL ELECTRIFICATION AND CONSERVATION OF WATER RESOURCES

There exists a grave shortage of electric power for rural and urban people, and a serious need for flood control, conservation of water for irrigation and domestic uses, the extension of navigation on our navigable rivers, and for additional reclamation projects in our national economy. We urge that in the building by the Federal Government of multi-purpose dams on the great rivers of our Nation a coordinated program be developed, embracing flood control, reclamation, navigation and hydroelectric energy, as necessary and essential to the future welfare of the people of this country, particularly to our farmers as a means of increasing production of food and fiber.

DOUBLE TAXATION OF CORPORATE INCOME

The National Council of Farmer Cooperatives favors the elimination of double taxation of corporate income.

FOOT-AND-MOUTH DISEASE

The livestock population of this country is endangered by the foot-and-mouth disease which is now prevalent in Central Mexico.

The method of control and complete eradication of this disease is well known to our Government and has been successfully used to eradicate all outbreaks that have occurred in this country.

To protect our livestock and assure our future food supply, the National Council of Farmer Cooperatives insists that our Government, in cooperation with the Government of Mexico develop and carry out a program that will completely eradicate this disease from the North American Continent.

SOCIAL-SECURITY COVERAGE FOR EMPLOYEES OF FARMERS' COOPERATIVES

Farmer cooperative associations operate in an important segment of the American system of private enterprise and the conduct of their several businesses reflects comprehensive activities in many fields which call for employment of persons in diversified positions and responsibilities.

However, there appears to have arisen some question as to what employees of farmer cooperative associations may be exempt from the provisions of the Federal Social Security Act under the provisions of said act applicable to agricultural labor.

The National Council of Farmer Cooperatives believes that all employees of farmer cooperative associations whose duties are not clearly within the exemptions specified in the act, should be definitely regarded as employees covered by the act and subject to its provisions.

FINANCIAL CONTRIBUTIONS TO NATIONAL TAX EQUALITY ASSOCIATION

Farmer cooperatives have made their records of receipts and disbursements for the last 12 years available to the House Small Business Committee. Likewise that committee has officially requested the National Tax Equality Association to furnish to it the names of the contributors to the National Tax Equality Association and records of its receipts and disbursements for the past 2 years.

The public in general and farmers in particular are entitled to know who seek to destroy farmer cooperatives and to divide and alienate segments of private industry of this country.

Therefore, the delegate body of the National Council of Farmer Cooperatives vigorously urges that the Congress of the United States take action to require the National Tax Equality Association to furnish to the Congress the names and addresses of each and every contributor and the amount contributed by each to the National Tax Equality Association during the past 2 years, together with a complete record of all receipts and disbursements for the like period.

PLANKS IN PARTY PLATFORMS

Farmer cooperative associations have been recognized and encouraged by the American people in the public interest under the administrations of the Federal Government by both the great political parties of the United States.

For many years the Democratic and Republican Parties have recognized by their actions the fundamental right of farmers to cooperatively market their own farm products and cooperatively purchase their own farm supplies.

In view of this long record, the National Council of Farmer Cooperatives hereby calls upon the leadership of both great political parties to reaffirm, by platform pledge and prompt affirmative performance, their belief and faith in farmer cooperative associations.

At the same time, this council denounces the activities of those individuals who have violated the pledges of their parties by attempting to cripple agricultural credit and by seeking to destroy the right of farmers to cooperatively market their own products and to cooperatively purchase their own farm supplies.

APPOINTMENTS TO IMPORTANT PUBLIC POSITIONS

It has been the consistent policy of the National Council of Farmer Cooperatives to examine the qualifications of men seeking appointment to important public positions

having to do with agriculture and to either approve or disapprove those qualifications without endorsing a particular candidate as such.

During the next 4 or 5 years, there will be several new appointments made to many administrative agencies having to do with agriculture, in particular to the Interstate Commerce Commission.

The National Council of Farmer Cooperatives will continue this policy and will investigate nominees proposed for important public positions, including commissioners of the Interstate Commerce Commission, and make appropriate representations to the President of the United States concerning its findings.

The National Council of Farmer Cooperatives, on its own initiative, will propose to the President the names of persons who in its judgment are properly qualified for appointment to important public positions.

RAIL WAGE RATE PROCEDURE

Labor costs constitute a substantial portion of all rates charged for the transportation of goods and services; therefore, agricultural shippers and receivers have a vital interest in the negotiations for increased wages, changes in operating rules, and in decisions of arbitration boards, fact-finding boards and commissions. As shippers and receivers, we are not convinced the public interest is adequately served or protected under procedures followed up to this time.

The National Council of Farmer Cooperatives will study the procedures involved and at the appropriate time will petition Congress to introduce and pass legislation to correct the abuses that may be considered damaging to the public interest and to the shippers and receivers of farm commodities and farm supplies.

INFORMATION ON SHIPPING COSTS

In view of the growing importance of transportation to the successful marketing and distribution of agricultural commodities and farm production supplies, there should be prepared information on the effect that rates, charges, and services have on the free movement of agricultural commodities to the consuming centers of the Nation and the distribution of farm supplies in rural areas.

The Research and Service Division of the Farm Credit Administration shall be requested to prepare and distribute to farmer cooperatives a bulletin on transportation services and costs and their effect upon the marketing of agricultural commodities and the distribution of farm production supplies by farmer cooperatives.

GOVERNMENT FREIGHT REPARATIONS

The rail carriers of the Nation are faced at the present time with formal complaints filed with the Interstate Commerce Commission in behalf of the Army and Navy of the United States, which complaints seek reparations totaling, according to press reports, in excess of $2,000,000,000.

The rates and charges upon which these reparations are sought were agreed rates, under section 22 of the Interstate Commerce Act, and the rail carriers of the Nation have no source from which to obtain the money with which to pay these reparation amounts other than through increased rates and charges for transportation services, a large part of which increased rates and charges must, of necessity, be borne by products of agriculture.

In the light of this situation, the National Council of Farmer Cooperatives shall make representations to the President of the United States to the end that the President, by virtue of his position as Commander in Chief of the armed forces of the United States, shall cause these complaints to be withdrawn, so that any and all claims of such a nature arising from the prosecution of the war by the combined efforts of the armed forces and the Nation's rail carriers may be held as part of the inescapable cost of war. We take this position as a matter of fairness to the carriers and the public they serve, as well as in behalf of agriculture and its products.

CARE

The Cooperative for American Remittances to Europe, known here and abroad as CARE has completed over 2 years of efficient, effective, nonprofit shipment of food, clothing, and household packages to war dislocated areas.

Thousands of farm families have been aided thereby in sending packages to friends, relatives or others on a direct person-to-person basis.

The National Council of Farmer Cooperatives recommends CARE to its members and urges that the support, which has helped ship $35,000,000 worth of packages, be continued and extended.

CRUSADE FOR CHILDREN

Because 230,000,000 children the world over are in desperate need of a daily food supplement, the United Nations is organizing a world-wide appeal for children this spring with the campaign in the United States conducted by American Overseas Aid, Inc.

The farmers of America want to do their share not only through increased production but through personal contributions.

The campaign was supported at Lake Success by the International Federation of Agricultural Producers of which the national council is a member.

The National Council of Farmer Cooperatives endorses the crusade for children and urges its members to publicize the campaign and pledges its support in the rural areas toward reaching the American goal of $60,000,000.

APPRECIATION OF PRESS AND RADIO

The National Council of Farmer Cooperatives takes this opportunity to express appreciation to the press and radio for their generally fair treatment of farmer cooperatives in their publications and on the air.

We reaffirm our belief that a free press and a free radio are necessary to our democratic society. We have no fear that farmer cooperatives can be destroyed by false propaganda if the truth is made known to the people.

For the preservation of the American way, it is essential that all sides of controversial issues be fully presented by the press and the radio.

MEMORIAM—CHARLES H. WALKER

With the passing of Charles H. Walker, farmers have lost one of their most earnest workers in the field of cooperative endeavor. His State and community have lost a citizen who was a constructive builder. He sponsored many progressive changes in his industry during his long years of service.

He was vice president of the National Council of Farmer Cooperatives at the time of his death, and he will be remembered by his associates for his kindliness and friendliness, and his prudent counsel on the problems of farmers' cooperatives.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial entitled "A Problem Deserving Deep Study," which appeared in the Cottonwood County Citizen, a newspaper published at Windom, Minn., of January 7, 1948, as follows:

A PROBLEM DESERVING DEEP STUDY

The propaganda pressure is pretty strong on this European relief matter. We are still being told that if we withhold our help and Europe goes Communist, then we must take the blame upon our own shoulders.

If feeding the world for a period of 3 or 4 years would guarantee perpetual peace we have not the least hesitance in saying that it would be a happy state of world condition most cheaply bought.

But we have serious doubts as to whether supporting nations without their doing anything in return is good policy. We cannot believe that nations are a great deal different from people. Take the average individual. Support him in idleness for a few years, assuring him at the same time that you owe him that support, and he will never willingly go back to supporting himself. If compelled to do so he will bear a grudge against the person who made it necessary for him to do that. Can we be sure that the nations of the world will not react in the same manner?

Just suppose that our Marshall plan does not bring the desired results. We bend the national effort for 4 or 5 years toward supporting the rest of the world, while neglecting to build up our own Nation to the strength necessary to withstand what we are told may come, an assault upon us by the Communist forces, when they gain control of Europe. Then the Marshall plan instead of strengthening us for the mighty struggle will have weakened us.

In other words will we be expending our resources in a vain attempt to get the friendship of the world only to awaken to the fact that we have not gained that friendship and that our enemies have built themselves up into a position to defeat us when our resources are depleted and our potential friends are not so friendly? It's a problem, and a mighty big one.

Cost of Government

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. SNYDER. Mr. Speaker, reports show that the cost of government in the United States is $371 per capita and the cost of food is $330 per capita. The cost of government, we find, is four times greater than it was a few years ago.

In this respect, what has taken place in our embassies in foreign countries is indicative of what is taking place in all departments of the Government.

Under a Paris date line, July 1, Henry Wales reports that the number of employees in the American State Department there has risen from 118 members in 1940 to 1,200 as of that date.

Under a date line, Brussels, Belgium, July 28, reported by Larry Rue, the State Department has increased its employees nearly four times in Holland and more than doubled the number in Belgium.

Under a London date line of October 17, reported by Kermit Holt, the United States Embassy in London and associated Federal offices carried a pay roll of

nearly 500 persons—more than double the number carried before the war.

Under a report by Barry Bishop from Mexico City on July 5, the report showed that the United States Embassy in Mexico was 3½ times its prewar size. We now have 350 people in Mexico connected with our Embassy staff.

All of our Government bureaus, including our Embassy staffs, have mushroomed from prewar levels. This growth is a material factor in the cost of government and the reason why the President is requesting a $40,000,000,000 budget.

Since the ending of the war, except in a few agencies of the Government, the work load is not two or three times its prewar level.

Before we can make much progress in economy in government, we must have economy in its operation. There is much room for improvement.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STRATTON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily News of January 2, 1948:

ST. LAWRENCE SEAWAY ATTITUDES CHANGING

(By Phil S. Hanna)

Time and shibboleths are changing the attitudes of many people and economic groups toward the St. Lawrence seaway and power-development program. The shibboleth introduced into the picture comes from Senator AIKEN, of Vermont. Senator AIKEN professes to believe that the farmers in upper New York and New England are in desperate need of another TVA.

As might be expected the opponents of the St. Lawrence project include organized labor in mining and shipping. Vocal and active in opposition is Carroll B. Huntress, vice president, Republic Coal & Coke Co., who is chairman of the National St. Lawrence Project Conference.

There is a refreshing note in the publicized opposition by the last-named group. They frankly say that they are out to protect their jobs and their investments. They are counseling labor groups not to favor the project because even though its construction would provide employment for a time it would result in permanent elimination of thousands of miners' and railroad workers' jobs.

THREAT TO AREA RAILROADS SEEN

But the coal people see another objectionable angle. Should the canal be built and the expected traffic develop, certain railroads in the area would have to be subsidized heavily. Those roads could not exist profitably having to rely on the traffic available to them during the frozen river season. Hence the opponents say: "Having subsidized navigation and power, the Government would also have to subsidize the railroads or take them over."

Subsidizing of that kind is just what the American counterpart of the British Socialist group want, says Mr. Huntress. With public power and railroads in government ownership, national socialism in the United States would be well on its merry way, he declared.

Of course, there are many arguments in favor of the project. But the last war ought to make us remember that no matter how many other transport facilities are developed a nation cannot get along without railroads. One begins to wonder if we can afford all the subsidies inherent in the St. Lawrence project?

Soviets Wage Economic War

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. ANGELL. Mr. Speaker, the following article is the seventh in the series written by Philip H. Parrish, editor of the Portland Oregonian editorial page, on European problems:

SOVIETS WAGE ECONOMIC WAR—RUSSIANS PUSH PROGRAM TO OBTAIN ACTUAL OWNERSHIP OF PLANTS, OTHER ASSETS IN COUNTRIES THEY CONTROL

(This is the seventh of a series of articles detailing observations recently made in Europe by Philip H. Parrish, editor of the Oregonian editorial page. The writer spent 7 weeks in Germany, Austria, France, and England.)

(By Philip H. Parrish)

Before taking off on this latest European trip, I already had considerable evidence of the degree to which Russia has been using its propaganda front to screen its more serious activity—the economic penetration of Europe.

The Russians are materialists. They enter with zest into the battles of the words, but their deeper concern is with who shall be the owner when the talking stops. That—they think—will decide the war rather than the battles.

Dr. Frank Munk, of Reed College, gave me valuable advance help in this respect. His studies of Nazi penetration of Europe were important contributions to the literature of World War II, and from his standpoint the Russians have merely taken over where the Nazis left off, adding ruthlessness of their own. He pointed out the appearance of a giant holding company in the Russian-held zone of eastern Germany, which if given time would control the entire economy of that area; and called particular attention to the new 4-year plan for Czechoslovakia, which, if it went through as originally proposed, would fit Czech production into Russian heavy industry and make it virtually impossible for the Czechs ever to return to their hard-won world markets.

I pursued the idea all over Europe, and no revelation could be more disturbing. Everywhere behind the iron curtain, Russia is moving with all possible speed to acquire actual property ownership, so that it can, at its chosen occasion, recall its occupation forces and still be master. It fills the air with accusations of "capitalist imperialism" in the west and in Greece, and itself practices such imperialism without limit wherever it has the power. The very loudness of its accusations shows where its mind is running.

PATTERN VARIES, RESULTS SAME

The pattern of penetration varies from country to country, but not the results. The Baltic countries of Lithuania, Estonia, and Latvia, along with part of East Prussia, eastern Poland, and Rumanian Bessarabia, have actually been incorporated into the Soviet Union and can be treated as desired. The two countries actually friendly to Russia—Bulgaria and Yugoslavia—are subdued economically through the cooperation of the Communist governments controlling them. Against self-respecting border states, such as Czechoslovakia, Poland, and Finland, adroit trade agreements are a chief dependence for the time being.

Then there are the former "enemy" countries and areas—Rumania, Hungary, and eastern Germany.

In regard to the procedure in these latter areas, I am able to present better testimony than my own. Among those who met us in Vienna was Capt. Daniel H. Swett, a native of Portland, who had been most helpful on my earlier trip. He is a case-hardened and decorated infantryman from the Eighty-eighth Division, now assigned to the Public Information Division in Austria, and as a result of material he had gathered on official missions to Hungary he had recently been denounced in the Communist press of central Europe as "the spy in uniform."

Captain Swett's detailed report on Russian acquisition of economic control of Hungary, never previously released, appears on this page today.

The system, as will be noted, is beautifully simple. The Russians take what they can for reparations from the conquered country, in the way of plants and other assets. Then they agree not to move these plants and assets to Russia (which they tried for a time with disastrous results). Instead, they will contribute the plants and assets as their share of new companies which will monopolize the future economy of the country. Whereupon they put excessively high valuations upon their seized assets, and excessively low valuations on what the country itself puts into the pot, and the trick is done. Russia has 51 percent, Captain Swett does not get around to that, but so far as I could judge the Russians are now dominant in 90 percent of Hungarian business and industry.

PLAN SAME IN GERMANY

In the Russian zone of Germany the system is the same, in general. But the one huge holding company does the job there—called the Soviet AG, for Autien Gesellschaft.

And after this financial and industrial control from the top, the Russians move down into the Sovietizing of the details of life. If they have time enough they will manage that also. In some of the communities of eastern Germany it is estimated that life already is 80 percent sovietized.

I am sorry to make this report but that is the way matters stand. The unpleasant reality is that the whole picture of eastern and central Europe is being altered behind the guardianship of the iron curtain, and mere withdrawal of the Russians and ourselves from the scene would not restore anything like a competing economy and a democratic way of life. The Russians will come out in actual physical ownership, and directing the detailed life of the people.

Myth of Security

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the New Ulm Daily Journal, New Ulm, Minn., of January 9, 1948:

MYTH OF SECURITY

A Minnesota committee containing the names of some of the leading educators in the State is forming to fight the universal military-training bill which is being pushed through Congress at the present session. In his annual message President Truman endorsed the military-training program.

Universal military training is being opposed by a number of important people and one of the ablest and most intelligent is Hanson W. Baldwin, military editor of the New York Times and an author of note.

In an article in Foreign Affairs Baldwin scoffs at what he calls the myth of security. He claims there is no such thing as complete preparedness or military security because we do not know the type of a war we may be called upon to fight next. Hitler, he points out, was completely prepared to fight a war against Poland but Germany was not prepared to fight the type of war they finally got into. Every nation prepares itself against the war it has just fought. France built its Maginot line to protect itself against trench warfare of World War I but was not prepared to defend itself against warplanes and mobile tank units which hurdled the Maginot line.

Baldwin claims there is no such thing as preventing war by being fully equipped with armaments and points out that the nations best prepared have been those which have been involved in war. He also raps the theory that disarmament means insecurity and claims the United States and the world made great gains from the Washington conference which stopped the armament race after World War I.

He also attacks the glib assertion that "the United States will be the first area to be attacked in a future war." The next war, he contends, will start with an attack on air and sea bases and against our allies closest to the attacking nation. He cannot see any real chance of a large scale invasion of the continental United States. At least he can see no chance as long as we control the seas and air.

World War II, this expert claims, developed no new principles of war which is more of an art than an exact science. From our last war we should have learned a few principles and the most important of these Baldwin claims are:

1. Victory in modern wars are won by big factories and not big battalions. After we got mobilized for war and landed our immense store of war machines in France, he claims, it was simply impossible to lose the war against nazism no matter what mistakes our generals might make. Our victory in World War II was an industrial more than a military victory.

2. Continental United States is not only an arsenal and a supply base but it is now our main operating base for our armed forces. In the future all global war will be directed from Washington as it was in the last war.

3. Offense has so far outstripped the defense that our entire ideas of war and defense have to be changed. He contends the best and only defense in war is to have more and better atomic bombs, more and better long-range, globe-girdling planes, better and faster intercontinental missiles and induced plagues so that no other nation will dare to attack us knowing we can return the attack 10 to 1.

4. Wars in the future will be "total" wars far beyond the imagination of even those who coined the phrase. With this he raises the question of how we can prepare for total war without weakening our democracy or how we can prepare for war without adopting the very principles we oppose in military states elsewhere.

The universal military training bill he contends is a mistake because we are thinking about fighting the next war the way we did World War I and in part World War II. The next war will be an entirely different affair, a war more of machines than manpower, and this military expert believes we will be wasting our strength building ourselves strong in the way we will be least effective.

This is something to think about before we get swept away by the talk of the militarists and the jingoes.

The Housing Situation

REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. FOGARTY. Mr. Speaker, yesterday morning Mr. Richard Gray, president of the building construction trades department of the American Federation of Labor, appeared before the Joint Committee on Housing and gave one of the most comprehensive and most illuminating statements that I have ever read on the housing situation in the country today. He appeared before the so-called Gamble committee, who I believe are genuinely interested in getting to the bottom of the housing problem which we have at the present time. There is a genuine effort on behalf of the building trades of this country to work with the committee, which is doing a splendid job, in my opinion, in straightening out some of the difficulties that have beset the housing problems during the past few years. I hope that every Member of the House will take the time to read this very constructive statement:

STATEMENT BY RICHARD GRAY, PRESIDENT, BUILDING AND CONSTRUCTION TRADES DEPARTMENT, AMERICAN FEDERATION OF LABOR, BEFORE THE JOINT COMMITTEE ON HOUSING OF THE CONGRESS OF THE UNITED STATES, JANUARY 14, 1948

I am glad to have the opportunity to appear before the Joint Committee on Housing on behalf of the building and construction trades department of the American Federation of Labor. Labor has deep concern in the solution of the extremely critical housing problem which continues to confront the country. The American Federation of Labor through its affiliates has in the past made a major contribution to the study of housing conditions and to the fullest possible discharge of its share of responsibility toward their improvement. It is our purpose to give the fullest cooperation to the Joint Committee on Housing to the end that its factual findings may square with reality, and that it may receive the best guidance in the formulation of policies in the public interest.

The present housing shortage is deeply rooted in the conditions that prevailed for many years before the war, and represented a grave national problem long before the war years. This shortage was greatly aggravated by wartime conditions and numerous maladjustments which grew out of the war. The attempts to solve the problem since the war ended were seriously handicapped by dislocations in the postwar economy.

Let me say at the very outset that keenly aware of the many difficulties surrounding the problem, organized labor and the building-construction industry has consistently made every effort to aid in the promulgation of agreements and policies designed to achieve the maximum volume of home building; to improve the quality of performance; to assure the best and fullest supply of mechanics and laborers needed in home construction, and to achieve stability.

This program of American Federation of Labor unions was not a token program, nor was it confined to verbiage. It represented the considered effort of unions who have attempted in the best way they knew how to render real service to the community and to the Nation.

Building and construction trades unions were not breaking new ground in this work. Experience of World War II prepared and equipped them for it. Early in the war when emergency need for skilled workers on many phases of defense construction became evident, our military branches of the Government were unable to secure qualified workers required for the construction of defense installations, especially in rural communities and outlying areas. Building and construction unions quickly volunteered to recruit skilled men in order to meet the construction requirements of national defense without delay. Over 350,000 mechanics and laborers were provided by unions to man the jobs for which no qualified workers were available from any source.

It should be noted also that the building and construction unions took the initiative in wartime in a program of wage stabilization. A full year before wage stabilization was applied to other industries by the Government, a voluntary wage-stabilization program was put into effect by agreement with the building and construction trades on all defense construction work.

I am mentioning these facts to make it clear that the building trades approached the postwar emergency in the same spirit of constructive contribution to the national welfare that guided them through the war. Labor's attack on the postwar problem of increasing the supply of homes at reasonable cost has been many-sided. In several specific respects unions have succeeded in making a valuable contribution toward solving it.

Unions have cooperated vigorously in assuring a maximum supply of qualified labor needed to do the job. These activities were twofold:

1. While this recruiting work has proved to be exacting and difficult because of the unsettled conditions, the record shows that the manning of housing construction in numerous areas throughout the Nation was successfully accomplished because of the tireless efforts of the unions concerned.

2. Under the leadership of the building and construction department, its affiliated unions have carried on an intensive drive to develop a Nation-wide apprenticeship-training program in order to increase the supply of skilled workers needed. The record of practical accomplishment in this program also demonstrates that we are making remarkable progress toward the solution of this extremely crucial problem.

Labor in the construction industry has also concerned itself with the achievement of maximum stability of wages in the building and construction trades commensurate with the rising living cost. It is notable that in the last 3 years the prevalence of black-market wages and the wide departures from the established wage standards have occurred almost entirely on nonunion jobs. Such practices of paying bonuses and making side payments have had an unsettling effect on wages throughout the housing field. At the same time union standards established under contract have been an important stabilizing influence throughout the industry.

Through the establishment of cooperating committees with the agencies of the Government concerned, such as the Construction

Labor Advisory Committee in the Office of the Housing Expediter, our unions stood ready to help solve the multiplicity of problems brought to our attention by Government officials. This "trouble shooting" was a day-to-day job in which, through our affiliates, we were able to find successful and effective solutions to many problems which seemed insoluble at the time.

I would like to have the opportunity to inform the committee about some of the important aspects of the housing problem in which labor has had primary responsibility.

APPRENTICE TRAINING

In striving to increase apprenticeship training in the construction industry since the end of the war the Building and Construction Trades Department vigorously pursued two objectives: (1) To assure an adequate supply of well-trained and qualified mechanics to meet the Nation's construction needs in coming years; and (2) to help provide employment opportunities for veterans of World War II.

The national apprenticeship program is a cooperative effort in which labor and employers are jointly engaged. The record shows, however, that organized labor has been consistently the initiator of local as well as national programs designed to provide a firm and lasting basis for a steady supply of properly trained journeymen and mechanics to the trade.

Apprenticeship itself came to America with its first settlers. But the development of standards of training to match the requirements of the skill and to assure unbroken continuity of experience and training and the establishment of fair standards of apprentice pay has been the result of unceasing effort of trade unions.

Aware of the need to place apprenticeship on a stable and continuous basis in the community, unions have succeeded in establishing a number of years ago a number of community-wide programs. They have led in such pioneer efforts as the Detroit plan launched by the Bricklayers Union in the thirties, where on-the-job training was supplemented by classroom work in blueprint reading and other related subjects. They were prompt to respond to the challenge of modern technology as did the International Brotherhood of Electrical Workers when they established the Electronics School at Marquette University in 1944, noting that the electronics branch of the electrical industry has grown to production totaling $4,000,000,000. Since 1944, over 15,000 craftsmen received this new and specialized training in this school alone.

With the goal of labor-management cooperation squarely before them, unions, long before the last war, began to drive for the goal of establishing national apprenticeship systems. That the building and construction trades led in this drive is evidenced by the fact that national apprenticeship standards were first established in the following 10 trades: Bricklaying, carpentry, cement finishing, electrical, painting and decorating, plastering, plumbing, stained glass, steam fitting, and tile setting.

The foundation for the Nation-wide program of apprenticeship was laid in 1934 with the formation of the Federal Committee on Apprenticeship, made up of employer, labor, and Government representatives. Of foremost importance in the construction industry has been the general committee on apprenticeship for the construction industry, which consists of representatives of building and construction unions and of trade associations in the building field. The services essential to the success of the program are provided by the Apprentice Training Service of the Department of Labor, headed by William F. Patterson.

The record of the apprentice training program since the end of the war is indeed remarkable, especially when one considers the many difficulties and obstacles with which the industry was beset in recent years. In 1947, more than 2,500 local apprenticeship councils were jointly established by labor and employers in the building and construction industry in all parts of the country. According to the Apprentice Training Service the following is the record of growth in the number of building trades apprentices in actual employment from June 1946 to November 1947:

	June 1946	November 1947
Total apprentices reported	49,092	112,221
Wood trades	17,946	41,065
Electrical trades	9,027	16,937
Pipe trades	6,782	16,966
Trowel trades	5,487	15,479
Paint trades	4,476	8,967
Sheet metal trades	3,363	8,029
Other trades	2,011	4,778

Thus, as the reports of the Apprentice Training Service of the Department of Labor indicate, the number of building trades apprer tices employed was more than doubled in a period of 18 months.

There is evidence, however, that the actual progress has been much greater than these reports indicate. The reason for this is that the Apprentice Training Service does not receive reports from many of the smaller towns and trade areas in which effective apprenticeship programs are underway. The A. F. of L. Building and Construction Trades Department has just conducted a questionnaire survey in an attempt to determine the actual number of apprentices employed in January 1948. Due to the shortness of time, only a few complete returns have been received to date. But these indicate a much greater progress in the apprenticeship program than reported to the Government.

In the masonry trades, for example, the Bricklayers, Masons, and Plasterers International Union reports an increase in apprentices from 328 on January 1, 1945, to 11,858 on January 1, 1948. This is the actual number of apprentices in the membership of the union working under contract.

The Operative Plasterers' International Association reports an increase from 1,876 in September 1946, to 5,000 in January 1948. The International Union of Wood, Wire, and Metal Lathers reported a rise from 358 in January 1945 to 2,200 in January 1948. The Brotherhood of Painters, Decorators, and Paperhangers of America reports an increase from 5,000 in January 1945 to 20,000 in January 1948.

It should be noted that in a number of the building trades the employment of regular apprentices is not customary. There are no apprentices, of course, in such trades as the hod carriers and common laborers or in the teamsters' trade. Elevator constructors provide an example of trades where there is no regular apprenticeship system, but instead, helpers are given the training and are stepped up when they can meet requirements. Asbestos workers adhere to the so-called improver system, with the ratio prevailing in the trade of one improver to three mechanics.

It is often erroneously stated that the unions are responsible for maintaining a rigid ratio between a number of apprentices permitted in proportion to the number of journeymen on the job. The fact is that this ratio is set by experience and is by no means dictated by the union concerned. In this connection these points must be made:

1. The employer always prefers to have seasoned workers on the job. The apprenticeship agreement places a responsibility and a financial burden on the employer which he is often reluctant to assume.

2. The training of the apprentice must give him proper supervision and actual experience in order to be of value. Too many apprentices with not enough supervision from a journeyman would gain little skill, would prove highly unproductive, and would be costly by turning out work of inferior quality.

3. Apprenticeship training must lead to employment at the trade the apprentice learns. When unemployment in construction is high, as has been the case for many years before the war, to train men with no prospect of work for them would have been wasteful and a bitter loss of time and effort to the apprentice himself.

The combined effect of these considerations has often been to establish a prevailing ratio between a number of journeymen and apprentices in a particular trade. When maintained over a period of years, these prevailing ratios were often embodied in contractual agreements.

It should be noted that with the end of the war building and construction unions, aware of the need for an increased supply of mechanics in most trades, took prompt steps to meet the emergency situation. Most of the unions took the initiative to provide for a larger number of apprentices in relation to journeymen and to give special consideration to veterans.

Moreover, many of our unions acted to raise the age limit for admission of apprentices and secured the removal of any age limit for veterans' admission to apprenticeship. The lathers' union, for example, had the age bracket enlarged from the existing one of 16 to 21 years of age to one ranging from 16 to 27, with no limit on veterans.

The building and construction trades department and its affiliates are gratified by the progress of the apprentice training programs. But they don't think that this progress provides any ground for complacency. In my report to the convention of the department held last October, I reported:

"To help provide employment opportunities for veterans and assure an adequate supply of well-trained and qualified mechanics in the years to come, the building and construction trades department continued to cooperate actively with employers and the Government in speeding the apprenticeship training program. By June 1947, over 2,500 local apprenticeship councils were jointly established by labor and employers in the building and construction industry in all parts of the country. Our goal for the coming year is to double this number of apprenticeship councils, in order to make apprenticeship training facilities available, under proper standards, in every sizable community."

This goal and this recommendation were adopted by the convention and are being vigorously pursued by our national and local affiliates in the current year.

Numerous irresponsible statements have been made alleging that building tradesunions have restricted the supply of apprentices needed in order to meet the increased volume of construction of housing after the war. The record shows just the opposite to be true. National, State, and local programs designed to increase and regularize apprentice training are being carried out not only with labor cooperation but also with labor's initiative. The record shows also that in many situations where, because of inadequate supply of building materials, the work has been intermittent the unions have done much to overcome the reluctance on the part of the employers to assume the responsibility and the financial obligation of taking on additional apprentices.

Equally important have been the efforts of unions to assure a fair standard of compensation to the apprentices placed into training. Inadequate compensation offered to apprentices has been a severe deterrent to veterans and other young people in the choice of their trade. The improvement of the apprentice pay under union agreements has been an important factor in increasing the
